HUNTER'S REFRAIN.

BY GUY H. AVERY.
WAY, away,
To the woods away,
We'll waken the morn
With the hunter's horn—
Tirra-la-la-la. Tirra-la-la-la.
The game is nigh,
And the scent will lie,
Ho! ho! Tally ho! boys oh!

What pleasure to be
A hunter free;
When he hears the sound
Of his faithful hound,
What joy he feels
As the bark it peels
From his bound heels.
Ha! ha! Tirra-la-la-la,
Ho! ho! Tally ho!

What glee to be
A hunter free;
What glee! what glee!
As he chases the frog
On the slippery log
And falls over his dog
Into the bog,
With his mouth full of blood,
And his boots full of mud.
Ha! ha! Tirra-la-la-la,
Ho! ho! Tally ho!

What comfort to be
A hunter free;
When the day has gone,
And the sunlight fled,
He takes his gun,
And goes to bed,

If he is a sensible man; if he is not, he gropes around in the darkness, upsets the clothes horse, falls over young Nimrod's cradle, who opens in full cry, leaves his hat and coat in a raspberry patch, blows off the end of his fore-finger, returns the next evening with a consumptive pheasant, and is arrested for killing game out of season.—Puck.

For Forest and Stream and Rod and Gun.

Voyaging on the Upper Missouri.

BY ERNEST INGERSELL.

NO IV.—[Continued from page 463.]

THE PLAGUE OF THE PILGRIM—GROS VENTRES AND OTHER
RIVER INDIANS—THE BIG-HORN—ENGINEERING AT DAU-
PIN'S RAPIDS—ISLANDS—PILOTING BY INSTINCT.

WE were so unlucky as to have with us a Pilgrim. A Pilgrim is an Eastern person who for the first time goes West, and is, of course, ignorant in occidental customs—and ignores it. You may exhaust upon a man the vile vocabulary of a bullwhacker's vituperations, and perhaps he will only smile; but the case is not on record where any true patriot of Montana allowed any one to insinuate that he was no better than a Pilgrim. I suppose the wrath with which an old Pharisee heard himself called a Publican was serene and sunny good nature compared with the amazement and grief and anger and self-sacrificing preparation for instant battle with which a mountaineer comprehends that you have stigmatized him as a Pilgrim! To be thoroughly successful, the Pilgrim ought to be a tolerably well informed man on a narrow range of topics in his native country, and one whose opinions have been wont to command respect. If he comes from Boston, it is well, and he carries Westward with him the full-grown comb which adorned his high head at home. Pilgrims "know it all," and some of them never do survive the shocks to their vanity which their iterated mistakes occasion. Our Pilgrim, like the rest of his genus, was a great bore. As inebriated men often think all the rest of the world drunk, so this man took all the rest of us to be pilgrims and himself only experienced. He discoursed to us on the arts of mining, the science of cattle-raising, the habits of antelope and deer, the customs of Indians; instructed us how to climb mountains with ease (he had never been half way to timber-line), and how to cross deserts (he had never seen a square yard of alkali). He knew all about fighting Indians, hunting buffaloes, navigating northwestern rivers, cheating the Government at Indian agencies, far more thoroughly than the wisest pioneer between the Saskatchewan and Salt Lake. Now, here in

the Bad Lands, he had a text for an endless sermon, and he bored half the pleasure of the scene out of all of us. He overheard a geologist say that the singular forms into which the rock had been worn was mainly through the action of trickling water, and that soft and hard strata alternating had worn unequally; therefore—"Oh, yes!" interrupted the Pilgrim, and talked wrong geology "into the ground," if I may use such an expression. Next he must whisper to ye scribe "to write up well" certain features; remarked to the lady sketching that the only proper thing to draw lay "just there," and laid down such rules of work as would disgrace chalk-sketches on a barn door; then climbed on high with a self-satisfied air, and looking critically ahead, informed the pilot that, in his opinion, the channel lay on the right bank, and that to hug the left was a grave mistake of judgment. The pilot only smiled, but the captain made a frank observation as to the Pilgrim's knowledge—the Pilgrim can never quite become accustomed to Western candor—and the unappreciated man was seen no more in the pilot-house all day. If Mr. Josh Billings had been a passenger on the Benton he would have doubly appreciated his own remark: "It is better to be bored with a two-inch auger than with a gimlet."

At Arrow River the white cliffs are succeeded by lofty banks of mud, less entertaining but equally desolate, which continue for thirty miles, presenting a picture of nature's wild deformities, characterized by a total absence of everything which could give pleasure to the eye or gratification to the mind, except as an exhibition of the weird. At Arrow River Lewis and Clark wintered in 1804-5, and are said to have left the record carved on a white pillar; but we didn't see it.

Twenty miles below, the Judith—an important tributary—enters from the south, and close by is the mouth of the Dog River. Here are extensive, well-wooded bottoms, which were long ago occupied by fur-traders, and more recently by the Government as an army post, called Camp Cooke. Now there is a branch trading post of T. C. Power & Co., of Fort Benton, here, for the Gros Ventre Indians, consisting of a collection of low log-houses around three sides of a quadrangle and a corral, where the boat stopped in landing supplies long enough to allow the passengers to go ashore and prow around the lonely station. There wasn't much to see—two or three half tamed squaws in bedraggled calico dresses of civilized cut, who, with their papposes, were gazed at and quizzed by the ladies of the party, while some of the rest of us examined a lot of moccasins, etc., for sale (at outrageous prices) by the trader, or went to see the three young grizzly bears that were penned up in a log corral near by. I saw only one Indian man about the premises, but he evidently thought himself a whole host. He was a youth on whose smooth and, for an Indian, handsome face, not one of the ugly wrinkles of age had marked its lines. With his coal-black hair elaborately combed, the parting in the middle strongly indicated by a line of yellow paint, and the ends gathered into a queue behind into which was plaited strips of otter-hide and a tail of large silver disks that hung down to his heels, jingling as he walked; with his swarthy face set off by broad lines and patches of vermilion; with heavy coils of large bright beads about his neck; yellow leggings, whose side fringes trailed the ground, and moccasins of gorgeous beadwork and fringed flaps. Folding his brilliant Navaho blanket with careless grace across his unshirtd body so as half to reveal his bronze chest and sinewy arm, he stood erect and motionless as a statue, calm in the admiration he thought he was exciting in our wondering eyes, swelling with the vanity of a full-dressed Indian dandy. My companion was a young lady who had just come from years of residence in Germany and Italy—from wanderings among the orange groves of Naples, and excursions down the historic Rhine. To her all this was full of wild and poetic interest, although by no means her first sight of an Indian. She stopped in half amazement and half admiration to watch this picturesque savage, and observing it, he turned slowly round to fully exhibit all the glories of his finery and personal appearance. She was greatly amused and wanted to talk with him, but I would not permit it. Very likely he knew a little English, but it was pretty sure to be very bad English, and the lady who enters upon conversation with an Indian is pretty sure to find it shockingly unpleasant. We had quite exhausted all the sights of this frontier post by the time the whistle called us to tread the narrow gang-plank again, and the voyage was resumed with little regret.

The Gros Ventres are a band of the Hidatsa, or Minnataree Indians, who belong to the Great Dakota family. The Crows are said to be another band of Hidatsa, separated long ago. At any rate, the Crows and Gros Ventres are inveterate enemies, they sometimes unite against the Blackfeet, which are the Ishmaelites of the Northwest, fighting everybody. The Blackfeet occupy the country, properly, north of the Missouri and West of the Marias, extending to the upper waters of the Saskatchewan, yet frequently making long excursions Southward, being admirable horsemen, and some of the worst Indian battles on record or in tradition have been fought in the valley north of Yellowstone Park between the Blackfeet and Flatheads from the West (on their way to hunt buffalo), Crows from the East, Shoshones from the South, or the wandering companies of trappers under Jim Bridger, the Soulelles and other leaders that used to range through this country, and who dreaded the Blackfeet above all other tribes. The Crows included in their country the headwaters of the Yel-

lowstone and Southward—a band of them (the River Crows) living along the southern bank of the Missouri from Fort Benton to the mouth of the Mussel Shell. This left the north bank of the Missouri, east of the Marias, and the triangle between the Yellowstone and the Missouri for the Gros Ventres. East of them were the Assiniboines, and south of them the Crows and Sioux. And they often made long excursions into the districts of their neighbors. The Gros Ventres are said to have once lived "in earthen houses" in the region through which the boundary between Dakota and Minnesota now passes. It is also known that a portion of them once settled near the head of Green River, where the names of some mountains and streams perpetuate their memory.

The Gros Ventre Indians are fine looking, and I have never anywhere, unless it be among the mountain Utes of Southern Colorado, seen such prepossessing women as those of this tribe. Gov. J. J. Stevens gives some interesting facts about them in his narrative of Explorations for a Northern Railroad Route to the Pacific in 1853. The Gros Ventres were then camped on Milk River, where was fine pasture for their immense herds of horses, and they treated the officers of the survey with great hospitality, receiving them with great ceremony in a lodge twenty-five feet square, after which they were taken to visit the lodges of the principal men. Among the dishes furnished the guests was a mess made of buffalo marrow, berries and the scrapings of lodge skins, which Stevens asserts he enjoyed. "Polygamy is universal, several of the chiefs having four, five, and even six wives, one of whom is the especial favorite and mistress of the household. The husband will appropriate any of them for purposes of prostitution when he can profit by so doing. They appear to be a simple-minded race, easily influenced, and very kindly disposed toward the whites. They are filthy in the extreme in their habits, many of the women actually eating the vermin out of each other's head and out of the robes in which they sleep. Being improvident, it is always feast or famine, either having abundance or else nothing." Much the same account would do for all the Missouri River tribes.

But I have been led into too long a digression.

Beyond this stopping-place the barren clay banks crowd upon one another, with occasional cliffs of white chalk, leaving narrow verge for the border of trees until Cow Island is reached during the second afternoon of our voyage.

All this desolate region is the chosen home of the splendid big horns—the mountain sheep. Although no longer, as when Father DeSmet floated down in 1847, are "numerous groups" browsing on the steep declivities, they are still to be got by the hunter, and we saw many of them standing among the monumental rocks as quiet and stately as though carved from the sandstone. They are the noblest of game. Much like sheep in some particulars, and more like the chamois or ibex in others; the man who would get them, even though they never saw the human form before, must have the strength and agility to climb to the loftiest ledges, and tact and skill to bring his game down at long range. Even then he may lose it, the body often falling over some precipice on whose very brink the sheep loves to stand. These northern mountains, with their strong dark heights and rugged foot hills are full of them. When climbing the mountains I have had bands in sight for two or three hours at a time, feeding on distant green hill-tops below me, where scattering clumps of dwarf spruces furnished shelter when they cared to rest, and the young grass afforded sweet pasture. It was extremely interesting to watch them. Nothing could better express the wild freedom of the unmapped mountains. An old ram or two, easily distinguished by the immense coiling horns from the ewes, whose horns are small and light, would lead the flock, and there would be from ten to fifty younger rams and ewes following. How they can run! Let the ground be rough or smooth, level or inclined, it seems to make no difference to their sure and agile hoofs; and the kids will race up and down the steepest snow banks just for fun. It will climb to points where wolves even dare not follow, and leap from pinnacle to pinnacle as though held up by invisible wings. This seems incredible when we look at their ovine form and great weight, and the cumbersome ammonitic horns carried by the males. It is these ornaments that give them the name "big horns," and it used to be believed that the mountain sheep could throw themselves from tremendous heights, alighting on their horns and rebounding without injury. Their hair is coarse and slightly crinkling, and when the bluish winter coat comes out, displacing the brown summer dress, you may find everywhere between the hairs a shorter coat—a sort of undershirt—of the finest silky wool. The flesh of the big-horn is tender and juicy in the autumn when the animal becomes fat, and has a taste between the antelope and mutton, partaking of both.

Just above Cow Island are Dauphin's Rapids, which are the chief obstructions to the ascent of steamboats beyond this point. They are not very formidable as rapids, but in a bend in the river sand-bars have formed in such a way that here, more than elsewhere, the boulders and angular pieces of rock brought down by the ice have been deposited, until an accu-

* Since the above was written there has come to hand the admirable "Ethnography and Philology of the Hidatsa Indians," written by Dr. Washington Matthews, U. S. A., and published by Dr. F. V. Hayden as one of the Miscellaneous Documents of the U. S. Geological Survey. This contains a full account of the manners of this family and their allies, the Mandans, who inhabit a permanent village at Fort Berthold lower down the river.

mulation extremely dangerous to navigation has been formed. This cannot be passed except at high stages of water. After the middle of August, therefore, steamers do not attempt to go above Cow Island, but land their cargoes on the shore there, whence they are hauled to Ft. Benton by teams. Vice versa, freight and passengers are frequently sent down to the late steamers in mackinaws. A mackinaw is a boat of any size from 20 to 60 feet in length, flat-bottomed and flat-sided, with a sharp prow and square stern. The current is sufficiently swift to make rowing unnecessary going down, and so strong that you must drag your boat up by "cordelling."

When we were there some government engineers with an escort of troops were at work dredging the river of rocks and building a wing-dam so as to concentrate the vast force of the river upon one channel, and make it its own perpetual dredge. An unusual height of water was experienced this year, and their operations were delayed until late in the season. The amount of money granted by Congress for this work was small. Perhaps there is no water-improvement in the whole country that would yield such honorific returns in proportion to the outlay as the removing of the obstructions from the Upper Missouri. I dare say the proper expenditure of \$150,000 would add three months in the year to the freighting season of the upper river. It will take very much more than that to put the Yellowstone at all into shape, notwithstanding some reports of its excellence as a steamboat route to Montana.

It was just sunrise as we reached the rapids, and we heard the cook beating the bottom of a tin pail for his gong, before we saw the little colony which had just sat down for breakfast in a bower made of cedar bushes, while the officers' mess was in one of the row of small white tents cuddled down in a hollow. Our whistle, however, put breakfast out of their heads, for had not we the mail from home? And is there anything dearer to the heart of one of these exiles than his letters and newspapers? We gave them a great packet and a goodly quantity of grocery supplies. One would hardly have thought these roughly attired men, without the shadow of uniform about them, were officers of the Army, so accustomed are we to the glitter and military carriage of our West Pointers in the East. But they were very good soldiers, and held as firm discipline—though genially—in buckskin and beads as in broadcloth and buttons. One wonders also at the apparent contentment of these gentlemen, cut off for such long periods from civilization; but their resources of amusement are more varied than we think, their duties keep them busy, and the certainty that they must stay enforces a habit of contentment.

At Cow Island the only sign of human use is a dilapidated shanty and a tumble-down sign-board upon an insignificant knoll, whereon is scrawled "Fort Hies." The island is covered with a sparse cottonwood growth.

Below this the shores become less grotesque, more and more rounded and grassy, and the heights recede from the banks overgrown with pines and cedars that straggle loosely up the sides but gather more densely on the summits. Island after island, low and flat, interrupt the free flow of the river. Each one is known by name to the pilots. From all of these long sand-spits run out into the river, sometimes showing their yellow backs above the surface, often concealed by a thin film of water. But the practical pilot detects them all by the peculiar "ripple" on the water. "Marks" are of little use in steering on this upper river. The pilots, to be sure, do fill their marvelous memories with points to be remembered at every bend, where to go next to the bank, and where to keep away, although to our ignorant eyes each league of the smooth water and every yellow bend looks precisely like its neighbors above and below; but for the most part the pilot must steer by the appearance of the water, and his eye never wanders from its shimmering flood. Forty times a day his bell calls for soundings, sometimes only on one side, sometimes on both. Then a darkey seizes the sounding-pole, which is marked into sections of feet and half-feet, and plunges it down alongside of the lower forward deck. If the water is more than seven feet deep he draws out, "N—no—o bottom!" But generally he finds one pretty quick, and you hear the thick utterances, repeated by another darkey on the upper deck, "Se-e-ven feet!" with a lunge forward and sinking emphasis on the last word. Then "S—i—i—i—x and a h—a—l—f! S—i—x feet! F—i—ve feet! F—o—ur and a h—a—l—f! Th—r—e—e—e—e feet!" and so on until perhaps there is only "Two—o—o f—e—e—t s—e—e—n—t!" and we glide over, grating on the bottom, and our wheel kicking up the gravel behind us. Time and again we got aground, but always got off again without serious difficulty. In this we were very fortunate. Steamers have sometimes stuck for two or three days at a time in the sand, which was tedious, when nothing but Missouri River water was passed over the bar.

A PLACE FOR SUMMER REST.

BAY CITY, Mich., Jan. 7, 1878.

EDITOR FOREST AND STREAM:

Higgins Lake, Roscommon County, Michigan, is nearly six miles from Roscommon Station, on J. L. and S. R. R., distant north of Bay City eighty-five miles. The lake is two and a half by six miles long. An island and little bays and sharp points make all the protection from the wind you need, so that you can fish every day; and one acquainted with the lake can catch more fish than any party can eat. There are no ducks here, but Mud Lake, half a mile below, has some, but not enough for much shooting. The shooting is mostly for partridge, of which there are plenty along the shore, yet the season for rest on the lake is the close season for partridge. July and August are the season for the most perfect rest. Some of your readers have heard of the St. Louis, Mich., Mineral Springs, the great benefit to all who are affected in the least with kidney difficulties from the use of the water. I think the water in Higgins Lake is the feeder for the famous springs mentioned above, for all I have seen who have been at the lake say that the lake water has no equal in purifying the system. We found much pleasure shooting with a Sharps' rifle at the loons on the lake, and I assure you I was surprised at the distance one of their 45 sporting rifles would shoot. In firing at a loon about 400 yards out on the water I found that the balls went clear across the lake, a distance of two and a half miles. I could not believe it until by actual experiment I found it to be true.

In warm, hazy weather, the fishing cannot be surpassed. A sail on the lake and trolling at the same time is the most indolent pleasure in the warm or summer season I ever enjoyed. The best fishing for perch or rock bass is in the early morning. The lake is as smooth as a looking-glass, and as true to mark the shore or clouds, and I have seen a sunrise with equal splendor show in the lake as in the sky; and a sunrise on Higgins is a beauty, once seen never to be forgotten. As for those who do not like to get up to see the sun

come up do not enjoy one of the great pleasures of life, for I assure any man that it would be one of the greatest of pleasures to get up and anchor ready for fishing before the sun shows itself on the hill-top.

If you have no other bait take a piece of fat pork, cut the skin off, say half an inch thick and in pieces half an inch square, put on the hook with the flesh side next the hook; let the beard of the hook pass through the skin; this leaves the point of your No. 1 English spear point Limerick hook bare, so that you are not aware of your lazy twelve and fourteen-inch perch, who take this bait in their mouths, unless you see them. Here you are without a rod in the early morning, as lazy as the fish, with the line wound around a large cork or chip, and let the line down among the old moss-back perch. When your pork goes out of sight you pull up, and if—your hook baited as above and sharp pointed—you do not get the fish, then all I can say is that you were too lazy or indolent to make one quick move, which needs to be the first one. I assure you it was the most indolent fishing I ever had, except sailing and trolling. Yet, oh how enjoyable! You are in no hurry if your companion or wife (this is a pleasant place to take one's whole family) says look, or see here—you have plenty of time, for if the fish you have hooked is lost you can very soon get another. You have the entire time for enjoyment. There is no hurry like most every kind of camping out. Of course this does not stir up the blood like grayling or trout fishing; but it is for rest we are here; to get away from darning letters. In a short time we have perch enough for breakfast; then we pull ashore; then, while the cook is getting breakfast, if you feel steady, you have the loon always to try your Sharps' rifle on. After breakfast you take the sailboat and sail and troll. Do not forget to buy a large-brimmed hat, and a lady will need an umbrella. How delightful. The lady can read or knit—they always work. I hold the rudder and line, it is so easy. You can dream or sleep. I have lost myself so that my attention had to be called to the boat often while sailing. You do not have this kind of sailing all the time, for I have seen quite a sea upon the back of old Higgins. However, there are little coves you can run into; there is no danger if you care to be safe. About the fish in the lower end of the lake, your reward is black bass. Have caught them as high as eight pounds. They are the same as everywhere else, when first hooked jump clean out of the water and try to get free from the hook by this and their familiar run after the boat, so that you are sure he is lost. Next comes a little more lively fishing for rock bass. The places you have to find for yourself, for no one ever leaves any mark for others. All fish with anchor; never leave a pole stuck in the lake. Those who are familiar with rock bass can soon find them, for the water is so pure and transparent that you can see the bottom of the lake as easily as if you were on dry land. We let a new tin pail down in the lake, and could see it seventy feet below the surface. I may as well tell you how we get our ice water. We take a twenty or twenty-five fathom line and fasten it to a two-gallon stone jug (you always take one with you when you go from here) and let it down in the lake with a cedar stick large enough to hold the jug. (I have a jug there now with a too small piece of cedar attached to it.) After two hours haul up and you have water so cold that you will not think of ice or ice water again, for you have it at hand. Now, to rock bass—we have found them while I digressed. The great beauty of this lake is, you see all the fish you catch with the hand. I never used my rod once while there. It is only in the way, and I can catch four fish with the line in my hand to any man's one with the rod. The fish do not bite as they do in other waters. Bate your hook the same as for the perch, only make the pieces of pork larger. It is more sport to catch the bass than the perch, for they are more gamey; and I assure you that if you strike a big school you can have a lively time, for we (four of us) caught forty-five in thirty minutes that would weigh from one-half to two pounds apiece. I then pulled up anchor and sailed away, for we had more than we could eat, and there is no way to dispose of them. You are alone in the wilderness. Not a house can be seen from the lake, and I think the nearest settler is a mile and a half away. The only gamey fish I ever caught in the lake was a muskallonge. I caught one up in the upper end of the lake, so that I know they are there, and I assure any one who can take one that will weigh fifteen to eighteen pounds will find it a lively job, and feel when he has him safe that he has done a remarkable thing. They are not very plenty, or, at least, I have not been able to find them. I sailed and rowed more to get my one muskallonge than all my other fishing put together.

H. G.

A ROUGH HUNTING COUNTRY.—A correspondent, W. H., of New Orleans, who has been snipe hunting in the swamps five miles below that city, writes:

"If one wants high, dry and easy hunting let him not seek it in the swamps of Louisiana. Alligator holes, ditches, mud, filth, and other obstacles impede the progress, lacerate the hounds, clothes and dogs. A morning's tramp here is enough to fatigue the strongest man and wear out the staunchest dog."

Five miles below the United States Barracks our correspondent has a favorite ground for snipe. One of his snipe hunts he has taken pains to immortalize, by writing us a letter. He says:

"Our dogs were Nibbs, the celebrated Dacotah chicken dog; and Frank, a New Jersey pointer; both very beautiful and universally admired by every one we met on the day of our hunt. Starting at 6 a. m., we reached the Barracks by 7 o'clock. Our Creole friends who met us were very cordial in their politeness, and our horse and dogs being put up, we were posted as to the most desirable hunting grounds. The bar-keeper was an old Frenchman, who told good stories and chuckled at his wit. He was the proud owner of at least eight or ten rat terriers, and at our feet around the stove these sharp little fellows lay. He was delighted with them, and on noticing them cried, 'Bazine,' and up started a toy dog, valiant with the rat as his namesake with the German. 'McMahon,' 'Engene,' and others answered in turn, and upon the mention of the word 'rats,' the French dogs arose, and the exiled Bazine and uneasy President McMahon were all intent upon getting a smell of a rat. If one appeared but poor show he stood."

"Bed-time came and we turned in. At four in the morning we were up, heated a little coffee, ate a breakfast, fed our horse, and resumed our seats. It was bitter cold, and we drove rather rapidly for the Dacotah plantation, five miles down. On our right was the Mississippi, and on our left cane-fields and plantations. Slowly day broke. Then came hard work through a prairie, across ditches, and into holes, losing sight of our dogs in endeavoring to pick our way. Soon a snipe flew, and we prepared for more. On we tramped, kill-

ing a few, but not meeting half so many as we expected to in starting. We kept it up until about 9 o'clock, when, tired and wet, we turned to our starting-point to rest. The dogs came in and were themselves lame from the arduous work done."

"We went back to where our wagon was, and as there were a number of negro huts about I sought a place to warm my feet, which were soaking and cold. An old man told me to come in, and calling my companion we entered his cabin, a room about 12x10, with a wood fire in the chimney and a pot of coon boiling. We took seats and found the fire very comfortable. 'Jim,' our host, told us he had caught the coon in a trap the night before, and was cooking him for his breakfast. He had the meat in a little water, and the whole filled up with embers to 'brown de meat,' as he said."

"After warming thoroughly we again started for snipe, and again we got wet and more tired, but shot a rail and rabbit in addition to a few more snipe. By noon we left the fields and started for home."

Fish Culture.

FISH CULTURE UNDER DIFFICULTIES.—The following paragraph from the Kingston (N. Y.) *Courier* shows some of the obstacles which those who attempt to propagate fish have to encounter. We are glad the citizens of Kingston are determined to protect the plants:

"Already, through the creditable efforts of James E. Low and George B. Styles of this place, 100 pounds of yellow perch have been put into the waters of the Esopus Creek. Arrangements have been perfected by the last-named gentleman with Seth Green, of Rochester, to further stock the same waters by adding 200 pounds of mature black bass within a few days. If these fish are let alone for the period of three years and allowed to breed, we can reasonably promise as fine fishing at the expiration of that time as can be had in any waters of this State."

"Certain lawless characters, in defiance of the law of the State as well as in defiance of the special enactment of the Board of Supervisors of this county at its last session, persist in using nets and fykes in the creek. If allowed to continue, the labor and cost of stocking these waters will prove in vain. Nearly \$100 will have been expended when the black bass are received from Rochester; and shall all this be wasted to satisfy the greed of a few lawless persons who have contributed nothing?"

"Furthermore, any person who shall put a net or fyke in the creek, in defiance of both State and county law, will be prosecuted from this date. Let every good citizen constitute himself a game constable for that purpose. Mr. Clearwater, the District Attorney, has promised to faithfully prosecute all offenders."

GOLD—FISH.—Our special correspondent, B. B. Porter, Esq., late of the Fish Farms, in Bergen County, New Jersey, reached San Francisco on Jan. 23, having rendered us good service en route. In the following letter he mixes the gold and fishes of Nevada in a fashion which indicates his interest in both:

"SAN FRANCISCO, Jan. 23.—Mr. Editor: I found myself the other day in the far-famed Virginia City, Nevada, so noted for its bonanzas, and learned that Mr. J. B. Overton, superintendent of the Virginia City Water Company, was raising trout in the reservoirs with success."

"Through this gentleman's kindness I was conducted through the works of the Virginia Consolidated and California Mining Works. Mr. Mooney, foreman of the melting room of the Bonanza mine, said that in figuring up he found that the mine produced through the month of December, 1877, \$1.23 per second. The mine is run night and day; Sundays, too. Piles of silver bricks, 130 lbs. each, 47½ per cent. gold, were awaiting transportation. They use scales that weigh the 1,300th part of a grain. From 80,000 to 85,000 feet of timber per day is sent down one shaft alone to timber up with. The magnitude of these mines is indeed wonderful, and worth going a long way to see."

"From Virginia City I went to Carson City, and met that genial soul, Hub Parker, Fish Commissioner of the State of Nevada, with whom, behind a spanking pair of grays, I visited Lake Tahoe. Though out of season the day was fine. Mr. Parker has 100,000 Michigan white fish, now being hatched, to put into this lake. We took a short sail out on the lake and caught what they call a silver trout, weighing 4½ lbs.; a male and a perfect beauty. It was the first of the kind I ever saw. The waters of the Lake Tahoe are the clearest I ever saw; I could see the pebbles on the bottom very clearly in water fifty feet deep. It is a wonderful lake and well worth a visit."

"Yours, etc.,

B. B. PORTER."

EELS.—A correspondent takes us to task in regard to a reply of ours to "Septuaguarian" on the subject of eels. We stated "When eels are young and have to be carried any distance an assistant should accompany them." In the paragraph before we printed "Eels are very difficult of transportation, dying in a few hours unless the water is changed." Now, if our correspondent had read the article the least care fully he must have understood that we meant young eels. Everybody knows that the adult eel is very tenacious of life, and can be transported even out of the water a long distance. Our friend also differs with us about eels going to salt water. "That is a mistake," our correspondent writes. He says: "We have eels (in Pennsylvania) in nearly all our rivers, creeks, ponds and lakes that have no outlet, and in the rivers and lakes having falls and dams of from five to twenty feet, so anybody can see that the fresh water is the native home of the eels." This we do not see at all, any more than that the shad or the salmon, because they are caught in the Hudson or Merrimack, have native homes in the fresh water. For one eel caught in fresh water ten are caught in salt water. A fall or dam of twenty feet would not present any difficulties to an eel who could wriggle up or down them at pleasure; but in any serious obstruction no eels are found above it. So far our correspondent may enjoy the benefit of his doubts as to the difficulty of transporting young eels, but

as he has evidently never tried it, and our data were derived from absolute experiments made by the Fish Commissioners, we must believe that we are right. When our Pennsylvania correspondent, however, says "that in regard to the breeding (of eels) all our fishermen in my neighborhood have an idea that the Lamprey eel is the mother of all the eels," we beg to remark that the fishermen might as well think that the Lamprey was the mother-in-law or great uncle of eels, as their mother.

Natural History.

THE ROCKY MOUNTAIN BIG HORN.—One of the strangest creations known to naturalists is this member of the animal kingdom, the Big Horn or Rocky Mountain sheep. Whether descended from some patriarchal family of "short-horns" who came over in the Ark, or from the common stock that produced the Mexican sheep, is unknown, and probably will forever remain so. It is, however, more than likely that they are a race separate and distinct from all others on this hemisphere, as their forms and habits are entirely different. They may be related to the sheep which inhabit the Ural Mountains of Russia, or the Cashmere or Thibet tribes; but even this is questionable.

These animals are to be found only in the Rocky Mountains in Colorado, Arizona, Utah, Nevada, and portions of Montana. They herd among the higher portions of the range, feeding and living at a great elevation. In form the mountain sheep is much like his prototype of the lowlands, being, perhaps, a little larger and more strongly built. Their wool is short and thick and very warm. This coat they retain throughout the year, its growth being so rapid that even their wild habits and the rough usage which they endure never perceptibly thins it. Their heads are disproportionately large, resting upon short, thick necks; their legs thin, but of wonderful strength, and their feet the surest in the world. A sheep never slips or falls. From the head of the huck grow strong, crooked horns. These issue just above the eyes, curve at first outward and downward, then as their growth continues, inward and upward again, until when mature the leaders of the herd often carry horns fully three feet in length, and in some cases weighing from fifty to sixty pounds.

The hunter's fable of the habit which this animal had of striking upon its horns instead of its hoofs when springing from any great height has long since been exploded; but the wonderful leaps which the Big Horns will sometimes make when frightened are as astounding as any tale which has been told of them. When hunting in Colorado I have seen an entire herd jump from cliff to cliff across chasms twenty feet in width, or down precipices thirty and even forty feet high, and bound away without the slightest apparent injury.

This very fact of their ability to flee where the hunter cannot follow renders the pursuit of them fine sport, and the lover of lamb and green peas will gain an excellent appetite in the chase before the game is his.

F. E. H.

[Our correspondent omits to mention that besides the wool of the Big Horn, which, as stated, is short and very thick, the coat consists of hair about an inch in length which wholly conceals the wool. This hair resembles that of the caribou in many respects, and is very different from that of deer in general. The Big Horn is now believed to be a near relative of the Argali of Siberia, as well as of the Mouflon of Corsica, from which latter our domestic varieties are believed to have sprung.—Ed.]

A QUESTION ABOUT BEARS.—*Weston, Va., Jan. 14, 1878.*—Editor *Forest and Stream*: There is a trait or habit of *Ursus americanus*, that I would like explained or accounted for through your columns. It is the testimony of all hunters and trappers of experience, with whom I am acquainted, that when a she-bear is trapped or killed in the chase during the period of pregnancy, she has been found to have recently aborted. Is the abortion voluntary or involuntary?

CONF. LOT WARFIELD.

[This is a matter to which our attention has never before been drawn, and about which we know nothing. Are any of our readers better informed?—Ed.]

LES OISEAUX DU CANADA.—We have recently received from Mr. J. M. Lemoine, the author of *L'Ornithologie du Canada*, an extremely valuable and practically useful ornithological chart, prepared by him for use in the schools of the Province of Quebec. It is entitled *Les Oiseaux du Canada*, and gives, in the clearest and most compact form, a list of Canadian birds, with a reference to the genus, family and order to which each species belongs. The chart is made up of seven columns, and an example taken at random will serve at once to show the admirable method upon which it is constructed. Thus, in the first column, we have the order *Insectores* and a definition of the term; in the second comes the sub-order, *Oscines* (singing birds); in the third we find the family name, *Sylviolidae*; in the fourth the name of the sub-family; the fifth contains the name of the genus *Sylvicola*; the sixth that of the sub-genus, *Dendroica*, while the seventh gives the full name of the species, as *D. coronata*, followed by the common names, English and French, and a reference by number to Prof. Baird's check-list. The whole chart, arranged as we have indicated, and containing a list of the 300 birds, including some species about which there is doubt, which are known to Canada, occupies a space of 40x23 inches.

From what has been said, it will be apparent that this chart, after its purpose and the relation of its parts have once been explained, cannot fail to convey to the mind of every child the family relations of the different birds of the region for which it was compiled.

The nomenclature employed is that of the Pacific Railroad Report devoted to birds, Vol. IX, by Prof. S. F. Baird.

EARLY NESTING OF QUAIL.—Our correspondent, Mr. J. B. Newby, writing from St. Louis, gives an account of a quail's nest which he recently found there. The occurrence is quite

unparalleled, we think. May it not be, however, that the nest was an old one, left over from last year. Mr. Newby says:

While walking (Jan. 20) on my place near St. Charles, one of the men in the party found a nest of the quail with one egg in it, and called me to look at it. There is no doubt about its being a quail's egg. I never before heard of their nesting as early in this section of country.

A TROUBLESOME OWL.

POTTSVILLE, Pa., Jan. 7, 1878.

EDITOR *FOREST AND STREAM* AND *ROD AND GUN*:

A singular, and, we believe, previously unheard-of occurrence, took place here recently. A young man, the son of a respectable farmer, residing within a few miles of this place, on his way home across the fields, was violently seized on the back part of the neck by an owl, which had suddenly alighted on his back, and it was with some difficulty that the winged assailant could be kept at bay. A few days afterward, the young man passed over the same route, when he was again attacked by the same or another owl, which flew in his face, and severely bit him. In each case blood was drawn by the beak of the aggressor.

The neighbors becoming alarmed, an investigation was made, and in a large, lonely and well-decayed oak, was discovered a hole, well up near its forks. As the tree was being felled, several owls flew out and escaped; the examination resulted in finding the skeletons of various sizes of birds, mice, bats, frogs, moles, etc., while an immense stock of large and small insects yet remained for a winter (?) supply.

One of our crack apothecaries, while out for some few days since, caught a live weasel, which was entirely white, with the exception of the tip of its tail, which was black. It was brought into town and sold for \$25.

DOM PEDRO.

[The "weasel" was probably a Stoat or Ermine (*Putorius erminea*). He will turn brown in spring. For a full and admirable account of the species, see Dr. Coues' "Fur-Bearing Animals," issued under the direction of Dr. F. V. Hayden's Geological and Geographical Survey of the Territories.—Ed.]

THE KNITTING TOGETHER OF THE BONES IN A BIRD.—A correspondent from Cleveland, Ohio, sends us the tibia, or leg bone of a quail. One bone had been broken somehow, but nature in time, by a plastic process of her own, had reunited the fracture. The *fibula* seems to have been joined to the tibia. The mended bone has quite a distinct curve, as if at the commencement of the process of growing together, too much weight had been put on the soft bone by the bird. Such comparisons as we can make in comparative anatomy are of great interest to us, and we have to thank our correspondent for attention.

EMOTIONAL ANTELOPES.—Dr. Caton, in his book on American antelopes and deer, says: "Our antelope has the faculty of weeping when in affliction. I first observed this in a specimen which had been taken wild when adult, and still retained all his natural fear of man. I had placed him in a close cage in the evening, intending to familiarize him with my presence, and divest him of his fears when he saw me, by convincing him that I would not hurt him. When I approached him the next morning he seemed struck with terror, and made frantic efforts to break out, which he soon found was impossible. His great black eye glistened in affright. I spoke softly and kindly, while he stood trembling, as I introduced my hand and placed it on his shoulder. Despair now seemed to possess him, and he dropped on his knees, howled his head to the ground and burst into a copious flood of tears, which coursed down his cheeks and wet the floor! My sensibilities were touched; my sympathies were awakened, and I liberated him from that cage as quickly as I could tear the slats from one of the sides."

TROUT ON THE TRAPEZE.—The *Boston Post* tells a queer story about a trout, a boarder of Mr. Messenger's, at the Broomfield House, which eats capers and gives gymnastic exhibitions of a remarkable character. When you place a rattan stick across the aquarium, *Salmo fontinalis* jumps for that stick, catches it with his teeth, and skins the cat, performing numerous acrobatic feats, quite equal to the most accomplished circus man. The *Post* says stories have been told by fishermen (they do it sometimes) that trout in their native streams have been known to indulge in such accomplishments. We doubt very much whether the trout ever does high and lofty tumbling and springs for a twig or an overhanging branch, save to go for some fly or insect.

THE GIANT SQUIDS.—Our correspondent, Monon, sends us from Indiana the following good thing. We laugh, it is true, but our mirth is tempered with solemn thoughts. We feel that, by our too liberal use of scientific language, we are responsible for this joke. We never mean again to give any one a chance to get off another like it. Monon says:

"I was reading your article in a recent number of *FOREST AND STREAM*, headed 'The Giant Squids,' to our boys and a neighbor named Sam, who is something of a philosopher, much of a pot hunter, a capital shot, and a good neighbor withal. I waded through the long names, and when I was done I saw I had made an impression on Sam, and asked him what he thought of those fellows.

"I want to ask you, Mr. L——, do you believe they chew such quids?"

"Who, Sam?"

"Why, the giants!"

—The Westminster Aquarium, London, is said to possess the largest plate-glass tank in the world, one having been lately erected 150 feet long, 20 feet wide, and proportionately high. It will permit the display of fish of the largest size procurable in British waters.

ANIMALS RECEIVED AT CENTRAL PARK MENAGERIE FOR WEEK ENDING FEB. 2, 1878.—Received in exchange: One Griffon vulture, *Gyps fulvus*, Hab. Europe; one bald-headed ibis, *Geronticus calvus*, Hab. South Africa; two Swainson's parakeet, *Trichoglossus multicolor*, Hab. Australia; one razor-billed Curassow, *Mitro tuberosa*, Hab. Guiana; two herring Gulls, *Larus argentatus*, captured in Central Park.

BOTANIZING IN MIDWINTER.

UP at what ought to have been daylight, and what, perhaps, would pass for daylight at the pole; in fact, which was a general mixture of the fog of some days, and had become "stale, flat, and unprofitable," and was just then being packed up into sleet, hail, and snow by a roaring north-wester, then booming down on us from the Lhawangunk Mountains, full tilt, on a grand frolic for a day, and meaning to race up to sixty miles an hour by noon—cold, clear, and as savage as one of the old Norse Vikings. "Botanizing on such a day—what folly!" cries your gentle rover by warm hill sides and shady glens when the breezy month of May is on us. But, reader, pause! It has been said that one-half the world does not know how the other half lives. Never was this more true than of our two cities in regard to the pleasures which may be had with a little care and a good guide. Reader, pause and perpend!

Whew! bow the snow-squall cuts to the epidermis through cloak and muffler till we reach the foot of Liberty street, and then find our companions, Davidson and Bush, florists, artists, and most genial gentlemen. Off, then, by rail, the sun coming out on the northwester clear and clear; but the wild wind howls and whistles across the track. Lo! on the trestle-work across Raritan Bay the train stops for an open draw, and the cars seem fairly to lean over with the wind, and one spoony finds that he has a sudden call back to the last station, and would fain leave us; but the brakeman quietly locks the door of the rear car, and becomes so busy inside that our friend is obliged to take his chances with the rest. In fact, he could not have walked the track in such a wind. Here on the next seat is Luch, and soon we are chaffing on the old theme of Jersey vs. the World, and especially New York, the proud and all-claiming metropolis. At South Amboy we leave the station for Rathbun's conservatories, and bear up against the wind and increasing cold with a will. Ah! there, shut the door! Here we are in the tropics, and for an hour, under the spell of William Clements, we wander in dreams of spice islands and Bengal jungles. Strange forms and weird flowers start up around us, and what with orchids, cactaceas and ferns of all climes, and with these men at your side who knew all about them, and love them with a tender devotion to the art of wooing them, which they demand and must have, we soon forgot that we are where winter holds its "ancient, solitary reign." The scene is simply wonderful to a thoughtful eye. Orchids bang round tied to bits of clay or wood, with their fat, puffy apologies of leaves, and long, spider, clean white root spraddling down in every direction, neither root nor branch such as we see about us in this temperate climate. Nature, when she tried her handiwork at an orchid, dispensed with all care of anything but the one end in view—and that was the end where the flower bangs. There the result is about as near perfect beauty as can be imagined. Look here! an orange-and-red butterfly has just alighted and is swinging on the end of this twig. He will slip off as it bends down and fly about. And what a fellow he is! How brilliant the coloring, and the long antennae. Where did he get them—in this region? Not a bit of it! It is only a flower. We have read of him in Myers' stories of the strange land of Carraccas, and in Orton's (alas that he is gone where the flowers never fade!) accounts of the lovely valleys of Quito. Fancy a thick, "bosky dell" on the Guayaquil, and just on the edge of the leaves across a stream these vegetable wonders, and you comprehend when they tell you that the botanist does not know flower from papilio as he rambles, but must go up and see whether the weird thing flies away before he can tell. Then, look along and note how Nature is given to mimicry, how she writes her lessons in duplicate—now on vegetable cell, and now reproducing it in the sensitive flutterer of a day. It is worth a journey to Amboy to see just this much, and, reader, you will find in the place a genial welcome and come back satisfied that there is sense in botanizing in mid-winter.

But we are only on the way. Our Jersey team is at the door, and Jersey is a great place, and Jersey teams are an institution. This one would have suited better a South American pampas than the three miles of sand covered with scrub oak and kalmias, and besides epigaeas—nothing else. It becomes a nice question how long body and soul can hang together against the keen edge of the northwester, now up to fifty miles an hour, and the thermometer falling through some half its distance. But on we go, thankful to a sound bank now and then which takes off the wind till we get out at the hospitable doors of Mr. George Luch, as aforesaid.

We do not intend to describe what followed, but leave you to go and do likewise. What with confabulating with a "fale and arty Englishman" on the mysteries of his art, rushing off to this and that wouder, smiling at the enthusiasm which showed the paternal tenderness over a seedling, and stories anent plants, and all else under the canopy—dinner, a good cigar, and back again, "like a bird that seeketh its mother's nest;"—suffice it that the Jersey team aforetold was back for us all too soon, and, after a most pleasant and profitable day, we went back into the chill air again, not now at our backs, and talking wildly of what we had seen. Such sarracenias and turt-ferms, s hids and camellias, such Vandas and Platyceriums, an acre of space, and opening the

mind's eye to the continents and islands of sunny seas, it is simply wonderful that people do not crowd to see them, and travel while they stay at home. There! don't touch that *Platycerium majus*! By the way, though not more than six inches high, it is cheap at ten dollars, but you cannot touch it or it is hurt. Look where some Philistine has left his mark, the brute. Come to this corner! We open a private and particular case, and look down into the warm damp air of a Javan dell, where the parrots are screaming in the close branches above, and serpents of strange name glide away from us, and see the delicate clouds of the *Tricomane* ferns. Well, says Goliath, what of that? Well, my muscular hearty, just this of that: it takes mind and care and thought and industry; it takes off getting up at midnight to look after furnace and steam-pipe; it takes a conscientiousness in doing what one undertakes to do, and knowledge of all manner of entomological pests and botanical molds and cankers; it takes the skill of a vial herb-doctor to know just when to administer food and drink and medicine (called, vulgarly, manure); it takes a strong hand and back, and a kind heart and a tender touch; it takes, most of all, that "bond of all the virtues"—charity for the weak—to produce those results. You will go and see the Loan Exhibition, for it is the thing to do. Go and revel over laces, aged and brown. Alas! for the dames they have graced. But where are the laces like these in the loom of nature's grounds? No one has dropped a tear to produce them. No weary slave has sighed at bondage to color their tender spray and misty hairs. Look how our friend, James Taplin, watches to catch the style in which you approach them! Sympathize with them; give them a loving glance, and he understands you, and tells you of them with genial tales; but betray your indifference and you are lost. Where is Bush? Well, he is off worshipping a Pitcher Plant, and a dozen times he gets back to it and you hear him expatiating on it. Sure, it was wonderful to look on. What will buy it? To answer that, reader, tell me how much you will take for that dear little girl that is the light of the household? And then think over that old tale of the Prophet Nathan—of an ewe lamb—"and it was unto him as a daughter." That's about the figure.

But we stop; nor relate, as should be done only in melodious verse, of our return—how Bush lost his hat, and a good Samaritan came by that way, who had been hunting robins and found none, and had a duplicate hat; and then how the said robin-hunter takes us to an inn and did well content us, pouring in oil and wine;—all this you lose. But as we unrolled our bundle in the warm retreat of home, and put away *Gleichenias* and *Gymnogrammes*, fronds fertile and unfertile till late into the night, we found that one may profitably go out botanizing in midwinter. Let him that has time try it, and we commend the wise to our friends, Clements and Taplin, with thanks for a day's pleasure and profit.

DR. C. H. HALL, Brooklyn.

EUCALYPTUS GLOBULUS.—The vitality of popular errors is a feature as marked as it is unpleasant. One of these errors, as we believe, is the statement that the *Eucalyptus* has any special power of averting or destroying malaria, apart from its rapid growth and transpiration, and the improvements in the condition of the soil consequent on planting. As an illustration of our remark, we refer to a statement by a correspondent of *Nature*, that he and many others known to him had suffered from malaria in the very heart of a *Eucalyptus* forest. But if the anti-malarial qualities of *Eucalyptus* are open for doubt, what shall we say as to the ridiculous statement that the *Eucalyptus* trees are somehow inimical to mosquitoes? Nowhere, we believe, are these pests more troublesome than in the *Eucalyptus* forests of Australia. It is a pity that such false and exaggerated statements should be made, as they are sure in the end to excite a prejudice against a tree whose utility is likely to be very great.—*Gardener's Chronicle*, London.

The Kennel.

TO CORRESPONDENTS.—Those desiring us to prescribe for their dogs will please take note of and describe the following points in each animal:

1. Age. 2. Food and medicine given. 3. Appearance of the eye; of the coat; of the tongue and lips. 4. Any changes in the appearance of the body, as bloating, drawing in of the flanks, etc. 5. Breathing, the number of respirations per minute, and whether labored or not. 6. Condition of the bowels and secretions of the kidneys, color, etc. 7. Appetite; regular, variable, etc. 8. Temperature of the body as indicated by the bulb of the thermometer when placed between the body and the foreleg. 9. Give position of kennel and surroundings, outlook, contiguity to other buildings, and the uses of the latter. Also give any peculiarities of temperament, movements, etc., that may be noticed, gas of suffering, etc.

FIXTURES FOR 1878—BENCH SHOWS.

St. Louis Bench Show, St. Louis, Mo., Feb. 19, 20, 21 and 22. Entries close Feb. 5.

Boston Kennel Club Show, Boston, Mass., March 26, 27, 28 and 29. Dr. E. J. Forester, Secretary.

Baltimore Kennel Club's Show, Baltimore, Md., April 23, 24, 25 and 26. L. K. Cassard, Secretary.

The Westminster Kennel Club (New York) Bench Show, Gilmore's Garden, May 16, 17, 18 and 19. Dr. W. Seward Webb, Secretary.

For Forest and Stream and Rod and Gun. COURSING RABBITS IN VIRGINIA.

FIELD REMINISCENCES.—1st PAPER.

MY first hunting experiences were acquired under the guidance of my cousin Sandy long before I was old enough to straddle a horse, and long before I had attained to the dignity of a long-tailed coat, and, like all South-

ern boys, I was first "entered at hares," possums, coons, and such "small deer" as the plantation negroes were permitted to hunt, preparatory to the much-longed-for day when, mounted on my own pony, I was to take a part with men in hunting the fox.

My cousin, Alexander Skinner—or Sandy, as he was called by his kinfolk and his intimates—belonged to a distinct class of men peculiar to the Southern States, and which, as it is now extinct, may be worth description. Like the whole of his genus, cousin Sandy was a gay bachelor, of good education, with a certain amount of social talent and information, which made him a welcome guest in every country house in the tide-water counties of Maryland. He was a first-rate judge of a horse and amateur veterinarian, and he was a dangerous man to bet against in the quarter-races, so frequent at the county-court meetings. No man bred such fine game fowls as he, and no one could heel and pit them better. He was a crack shot with gun and pistol and a great stickler for the "code"; his equal at brewing a bowl of punch, an apple toddy, or concocting a julep was not to be found; he could sing a capital song, and, though he was the most amiable and jolliest of men, he once whipped the country hully—one Buckmaster—within an inch of his life for refusing to open a gate for a lady.

Cousin Sandy's many good qualities, and even his weaknesses, made him popular with the gentlemen; as for the ladies, though notoriously a non-marrying man, he was with them a great favorite. He went up to Baltimore four or five times a year, and on his return would entertain them with the town gossip and the latest fashions, and with a perennial flow of that small talk so acceptable to most women. What cousin Sandy's pecuniary resources were no one could precisely find out; but he kept clear of debt, was always well-dressed, drove a stylish, old-fashioned gig, rode a fine horse, and owned a little bandy-legged old negro called (ironically, I fancy) Cyrus, for he could neither draw the bow nor for the life of him tell the truth. This queer little darky accompanied my cousin everywhere as his body servant, and was looked upon by all the boys, both white and black, as the very cutest old darkey in all the lower counties, and what added no little to the importance of Uncle "Sy" was the ownership of the very best coon and 'possum dog in all Calvert County.

It was in December, 1824 or '25, that my father took my brother and myself down to Calvert County to spend a portion of our Christmas holidays with our aunts and cousin Sandy. Early in the morning we embarked at Light street wharf on the Eagle, the pioneer steamer of the Maryland waters, commanded by Captain George Weems, the father of Mason and Theodore Weems, and others of that family, all steamboat men. I remember well the splendid breakfast we sat down to as soon as the boat was under way. We had diamond-backed terrapin and canvas-back, "a discretion," as the French would say, but in those good old days a large "hen" terrapin bursting with eggs, or a fat canvas-back duck might be had for a quarter. As the boat neared the mouth of the Palapsee, at North Point, our wonder was excited by the clouds of ducks cutting the air in every direction, and the wedge-like flights of geese on their way to their feeding-grounds up the bay. Off Thomas' Point we admired the tall, snow-white swans floating on the flats like a fleet of warships in order of battle; the now famous pleasure resort at Herring Bay was not in existence then. So we passed on, and toward sunset dropped anchor off Plum Point, landed, and within an hour were seated at my aunts' bountiful table with appetites sharpened to voracity by the bracing salt air of the glorious bay.

Dear old cousin Sandy, who was devoted to young people, had planned a hare hunt for us the next morning. So we were packed off to bed, while he and my father, seated on either side of a yawning fire-place, glowing with half a cord of blazing hickory logs, brewed their apple toddy, smoked cigars, and talked horse.

The following dawn found us up and dressed, and as eager for the hunt as two hung greyhounds straining in the slips. Breakfast was soon ready, and while eating it Uncle Cyrus was sent for and consulted as to future proceedings, but not until he had imbibed near a pint of peach and honey mixed for him by his master. The old fellow sipped it deliberately, as if he enjoyed it, then he replaced the tumbler on the table with a bow worthy of an African Chesterfield. With half-closed eyes and a sigh of contentment he cocked his white woolly bullet-head on one side, and then on the other, with an air of the profoundest cogitation—the Lord Burleigh shake of the head was nothing to it—after a pause due to what he considered the gravity of the occasion, he decided that we should first visit the hay-stacks in the meadow, where he knew, he said, that a certain old "har," as he pronounced it, always made his form when the weather was so cold, and the wind from the quarter it was in then. We accordingly set out on horseback, we boys behind my father and cousin Sandy, old "Sy" on foot, leading the way with an ax under his arm, and followed by Lion and Tiger, two young fox-hounds, and his own dog, Bose, the famous coon dog. As old "Sy" predicted, the old "har" had made his form to the leeward of one of the stacks, but he, doubtless remembering former narrow escapes, had bolted before we reached it. The young hounds immediately took the hot trail, and were off like a flash, making the hills re-echo with the music of their cry. That music from only two mouths gave me a passion for hunting with hounds which has never weakened, and now with more than three score years upon my head I would rather bear a pack in full cry than listen to the sweetest notes of a Betsey Bancker or a Jennie Morton. For twenty minutes or so Lion and Tiger, leaving old Bose far in the rear, stuck close to their quarry, and though soon out of sight were never out of hearing. Suddenly the musical cry changed to a sharp bark, and old "Sy," jumping up and cracking his heels together, exclaimed in great glee: "Got him, Mass Sandy! Done tree, by golly!" and off he ran, his bow-legs making first-rate time. We followed on, and soon found the dogs scratching and gnawing at the root of a medium-sized tree with a small hole at the butt. Old "Sy" eyed the tree with grave deliberation, he then cut a rod or switch about five feet in length, and splitting the small end of it, thrust it up the hollow of the tree, and endeavored to twist the hare out, but only got a little fur for his pains; he then sonaded again, and finding the hare had climbed about four feet up, he with great care and neatness cut a single chip out of the tree, and as it fell puss was seen and dragged from her retreat; then, after carefully replacing the chip and securing it with a piece of twisted grape vine, our sable huntsman cast off the hounds again, observing that he meant to have "anudder har out dat

tree hefo' he went home." The words were scarcely out of his mouth before the hounds opened again, and to our astonishment in a little while another hare took the same tree and was bagged without trouble by simply removing the chip.

Old Cyrus asserted, what I have since ascertained to be the fact, that our little American hare (*Lepus virginianus*) is always acquainted with all the hollow trees within his range, and when hard pressed never trusts to chance to find a place of refuge.

We caught four hares that morning, and returned to dinner highly delighted and thoroughly inoculated with the passion for field sports.

During those ever-to-be-remembered holidays Cousin Sandy and old "Sy" initiated us into all the mysteries of 'possum and coon hunting, and taught me at least that one of the most delicious dishes in the whole range of gastronomy is a fat 'possum baked in a Dutch oven with sweet potatoes, by a Southern dandy.

If you can find space for it, I will give you in my next some of my experiences with noted packs of fox-hounds in Virginia and Maryland.

F. G. S.

FIRST ANNUAL BENCH SHOW OF DOGS

TO BE HELD IN BOSTON ON MARCH 26, 27, 28 AND 29 BY THE MASSACHUSETTS KENNEL CLUB—ENTRIES CLOSE MARCH 15.

CLASSIFICATION OF DOGS AND LIST OF PREMIUMS.

DIVISION 1.—Sporting Dogs—Champion Classes.—For either native or imported dogs or bitches that have won first prize at any bench show in this country or abroad.

Class 1—Champion English Setters—For the best dog, \$50; for the best bitch, \$50. (Winners of first prize in sporting class can have cup instead of coin if they desire it.)

Class 2—Champion Irish Setters—For the best dog, \$50; for the best bitch, \$50.

Champion Classes are only open to winners of first prize at Chicago, Baltimore, New York and St. Louis Bench Shows.

Class 3—Champion Gordon Setters—For the best dog, \$50; for the best bitch, \$50.

Class 4—Champion Pointers—For the best dog, \$50; for the best bitch, \$50.

(Judges in this class will be instructed not to discriminate with regard to weight.)

OPEN CLASSES.

Class 5—Imported English Setters or their Progeny of the First Generation—For the best dog, \$35; second best, \$20. For the best bitch, \$35; second best, \$20. For the best dog puppy under 12 months of age, \$10; for the best bitch puppy under 12 months of age, \$10.

Class 6—Native English Setters—For the best dog, \$35; second best, \$20. For the best bitch, \$35; second best, \$20. For the best dog puppy under 12 months of age, \$10; for the best bitch puppy under 12 months of age, \$10.

Class 7—Imported Red, or Red and White Irish Setters, or their Progeny of the First Generation—For the best dog, \$35; second best, \$20. For the best bitch, \$35; second best, \$20. For the best dog puppy under 12 months of age, \$10; for the best bitch puppy under 12 months of age, \$10.

Class 8—Native Red, or Red and White Setters, either Irish or Crossbred—For the best dog, \$35; second best, \$20. For the best bitch, \$35; second best, \$20. For the best dog puppy under 12 months of age, \$10; for the best bitch puppy under 12 months of age, \$10.

Class 9—Black and Tan, or Black, White and Tan Gordon Setters, either Native or Imported—For the best dog, \$35; second best, \$20. For the best bitch, \$35; second best, \$20. For the best dog puppy under 12 months of age, \$10; for the best bitch puppy under 12 months of age, \$10.

Class 10—Pointers of Fifty Pounds Weight or Over—For the best dog, \$35; second best, \$20. For the best bitch, \$35; second best, \$20.

Class 11—Pointers Under Fifty Pounds Weight—For the best dog, \$35; second best, \$20. For the best bitch, \$35; second best, \$20.

Class 12—For the best dog puppy under 15 months of age, \$20; for the best bitch puppy under 12 months of age, \$10.

Class 13—Chesapeake Bay Dogs—For the best dog, \$35; second best, \$20. For the best bitch, \$35; second best, \$20.

(Judges in this class will be instructed not to discriminate with regard to length of coat.)

Class 14—Irish Water Spaniels—For the best dog or bitch, \$20; second best, \$10.

Class 15—Cocker Spaniels—For the best dog or bitch, \$20; second best, \$10.

Class 16—Cocker Spaniels—For the best dog or bitch, \$20; second best, \$10.

Class 17—Field Spaniels of Any Other Breed—For the best dog or bitch, \$20; second best, \$10.

Class 18—Foxhounds—For the best couple (dogs or bitches), \$20; second best, \$10.

Class 19—Beagles—For the best dog or bitch, \$15; second best, \$10.

Class 20—Dachshunds—For the best dog or bitch, \$15; second best, \$10.

Class 21—Fox Terriers—For the best dog or bitch, \$15; second best, \$10.

Class 22—Greyhounds—For the best dog or bitch, \$15; second best, \$10.

Class 23—Scottish Deerhounds—For the best dog or bitch, \$15; second best, \$10.

DIVISION 2.—Non-Sporting Dogs.

Class 24—Mastiffs—For the best dog or bitch, \$20; second best, \$10.

Class 25—St. Bernards—For the best dog or bitch, \$20; second best, \$10.

Class 26—Newfoundlands—For the best dog or bitch, \$10; second best, \$5.

Class 27—Siberian or Ulm Dogs—For the best dog or bitch, \$10; second best, \$5.

Class 28—Dalmatian or Coach Dogs—For the best dog or bitch, \$10; second best, \$5.

Class 29—Shepherd Dogs or Collies—For the best dog, \$15; second best, \$10. For the best bitch, \$15; second best, \$10.

Class 30—Bulldogs—For the best dog or bitch, \$10; second best, \$5.

Class 31—Bull Terriers—For the best dog or bitch, \$10; second best, \$5.

Class 32—Pugs—For the best dog or bitch, \$10; second best, \$5.

Class 33—Black and Tan Terriers (exceeding eleven pounds in weight)—For the best dog or bitch, \$10; second best, \$5.

Class 34—Black and Tan Terriers (not exceeding eleven pounds in weight)—For the best dog or bitch, \$10; second best, \$5.

Class 35—Skye Terriers—For the best dog or bitch, \$10; second best, \$5.

Class 36—Scottish Terriers—For the best dog or bitch, \$10; second best, \$5.

Class 37—Dandie Dinmont Terriers—For the best dog or bitch, \$10; second best, \$5.

Class 38—Yorkshire Terriers—For the best dog or bitch, \$10; second best, \$5.

Class 39—Toy Terriers (not exceeding five pounds weight)—For the best dog or bitch, \$10; second best, \$5.

Class 40—Blenheim, King Charles, or Japanese Spaniels—For the best dog or bitch, \$10; second best, \$5.

Class 41—Italian Greyhounds—For the best dog or bitch, \$10; second best, \$5.

Class 42—Poodles—For the best dog or bitch, \$10; second best, \$5.

Class 43—Miscellaneous Dogs or Bitches—The sum of \$15 will be given, to be awarded at the judges' discretion, for breeds of dogs which have not been assigned special classes.

Class 44—Trick Dogs—For best dog or bitch, \$20; second best, \$10.

This premium will be awarded by a committee appointed for the purpose, and after competitive exhibitions to be given on each afternoon and evening of the show.

For further particulars address E. J. Forster, Secretary, P. O. Box 3008, Boston.

Officers for 1878.—Pres., W. H. Cowing; Vice-Pres., J. Fottler, Jr., E. L. Dorr; Treas., T. T. Sawyer, Jr.; Secy., E. J. Forster. Exhibition Committee—F. B. Greenough, I. Nelson, Borland, T. T. Sawyer, Jr., Luther Adams, Samuel W. Rodman, James F. Curtis, John Fottler, Jr.

FIRST ANNUAL BENON SHOW OF DOGS AT BOSTON.—We shall be glad to forward to any one who may desire them, copies of the rules and regulations, catalogue of prices, classification of dogs, with entry blanks of the bench show of dogs, to be held by the Massachusetts Club, on March 26, 27, 28 and 29.

ST. LOUIS BENCH SHOW—St. Louis, Feb. 2, 1878.—*Editor Forest and Stream and Rod and Gun:* The great dog show is about the only topic of conversation in St. Louis at present. Entries are coming in rapidly, and by the 5th I expect to be crowded. All the classes seem to come in for a share. The Rink is fast assuming show form. It will be handsomely decorated and will look grand. All the space for exhibits of sportsmen's goods will be occupied. The Eastern dealers are going to make elegant displays. A taxidermist has requested sixteen feet square for his display of birds and animals. A St. Louis gentleman will show a handsome new hunting wagon, fully equipped, which cost \$700. There will be about a dozen boats of different design. Mr. Dabney Carr has been made manager of Division 4 (sportsmen's goods.) F. O. De Luze, agent for Spratt's biscuits, has increased his donation for class 63, native setters, from \$25 to \$75 value. The prize will be made by Tiffany & Co., of New York, in their best style. Messrs. E. C. Sterling and C. H. Turner are appointed a committee to meet visitors at all trains. Wagons will be provided by the association to convey all dogs from the trains to the Rink at no cost to exhibitors. Rates for visitors have been secured at Barnum's Hotel at \$1.50 per day. The proprietor, Col. Pratt, is an ardent sportsman, and the hotel is an excellent one. The St. Louis dealers are preparing places for their exhibits. Some of them, in addition to their own handsome displays, will exhibit cases of goods which were at the Centennial. Yours, truly, CHAS. LINCOLN, Sup't.

A NEW ZEALAND DOG STORY.—The Maori of New Zealand presents, perhaps, the best specimen of aboriginal man. Honest and brave, he seems to have had few, if any, vices; surpassing the American Indian in eloquence, he was never cruel in war. In his interpretation of the phenomena of nature he has given us one of the most poetical and beautiful mythologies in all the world. But, alas! even the Maori has been contaminated by his intercourse with foreigners. From his European conquerors, the simple, truth-loving native has learned the art of—what should we say? Perhaps the following extract from a New Zealand newspaper will show sufficiently how totally changed the whole Maori cast of mind has become:

There is a dog at Taupo, and also a young pig, and those two afford a curious example of animal sagacity and confidence in the *bona fides* of each other. These two animals live at the native pa on the opposite side of Tapuaharuru, and the dog discovered some happy hunting grounds on the other side, and informed the pig. The pig, being only two months old, informed the dog that he could not swim across the river, which at that spot debouches from the lake, but that in time he hoped to share the adventures of his canine friend. The dog settled the difficulty. He went into the river, standing up to his neck in the water, and crouched down; the pig got on his back, clasping his neck with the forelegs. The dog then swam across, thus carrying his chum over. Regularly every morning the two would in this way go across and forage around Tapuaharuru, returning to the pa at night, and if the dog was ready to go home before the pig, he would wait till his friend came down to be ferried over. The truth of this story is vouched for by several who have watched the movements of the pair for some weeks past."

DACHSHUNDE.—We are glad to know that Mr. F. Leisler's fine Dachshunde Puck and Nellie, which were noticed by us at the Philadelphia show, will be sent to the St. Louis Bench Show. To a correspondent who asked us to give Mr. Leisler's address, we can furnish the same on application directly to us.

DEATH OF DASH.—Mr. J. C. Comfort, of Cumberland, Pa., informs us of the death of his well-known setter Dash. Dash was imported in 1866.

A POSSIBLE CASE WHERE NICOTINE PREVENTED RABIES.—A correspondent, "B. P. B.," of Galveston, Texas, informs us that once he had his Newfoundland dog bitten by another dog, supposed to be mad. As our correspondent was smoking a pipe at the time, he applied to the bitten dog the nicotine in the pipe stem and bowl, anointing the wound with it. The dog never suffered any inconvenience. This question suggests itself to our mind, was the first dog who bit the Newfoundland mad? Nicotine, though somewhat caustic in character, is not considered to be very powerful in its action. We should not be inclined to place any reliance in nicotine, as applied to bites from a rabid dog.

FAIRY'S WHELPS.—Mr. C. H. Raymond's Fairy had eight whelps, Feb. 2, by Mr. Higgins' Lincoln (Dan—Lill.) All are white and orange, good size and well shaped. Six females and two males.

NOTICE TO SPORTSMEN.—Having received so many communications asking us for information in regard to our six-section bamboo trout, black bass, grise and salmon rods, we have prepared a circular on the subject, which we shall take pleasure in forwarding to any address. We keep on hand all grades, the prices of which range from \$15 to \$150. We put our stamp only on the best, in order to protect our customers and our reputation, for we are unwilling to sell a poor rod with a false enamel (made by burning and staining to imitate the genuine article) without letting our customers know just what they are getting.

BOAT AND YACHT BUILDING—(12th Paper.)

BY NAUTICS.

A NEWPORT BOAT.

The drawings with this article, diagrams No. 40, 41 and 42 give a model largely in use, and commonly called the Newport boat. The buttock lines are not shown, but their position is indicated on the half breadth and body plans. The distinguishing features of this model are light draft, and the wide shoulders or hips giving great stability. This boat may be sloop-rigged, but is usually cat-rigged. A cat-rig is, undoubtedly, the safest and easiest craft there is when working to windward; running free, the cat-rig is unpleasant. The large mainsail is far forward of the centre of gravity, and consequently a large and strong rudder is necessary to keep the boat on its course. The "rise" of the outward end of the boom must be sufficient to prevent its dipping into the water when the boat rolls, as roll it will when running free. The

mast must be of extra strength, as no shrouds are practicable. This boat may be built of any size preferred. For a boat 20 feet long the ribs may be three-fourths of an inch at deck line, and three-quarters by one and one-half inches on the keel. The keel is flat, and may be one and one-half inches

thick. Stem and stern deadwood, two and one-half inches thick along the rabbet or grooves. Centre-board, one-third the length of the load water line. Foundation of the trunk, two inches thick, the pieces to run some distance fore and aft of the trunk, materially stiffening the boat. The trunk should be so placed that the centre of gravity, or lateral resistance, of the centre-board when down, will be in the same

vertical with the centre of lateral resistance of the hull; the centre of gravity of the centre-board can be found in the same manner as described for finding the centre of gravity of a triangle. Rudder for a twenty-foot boat, about two feet long, made and hung as described for the skip-jack yacht. For the benefit of those who are not used to drawing, some explanation of the mode of making and using scales will be necessary. We will suppose that the builder wants to construct a boat after the Newport model, twenty feet long on the water line. Mark on a piece of paper a line as long as the load water line of sheer plan, and, with a pair of dividers, divide the line into twenty equal spaces, each one of which represents a length of one foot. Draw a series of twelve parallel lines, at equal distances apart, under the first line, and space them like the first line, by lines at right angles drawn across all the lines to intersect the divisions of the first line.

Number the divisions as represented on diagram No. 38; draw the diagonal line as represented on the diagram, and number the end of scale as shown; the large divisions represent feet, and the ending of the parallel lines on the diagonal represent as many inches as are marked on that line. We will now suppose that some certain measure is taken off the boat drawings with the dividers, and we want to know how many feet and inches is represented. Placing one leg of the dividers on the scale on some one of the divisions representing feet, we try different places until we find a position where one leg will rest on some one of the foot divisions, and the other leg touch the diagonal line at its intersection with the parallel on which the measure is taken. The distances indicated on the scale in the diagram are 1 foot 2 inches on the second parallel, 2 feet 5 inches on the fifth parallel, and 3 feet 10 inches on the tenth parallel line. The fractional parts of an inch can be estimated. The enlarged drawings will be more or less inaccurate, but can be easily rectified as explained in the article on drawing. The mast for a cat-rig is best made whole, without a top-mast, and for a boat 20 feet long should be about five inches diameter at the deck line, 2½ inches diameter at the top, and about 25 feet high above deck. Diagram No. 39 shows a method by which a good taper is given to masts or other spars. Suppose a mast is wanted of the dimensions given above—draw two lines, A B, at right angles to one another, as shown on the diagram; set the dividers to five inches and draw the curve C, the intersection of the lines A and B being the centre; draw a line parallel to A, which will intersect the curved line C, at a distance of 2½ inches from B; divide the space between the line last drawn and the line A into four equal spaces, and draw lines from each division to the curved line C. The diagram will now show the line A to represent five inches, or the diameter of the mast at the deck line. The next parallel line gives the diameter at one-fourth of the length of the mast above deck, viz.: 6½ feet above the deck, and in like manner for the rest as shown on the diagram. The greatest diameter of a boom is at or near its mid-length, and tapered each way toward the ends. The boom for a 20-foot yacht should be 4½ inches diameter. The sail for a 20-foot yacht of this model may be about 350 square feet area, or about seventy square feet area of sail to every foot of immersed mid-ship section.

The following dimensions will give a good-shaped sail for a 20-foot boat: Mast, set 15 inches back of rabbet of stem, 25 feet high above deck, and to "rake" three-fourths of an inch to the foot; "peak" of sail, 7 feet 3 inches aft of top of mast, and 25 feet 4 inches from the foot of mast, measured on the diagonal line; hoist of sail, 16 feet and 9 inches; sail measures along the boom 23 feet and 3 inches; from end of boom to peak of sail, 26 feet; along the gaff, 10 feet and 6 inches; the outward end of boom "rises" 2 feet and 6 inches above the foot of sail at the mast. The mast step should be made extra strong and well fastened. A piece of live oak will make the best "tiller," as it is strong and tough. The ballast should be sufficient to bring the boat down to the load water line, and the bulk of it kept as near the centre of gravity of the vessel as possible. Some shifting ballast may be used, but it is best to have the ballast fastened in place, so that there will be no danger of its shifting. A small boat or "tender" is convenient, and sometimes necessary; but if towed astern acts as a clog. Probably the most convenient boat would be one of Penner's portable scows, which can be folded up and stowed in the cockpit or under deck when not in use. Directions for building centre-boards and trunks will be found in the article on the skip-jack yacht. A 20-foot boat of this model draws but 14½ inches water, and can be kept on mud flats which are left bare by low tides without removing any ballast. This is quite a convenience. A sharp, deep boat, ballasted and placed in a similar position, will not rise with the tide, but fill with water. This I have learned to my sorrow, and others may profit by my experience. The Newport boat generally has a light spar bow-sprit, and a jib is set and boomed out when running free. No jib-stay is used. When working to windward the jib is not used, as it would destroy the balance of the sails and give a "lee helm."

BOAT AND YACHT BUILDING.—In reply to the queries of several correspondents, our regular contributor on marine architecture writes:

"I would say that the load water line is shaped according to the judgment or fancy of the designer; the curve of the stem is also a matter of fancy. The paper on drawing (published Nov. 1), contains all that is required to learn the art, and I would reiterate the advice there given—'The quickest way to learn boat drawing is to draw or copy drawings; continue the practice until every point and line and their meaning is indelibly fixed in the mind.' No one need expect to master the subject by simply reading it over—it requires study and practice."

CANOE QUESTIONS.—We beg to state that we are fully prepared to give all information in regard to canoes. We are glad to announce that in case any of the queries are beyond our personal powers we can call upon a prominent canoeist and member of a leading club, who will give us his aid.

EASTERN YACHTING NOTES.—The yachting outlook for Boston and vicinity bids fair for a lively season for 1878. The builders and repairers are all busy.

Messrs. Lawley & Son, on Sixth street, South Boston, are just getting out the frame of a 32-foot keel sloop on order, and have just finished two very handsome cat-rigs 22 feet long, one of which has recently been purchased by Frank Drew, Esq.

Messrs. Hutchins & Pryor are building a 37-foot keel sloop, 14 feet beam, 5 feet draught, on order of Mr. O'Gorman, late owner of the Water Witch. The model and molds were furnished by our celebrated architect, D. J. Lawlor, Esq.,

who modeled the pilot boat 'Centennial,' of New York City. Mr. Robert Bibber is building a cat-rig to order, 24 feet long, and she has every appearance of a staunch, sea-worthy boat.

We also find up Bay View that the curiosity shops are not yet closed. There is a curious craft in course of construction on the beach at Ninth street. Some of her peculiarities are in having bilges lower than her garboards, a solid fore-foot extending two feet up the stern, and having an ell added on for a round stern. Although she may not prove so much an object of curiosity as the vessel that was built in the back woods of New Brunswick, she attracts many visitors.

If the large yachts had been in the water Christmas we might have had a fine regatta, the weather was so warm, with a steady breeze.

D. J. Lawlor, Esq., at his shop in East Boston, is building a veritable English cutter, 50 feet long, 15 feet beam, and 7 feet draught. She is being built in the best manner, and is a fine piece of mechanism. No money will be spared by her owner, Frank E. Peabody, Esq., to make her a complete success. We wish him much pleasure in his new departure. All of the new crafts will be furnished with iron keels. Mr. Peabody's keel will weigh 6,800 pounds, and be 18 inches deep and about 35 feet long, tapering to 1 1/2 inches. Mr. Gorman's keel will weigh 1,500 pounds, and measure 12 inches deep, 23 feet long, and taper to 1 1/2 inches. The keel on the boat by Messrs. Lawley & Son will be as heavy as Gorman's, but not quite as long.

Hollow spars are receiving as much attention as last year, and a number of old boats will appear in new rigs.

Nat. Wales, Esq., is going to have the Wyvern refitted for the coming season, and again his generous latch-strings will hang out for his numerous friends.

—The first annual meeting of the Metropolitan Association of Amateur Oarsmen will take place at the Sturtevant House next Saturday evening.

—Captain Crapo is now playing the role of "The Ancient Mariner" at 647 Broadway, where wedding guests may linger to hear the story of the little "New Bedford's" Atlantic voyage.

BOSTON YACHT CLUB.—The following officers have been elected for the ensuing year:

Com., Frank H. Peabody; Vice-Com., Nat'l Wales; Rear Com., A. Robeson; Treas., A. Russ; Sec., T. Dean; Measurers, D. J. Lawlor, J. B. Smith; Trustees, Benj. Dean, Wm. B. Merrill, Eben Phillips; Membership Com., A. C. Martin, C. E. Russ, W. H. Whitney; Regatta Com., F. E. Peabody, W. H. Bangs, H. H. Kellet, C. C. Barnard.

The club is in a very prosperous condition financially and five new yachts have been added to the already large list.

KING'S SAUCE ROYAL.—The great reputation of Worcester sauce arose from the fact that an English nobleman once declared that with it "he could eat his grandmother." We must insist on the possible fact that with a sprinkle of King's Sauce Royal any man could devour the toughest, the most unsavory and complicated mother-in-law. On fin, fur and feather, on fish, flesh or fowl, King's Sauce Royal will be found to give a flattering flavor.

Sea and River Fishing.

FISH IN SEASON IN FEBRUARY.

SOUTHERN WATERS.

Pompano, *Trachynotus carolinus*. Grouper, *Epiglyphus nigrilus*. Drum (two species). Family *Sciaenidae*. Trout (black bass), *Centropomus niger*. Kingfish, *Menticircus nebulosus*. Striped Bass, or Rockfish, *Morone saxatilis*. Sea Bass, *Sciaenops ocellatus*. Sheepshead, *Archosargus probatocephalus*. Snapper, *Lutjanus caxus*.

FISH IN MARKET.—RETAIL PRICES.—English turbot and sole are in market. Shad of 5 1/2 pounds each are coming in from North Carolina, with very fine red snappers from Mobile. Spanish mackerel, caught at Key West, are also on sale. A very rare and curious fish, the *Laachnotaemus fuleatus*, was exhibited to us by Mr. E. G. Blackford, of Fulton Market. This fish resembled in part the red snapper, but is distinguishable by three elongated spines coming from the dorsal, these spine being over six inches in length. The mouth is huge, and capable of any amount of extension, the end of the jaws being covered with long and sharp teeth. Length 28 inches, breadth 9. This makes the second fish of this kind brought to New York. The *Laachnotaemus fuleatus* is not often caught, even in Key West. It is said to be an excellent fish to eat. Striped bass, 20 to 25 cents; smelts, 15; bluefish, 15; frozen salmon 35; mackerel, 25; Southern shad, 1.50; white perch, 15; Spanish mackerel, 40; green turtle, 25; terrapin, \$18 per doz.; frost fish, 8; halibut, 18; haddock, 8; codfish, 6 to 8; blackfish 15; Newfoundland herring, 6; flounders, 12; sea bass, 15; eels, 18; lobsters, 10; sheepsheads, 25; scallops, \$1.50 per gallon; soft clams, 30 to 60 per 100; whitefish, 15; pickerel, 15; sunfish, 10; yellow perch, 10; salmon trout, 16; black bass, 18; hard crabs, \$3 per 100.

CONNECTICUT.—New London, Feb. 1.—Fishing through the ice attended with but poor success. Few pickerel and many in spawn. No black bass.

THE "WOOD" FLY.—Brother Reuben Wood, of Syracuse, who conscientiously captures the leading prizes at nearly all the Fly-Casting Tournaments, has kindly sent us a half-dozen of the peculiar pattern of flies which is happy in bearing his name. Now, it need not be supposed that the flies are wooden. Nay, they are of most delicate floss and feathers. The bodies are white, head red, hackles brown, and wings and tails of the rayed feathers of the mallard. No other flies are arrayed like these. Mr. Wood tells us that they are to become the "base fly of the world." While we considerably accept his assurance, we prefer to leave the fact to the bass themselves to determine. This he begs us to do. He says:

"Try it any time of day you like; but a dark day, or just at night, is the best. Try it against each and all other flies at the same time, and when you have done let me hear the result." That's fair, certainly! We will test them emphatically. We should think them also excellent samples for trout, and will try them on those fish also. We have no doubt that brother Wood can duplicate these patterns on order, if an order be sent. Brother Wood was in this city last week, and made his genial presence felt.

THE ANGLING SEASON APPROACHETH.—In these early months of the year the thoughtful angler will prepare for spring. On the 15th of next month the trout streams of Long Island will be open by law, if not by nature, and it is well to get tackle in readiness for the occasion. Those whose stock of flies need replenishing can apply to John Haily, 320 Henry street, whose advertisement appears in our columns. Or, if they wish to learn the art of dressing artificial flies, Mr. Haily will impart it in a few lessons. Very opportune and fortunate, we think, are the few days of wintry weather which we perceive precede the trouting season. The very contrast of sleet, snow, storm and cold enhances the delights of the more genial spring days which are sure to follow, sooner or later. We could not fish with half the zest if there were no contrasts of temperature and weather; no change of physical features; no temporary repression of the sap in the trees; of the blood in the veins; of the streams in their ice-bound beds. With the reaction of returning circulation comes the glow. This glow it is which makes all nature smile; it reddens the pallid complexion of men; it imbues us all with health. It "stiffens the sinews and summons up the blood." It renovates, rejuvenates and renews. Hail, stormy winter, as long as it pleaseth. After which, hail gentle spring!

We have made a tour of the tackle-shops, Crook's, Conroy's, Abbey & Imbrie's, Marsters', Peck & Snyder's, Fish & Simpson's, Shipley's of Philadelphia, Reed & Sons, and Schaffers of Boston, and others, and find their cases and drawers filled with goodly assortments of tackle, from which they are filling country orders with an activity which would seem to reflect credit upon the voracity of fishes and the propagating efforts of fish breeders.

SHEEPSHEAD AT THE BREAKWATER.—Perhaps the greatest place for sheepshead fishing on our coast, and a place the least resorted to by sportsmen, is the Delaware Breakwater, situated at the mouth of Delaware Bay, on the Delaware shore, just inside of Cape Henlopen. The peculiar formation of this structure, and its close proximity to another "work" of the same description, namely, the "Ice Break," has everything to do with the fact that sheepshead are so numerous around its base. The large stones, sandy and muddy bottom, and precipitous, or rather sudden descent of the walls, forming the breakwater, and its comparatively undisturbed locality, render every encouragement to the tourist seeking the capture of the finny specimen. In order to thoroughly enjoy the sport incident to fishing of this description, one must familiarize himself with the customs of the "game," or his most energetic efforts would only be rewarded by disappointment. "An ounce of experience is worth a pound of theory," and experience is not to be obtained in this matter without the aid of one accustomed to its toils. On the bleak surface of this Breakwater, in a bleak house, exposed to all the howlings of the winter's gale, and alike to the stifling rays of the summer's hottest sun, a middle-aged man and his family proudly hold in baid the responsibility of tending "keeper" to the light-house projecting from the roof of his storm-beaten dwelling. Rather tall, straight as any arrow ever made, with a face covered by a thick, black beard, an honest and open countenance, imposing full confidence at first sight, Captain Al. Jenkins is a person calculated to entice success to those entrusting themselves to his care for the purpose of taking chances with the line in fathoming the mysteries of the deep. "Good morning, gentlemen—Miss!" and the captain springs ashore from his boat. "Haul up her bows, Charlie. Keep her stern off, and lay out the gang-plank! Now, if you will take my hand, ladies, I'll see that you are safely seated; the gentlemen have boarded my craft before, and they can take care of themselves. All aboard! Step aft, please sir! Shove her off! Up mainsail! Trim aft! Give her some board!" We are off, and, oh what fun! Skipping lightly over the top of the little waves, as they splash against the sides of our boat, or driving headlong through a larger swell, which refuses to lift our bows, skipping along, accompanied by the flap of a bonnet-string, the gurgling sound of the rudder, and the merry voices of a merry party, a breeze on our beam, with the sun-burnt skipper mindful of his trust, his eye fixed on the beach, and silent as a grave. We leave the shore astern and rapidly approach the spot selected for the battle-ground. Passing a few schooners, and perhaps a stray ship or so lying in the harbor waiting for orders, we glide gently in the quiet waters to leeward of the Breakwater, where, having made all fast by stern anchor and bow-line, we rest upon our oars. A bushel basket of speckled-back crabs is uncovered, and the captain and his son "Charlie," bringing to sight the coveted lines in short order, have all hands baited, "eager sense" waiting for the nibble. "Drop down your lead till it reaches bottom, then haul up about six inches to a foot," are the orders of the captain, speaking for the first time since leaving shore, as he quietly lowers the bait over the bows of his boat. "I think we'll have some work to-day; wind nor'west, and not too much of it. Mind the bite, sir! It feels as if some one had hold of your line pulling steady down," and a little voice speaks up, "Captain, my line feels heavy!" "Pull it quick,

Miss, and held on till I get there! Let me have it. Whow! ten pounds or not an ounce!" Watch him as he works his line; now hauling in; now paying out! now holding fast, line in sight; now out of sight, rushing madly to and fro endeavoring to free itself from the grasp of death. The captain never smiles. His line always on the same strain; no jerk, never smiles. "Ready now, Charlie," and the boy stands with a net raised in the air. Dash! splash! and the enemy is captured in the meshes, swung from the water and laid in the bottom of the boat, secured safely from further temptation and all wet weather. There is no sport like it when they bite; there is no sport so tedious when they do not bite. But the chances of a turn at the glorious pleasure are well worth the cost; and should the tyro happen to meet with a fortunate trip, I feel assured that he (if he possesses any sense for true sport) will not rue the trouble he undertook nor envy the moments spent in the boat of Jenkins while in search of the hidden treasures by the walls of the Breakwater.

CHARLES GIBBONS, JR.

THE BASS ROD.

CHICAGO, Jan. 22, 1878.

EDITOR FOREST AND STREAM:

In answer to some of your correspondents who inquire about the kind of rod used in black bass fishing, I say that the rod I use is made by J. C. Wells, of Milwaukee, has an ash butt, secure joints, and tip of natural cane or bamboo. I sometimes substitute a tip of lancewood for the cane, and thus add a little to the stiffness of the rod.

I notice in Hallock's "Gazetteer" a strong recommendation of the Meek reel in casting for bass. While I commend this reel for superiority of workmanship and finish, and its perfection in some kinds of fishing, my experience in casting for bass is, as stated in my former note, that this reel is not the best. In reeling in after a cast, the rapid action of the reel is an advantage, for the reason that you can then control it; but in making the cast, this same rapidity is sure to involve you in difficulties, and your line in exasperating confusion. I have abandoned the Meek reel, and used only the double multiplier.

Recurring once more to the Wells rod: In addition to the lightness of its weight, it has sufficient elasticity and strength to capture any fish found in our waters. I took a green bass one day last summer, that weighed (on the scales, and not in the eye) five pounds, thirteen ounces. He made a vigorous fight, and tested the rod thoroughly.

On an afternoon late in the fall, I had come in from duck shooting. Thinking to finish up the day, I shoved out in La Buu Lake in a small duck boat, taking a rod, landing-net and an artificial minnow. On the second cast a fish struck the bait, and in a moment I was fully aware that he was a big one, for he made a rush that carried out, at least a hundred feet of line. When I checked him, he made a bee line for the boat, passing quickly under it, and would have doubled and broken the rod in pieces, had I not quickly slipped the tip of the rod over the stern of the boat, and given him foilage. He tried this same plan three or four times, but finally gave it up for more distant action. After about twenty minutes of hard and exciting work, standing all the time in a crank boat, I brought him alongside, and slipped the landing-net over his head, and the fish in the boat. It proved to be a small muskellunge, three feet two inches in length, and weighing fourteen pounds. The rod worked to perfection during the whole contest. By the way, I notice that some of your correspondents persist in calling the rod a "pole." No fisherman will submit to that, and our friend, Capt. Fitzgibbon, of Indianapolis, will surely kill any man who perpetrates the crime in his presence.

Our brother, Wm. C. Egan, of Chicago, has taken unto himself a wife, as fair and beautiful as the bride of Morning, and down to warmer climes for his honeymoon. His sporting days are not over, and you will see him, no doubt, in the coming summer time, on the banks and bosom of the broad St. Lawrence. GAO. A. SUHRMUT.

SPLIT BAMBOO RODS.

To our customers and the public:—In reply to the damaging reports which have been circulated respecting the quality of our split bamboo rods, by "dealers" who are unable to compete with us at our reduced prices, we have issued a circular which we shall be pleased to mail to any address, proving the falsity of their assertions.

CONROY, BISSETT & MALLESON,
Manufacturers, 65 Fulton Street, N. Y.

DUDLEY'S PATENT POCKET CARTRIDGE-LOADER.—Among the late inventions patented is one by J. H. Dudley, of Poughkeepsie, N. Y. It is a cartridge-loader. The old method of loading cartridges for breech-loading guns necessitated the use of several cumbersome tools. The Dudley Pocket Cartridge Loader is not larger than a good-sized jack-knife. The whole is combined in one instrument, and is very simple. The price is about three-fourths less, also, than the old appliance.—*Brooklyn Eagle.*

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

A number of anonymous correspondents will understand why their queries are not answered, when they read the lines at the head of this column.

A. B. H., Tullytown.—Have sent to California to find out.

H. R., Philadelphia.—The papers you require have been sent you.

J. P. S., Philadelphia.—Refer you to reply to T. A. Mc. as to beagles.

N. E. R., Fairfield, Ill.—We sent you last week the pamphlets you required.

W. H. W., Cincinnati.—Mr. Jefferson has not had his picture chromolithographed.

B. M. S., La Grange, Texas.—In next number will have a full description of the breed.

J. R. M., Hillsborough, Ohio.—"Rob Roy on the Baltic" is published by Roberts, of Boston.

W. W., Albany.—The difference of time between London, Eng., and New York is 5 hrs. 1 min.

PICKET, Victor, N. Y.—We will do what we can for you. Write us again in about two weeks.

P. R. S., Stewardville.—The Perry gun out of date; would not know where to get the parts you require.

H. H. S., Ithaca.—Please send me forms of entry for St. Louis Bench Show, Ann. Sent you some last week.

Jim.—The Preston Ponds, three in number, are in the Adirondacks. Their outlet is Cold River which enters into the Raquette.

M. D., Stanford, Ky.—One of the best artists in your State for photographing dogs and animals is Wybraut, 141 Market street, Louisville.

H. W. H., Louisville.—Powder used at the Tatham Trial of Improved Chilled Shot was No. 1 Ducking. See reply to "Calla Lily" in this column.

C. R. Van V., New York.—We refer this inquirer to the answer we have given J. W. S. The case is precisely the same, and wants a similar treatment.

C. V., Pine Bluff.—Is there a firm of Lon & Garlick, gun dealers, in New York? Yes, in Chambers street; also, there is a firm of Onlou & Cornwall.

C. S., West Meriden.—I want to settle as a gun maker; where shall I go to? Ans. Would advise some town in Texas, and to combine lock-repairing and fine iron work with it.

F. L. A., New London, Conn.—What charge shall I put in a Bond double gun, 24-gauge, 29½ in. barrel, ¾ in. thick at muzzle, 7½ pounds? Ans. Two drachms powder ¼ oz. shot.

O. G. B., Galveston.—Is there any sense or reason in cutting young pointer or setter puppies' tails a quarter of an inch? Will it prevent wories? Ans. No common sense and no good reason for cutting dogs' tails to attain the object you mention.

E. S. P., Washington, D. C.—Do not think you ought to buy. The name of — alone, without the Co. to it, is that of a famous maker. Such a second-hand gun, in good order, would be cheap for \$150. Of — Co. we know nothing. Don't.

L. D. S., Philadelphia.—1. Give me the best method of keeping the inside of my gun barrels clean and bright. 2. What is the opinion of the guns made by —, of Birmingham? Ans. 1. Use Eaton's rust preventer. 2. Do not know of such a maker.

W. H. H., Pittsburgh.—1. What is a pace? 2. Give me a book on projectiles? Ans. 1. When men shoot measuring as they make a stride, it is called a pace and is considered as something like three feet, though Webster says five feet. 2. Ordnance reports 7 and 8.

J. L. G., Danville, Canada.—Send me "Camp Life in Florida," price \$1.50. What is the most comfortable route from Boston to St. Augustine and the fare? Ans. Book sent. Take steamer of Murray & Ferris line direct from New York to St. Augustine; fare \$20. Office, 62 South street.

T. M., Chicago.—My spaniel pup had distemper last fall, and since then, on attempting to turn quickly, his hind quarters give way under him, apparently from weakness. Can he be cured? Ans. The dog has partial paralysis. One-tenth grain doses of mus vomica given three times a day would do good.

H. L., Austin, Minn.—1. Give me the names of German papers on sporting topics. 2. Which style of choke-boring is most in use, when the choke is at the muzzle, or where it is from ¼ to 1 inch from the muzzle? Ans. 1. *Deutsche Jagdzeitung*, Ellenberg, Prussia; *Der Waldman*, Leipzig. 2. The gradual, not the sudden, choke.

J. B. C., Cumberland.—Give me some book where I can find picture of H. T. and plunge trap. 2. Do you know such a gun maker as Smith, of London? 3. Could I send it to England to have it altered to a centre fire? Ans. Refer you to a former number of *Forest and Stream*. 2. Do not know such a maker. 3. Much cheaper to have it done at home.

A. R. H., Saint Ansgar, Iowa.—1. Where are the Ballard and the Spencer rifles made? 2. Who make Creedmoor rifles? 3. Are there any buffalo in Iowa? Ans. 1. Schönerling & Daly, 84 Chambers St., N. Y., the Ballard, and the Winchester Repeating Arms Co., New Haven, Conn., the Spencer. 2. The Sharps and Remington and Ballard. 3. No.

T. & F., Columbus, Ohio.—Conroy, Bisset & Mallison have the Mitchell bass rods for sale. We bought one of them last summer. We do not understand that the Mitchell rods are made to order by the manufacturer. The Orvis bass rods, both wooden and bamboo, are very fine. We prefer his wooden bass rod to his bamboo rod for our own use.

W. H. H., Grove street, New York.—Have a Richards BB. I want to load it for trap-shooting. It is 10-bore 32-inch. In loading shells must I press hard? Is crimping shells detrimental to good shooting? Ans. Four and one-half drachms powder, 1¼ oz. No. 8 shot. Use Hazard's Electric No. 4 or Dupont's No. 2. Crimping shells is supposed to improve shooting.

J. B. Meli, Strasburg, Va.—Have an 18 bore 36 inches long. It shoots small shot well. Want it to shoot No. 1 and 8 B's. Can I do that with choke-boring? Would it then shoot large shot better? Ans. Would not advise its being choke-bored. Not intended for large shot. Think you would spoil the arm. But if you wish to try the experiment send it to Mr. Squires, No. 1 Courtland street.

T. M. Gwyn, Woodstock, Ohio.—Please inform me in what counties in Pa. the wild pigeons are feeding. I know they are roosting in Bloomingfield Twp., Trumbull county, Ohio and they fly in all directions. Would like to hear from Jefferson and Clarion counties in Pa., or anywhere else that birds are plenty. Ans. C. Crittenden, Garrettsville, Ohio, has plenty of wild pigeons to sell. The "woodcock are full of them" over there.

G. W. B.—In two of the New York daily papers I see a notice of the progress and advancement of the "Adirondack Club." Will you, through your columns, be kind enough to inform me where I can communicate with said club? Ans. For some particulars of the Adirondack Park, see this week's issue of *Forest and Stream*. Jas. R. Thompson, of Jersey City, is the President. He will give you the names of the other officers.

Jim Red, Fort McKarett, Texas.—Can I procure a rubber boat to carry two persons? Ans. Have inquired among the manufacturers of rubber goods and they say none are made. There is, however, a "Monitor Raft" sold by the Combination Rubber Company, 62 Church St., N. Y., price \$75, which consists of rubber cylinders (to be inflated) connected by a suitable framework, with an elevated seat for the fisherman. See "Sportsman's Gazetteer."

M. C. J., Philadelphia.—What is the proper load for pigeon shooting, 21 yds. rise, for a Remington breech-loading gun, No. 10 bore, 30-in. barrels? Also, the best kind of powder, shot and wads to use. 2. If a bird is shot between the trap and shooter, or on a line with the shooter, is it considered his bird or not? Ans. 1. 4½ drs. powder, 1¼ oz. shot, Dupont's or Hazard's, two pink can tridgers over powder, one black over shot. 2. The bird is scored if gathered anywhere within the boundary.

F. G. B., Hillboro Bridge.—1. Is there a shot-gun shell other than the Draper, that uses a common percussion cap? 2. Where can I obtain Kay's shot cartridge, and buy Draper's shells at 18 cts.? 3. Have a Phenix gun, B. L., but 233 shot 13a 3-in. target, 40 yds., No. 8 shot. Is that a good pattern? 4. Is — a good gun, and what is the price? Ans. 1. Not any. 2. Mr. Squires, No. 1 Courtland St., New York. 3. A first-class performance. 4. Admirable arm, and costs something like \$75 to \$85.

J. W. S.—My dog's hair is falling out, not that he gets bare, for the hair seems to be replaced as fast as it falls out. It is a nuisance, covering one's clothes and furniture. I use Nalder's tablet to wash the dog with. What shall I do? Ans. You fail to mention the breed of your dog, whether long or short haired. The trouble is best remedied by regular brushing, and plenty of open-air exercise. Confinement and lack of exercise causes the hair to fall. The soap you mention has a good reputation.

A. S., Troy.—1. Who is the publisher of "Wilson's Ornithology" and what is the price? 2. Is there a work on animals with colored plates, who published by and the price? Ans. 1. There have been several editions of Wilson issued; the most recent was published by J. W. Bonten, No. 706 Broadway, New York. See advertising column for price. 2. "Audubon and Bachman's Viviparous Quadrupeds of N. A.," now out of print, hard to get and costly. Randolph & Co., of Broadway, will give you particulars.

SVM FORNIZER, Memphis.—My pointer is exceedingly addicted to tightness of the bowels. Has suffered so before. He attempts to have an operation every few minutes, and bows his back until his rump almost touches the ground. What is the matter with him, and what shall I do? Ans. The dog has dysentery. Give small doses of castor oil, and inject into the bowels, after each evacuation, 10 drops tincture of opium in a spoonful of starch water. Do not feed meat, and let the diet be simple for a while.

P. D., Eaton Rapids, Mich.—I shot a partridge four weeks ago from my buggy. Since that time my horse has not been able to hear a single sound. He showed no signs of being hurt at the time—merely gave a nervous start, but no more than he did on former occasions. 1. Did the report of the gun make him deaf? 2. Can anything be done for him? Ans. 1. The sudden concussion may possibly have precipitated the deafness, but is not likely to have been the absolute cause. 2. The ears should be carefully examined by a competent person.

T. W. J., Erie, Pa.—Have a new \$35 Remington gun, breech-loader, No. 12. Shooting it about one hundred times it leads about three inches from the end of the shell. What shall I do to prevent leading? I won, with this gun, the badge last Friday; score 24 out of 25 balls. Member of the Northwestern Shooting Club. Ans. See that there is no roughness in the barrel caused by an indentation from the outside, or otherwise. If perfectly smooth use Eley's pink edge wads and there will be no leading. Remove the lead with wire scratch brush.

P. B., Washington.—What will cure my dog of sore ear? Heath good, but shakes her head and scratches. Ans. The dog has canker of the ear. A cap should be fitted to his head to prevent shaking of the external flaps. The internal ear should be kept clean by syringing it with warm water, and a weak solution of lead water be poured in the ear twice a day. (P. B. has only sent initials of his name and not his whole name. We have made an exception in favor of the dog. We positively do not answer questions when not signed in full. No end of such go into our basket.)

T. A. Mc., Wilmington.—A harrier is generally from twenty to eighteen inches high, with points similar to a foxhound. Legs should be straight; feet round and not too large; shoulders well set back; head like a foxhound's, only lighter; usual colors blended pieb, black, tan and white and blue mottles. A beagle is a daintier dog, with a finer head than a harrier, and sharp-nosed; body compact and muscular; height from twelve to fifteen inches; color same as the harriers. Has a flute-like bark; much more ear and finer than a harrier's. For points we refer you to the papers Dec. 22 and 27.

H. B. A., Bellevue, Ohio.—Have a fine Gordon bitch twenty-one months old. She has never been to the dog. Was in heat three months ago. Now her tests are much distended, and she is uneasy at times. When taken out to exercise, is as lively as ever. Fed on cooked meat and vegetables. Appetite variable. Ans. Not an unusual case. Exercise the bitch freely, but, of course, so as not to over fatigue her. Do not feed her on meat for a while. A little camphorated water might help her externally. Let her have a scrupulously clean bed in a properly ventilated place. Write to a week if not better.

H. H. R., Rockford, Ill.—1. What is the color and what are the points of a good "Blue Belton" dog? 2. What kinds of game are they best on? 3. What price ought I to pay for a setter, say 18 months old and who has had first season. I mean a fair dog, not one with many fine points. 4. I shall take a trip into Texas next month. What route would you advise me to take and near what towns would I find ducks, snipe or turkeys? Ans. 1. Refer you to article on Blue Beltons in next week's paper. 2. Good for everything. 3. \$35 to \$50. 4. Refer you to Hallock's Gazetteer, as the answer would take a half column.

R. J. S., Jr., New York.—Can you give me information about Halifax, N. S., or St. Johns, N. B.? Is living expensive there and can apartments be taken in the English system? Is there any trout fishing in the neighborhood and is it free? Ans. Living is more expensive in Halifax than in St. John. You can board at both places on the English system. There is better trout fishing near Halifax than near St. John, but good at both. Trout fishing free except in streams protected for government hatching purposes. Finest information can be found of the entire Provinces in Hallock's Fishing Tourist, for sale at this office.

E. R. D., Newark.—1. Have a Frank Wesson rifle, cal. 38; it is not chambered out for the extra long cartridge. Would I be allowed to use it in a 200 yards match? Its weight is 8 pounds. 2. Is Tatham's new chilled shot, No. 8, the same size as the old shot, 399 pellets to the oz.? Ans. 1. The chambering can be done with safety and the rifle would pass according to rules of N. R. A. 2. The improved chilled shot No. 8 should be 499. From No. 1 to 13 standard diameters are made three sizes larger than the English. The Messrs. Tatham will make up to T. N. in improved chilled shot.

N. A. L., Jr., Albany; G. O. Lewis; D. H. D., New Rochelle; P. & K., Detroit; L. M. A. Brooklyn; S. F. and Party, Concord; Duck Snooter, Norfolk, Va.; J. B. S., Rochester.—We can make about the same reply to all these queries as to the Improved Chilled Shot, manufactured by the Messrs. Tatham. The price will be but slightly in advance of the ordinary soft shot. It is a bright shot, and has no plumage coloring. It is very even and cylindrical. The Messrs. Tatham are now selling their improved chilled shot to dealers, and you ought to get it from your nearest gun store. Do not know the price. See tables of penetration in last number.

TELEGRAM, Welles Corners.—1. Where can I procure Miller's "Complete American Trapper"? 2. Does Sharps' rifle, cal. .45, use a straight shell, a smooth or a grooved ball? 3. Would you recommend the —, when all kinds of game are used? 4. Of the twenty-two gallery rifles, which do you recommend? 5. Would you like to hear from me on the "Running Deer" question? 6. Is there a rifle made to shoot ball or shot? Ans. 1. Address James Miller, Publisher, New York. 2. Straight shell, and, for sporting purposes, grooved ball. 3. Would answer your purpose. 4. All are good, the galleries have no preference. 5. Would be pleased to hear from you. 6. There is not.

F. G., Louisville.—Have you ever known of the calla lily blossoming double? I have one that has the cup formed in three distinct petals. Ans. Thos. Meehan, in the Gardener's Monthly for 1877, page 185, says:

"No doubt the peculiar arrestation of bud growth necessary to form the embryonic flower last fall was imperfect. It grew a little after having started to form the flower bud and then was again speedily arrested." Double-headed were unusually plentiful last season, but we have not yet seen one with three developed apertures. It is of little use even if it keeps its character, except as a curiosity. The normal flower is much more beautiful, and we doubt much that this variety would be much thought of even if it proves permanent.

H. G. L., Milton, Pa.—1. What improvement is there in the Winchester model 1876 on the 1873? 2. In what work on hunting can I find the most complete directions for deer hunting? 3. In what State or Territory can I find the best deer hunting? 4. Do you consider the — the best gun for frontier use? 5. Is it advisable for one going West to hunt to carry cartridges with him, or are cartridges of a particular make, Winchester, for instance, easily procured? Ans. 1. Model of 1876 uses cartridges of 45 grains, that of 1873 55 grains. The former has a safety guard. 2. Hallock's Sporting Gazetteer. 3. Michigan, Virginia, Montana and Colorado. 4. An excellent gun for every purpose. 5. If you use model of 1873 you will find cartridges in the large towns, but you had better carry them with you if you use the model of 1876.

D. F. E., Strasburg, Va.—1. What is the best shape to build a flat-bottomed boat for swiftness and to draw least water, so a carpenter could understand it. For lightness what is next best to cedar, which we cannot get here. How far below the oarlocks should the seat be placed? 2. Where are the new lines of Colts and the new Smith & Wesson manufactured? 3. Do the Remington Co. make a rifle that can be used with their shot-guns (double barrel)? I have a \$60 Remington that I would like to have made so I could use it as a rifle. I saw something of the sort in your paper some time ago. What would it cost? Ans. 1. See *Forest and Stream* page 11, No. 1, vol. 9. Basswood next to cedar. Three inches below the oarlocks. Colts at Hartford, Wesson's at Springfield. 3. The Remingtons have a rifle barrel which slips inside of their shot-gun. Cost \$33.

J. R., Washington, D. C.—Can you inform me if the New River, in Southwestern Virginia, can be navigated by skiff or canoe from the R. R. crossing in Montgomery Co., to its junction with the Gully, where the two form the Kanawha? Also, if it is a good stream to fish in, the kind of fish to be caught, and the varieties of game to be found in the section of country it passes through? If the thing is practicable, three of us propose to make the trip next June. Ans. It can; and much higher toward its source,—all the way through Pulaski and Wythe counties. It is a most romantic and charming river. Good bass fishing may be found in places, but the river is much best by fish-traps. The game is deer, turkeys, ruffed grouse and gray squirrels, to say nothing of the "mountain boomers" (red squirrels). A canoe trip will be delightful. There are trout in the tributary mountain brooks of the New River.

WM. E. WEBER, Philadelphia, Pa.—Please let me know what works are out on Natural History, such as birds—I mean late editions, which are illustrated, giving the description and habits, where they breed, when they are in plumage, etc. 2. Is there any which comes out weekly or monthly? 3. Also, send me one of the forms of entry or circulars. Ans. 1. "The Birds of North America," by Messrs. Baird, Brown and Ridgway, in 3 vols. (land birds, only, issued as yet), is the latest and best work on ornithology. A fourth volume, containing the water birds, is promised. The price of the work is \$10 per volume uncolored, \$20 colored. The illustrations consist of figures of the heads of different genera. 2. The "Bulletin of the National Ornithological Club" is a quarterly journal of ornithology, price \$2.00 per annum, the only serial publication on this branch of science in the country. 3. We do not understand this question.

CAPTAIN, New York.—1. What is the meaning of the word "Palma" on the Centennial Trophy? 2. What pattern at 40 yds., 30-in. circle, 1½ oz. No. 4 shot (American), would beat fair one to expect from a 10 gauge, \$45, Remington shot-gun? 3. Could you use over 4 drs. powder in such a gun comfortably? 4. Would the above gun, with the above charge, knock over a duck at 40 or 50 yds., sure, providing you hold straight? 5. Will you kindly publish at your convenience, some time between now and spring, a draft of a Fair Haven sharpie, of say about 15 ft. long, giving about 3 cross-sections, the place for the C. B. trunk, the mast steps, and dimensions of the sails? Ans. 1. Palma is the Latin for the palm branch, which was accorded to the victor in the games. Hence it is employed as a symbol of victory in the trophy. 2. R. B. 228, L. B. 237, No. 7 chilled shot. 3. Yes, if you wish to. See F. & S. of Jan. 31, 1878. 4. Only requires holding straight. 5. Described in Hallock's "Gazetteer."

G. C. W., Chippewa.—1. Pray give me differences between a King Charles and a Blenheim spaniel? 2. Is their breed extinct? 3. What is a Maltese terrier? 4. What would be your opinion of an Italian greyhound, white, with fawn ears, 5 yrs. old, and weighing 5½ lbs.? Ans. 1. King Charles spaniels have greater length of ear than Blenheims, and ought to be slightly heavier dogs. The cross between the two breeds, as they assimilate closely, has led to a great deal of confusion. A King Charles has wavy hair without curls; color should be a rich black and tan, without white; weight should be 6 and never over 7 lbs.; legs feathered to the toes; head, round and bullet-like; eyes an inclination to weep; nose and palate black. The Blenheim may have white on him and a white blaze between the eyes is admirable. Dog lighter than a King Charles, not much feather on the toes and sometimes without it entirely. 2. Breed not extinct, but rare and costly in England. Some fair Blenheims in New York. 3. The Maltese terrier is really a small edition of the Skye, but rounder slightly in form, and with a silkier coat, and a curved tail. Ought not to weigh over five to six pounds. Dog very scarce, and do not know of any in the country which come up to standard. 4. If in good form, with weight you describe, though she would be classed a trifle higher if of one color, still your bitch must be a beauty, and should be highly prized.

FORTY FIVE, Jacksonville, Ill.—1. Have a \$15 Remington 12 gauge gun that the black paint on the barrels has rubbed off enough to spoil the looks. Give a receipt so that I can replace it myself. 2. Is the \$45 gun choke or cylinder bore? 3. The shells (brass) that I have been using are 2½ inches long and the chamber of the gun is 3 inches. Would a 3 inch brass shell shoot any better than the 2½ inch? 4. Some how or the other I am afraid of the steel barrels and don't like to shoot heavy loads in the gun. Now, will they stand as heavy charges as twist barrels? 5. Have the Remingtons ever made any experiments in that direction; and to prove whether the metal will become rotten after repeated explosions like car-wheels after running a while? 6. Can't you induce them to make experiments in that direction as you did the Winchester Arms Co. with their new life? 7. What part of Minnesota would you settle in for farming, cheap, good land and good hunting and fishing being the two chief things wanted? Ans. 1. We might give you receipts for browning, but when it is done at home a notch is made of it. Send it to a gunsmith. 2. Choke. 3. The chamber will not take a 3 in. shell; only advantage would consist in the use of more powder. 4. No reason for the least alarm; all stand heavy charges. 5. All are tested beyond any charge a sportsman would like to put in the guns. Car-wheels are cast, gun-barrels are forged; the comparison does not hold good. 6. Suppose the Remingtons would be quite willing. You can use 50 drs. powder if you want to. 7. The Southwestern part of the State, on the Sioux city road. Choice there of timber and prairie.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INSTRUCTION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

No. 111 (old No. 103) FULTON STREET, NEW YORK.

[Post Office Box 2832.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Twenty-five per cent. off for Clubs of Three or more.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

* Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, FEBRUARY 7, 1878.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith, and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous contributions will be regarded.

We cannot promise to return rejected manuscripts. Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost. NO PERSON WHATEVER is authorized to collect money for us unless he can show authentic credentials from one of the undersigned. We have no Philadelphia agent.

Trade supplied by American News Company.

CHARLES HALLACK, Editor.

Western Manager.

TENTH VOLUME.—With the present issue we begin the tenth volume of FOREST AND STREAM, and the second volume of the consolidated paper. In expressing our thanks to the public for their increased confidence and patronage, we feel at liberty to state that we are perfectly satisfied with our present status and success, though we are still ambitious, and hope by continued industry and fair dealing to merit the fullest measure of praise and emolument which it is possible to secure. In a few days we shall publish some substantial testimony of the geographical area over which our FOREST AND STREAM AND ROD AND GUN spreads itself, in the shape of a printed list of several thousand towns which the paper reaches by mail.

—That worthy and universally respected President of the United States, the late Abraham Lincoln, sagely, but with childlike simplicity, remarked, in one of his Messages, that it is "easier to pay a small sum than a large one." Adopting this maxim, which is peculiarly apposite to these hard times, we have decided henceforward to render monthly bills for standing advertisements. We trust our advertising patrons will apply Mr. Lincoln's maxim practically, and find from experience that it is mathematically correct.

YELLOWSTONE PARK.—At the meeting of the National Association at Nashville, last fall, a committee was appointed to draw up plans for the protection of the Yellowstone National Park. The members, who are Professor Comstock, Major Powell, Lieutenant Wheeler and Professor Hayden, have been in conference with Professor Henry, of the Smithsonian, and are now endeavoring to secure an appropriation from Congress for the protection of the Park. We hope that this important matter may receive from our Washington legislators the consideration it surely merits. The course of Congress toward this project should be neither hesitating nor doubtful. Prompt and efficient action is called for. A suitable appropriation, judiciously applied, for the protection of this national park from the defacings and ravagings of unprincipled vandalism, will insure for the future a domain of natural beauty, which, once destroyed, no tardy effort can replace.

—Dr. J. R. Romeyn, of Keeseville, N. Y., a gentleman who has visited the Adirondacks regularly for twenty-five successive years without being surfeited with the delights of that region, has very graciously sent us a large photograph, in frame, containing a view of Bartlett's well-known sporting lodge at the outlet of Saranac Lake. Just at this season it is an opportunely pleasant reminder of a very pleasant home. The photograph was taken by Mr. G. E. Baldwin, of Keeseville, whose photographs of scenery can scarcely be excelled. We have many of them in our collection, whose details are as perfect as it is possible to transfer from the face of nature.

SLEIGHING.—New York and Brooklyn enjoyed the unusual luxury of a day's good sleighing on Saturday the 2d inst. The number of turnouts was large, and the display brilliant. On Sunday the sleighing was somewhat impaired.

—"It's all over with me now," as the trout said when caught out of season.

Yes; and the joke is all over, by this time.

—It don't look as if the times were very hard when an advertiser like H. C. Squires, No. 1 Courtland street, sells in one week eight out of twelve shot-guns advertised by a single insertion in FOREST AND STREAM (Jan. 31, 1878). Yet we have Mr. Squires' testimony to this effect.

THE DWELLERS AT CURRITUCK.—We are glad to have so good an authority as Mr. J. F. Alcorn, who was an officer attached to the wrecked ship "Metropolis," speak a good word for the so frequently maligned dwellers at Currituck. We believe they are termed "buffaloes" locally. They have had the reputation of being little less than pirates. No doubt they do not despise the valuable waifs which the sea throws up to their doors, but we do not believe that their usual habit is to cut off fingers of the dead to get possession of the rings thereon. Mr. Alcorn, in making his report, says:

"In closing I feel that the isolated dwellers of Currituck Beach cannot be passed over without more than mere thanks. Strown as that beach is with scores of wrecks, mute evidences of the frequency of the calls upon their hospitality, on the occasion of this last sad calamity at their doors they were most prompt with their aid, generous in their hospitality, and munificent far beyond their means in the distribution of such spare clothing as was at their command.

A CANDID AVOWAL.—A prominent legal official in Minnesota unloads a debt of gratitude to us in the following language:

"I really think any sportsman who lives in this State should appreciate the send-off which your editor has given Minnesota, by at least remitting for your paper and his hook, the "Sportsman's Gazetteer."

TO ASSOCIATIONS OF SPORTSMEN.—Associations for the protection of game, game and fishing clubs, rifle clubs, and gun clubs throughout the United States and Canada, would confer a special favor by sending us duplicate copies of their printed constitution, by-laws, with list of members, names of officers, etc., for 1878. Such documents of the above character as we may receive will be exceedingly useful, and will further the end and aim of all legitimate sportsmen.

THE LONDON FIELD—THE FIFTIETH VOLUME.

In the best possible taste, our great English contemporary, the *London Field*, tells its history:

On the first Saturday in January, 1853, was published the initial number of the *Field*, and the last issue of the paper, bringing the year 1877 to a close, completed the fiftieth volume and the twenty-fifth year. The *Field*, in giving a review of the publications in England devoted to cultivating a taste in manly exercises and in the sports of the field, mentions that John Wheble, a bookseller, in 1792, associated with John Wilkes and Horne Tooke, wrote the *Middlesex Journal*, which, purporting to give but a dry analysis of parliamentary debates, under the leadership of the fiery Horne Tooke, occasionally indulged in flaming lampoons. The *Middlesex Journal*, riven by the parliamentary lightning of the day, was killed, but Wheble originated in October, 1792, the *Sporting Magazine*, or, as it was described, "A Monthly Calendar of the Transactions of the Turf and Chase, and every other Division Interesting to the Man of Pleasure and Enterprise." For a quarter of a century, though Wheble knew nothing about horse, fox, hound, rod or gun, the *Sporting Magazine*, under his direction, was the leading authority. On our bookshelves there reposes to-day many a volume of this old publication. The paper is blue; the imprint now of a rusty brown. Occasionally, half reverentially we dust off a volume, and have now and then given in this journal extracts from its pages. The *Sporting Magazine* contains a great deal of the P. R., which has the same interest to us now as had the gladiatorial combats of yore. What is not so nice, however, are compilations from *crim. con.* cases of the time. Thank goodness, to-day such purulent matter has been expunged from general literature, and no longer caters to a depraved taste. Wheble, dying in 1820, the Pittmans carried on the magazine. Now arose the most brilliant writer on sporting topics, on horse and hound, that has ever adorned these subjects. Apperley rode as well as he wrote, and under the nom de plume of "Nimrod" (Oh! much-abused pseudonym!) produced those three superb essays—"The Chase," "The Turf" and "The Road"—which are as famous to-day as when they appeared many a long year ago in the ponderous *Quarterly*. The *Field* tells us how the ore in this mine has

been used, and how some of it is dug out every day and claimed as original. In the United States, filching of this character, we regret to state, is common, and few weeks elapse that we do not discover poor rehashes of these topics, derived from the same identical source. Through Apperley's brilliant talent, readers of the *Sporting Magazine* quadrupled in 1827, when Mr. Pittman died. In 1831 the *New Sporting Magazine* was produced, with Mr. Surtees as editor, Mr. Ackerman for publisher, and with "Nimrod" for chief supporter. In 1843 Apperley died.

In 1820, *Bell's Life in London*, was published. The race for supremacy now commenced between the mouthy magazine and the weekly paper, in which the paper won eventually. It was in 1870 that the magazine died after a lingering struggle.

As in New York so in London, we fancy there is somewhat of an over quantity of sporting literature. The supply for journals of this character, at least with us, is in excess of the demand. There is just so much ground to be covered and no more. Readers cannot be forced as in hot-houses. Some few journals must lead; others follow in their wake, dragging out a miserable and anxious existence.

We congratulate our English contemporary on the establishment of what is certainly the greatest of all papers, second only to the *London Times*. The *Field* has accomplished a noble task, and has achieved its success by no chance or accident. It abounds with true English method and soundness. One might gush in a rhapsodic kind of way over its aim and purpose. What it has done which is best, is to have eliminated from a coarse and gross medium the sportsman of only twenty-five years ago, and, by means of scientific study and observation, led him to a higher plane of thought. Our encomiums are, then, hearty and sincere; even we are grateful for the lessons the *London Field* has taught us. May the FOREST AND STREAM AND ROD AND GUN, when it reaches its twenty-fifth year (many of our readers, perhaps all its editors, may have passed away long before that period) only approach the present superlative excellence of the *Field* and the *Country Gentleman's Newspaper*.

SHEEP RAISING IN TEXAS AND COLORADO.

SOME weeks ago there appeared in this paper some few remarks on the availability of Texas and Colorado as a pasturage ground for sheep. Therein we stated that this vital interest, the production of wool, was destined to become in time one of the great leading businesses of the Southwestern country. Since the publication of this article in the FOREST AND STREAM AND ROD AND GUN, we have received a very large correspondence from various portions of the country, asking for further information on the subject of sheep raising. At the same time the paper has been the recipient of quite a number of applications from persons desirous of purchasing ranches in Texas and Colorado. In the present number will be found the first of a series of letters on this subject, written expressly for THE FOREST AND STREAM, by Mr. S. Nugent Townsend, the well-known special correspondent of the *London Field*. Mr. Townsend has devoted a great deal of time and attention to this matter, having visited all the best portions of Texas and Colorado, mainly for the purpose of obtaining reliable data.

From the letters we have received from many parties now actively engaged in sheep raising, we can state that quite universally our correspondents are highly pleased with their business. Of course, a certain amount of caution and judgment is necessary before entering into any novel pursuit. Now, without casting any false glimmers around this business of sheep raising, which is simply a practical one, requiring thrift and enterprise, we still believe that at the present moment it offers many advantages.

Before investing then in a ranch, it would be wise for persons to visit the country and judge for themselves. Questions of drought, of rain-fall, methods of transportation, proximity of a market, salubrity of climate, particular advantages of certain breeds of sheep, should all be studied. Certain ideas which belong to people who have lived in cities must be discarded. There is no necessity for thinking, however, that life in Texas or Colorado must be necessarily a rough one. People mostly build their own nests, and do make their own surroundings. Life in the Southwest is no more lawless than it is in New York. Exaggerated stories run their course, and are sometimes wonderfully enlarged on, when, in reality, if sifted out, such wonderful narrations are found to have no possible truth about them. If, then, dress coats and lustrous boots, white neckties and the frivolities of a somewhat effete social condition do not exist in Texas and Colorado, to replace these there is no end of honest work, and bluff, hearty hospitality. Drones are out of place any where. If an industrious man should go to Texas or Colorado, he will find in sheep raising a fairly lucrative and healthy occupation. If there be no "millions in it," at least it will afford him an honorable means of support, and may impart to a body impaired by the unwholesome life in the cities a sound constitution and physical happiness, which is worth more than all the money in the world.

As an aid to those wishing to select lands in Texas and Colorado, and to avail themselves of the best and most comfortable means of going thereto, the Missouri, Kansas and Texas Railway Company, with its customary accuracy and enterprise, has prepared a railroad map which shows not only the best grazing lands in the State, but the lumber, sugar, cotton, grain and mineral districts, which they will furnish on application.

Here follows the first of Mr. Townsend's letters:

FORT GRIFIN, TEXAS, Sept. 16, 1877.

Mankind, outside of Texas, considers that the Texas and Pacific railway *pro tem* terminates at Fort Worth, in the northern region of this immense State, is the end of all things Texan. "The Texas and Pacific has a paradise to open," say the Dallasites, but at Fort Worth you hear a different story, for every one there has invested more or less in making that most dashing and energetic little city a point which they desire the world to consider a permanent one, and it is said, and that by persons who know what business is over the entire continent, that Fort Worth has grown faster and does more business for its size than does any combination of brick and brains in the United States.

So people in Fort Worth, as a rule, assure you that Borace Greeley's advice to go west holds good only so far West as Fort Worth, and should a morbid craving for pursuing the setting sun irresistibly overcome the tourist or emigrant bound westward to such an extent as to cause him to enter Mr. Bain's stage coach and, in his ignorance, wander to Weatherford, Palo Pinto, Breckenridge, or, even worse, to Griffin that admirer of Horace Greeley and Western skies will, when common sense reasserts its sway, have to reverse his preconceived ideas and adopt practically the motto, Go East, young man, go East; but no further east than Fort Worth, the *pro tem* terminus of the great Texas Pacific.

Seeing is believing. The cry for the extension of the Texas and Pacific is so earnest, the absolute determination of the Texans to have at least an east and west line through a State larger than either France, Germany or Austria, and a working democratic majority existing in the House of Representatives who are believed as a body to hold that a Southern trunk line is due to the interests of the country, make the probability of this line being quickly pushed on so strong that I doubt not a slight sketch of the proposed extension for some hundreds of miles will be studied with interest by many of your readers.

I cannot say anything particularly complimentary respecting the Fort Worth hotel, so besides noting the fact that a new and handsome one is being built to drop the subject and take a seat beside Hooper, a whip, formerly as well known for his courtesy to passengers in California and Oregon as latterly in Texas. A very gentlemanly gambler who does business in Griffin shared the box seat with us, and behind four good horses we sped westward across Tarrant county, iron ore and clay forming the not very productive soil. The Indian corn was black and not healthily looking, but some crops of cotton were very good and regular, and promised a large pick in about three weeks, and some fair sized villas and larger fenced-in enclosures prove that the settlers about Fort Worth are not only wealthy, but enterprising. When it is remembered that this proposed extension of the Texas and Pacific crosses the drainage of the country, the perpetual hill and valley variations of view that ceaselessly as pleasantly strike the eye at every changing moment, can, in such an ever undulating State as northern Texas, be very easily imagined. Now we skirt the brow of a hill and see white and red Fort Worth, with its St. Paul's-like court-house dome, from every point conspicuous; then down into a deep vale, through a thick belt of evergreen oaks half a mile or so wide. As we top the next rise eight miles behind us again appears the city and the dome, if possible more red and more white than before.

The valley of the Trinity River is now sighted from our road on the side of a hill. This valley is covered with a low forest, except in such few places as long, heavily grassed lawns stretch away to the south and westward. Just on this spot I take my bird's eye view from an Englishman's hall, with great taste, built a comfortable villa; behind his house extends for miles a heavily grassed table land prairie plateau. Hooper informed me that this Englishman claimed to be one of the African explorers that, with Stanley, found Livingston. This may have been so, but African explorers have of late grown so numerous that, considering the limited number of Stanley's party when that dashing leader did find Livingston I can only suppose that the dignity has been created in England an hereditary one, and that as in Germany, every son of a baron is a baron, so now, that every lineal descendant of a Stanley is an African explorer, even though he may never have been out of the State of Texas or of the city of London. If this reads ill natured the dies here must be blamed, for the full complement of those pests inhabit Griffin, and, besides, on a permanent soil of mother-in-law visit to them are the dies that I was so charmed to find absent all the summer from San Antonio.

However, to return to the road. As we go west in Tarrant county the soil gets rather thin and much iron weed, or lansey covers, the valleys, which as well as the hills, besides being fairly timber sheltered, are on a much larger and broader scale than those in southwest Texas, and very much more so than anything of the sort in Kansas. A few herds of 2,000 cattle are here in good condition, as are the lively, nice, fat-looking, but ill tempered mustang horses. The limestone which everywhere underlies and often crops up through the soil for hundreds of miles west and south of here improves the grass as much as it disimproves the majority of the springs and water courses. Heavy rain had fallen for several preceding days over northern Texas, so many creeks which, as a rule, are bone dry, appeared to me as quite respectable rivers. The first and prettiest of these—after we had forded the clear fork of the Trinity close to Fort Worth—is Mary's Creek, where we change horses and get a fair lunch at Hunter's. After this we ascend a steep hill and see Weatherford in the centre of the next county—Parker—which we shortly afterward enter. This county is both richer and better watered than Tarrant, which we now get out of. Lignite and fire clay are occasionally found here. Well developed milk weeds, which when eaten largely of by cattle or sheep cause death, thickly stand a long prairie bottom. One stalk of this undesirable weed I found five feet high—a most unusual size. Willow Creek is passed; Weatherford, a pretty little town with a magnificent central, china-tree planted square, puts us up for the night and a sweet, cleared voiced mocking bird sing us to sleep.

Old mother Sikes, as she loves to be called, made us all very happy and merry at the Sikes House in Weatherford, and after our thirty mile drive under a hot sun, civility and good fare are always acceptable. But "There is no union here of hearts That smileth not an end."

For next morning we had to tear ourselves away, leaving our stage coach and old Mother Sikes and our pleasant whip Hooper together, and getting into a little mail wagon with Lieut.-Col. Strang, who was going down to this fort to sit on a court martial, and with the young gentleman who incessantly courts the deities goddess by indulging perpetually in games of chance here. Off we drove at eight next morning, to set over as much as possible of the 100 miles that yet lay between us and Fort Griffin. The Villa of the local hanker, Mr. J. R. Conts—what a business he might do abroad if he only spelled his name with two P's—shone resplendent in its new coat of paint through many pretty trees and shrubs as we passed it. We drove through thick post oaks; the hills were gravelly and white lime stone, and the vales reddish sandy loam, and unquestionably of great richness. About half the land was clear, and the rest had not more timber on it than would be necessary for settlers' purposes of fencing, etc., none of the trees being large enough to get fair sized planks out of.

Having thus acquired a fair idea of what this county was, I turned a willing ear to Col. Strang, who has been for many years Quartermaster at Fort Worth, and knows as well as any man alive what Texas produces and wants, for he has purchased supplies all over the State, from time to time since '67, here for government.

"The Texas Pacific has surveys for three routes through here," he said. "It may, for the sake of coal supply, run as far north as Graham,

in Youngs County. Any and all of these lines are equally good, generally, for Texas and the country. Of course, there has been a great deal of squabbling about the line of road; no town likes to be passed by, for, except in exceptionally rich districts, any town that the T. P. does not go to, will have to come to the T. P."

"You think then, Colonel, that the road's running is a certainty?" "Certain as doom," replied the Colonel.

"But about the government guarantee?" "I insinuated." "Oh, it doesn't amount to anything. Sixty millions is all that is asked—not the money, only the interest at five per cent. If the government give this, they have as security the entire road, the entire splendid land grant—twelve hundred miles of road, and many millions of acres of as fine land as any in the world; and then the breaking up of the largest and most oppressive monopoly in this or any other county—the Central Pacific Railroad—why that consideration alone should be enough for Congress."

"Then you don't believe that Col. Tom Scott has already made, as has been said, or will make, a close compact with the Central Pacific?" "Not a word of it, sir. Such a thing would be a gross breach of faith with the country, and with Texas. Scott would never do such a thing; few know how absolutely he has carried out his contracts, written or implied, to the public. Last year," added the Colonel, "we sent a regiment from St. Louis to San Francisco, one hundred and one dollars head was the railroad charge; the Central Pacific had to take the men just half the way, yet that road got ninety dollars for each man, and the other roads, because there was competition on the Eastern half of the way, had to rest content with eleven dollars per man. Why, troops could be sent to the south of Mexico for the money."

"Mexico, Colonel, what do you think of that business?" "I lived there for three years," said the Colonel, slowly, "the country is getting poorer and worse every year, and I have long been certain that if we don't annex Northern Mexico, and establish a protectorate over the rest of it, that England or France will some time do so, and seriously affect our trade."

S. NUGENT TOWNSEND.

GAME PROTECTION.

—The Saginaw (Mich.) Protection Club, which has been organized only six months, has already accomplished much in preventing the unlawful slaughter of game in its section of the State. Its members are active in promoting a proper public sentiment on the subject.

MONTREAL FISH AND GAME PROTECTION CLUB.—At the meeting Jan. 29th, the following officers were elected for the ensuing year: Pres., R. W. Kelly; Vice-Pres., F. J. Brady; Sec., A. N. Shewan; Treas., W. H. Rintoul; Committee, McPh. Lemoine, H. W. King, F. E. Normandeau, J. C. Wilson, R. A. Alloway, R. White, F. W. L. Penton, George A. Ahern, D. Sinclair, M. Leach, G. Bourdeau, Louis Dupuis. It was then decided that the club shall hold its first annual dinner at the City Club on Wednesday, February 6th. The annual dinner was held last evening, a large number of gentlemen being present.

The Rifle.

THE FOREST AND STREAM AND ROD AND GUN TOURNAMENT

For the Short-Range Championship

And three team medals, which will be awarded to the teams making the first, second and third best scores. Other prizes will be offered also, to take place at Conlin's shooting gallery. Open to teams from any organized rifle club.

Conditions.—Teams—Each team shall consist of ten men. The teams participating must be composed of members of the various clubs which they represent. Rifles—Limited to ten pounds in weight; minimum pull of trigger, three pounds; .22-100 cal. Teams can furnish their own rifles and ammunition, or use those at the gallery, as they may desire. Number of Shots—Ten by each competitor. Sighting Shots—Two shots will be allowed each competitor. Position—Off-hand. Targets—200-yards targets, according to the regulations of the N. R. A. reduced in proportion to the range at the gallery. Practice—No practice allowed on the day of the match. Entrance Fee—Five dollars to be paid at the office of the FOREST AND STREAM AND ROD AND GUN, No. 111 Fulton street, N. Y. All teams desiring to compete must be entered ten days before the time the match is announced to take place. The match to be governed by the rules of the N. R. A. relating to teams. Captains of the competing teams shall meet one week before the commencement of the match, make all preliminary arrangements, choose referees, and decide in what order their respective teams shall shoot. The referees shall elect an umpire, whose decision in all cases shall be final.

The match will commence on Monday, March 11. The New York Rifle Club have entered a team to compete for the Short Range Championship in the FOREST AND STREAM AND ROD AND GUN Tournament.

Boston, Feb. 1.—At the rifle gallery, 655 Washington street, the following scores were made for a Smith & Wesson revolver:

J. N. Carvalho.....	4	5	5	5	4	3	—33
F. H. Hilds.....	4	5	5	5	4	4	—33
H. P. Small.....	4	4	4	4	5	4	—33
J. E. Patrick.....	5	4	5	4	4	4	—35
N. W. Arnold.....	4	4	4	5	5	4	—35
N. W. Spafford.....	4	5	5	4	4	4	—35
N. W. Covell.....	4	4	5	4	5	4	—34
J. E. Gore.....	4	4	5	4	5	4	—34
H. G. French.....	4	4	5	4	5	4	—34

ZETTLER RIFLE CLUB.—At the weekly meeting of this club, January 20, in ten shots, Creedmoor target, reduced form, in a possible 59 the following scores were made:

M. B. Engel.....	49	R. Connor.....	44
P. Erning.....	47	B. Zettler.....	43
C. G. Zettler.....	46	D. Miller.....	43
G. A. Shurnau.....	45	M. L. Riggs.....	43
Chas. Johnson.....	45	F. Oehl.....	42
W. M. Farrow.....	46	F. Farbus.....	41
R. Zimmerman.....	45	M. Dorler.....	40
G. L. Beates.....	44	W. Wiegand.....	40

YORKVILLE RIFLE CLUB.—New York, Feb. 2, 1878.—The following are the scores of the Yorkville Rifle Club, at the fifth competition for the champion gold badge, at Washington Park, Jan. 26th, 100 yards:

P. McIlharrow.....	Rem. Sport.....	4	5	4	4	4	5	4	4	—61
J. J. Kelly.....	Win. Sport.....	4	5	4	4	4	5	4	4	—60
P. Russell.....	Rem. Sport.....	4	3	4	4	4	4	4	4	—50
J. R. Grohman.....	Ball. Sport.....	4	4	4	3	4	3	4	4	—45
W. W. Dodge.....	Rem. Sport.....	2	3	3	3	3	3	2	4	—45

Six entries only, probably on account of foggy weather. Also, third weekly shoot, at 1581 Third avo. (Grohman's). Rifle, Ballard gallery; 22 cal.

J. R. Grohman.....	5	5	4	5	8	5	4	4	—55
P. McIlharrow.....	3	4	5	4	5	5	3	8	—43

O. Kez.....	3	5	3	4	4	5	4	4	—41
G. See.....	3	3	3	5	5	5	2	5	—40

A few others made less than an average of centres (4), whose scores are omitted. On Friday evening, Feb. 1, distance 100 feet, off hand; sub calibre rifles. Targets same as Zettlers use.

NEW YORK RIFLE CLUB.—At a special meeting of the New York Rifle Club, held on Thursday evening, January 31, at the call of the Executive Committee, it was resolved, "that the club enter a team to shoot for the FOREST AND STREAM trophy, and that such team be selected by competition, to take place on Monday and Thursday evenings each week," until the selection has been made. The first competition under the above resolution, will occur on Monday evening, February 4.

JOHN H. MECKER, Secretary.

NEWARK, Wayne County, N. Y., Feb. 2.—The regular competition for the champion's badge took place on the 300-yard range of the Amateur Club, Jan. 30. The following are the scores:

D. F. Wilcox.....	5	4	5	6	4	5	5	4	—46
E. B. Elliott.....	5	4	5	4	3	4	4	4	—42
G. M. Soverhill.....	4	4	4	3	4	4	4	4	—39
W. H. Nicholoy.....	3	4	4	3	4	4	4	4	—38
H. Hamilton.....	4	3	4	3	4	4	4	4	—37

ELCHO.

ORTO—Cincinnati, Jan. 21.—The following scores were made by the rifle team of the Cincinnati Shooting and Fishing Club, on the 26th ult. Our club would like to know how this score stands as compared with others at 200 yards, off-hand. Let us hear from the other "trigger pullers." Three of our best shots absent on a quail shoot in Kentucky:

Baum.....	5	4	5	6	4	5	4	5	4	—67
Seaman.....	4	5	4	5	5	4	4	5	4	—65
Easton.....	4	4	4	5	4	5	4	5	4	—64
Campbell.....	3	4	4	4	4	4	4	4	4	—59

Total.....255
Average of 83½ in a possible 16. G. B. E.

DESERET RIFLE CLUB.—Salt Lake City, Jan. 24.—The following is the result of the Deseret Rifle Club shooting for the medal, John Sharp, Jr., winning for the fourth time. Should Mr. Ross win five times the medal will become his property. Off-hand at 200 yards:

John Sharp, Jr.....	5	6	4	4	6	5	5	4	—44
James Sharp.....	3	5	4	5	5	4	4	4	—43
John Groesbeck.....	4	5	4	4	4	4	4	4	—41
E. McLaughlin.....	4	5	4	4	4	4	4	4	—41
W. K. Conrad.....	3	4	4	5	4	4	4	4	—39
J. Heuser.....	3	4	5	4	4	4	4	4	—39
B. Roberts.....	1	4	4	5	4	4	4	4	—39
J. C. Anderson.....	4	3	4	5	4	4	4	4	—38

PICKARD, JR.

—The Board of Directors of the National Rifle Association held a meeting on Tuesday. The spring meeting will open at Creedmoor Thursday, May 23. A convention of the rifle clubs at that time is proposed.

THE BALLARD RIFLE.—The excellence of the Ballard rifle we have frequently commented upon in our columns as an arm fitted not only for hunting, but for the most accurate target practice. In the contest for the FOREST AND STREAM AND ROD AND GUN medal at Schutzen Park, reported in our last issue, Mr. M. W. Farrow made, in ten shots, 204 with a Ballard, leading "by a large majority" the best muzzle-loaders. This high score has been equalled and sometimes surpassed by Mr. Farrow with a Ballard. In the competition for the Zettler medal, in making a choice of men, Mr. Farrow has scored in ten shots 216, 214 and 220. In examining the records of the Ballard at Creedmoor we find most excellent scores for this rifle, as the following analysis will show:

Competition for American Team.				T.
	500 yds.	900 yds.	1,000 yds.	
August 1.....	65	64	66	200
August 8.....	74	87	63	209
Competition for Canada Team.				
August 22.....	70	64	64	199
August 23.....	69	63	67	203
August 29.....	71	60	62	199
Practice Score.				
September 15.....	73	69	73	214
Spirit of the Times Match.				
September 23.....	67	63	71	201
Sharps Match.				
October 6.....	72	61	63	196
Bronze Medal Match.				
October 27.....	61	48	63	203
November 17.....	62	74	67	201
December 16.....	71	72	61	214

Match to Beat a High Score with a Brand-new Ballard, Never Used Before.

January 9.....	74	71	66	211
----------------	----	----	----	-----

Among the earliest manufactured of breech-loading rifles, the Ballard soon occupied a prominent position, which place it has ever since retained. The agents for the Ballard rifle—Messrs. Shoverling & Daly—are daily in receipt, as we are ourselves, of communications from sportsmen, in which the excellence of this rifle is particularly stated.

PENETRATION.—With a Ballard, 22, during an evening's use, at Collins' gallery, the balls penetrated through a six-inch thick piece of lead, backed up by a bit of boiler plate ½-inch thick. The charge of the Ballard metallic shell is three grains powder; weight of ball, 28 grains.

DOUBLE-BARREL RIFLES.

THE EXPRESS RIFLE.

EDITOR FOREST AND STREAM:

Mr. T. S. Van Dyke, in your paper of the 17th ult., does not seem to be aware of the great success which has attended the introduction of Express rifles, for dangerous game shooting, into India and Africa. They are now used almost universally, having superseded all large bore and explosive ball rifles for lion and tiger shooting (there must be some thousands of them in use in India alone), being found to be more instantaneously fatal—a great point in their shooting. Having killed some thirty grizzlies in the Far West during nine years' hunting, and having used several kinds of large-bore rifles, with explosive shells and without, have come to the conclusion that the Express rifle is far preferable in many respects. In the first place, it has a practically flat trajectory for 300 yards, doing away with any necessity for judging distances; then, too, it makes only one hole in the skin, generally lodging against the ribs on the opposite side, and lastly its effect is simply awful, the ball spreading to at least twelve times its former size. I have frequently found the inside of deer reduced to a pulp, and small

pieces of the ball sticking in all the neighboring organs. The principle of the Express is a light, hollow, conical bullet, and an immense amount of powder; but this has to be used with particular rifling, and no rifle now used for sporting in America can be made into an Express by hollowing the bullet, the rifling being unsuitable and the charge insuflcient. The rifle best adapted for the Express rifle was invented by Mr. Henry, of Edinburgh, the well-known gunmaker, and in a rifle bored on his principle as much as 100 grains of Curtis & Harvey's strongest powder can be used without any unpleasant recoil in a rifle of only .50-calibre. I have, myself, often fired a .45-calibre double rifle, weighing 5 lbs., over my arm, using it like a pistol when hunting buffalo, and have felt no recoil, using 136 grains of powder. Some friends of mine in India, using similar rifles, killed ten tigers in eleven days, and no tiger required a second shot. I quite agree with Mr. Van Dyke that single-barreled sporting rifles are a mistake, except for antelope stalking, and I do not believe that one out of every thousand sportsman in India ever uses one; nor do I think they will be used here so extensively when the manufacture of double rifles is better understood; for no one who has once used a good double-barreled rifle would ever go back to a single barrel, particularly for dangerous game. In conclusion, I shall be very much obliged if any of your correspondents who have used the new Winchester rifle, using 75 grains of powder, would kindly say what they think of it for deer-shooting?

VIA TOR.

THE OLD CONTEST.

BREECH-LOADERS VS. MUZZLE-LOADERS.

POUGHKEEPSIE, N. Y., Dec. 31, 1877.

EDITOR FOREST AND STREAM:

A communication in your issue of December 27, by "Muzzle-Loader," has attracted considerable attention here.

The question of the superiority of the breech-loader over the muzzle-loader seems to be creating quite a *furor*, especially in England. But it appears to me that all this theoretical talk (for it is really nothing else) is the merest nonsense. The only advantage a muzzle-loader possesses over a breech-loader, is in those in which the ball takes the rifling, and stands its centre while being rammed down. Now, if we examine the Sharps, Remington, and the Rigby (the latter the finest of this type of rifles), we will find that they are practically precisely alike as regards the loading and the ejection of the ball from the gun. This may appear startling to some, but it is a fact well known to every gunmaker, and I think I can demonstrate to the satisfaction of the general reader the truth of this statement.

In none of these three guns does the bullet take the rifling until after the explosion of the powder. The Rigby being no more a true muzzle-loader than the Remington or Sharps, as both of these latter guns can be loaded at the muzzle—a great many riflemen always loading the Remington in this manner.

In the great International matches, it has been the practice of the members of the American team to carefully wipe out their rifles after each shot, while their opponents did not. Does any sensible man think that a dirty muzzle-loader (of the Rigby type) can compete successfully against the clean breech-loader? (Rigby himself now admits it in his letters to the *Volunteer Service Gazette*). A few more (?) defeats will probably convince the foreigners that they must clean their guns if they desire to win the trophy. Both parties using equal care in doing this, and having coaching prohibited, will come to the battle-ground on equal terms, which has not yet been the case. We must try and do away with the stigma that the various American teams have acquired as mere trigger-pullers, and I see no other way except by abolishing coaching, which must appear to every true and honest American as a sacrifice to their manhood. The American teams, when shooting as individuals, have always been beaten. We should cultivate, and cultivate until we can place in the field a team of men who, as individual shots, are capable of holding their own fairly and without lowering their dignity or self-respect.

As regards the challenge of "Muzzle-Loader," I would like to see it taken up. Perhaps the Sharps Rifle Company, who are generally eager for such fights, will respond if they can have it take place at long range. Whether the Nichols & Lefever muzzle-loading rifle is capable of a victory (being a new gun) over the celebrated Remington or Sharps, I don't know. But I think from the excellent description given by "Muzzle-Loader," and the reputation, as one workman, of the Messrs. Nichols & Lefever, that with some further improvements it is destined to be one of the future true muzzle-loaders.

Regarding the bullet for this gun, it strikes me as being too complicated—a uniform density being ignored. Although this style of bullet has been in vogue for years, I am not aware, with one exception, that it has shown any real advantage over pure lead, at forty rods. For a long-range bullet, I think a mixture of tin—one ounce to a pound of lead—is far preferable to the hebdomadad sort of bullet which "Muzzle-Loader" thinks so highly of.

It has been the aim and ambition of every gunmaker, from the earliest period in the history of fire-arms to the present time, to produce a breech-loader that would equal, in shooting, a muzzle-loader. It seems almost comical to the writer that our great gunmakers, after producing what are really fine specimens of breech-loading guns, should, after pitting them against another *de facto* breech-loader (Rigby), and winning, ever after claim it superior to the muzzle-loader.

In conclusion, I would like to ask, as a nut for Creedmoor riflemen to crack, "Have we a breech-loader that has ever, in a competition open to all, beaten twenty (20) inches at forty rods, ten shot at a time?" This is a very liberal allowance it must be admitted, when it is stated that we have scores of gunmakers capable of making a rifle (ten shot string, forty rods) that shall measure less than ten (10) inches! If any one doubts this, I would refer him to that veteran gunmaker, Billingshurst, of Rochester, N. Y., who is one of the best rifemakers (of forty rods guns) we have, and was at one time the champion string shooter of the United States. For a few specimens of his skill I would refer the reader to the "Crack Shot" by Barber, page 80, where are two diagrams, one measuring 7 1/2 inches and the other 8 1/2 inches.

The moral of my letter seems to be: If a breech-loader can be defeated at forty rods, and it is done every time by the Empire State Rifle Club, at Syracuse, at their yearly meetings, can it in truth be the champion it so boastfully claims to be at 180 rods? More anon.

W. J. STEWART.

ALTERING MUZZLE-LOADERS TO BREECH-LOADERS.

MENASHA, Wis., Jan. 23, 1878.

EDITOR FOREST AND STREAM:

I see in your last issue that Ten Broeck takes exception to my plan of changing muzzle to breech-loaders, on the grounds that the screw-holes in the barrels are an element of weakness; also, that soft solder is unsafe. In reply to the first objection, I would say that the lump is forged solid in a T-shaped piece fitted accurately to the barrels, and is nearly the width of both barrels; and where the screws (3-16th diameter) pass through the steel plate, is nearly one-eighth inch thick, adding ten times the strength of the material cut away. To the second objection I would say that the form of joint as given above gives from seven to eight square inches of contact, and this, with a good solder joint, would make as strong a joint as hard, or silver solder, with the

joint as usually made. Besides, in my plan, the barrels are not subjected to the heat necessary to bronze them, which is sufficient to raise a scale and thus weaken them considerably, and with care it can be done so as not to require re-slaing. I would also suggest to your San Diego, Cal., correspondent that, instead of extracting the bullet from his 22-100 cartridge (for his explosive bullets), he take a pair of wire-cutters and cut off the bullet just above the shell. He will then get a much more effective explosion, as the powder is confined much more than in his process.

S. L. HART.

—E. Remington & Sons have a new gun in stock which is worthy of notice. It is a ten-gauge, weighing ten pounds, with twist barrels, extension rib, top snap-action and rebounding locks.

Game Bag and Gun.

GAME IN SEASON IN FEBRUARY.

Hares, brown and gray.

Wild duck, geese, brant, etc.

FOR FLORIDA.

Deer, Wild Turkey, Woodcock, Quail, Snipe, Ducks and Wild Fowl.

"Bay birds" generally, including various species of plover, sand piper, snipe, curlew, oyster-catcher, surf birds, phalaropes, avocets, etc., coming under the group *Limicola*, or Shore Birds.

NEW HAMPSHIRE—*Nashua*, Jan. 28.—The weather in this vicinity is unusually mild. Large numbers of ducks have been seen within the week past—feeding, no doubt—in the open water around the falls and the mouth of streams emptying into the Merrimac. A flock of black ducks, numbering some fifty or sixty, were seen flying north. Pickerel fishing continues to be the principal sport, and the bays and weather seem combined to make it a source of pleasure.

WEBB.

BUCK AGE.—A story comes to us from Dover, N. H., of two gunners who went out for rabbits. They took their positions, and all was still, when suddenly one was heard shouting at the top of his voice, and was seen by his astonished companion running through the woods, hatless and with hair streaming in the wind, his gun firmly grasped by the barrel with both hands. On being brought to a halt, and asked why he did not try and shoot the game, he said, "he never thought of it."

NEW YORK—*Kingston*, Jan. 30.—Rabbit hunting is now in full blast in this section, parties going out every fair morning and bagging quite a number. Rabbits are very plenty in this part of the country this winter, and the light falls of snow we have had have helped to make the sport better. Some of the most successful rabbit hunters are Theodore Hawke and Bennett Spaulding. They have been out a number of times and never returned with less than three rabbits apiece.

OUR HARRY.

VIRGINIA—*Warrington*, Feb. 1.—A club of four turkey hunters have killed sixty during the past season. The Mayor, Mr. Udderback, leads, I believe, in the score. In quail J. K. Maddox takes the lead, with a tally of about 400. No pot-hunting has been allowed in this vicinity. Fox hunts are frequent and lively.

N. B.

—The Presbyterian minister and the two school teachers at the Strasburg Academy in Virginia are "high guns" in turkey shooting, it seems. One of the pupils writes, Feb. 4:

"The Presbyterian minister here paced off eighty yards and placed eight No. 1 shot in the size of the crown of your hat with my Remington; the depot agent placed five in the same size at seventy-five yards, while I killed a wild turkey instantly with it at fully eighty yards, more if anything. The two school teachers here have led in wild turkey shooting, killing twenty-one."

LOUISIANA.—A panther, measuring seven feet from tip of nose to tip of tail, was recently killed in Bayou parish swamp, Avoyell parish.

OHIO—*Lancaster*, Jan. 28.—The two years' prohibitory law made the past shooting season an unusually fine one. Bags of from six dozen to eight dozen have been common. Pheasants have been quite numerous killed this fall, but quail shooting absorbed all the sportsmen's attention. Wild turkeys are reported unusually plentiful on the hills, below the State Farm. There were but few geese or ducks at the Big Reservoir this fall, and none in the prairie sloughs west of the city. English sparrows have made their appearance in this city, and can be seen in any of our streets at any time.

S. G. V. G.

JEFFERSON, Jan. 20.—Wild pigeons have been plenty in the vicinity of Bloomfield, and Trumbull, Morgan and Colebrook, and Orwell for some time past. Unlawful netting has been largely practiced, and prosecutions are now in order.

IOWA—*Vail*, Jan. 31.—Yesterday, between 11 and 3 o'clock, four of us succeeded in bagging 31 rabbits from one brush patch.

E. B. B.

THE "STANDARD" GLASS BALL.—As the Spring trade is about opening, and the demand for glass balls has fairly commenced, we would call the attention of dealers to the "Standard" ball, as put on the market by Ira A. Paine. See advertisement.

—Mr. Ira A. Paine is shooting at the Tivoli Theatre this week, and doing a remarkably fine act in making the feathers fly from his feather-filled balls, both with the shot-gun and pistol. His variety shooting elicited great applause.

TENS OR TWELVES?

WE are often called upon to answer inquiries in relation to the calibres of guns. The question is mostly put to us in this wise: "I want to buy a gun for general use. Shall I buy a ten or a twelve gauge?" When we receive a letter of this character, we examine the address of the communication, and study the locality of the writer, and the matter is at once simplified. If, for instance, it should come from the Adirondacks, where, though small game birds are found, there are deer, we mostly advise the larger calibre, which is a ten. If it be on the sea shore, where there are ducks and geese, we incline toward the larger sized bore. If, on the contrary,

the inquiry comes from a section of country where smaller game are the more plentiful, we counsel the use of a twelve. Our own particular fancy, we must declare, is for a twelve, as we have done quite as good shooting in a general way with a twelve as with a ten. All this, however, depends very much upon how a gun is built. We are putting aside for the moment the question of sheer weight. An eleven, a twelve, or even a thirteen-gauge, can be made, and is made, if you want it, with sufficient strength at the breech to stand the charge of a ten-gauge. We may remark that there is a growing tendency in England to run toward small gauges. We cited in a former issue a number of beautiful Scott & Sons' guns of nineteen and twenty. In a certain way the difficulty of hitting a bird may be increased, but with these small calibres, when they are choke-bored, if you do hit, you hit very hard. Of course, if you miss you are a duffer, and there are more duffers, ourselves included, than there are Captain Bogarduses.

Now, as to weight: A ten-gun ought to run not less than 10 pounds, and is made up to 13 pounds; but we think about 10 1/2 pounds is a good average, and of the proper proportion. A twelve is built from 7 1/2 to 9 1/2 pounds. With a twelve, then, of 9 1/2 pounds, with the excess of metal at the breech, a deft sportsman may consider himself as fully equipped, and this arm will do quite as good work as a ten-gauge, weighing 10 1/2 pounds. Captain Bogardus shoots a ten and twelve-gauge on the same stock, both weighing, when put all together, 10 pounds. Now, it is rather more economical for the sportsman to use a twelve-gauge than a ten, as the powder and shot cost less. Gentlemen sportsmen who shoot for pleasure, seem every day more disinclined to lug around arms which are as weighty as culverines. Those old-fashioned days are past when a man loaded himself down like a Bash-Bazonk. We all know what difference two pounds in a gun makes when a party has to carry it twenty miles in a day's tramp. In the last number of the *London Field* there is a capital communication from Mr. J. J. Whyte, on using small calibred guns. This correspondent says:

"There is the element of pleasure and comfort to be considered, and it is surely more agreeable to walk through a long day with a light weight than a heavy one. For my part, I study lightness in every department of shooting—walk in shoes, and the other garments as light as the nature of the shooting or weather will permit; and I would rather stop at home than carry my own cartridges or my own game. In one matter only I do not like weight stinted, and that is my gun. My twelve-bore weighs 7 pounds 8 ounces, and my twenty-bore 6 pounds 5 ounces. Give me plenty of driving power, and plenty of metal in the breech to make using it safe. If a gun is to be made light, do it by shortening the barrels, not by scrimping the metal at the breech."

As in all matters of a mundane character, we return very often to our first loves. The same correspondent tells of a Jo. Manton, with a twenty-two bore, with which he made a shot at ducks. A bottle at forty yards can be smashed with a twenty-bore, if you hit it.

As to difference of weight in the same calibre, gunmakers are perfectly familiar with the wants of people, and turn out guns which as to weight cover all requirements. In ordering a lot of guns, say a hundred, gunmakers will invariably assort weights, say in twelve's, from 7 to 9 1/2 pounds, and in ten's, from 8 1/2 to 10 1/2. Of course, if heavier guns are wanted there can be no difficulty in procuring them. We say, then, to numerous inquirers, if you want an all-round gun take a ten or a twelve. If you are big and strong, and have brawn and muscle, and glory in your might, take a ten. If, on the contrary, you are not a Hercules, and you want to save yourself, get a twelve. In both cases bear in mind the size of the game to be found in your locality. Always remember that if it be a twenty or a ten, the weight of metal at the breech has to do with the safety or life of the gun. We have purposely left out in this short review of the matter, the choke-bore ideas. This will form at some later day the subject of an article.

THE "UNCLE SAM" AND "MR. BULL" SHOOTING PUZZLE.—"Uncle Sam" and "Mr. Bull" go out together for a day's shooting on the marshes. Before starting they agree that whoever shall make the lowest score shall contribute a sum of money toward defraying the day's expenses, levied on all the game killed by each at the rate of 10 cents per head on every plover, 6 cents on every snipe and 4 cents on every woodcock killed by the winner; and half as much again per head on those killed by the loser. They further agree that each gun shall score 3 for a cock, 2 for a snipe and 1 for a plover. When the day's work was ended Mr. Bull found that his score on cock exceeded Sam's by one-fourteenth, that he had killed one-ninth less snipe than Sam had, and that Sam had killed six times as many plovers as he had. After Uncle Sam had examined his bag he found that one-fourth of his score was made by killing snipe; that he had scored half as many more by snipe than he did by plover; that he made two and one-third times as many by cock as he did by snipe, and that he had beaten John Bull by 9 points. How much did Mr. Bull contribute toward expenses?

CONSERVATOR.

A REMARKABLE SHOOTER.—*Rockford*, Ill., Jan. 20.—During the season just closed we have enjoyed some fine sport in this vicinity. The pinnated grouse have been plentier than for years before. I enjoyed a few days as a guest at the celebrated Tolleston Club House near Chicago—most elegant and commodious quarters. The members with whom I became acquainted were genial gentlemen. Whoever is so fortunate as to receive an invitation should not fail to accept the hospitalities of this club.

About the 20th of October a party consisting of ten—not including our cook—made a trip to Gross Lake, McHenry County. A couple of friends—Mr. H. Harper, of Emira, and Mr. John Griffin, of Buffalo, N. Y.—were of the party, and we desired to give them some fine sport. The weather proved unfavorable—as warm and hazy as summer, and the ducks all had *spring fever*; week later would have been just right. Two of our party had on former occasions bagged from sixty to eighty ducks a day at the same place, while our

RULES GOVERNING BENCH SHOWS AND FIELD TRIALS.

STANDARD OF EXCELLENCE AND POINTS GOVERNING BENCH SHOW OF DOGS.

All Contained in "Hints on Dog Breeding,"

Price (25 cts.) by W. H. HOLABIRD, Sportsman Clothier, Valparaiso, Ind. Jan 31 4t

WE-T MILTON KENNEL.—"Lelapa" in the stud, bred by R. H. Purcell, Lowell, England, sire "Leicester," dam "Doll," sister to "Dart" and "Aiams" "Drake," color white, ticked black and tan, 28 1/2 inches high, extra quality, very handsome. Fee, \$25.

SETTERS FOR SALE.—"Fan," black and tan, pure Gordon, Imp. stock, out of "Maud," by Marble, "Grouse," two years old; taught first lessons; bred to "Lelapa" Jan. 5, 1878; price \$75. One dog, two years, white and chestnut, sire Tucker's dog, Providence, It. L. Copeland's "Old Pete" grand sire, dam English imported, very handsome, 23 1/2 inches high; taught first lesson, and game shot over; price \$75. "Bell," half imported red Irish and half English, color orange, two years old, taught first and second lessons (see circular), extra in field, fast, staunch and handsome, 23 1/2 inches high, never bred, price \$125; will breed her to "Lelapa," same price. Dogs trained and boarded. For terms and particulars, send for circular. **FRANKLIN SUMNER, Milton, Blue Hill, Mass.** Jan 17 4t

THE DOG BREAKER'S GUIDE.—Train your own dogs in the most artistic manner. "The Dog Breaker's Guide" a cut for three cent stamp. **M. VON CULIN, Delaware City, Del.** Jan 17 4t

FOR SALE.—One imported red Irish setter dog, Dash, from J. C. Cooper, Limerick, Ireland, of good stock, bred by Grouse out of Flirt. Dash is about two years old and unbroken; of a deep blood red color, with slight marking of white on face. Price moderate. One Chesapeake Bay duck dog, Friday (long hair) well broken to retrieve (about one year old). Price, \$25. Snapshot, celebrated champion pointer, and Frank, imported English setter, winner of first at Philadelphia, in the stud. **LINCOLN & HELLYAR, Warren, Mass.** Jan 17 4t

COCKER SPANIEL BREEDING KENNEL OF M. P. MCKOON, Franklin, Del. Co., N. Y.—I keep only cockers of the finest strains. I sell only young stock. I guarantee satisfaction and safe delivery to every customer. These beautiful and intelligent dogs cannot be beaten for ruffed grouse and woodcock shooting and retrieving. Jan 17 4t

FULL-BLOODED.—Two Irish setter bitches, four months. Sire of pups, Don, imported from J. C. Cooper, of Limerick, Ireland, by C. H. Turner, Sec. Nat. Kennel Club, St. Louis, Mo.; dam, Countess, by Rodman's Dash. One Gordon bitch, eighteen months old; hunted this fall, staunch on quail and very fast, with good nose; will make a good one. One Gordon bitch eight months old. Full pedigree given with pups. **H. B. VONDERSMITH, Lancaster, Pa.** Nov 22 4t

FOR SALE, when eight weeks old, six puppies out of my blue belton setter Mel, by Bob Boy. They are black and white. Two of them are black, white and tan, and are almost perfect images of their sire. For particulars, address **L. F. WHITMAN, 5 City Hall, Detroit, Mich.** Jan 28 4t

FOR SALE, at a great bargain, my entire kennel with the exception of one brace I may own shoot g. I have on hand, for sale: One pointer dog pup, Dilley's-Ranger stock; one pointer bitch pup, Dou-Lina; one red Irish setter pup, Plunkett-Nell; one lemon-and-white setter dog pup, Tam-Queen-Blanche; one black-and-white setter bitch in whelp. Will sell the above at prices very much lower than ever before offered, and warrant them to be finely bred, and am confident no better blood exists. I am going to be absent from home much of the time henceforth, and must sell. Address **W. H. HOLABIRD, Valparaiso, Ind.** Jan 31 4t

FOR SALE.—Irish setter stud Sally; color red, white chest and feet; thoroughly broken; 18 months old; warranted to point, back and retrieve; good nose and fast; full pedigree; sold for want of use. Price \$50. Address **C. H. CONE, 156 East 126th Street, Harlem, N. Y.** Feb 7 2t

SPIKE COLLARS.—Spike Collars, by means of which dogs of any age or breed, no matter how long hunted, or what the disposition, can be taught to fetch and carry, and to retrieve game in a most perfect manner, with no play about it. Dogs broken of gun shyness and whip-shyness, made steady before and behind, and "to heel" steadily; prevents lunging on the chain, besides a much more extended sphere of usefulness. Price, with directions for using, \$3. Kennel collars, which a dog can get over his head, price \$1. Address **M. VON CULIN, Delaware City, Del.** Feb 7 4t

The Kennel.

FOR SALE, A BARGAIN.—A well-broken setter dog, two years old, color blue belton; is fast, staunch, and good retriever. Price \$30. Address **T. DENMEAD, P. O. box 458 Baltimore, Md.** Jan 31 4t

WANTED TO USE A BITCH.—I have an imported English setter dog, Dora-Judy, and wish to breed from him under usual conditions. Address, stating pedigree, **C. H. C., P. O. Box 215, New York.** Feb 7 4t

STUD DOG.—I shall want this month the use of a Belton stud dog for my bitch. The dog must be of the best breed, with an undoubted record. Address **M. Q. O., care of R. FOREST AND STREAM Office, giving complete full particulars.** Feb 11

For Sale.

FOR SALE CHEAP.—One-fourth interest in a well-located brook trout hatchery of most unlimited capacity, within 2 1/2 miles of a depot; also a good farm of 200 acres in connection with fishery. Enquire at this office for further particulars. Jan 31 4t

FOR SALE.—Paragon Talley breech-loader, 12-gauge, of beautiful and very exceptional power. Address **JOHN EGAN, gunmaker, Water street, Halifax, N. S.** Feb 7 4t

100,000 brook trout fry for sale. Address, **OSCAWANA TROUT FARM, Crotgers, New York; or H. P. LEGRAAF, Brewery National Bank.** Feb 7 4t

Wanted.

WANTED.—Heavy single-barrelled breech-loading shot-gun, .4 or .5 cal. **R. VALENTINE, Janeville, Wis.** Jan 31 4t

WANTED.—Second-hand breech-loading shotgun; send description and lowest cash price to **J. W. MILLER, P. O. box 150, New Haven, Indiana.** Jan 31 4t

WANTED.—A copy of Raxton's Life in the Far West, Harper & Bros., 1856; also Mary's Prairie Traveler, Harper & Bros., 1857. Address this office. Feb 7 4t

New Publications.

THE SOURCE OF LIFE, OR, SELF-PRESERVATION.—Two hundred edition, revised and enlarged, just published. It is a standard medical work, the best in the English language, written by a physician of great experience, to whom was awarded a gold and jeweled medal by the National Medical Association. It contains beautiful and very expensive steel-plate engravings, and more than 50 valuable prescriptions for all forms of prevailing diseases, the result of many years of extensive and successful practice. 300 pages, bound in French cloth; price only \$1, sent by mail. The London Lancet says: "No person should be without this valuable book. The author is a noble benefactor." An illustrated sample sent to all on receipt of 6 cents for postage. Address **Dr. W. H. PARKER, 4 Bulfinch street, Boston.** The author may be consulted on all diseases requiring skill and experience.

Camp Life in Florida.

By CHARLES HALLOCK,

AUTHOR OF THE FISHING TOURIST.

Published by Forest and Stream Publishing Co.,

No. 111 FULTON STREET, NEW YORK.

And for sale by all bookellers. Sent by mail, postage prepaid, on receipt of price (\$1.50) at office of publication.

"THE OOLOGIST,"

A MONTHLY JOURNAL DEVOTED EXCLUSIVELY TO BIRDS AND BIRDS' EGGS.

This magazine, the favorite of amateur ornithologists, is now in its third volume. It is replete with all that is new or recent in Ornithology and Oology, and publishes important papers on the latter of our birds and eggs. It is just the periodical for those making collections of birds and eggs for scientific examination, as its columns are constantly furnishing descriptions of the eggs of new and rare species.

TERMS—Forty cents a year, in advance. Specimen copies and prospectuses only on receipt of stamp. Address,

S. L. WILLARD & CO.,
Oneida st., Utica, N. Y.

THE
HAZARD POWDER CO.,
MANUFACTURERS OF
GUNPOWDER,

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of
strength and cleanliness. Packed in square canis-
ters of 1 lb. only.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and
6½ lb. kegs. A fine grain, quick and clean, for
upland prairie shooting. Well adapted to shot-
guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 6 (coarse). In 1 and 5 lb. canisters
and 6½ and 12½ lb. kegs. Burns slowly and very
clean, shooting remarkably close and with great
penetration. For field, forest or water shooting, it
ranks any other brand, and it is equally serviceable
for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG, in kegs of 25,
12½ and 6½ lbs. and cans of 5 lbs. FFG is also
packed in 1 and 5 lb. canisters. Burns strong and
moist. The FFG and FFG are favorite brands for
ordinary sporting, and the "Sea Shooting" FG is
the standard Rifle powder of the country.

Superior Mining and Blasting Powder.
GOVERNMENT CANNON & MUSKET POWDER;
ALSO, SPECIAL GRADES FOR EXPORT OF
ANY REQUIRED GRAIN OR PROOF, MANU-
FACTURED TO ORDER.

The above can be had of dealers, or of the Com-
pany's Agents in every prominent city, or wholesale
at our office,
93 WALL STREET, NEW YORK.

Sportsmen's Goods.

**BOSTON
SHOOTING SUIT.**

Manufactured only by

**G. W. SIMMONS & SON,
BOSTON, MASS.**

THE BEST IN USE.

ONLY ONE QUALITY MADE AND THAT IS THE
VERY BEST.

Flexible, Waterproof, Tan-Color, Duck.

Each article—coat, trousers, vest and hat
—has the name and manufacturers' address
stamped upon it, and no suit is genuine with-
out it bears this imprint.

The suit can be sent, securely packed, by
mail to any part of the United States or Can-
ada on receipt of \$1.25 above the price of
the suit.

We make no discount except to the trade.
The price of the suit complete is \$13.

The suit consists of coat, trousers, vest and
choice of either cap with havelock, or hat.

The material is of the best quality of duck,
waterproofed by a patent process. The color
is that known as "dead grass shade."

The seams and pocket corners are copper
riveted, and nothing is neglected to make
the whole suit complete in every way.

This is what one of our best sportsmen says
of it, writing from camp: "Miserable, drench-
ing rain, pouring down in a perfect deluge,
as if a second flood had come upon the earth,
two portages to cross, and a swamp between
them; that was the prospect before we reached
our camping ground. Such a swamp, too;
almost impassable, for where the ground was
firm was an almost impenetrable thicket of
thorns and what not, that looked as if it would
tear you to pieces. Well, we got to our
camp, and I must confess I was agreeably sur-
prised on my arrival. Although I had been
nearly eight hours under incessant rain, labor-
ing and striving along under the adverse cir-
cumstances above mentioned, yet I found
myself comparatively dry, and my clothes
without a tear. For the benefit of our brother-
sportsmen, let me advise one of Messrs. Sim-
mons' (of Boston, Mass.) Waterproof Suits.
Oh! what a relief it was to find one's tobacco
was dry, and that one could light a pipe; that
you could laugh at your miserable friend,
who stood shivering and shaking as if he
had the palsy; and then, next morning, oh!
what fun it was to see him mending his
clothes, while I had not a tear to complain of.
Ventilation, also, that great hughear of water-
proof suits, is legislated for in the most inge-
nious manner. No sportsman should fail to
supply himself with a suit which is at once
cheap, practical, and will last an almost indef-
inite time."

Our leather Jackets and Vests
are the great wind protectors. They are made
from soft, pliable black leather, flannel lined,
and sell at \$9 and \$7.

**Our Flexible Tan-Colored
Waterproof Leather Coats
and Breeches**

are considered the finest things ever made.
They sell at \$22 and \$15.

An illustrated circular, containing full de-
scription of each garment, with sample of the
material from which made, will be sent free
on application.

FULL NICKEL PLATE
\$12.

THE NEW IMPROVED AIR RIFLE.
Especially Adapted for Target Practice.
SPLENDID FOR SHOOTING SMALL GAME and touching up
CATS OR DOGS.

Just the thing for Taxidermists to collect specimens. There is no report or dan-
ger attending its use, or any auxiliaries required to operate it. It can be loaded with
ease and rapidity. It is extremely simple, and has no delicate parts to get out of order or wear
out. For sale by the Trade generally. Sent upon receipt of price or C. O. D.
SEND FOR CIRCULAR. H. M. QUACKENBUSH, Patentes and Mfr, Herkimer, N. Y.

**Hart's Sportsman's Favorite Metallic Shells.
FOR BREECH-LOADING SHOT GUNS.**

These Shells are easily loaded, and the caps easily extracted from inside.
Head solid and much thicker than any Shell now made, giving a solid seat for cone or anvil, which prevents
it from driving through or springing away, thereby causing mis-fires. The Cone is made of nickel, and fas-
tened solid in its place. Neither rusts nor corrodes fast, like movable anvil made from steel. The Nickel
Cone also prevents mis-fire when a cap has been left on shell for a few days, which is liable to occur either
in steel or iron. These Shells are finely finished, and made any length ordered, from 2½ to 3½ inches.
Shells and Loaders and Descriptive Price-Lists can be obtained from all the leading Sportsmen's Houses
throughout the country. GEO. E. HART & CO., Newark, N. J.

FROM CAPTAIN BOGARDUS, CHAMPION WING-SHOT OF AMERICA.
MESSRS. GEORGE E. HART & CO.—Gentlemen: The fifty Shells I received from you to-day suit me better
than any I have ever used. They are stronger and better in every respect, and I shall use them in all my
shooting hereafter. Yours truly, A. H. BOGARDUS.

**A VICTORIOUS INVENTION
The Eagle Claw.**

An ingenious device for the purpose of catching all kinds of
Animals, Fish and Game.

The easy method of setting the Eagle Claw, combined with
the simplicity of removing the victim, are among its peculiar
advantages.

It is immaterial how to place it when set. It may be buried
flat in the ground, suspended from the limb of a tree, or, when
occasion requires, covered with grass, leaves or other light
material without in any way impairing its certain operation.

It is adapted for half of any description, and, when set, no
Animal, Fish or Bird that touches the bait can possibly escape.
It does not mangle or injure its victims in the slightest
degree, nor need they be handled to free them from the trap.

PRICE LIST.

No. 1—For fishing and all kinds of small game and animals,
sent by mail.....85 cents.
No. 2—For catching Mink, Muskrat, Raccoons, large Game,
Fish, etc.....75 cents.
No. 3, or Rocky Mountain Giant, for catching Bears, Wolves,
Panthers, etc. Can be easily set by a boy, and will stand a
strain of several hundred pounds. Weight, 10 to 15 lbs. \$10.
All goods sent, charges paid, to any address on receipt of
price. Address

**TATHAM'S
IMPROVED CHILLED SHOT.
American Standard Diameters.**

(RED LABEL.)

Gives greater penetration and better pattern than ordinary shot, by reason of retaining its
shape under concussion and impact, soft shot being jammed out of shape while leaving the gun. Equally
well adapted to choke-bored, modified chokes and cylinders.

Our chilled shot will be found free from shrinkage, more spherical, more uniform in size
heavier and of brighter and cleaner finish than any other. SEND FOR CIRCULAR.

Guns, Rifles, Etc.

THE CHOKE-BORE MATCH.

W. W. GREENER begs to inform his numerous patrons in America that his gun has again come off victorious at the great match of Choke-Bore vs. Cylinder Bore, at the London Gun Club, on May 23, beating seventeen of the best shots in Great Britain who used guns by the best London makers, viz.: Four made by Grant, three by Parry, three by Dougal, one by Lancaster, Boss and others.

[See London Field, May 26, Editorial Remarks.]

"Mr. Chalmers Pennell, the winner of Mr. Parry's massive fifty guinea gun, weighing over 91 lbs., for the highest score, shot wonderfully well, killing all his birds at 30 yards with the first barrel. The gun he used was a full choke, by Greener, of Birmingham. The result of the trial served to show the superiority of the choke at the long range. Mr. C. Pennell cutting down his birds in a marvellous way with his heavy Greener."

W. W. GREENER,

St. Mary's Works, Birmingham, and

HIGHEST HONORS

AT THE

Centennial World's Fair, 1876!

THE

SHONINGER ORGANS

PRONOUNCED UNANIMOUSLY AS THE
Best Instruments.

Their comparative excellence is recognized by the
Judges in their Report, from which the following
is an extract:

"The B. SHONINGER ORGAN CO.'S exhibit
as the best instruments at a price rendering them
possible to a large class of purchasers, having a com-
bination of Reeds and Bells, producing novel and
pleasing effects, containing many desirable improve-
ments, will stand longer in dry or damp climate, less
liable to get out of order, all the boards being made
three-ply, put together so it is impossible for them
to either shrink, swell or split." THE ONLY
ORGANS AWARDED THIS HONOR.

There are 50,000 of our instruments in this and
the European countries in use, and they are so made
that they will keep in tune, and stand any climate.
They contain a magnificent Chime of Bells, tuned in
perfect harmony with the Reeds, producing wonder-
ful effects. The Music Rack, when tuned forward,
will make a splendid writing desk, with our Book
Closets and Swinging Lamp or Flower Brackets, with
a fine stool boxed free with each Organ, makes the
SHONINGER ORGANS the most substantial, con-
venient and perfect Organ.

ESTABLISHED 1850.
We are prepared to appoint a few
new Agents.

A liberal discount to the Clergy, Sunday Schools,
Teachers, Churches and Lodges.
Illustrated Catalogues, with prices, sent by mail
upon application to

B. SHONINGER ORGAN CO.,
97 to 123 Chestnut Street,
NEW HAVEN, CONN.

Three-Barrelled BREECH-LOADING Guns.

A new feature in the Sporting Line. Forms a light and compact gun from eight to ten pounds,
giving to sportsmen the very thing an often wanted in all kinds of shooting. We are also manufacturing a
Double-Shot Gun, containing more good points than any other gun in the market.

PRICES—Three barrel, \$75 to \$250. Double barrel shot guns. Damascus barrel, \$50 to \$200. Twist
barrel, \$35. SEND FOR NEW CIRCULAR.

W. H. BAKER & CO., Armory, 20 Walton Street, Syracuse, New York.

IRA A. PAINE'S FEATHER FILLED GLASS BALL. PATENTED OCTOBER 23, 1877.

The "Standard" Ball.

The Bohemian Glass Works would respectfully call the attention of all dealers in Glass Balls to the fact
that the Paine Patent Filled Ball is the STANDARD AND ONLY BALL MADE TO A SCALE, therefore we
would respectfully caution the dealers against buying in a stock of unsaleable articles for the Spring Trade,
when you can purchase the Best Ball ever made at prices less than is charged for other inferior balls.
No other ball affords the PLEASURE of the Feather Filled Ball, and no other Ball is as beautifully
made. It will break in every instance when hit by shot, and is sufficiently strong to prevent breakage
either by transportation or falling on the grass.

Every ball is weighed and examined, then packed with the greatest care, in barrels of 300.

Send for price list. Special inducements to the trade.

HEADQUARTERS BOHEMIAN GLASS WORKS, 214 Pearl Street, N. Y.

Bogardus' Patent Rough Glass Balls and Glass Ball Traps.

These Traps are the only ones that give satisfaction, as
they are simple of construction, easily set, and not liable
to get out of order, and they throw the ball in a manner
that more closely resembles the flight of a bird than any
other trap in the market. The Patent Rough Glass Balls
are made of uniform weight and thickness, and have a
corrugated surface that strengthens the ball for shipment
to any part of the country, prevents the glancing of shot,
and thereby insures the breaking of the ball when hit.

CAPTAIN BOGARDUS was the first to introduce the
ROUGH BALL, and at a price far below the smooth ball
at that time.

Balls and Trap can be ordered through all Gun Deal-
ers. Liberal discount to the Trade.

MY IMPROVED TRAP (warranted), which will throw a ball in any direction from the shooter at
the option of the puller, is now ready for the market. Price \$8.

HEADQUARTERS FOR BALLS, HAGGERTY BROS., 10 Platt Street.

THE CONDUCT OF LIFE.

Selected.

BE it good that we do, let us do it,
Giving soul and our strength to the deed;
Let us pierce the hard rock and pass through it,
And compass the thing that we need.

Does Fate, as a dark cloud, hang over,
And cover our heads from the light?
Does fate mock the heart of the lover?
Must wrong be the victor of right?

Yet in Fate there is freedom for each one
To make or to mar, as he will;
And the bolts of ill fortune that reach one
May maim, but they never shall kill.

Ever onward and upward pursuing
The aim that is thine for the day,
Adding strength to thy strength by thy doing,
Thou shalt gain it, nor faint by the way.

And though thou art busied with small things,
Though mental thy labor may be,
Do thy utmost in that and in all things,
Thou shalt still be noble and free.

Doest thou love? let it be with full measure;
Nor mingle with coldness or hate
Of others the joy of thy pleasure,
The passion that crowns thy estate.

Be to every man just; and to woman
Be gentle, and tender, and true;
For thine own do thy best; but for no man
Do less than a brother should do.

So living thy days full to number,
In peace thou shalt pass to the grave;
Thou shalt lie down and rest thee, and slumber,
Beloved by the good and the brave.

—Tinsley's Magazine.

For Forest and Stream and Rod and Gun.

Duck Shooting in Various Places

SHOOTING ON CHESAPEAKE BAY.

The Chesapeake Bay and its tributaries afford, beyond question, the best opportunity for wild fowl shooting in this country. The vast multitudes of wild fowl of almost every known variety indigenous to our country that frequent these waters annually, computed, would stagger credulity. The principal attraction, undoubtedly, is the abundance of wild celery (*Valisneria spiralis*), which grows along the shores on the shoals and flats in greatest profusion. The juicy and succulent roots (not blades) of this aquatic plant furnish a food not only highly prized by the birds, but which gives to them, when properly cooked and served, a delicacy of flavor unequalled. Especially is this the case with the famed canvas-back and red-head, which fact accounts for the ardor with which these varieties are sought by both sportsmen and market hunters. The Susquehanna Flats at the head of the bay are the choicest feeding-grounds of the birds, and here is where the devotee to the sport can gratify his passion to the fullest extent. The State of Maryland has very wisely enacted stringent laws to protect the fowl from constant harassing, hence shooting is only allowed on three days of each week from November 1 to January 1, after which time an extra day per week is permitted to the end of the season. About twenty vessels carrying sink boxes, and more than double that number of bushwhackers are granted license in regular form.

Your correspondent was recently the recipient of a grand day's sport upon the flats. In the choice company of our genial friends and gifted sportsmen, J. E. S. and E. C. P., we took the four o'clock P. M. train on the P. W. and B. R. R., and after a pleasant ride of less than two hours were landed safely at Havre de Grace, and a few moments later were snugly ensconced in the commodious and elegantly fitted up cabin of the gunning sloop, Lilly, where a single glance revealed most excellent taste and judgment in the arrangement of bunks, lockers and furniture, and where our sensitive olfactory nerves utterly failed to discern the slightest odor of bilgewater. That this reflected credit upon her commander, Captain Bill Myers, we frankly admit, and we were convinced, in addition, long before our departure, that the captain was an able seaman, a good ducker, and entitled to much praise for the gentlemanly qualities and abstemious habits of himself and crew.

Havre de Grace is situated at the mouth of the Susque-

hanna River. It is the headquarters of the Chesapeake gunners, and is distant about five miles from the best shooting grounds. As the law prohibits any gunning craft crossing light-house line before three o'clock A. M. on open days, we did not rise until dawn of day, when we awakened to find ourselves upon the shooting ground, but, greatly to our chagrin, enveloped in a heavy fog. A thin, drizzling rain soon added to our discomfort, and everything looked dark and discouraging. In the midst of our despondency, however, the report of a gun came feebly to our ears. This sound was welcomed gladly by our captain, who informed us that the wind was rising. Shortly after, in proof of his assertion, a puff shook the mainsail, then a rippling of waters was heard, and as the wind increased steadily the vessel soon gathered headway. The fog was lifted up and dispelled, and the rays of the morning sun were disclosed to our delighted vision. On our starboard bow, distant a few hundred yards, lay an immense bed of canvas and red-heads feeding. The discovery of ourselves to the birds was simultaneous, and the deafening roar occasioned by their rise fairly shook the vessel upon which we stood.

A few moments now sufficed to place our craft upon the feeding-ground, then all on board were engaged in a noiseless bustle. Silently the anchor was unshipped, and noiselessly it reached the bottom. How, I don't know. Then the lashings of the box were cast off, and it was lifted gently over the side, and an instant later was gliding quietly away, propelled by a pushing pole in the hands of Captain Bill, and the boat that took its place was being rapidly filled with decoys, taken from the vessel's hold by eager and willing hands. These were evenly arranged in triangular form around the box. The scene was enlivened by the occasional heavy muffled thunder of flushed beds of fowl by other vessels getting into position, and the air was soon literally alive with the thoroughly startled host, flitting hither and thither in pairs, flocks or singly, evidently looking for places of safety to gorge themselves upon their favorite food. None, however, heedless enough to venture within the range of our choke-bore.

Far away over the intervening waters lay the northern shore, with its irregular white outline stretching miles away eastward, to terminate in the well-known Turkey Point. Upon the shore, and in bold relief against the northern sky, looms up Bull's Mountain, whose broad base is constantly washed by the ever-changing tides. Upon its wooded summit leafless trees rear their tough and wiry branches heavenward, as if in very defiance of the cold blasts of the coming winter. Many miles of varied landscape grace the southern shore, the scenery of which is wild and fascinating. The eye here rests a moment upon the Battery light-house, which stands like a grim white sentinel in the haze of early morn; and then upon Spesutla Island, with its dense brown autumnal foliage and famed "Narrows," distinctly seen away to the south and east, while vessels, differing in size and color, dot the broad surface of the water here and there, giving familiar and life-like expression to the charming scene.

While we were gazing upon this magnificent panorama, the "set-out" was being completed, and we were warned to prepare to take the box first. Our dress consisted of three heavy flannel shirts, topped by a woolen gunsey of proper neutral color. Suspensives were dispensed with in order to give free play to our arms and body; two pairs of woolen stockings and rubber boots protected our feet, and a pair of dog-skin mittens, having a transverse and longitudinal slit cut in the palmer surface of the one belonging to the right hand, so that the fingers could be thrust instantaneously through the opening to grasp the wrist and triggers of gun. Thus equipped we took our "lay down" position in the box, without any misgivings concerning its frail or questionable appearance, and enjoyed, as we always do, the novelty of the thing amazingly. All around us, on the mirror-like surface of the water, sat the decoys, nodding and bobbing as they rode the swells and tugged at their anchors with life-like vigor. The Lilly "tripped" her anchor, and in a mysterious and noiseless manner made sail and tacked away to mooring quarters half a mile to windward. Distances on the water are very deceptive. Especially is this the case at early dawn. It is no wonder then that we spoiled our first "fly," by raising a little too soon, the ducks that appeared to us when lying down within easy range, were discovered—alas! too late—to be eighty or ninety yards away, and ran the gauntlet of our fire with the

loss of only one of their number. We determined to wait until the next "fly" were in the act of extending their legs preparatory to alighting, or directly over the stools. The wisdom of this resolution was soon apparent, for a moment later we stopped right and left a pair of canvas-backs, and hurriedly slipping in a shell cut down a single black-head that had the temerity to cross directly overhead. A pair of red-heads next rewarded our skill, and then a clean miss on the right vexed us not a little. Shots on this side are the most difficult, and tax to the utmost the skill of the most expert. The shooter is here obliged to "throw out," that is, suddenly and without preparation, fix his knees upon his abdomen, so that his feet will clear the side of the box, while at the same time his body is raised and he spins around upon his seat facing the birds. The celerity with which this movement is accomplished by a practiced hand is astonishing, while the attempt upon the part of a novice is ludicrous in the extreme.

A gun making a good penetration and a close target with large shot is essential to success, for the birds, with an appalling perversity, will persist, in the majority of instances, in "throwing off" when about fifty yards away from the sportsman. Our choice gun, a Nichols and Lefever—right barrel, modified, left full choke—we found a *ne plus ultra* for this sport. We could use either barrel, according to distance, and then the easy and quick manipulation of the action with one hand, while drawing and inserting shells with the other, made it very effective in shooting cripples before they got out of range.

A single drake canvas-back next made a dart at our decoys. We concluded to let him settle, which he did within ten feet of the box, giving us a splendid opportunity to witness his beauty of form, graceful movements and exquisite penciled plumage. A slight movement, however, alarmed him, and he rose with marvelous speed to full dead an instant after, as the sharp report of our "Lefever" rang out upon the reverberating atmosphere. A bunch of black-heads gave us a long shot on the right, and we made a good kill with our left barrel. Scarcely had we shoved in fresh shells, when we espied a large flock of canvas-backs heading directly for our "set out." With eyes riveted upon the incoming birds, we breathlessly waited until they were over the tail decoys; then raising quickly, we took careful aim at a "climbing" bird, and pressed the trigger. Hurriedly we covered another and touched the second trigger, and as the report ended, looked to see the result.

"Thunder and Mars!" we ejaculated, "not a feather." Astonished of course we were.

"But," says some inexperienced brother, "why didn't you shoot into the body of the flock?" Because the birds invariably separate when the shooter rises and seldom give a bunch shot. A grand good shot, indeed, is the man who can make three out of four doubles. Many sportsmen are misled by the idea that sink-box shooting is not difficult. A little experience with these swift-flying birds in this cramped position will soon disabuse one's mind of such an erroneous impression. Bunch shots are the exception—single shots the rule.

After a number of splendid "darts," we were relieved by our companion, E. C. P., and accompanied Captain Bill in the boat to pick up our slain, which had drifted slowly away with the tide. The shooter usually keeps count of the number of ducks down, and reports to the boatman, who rarely fails to gather all of the dead, cripples often escaping. Our friend, E. C. P., made a grand score in the succeeding hour with his new "Lefever," never missing a bird. His pick-up made a showing of twenty-one canvas, seven red-head, four black-heads and one bald-pate. J. E. S. next manned the fort with his "Scott." With the aid of the telescope we viewed his every movement, as he dealt out destruction with lavish hand.

This proved to be a good hour and added largely to our bag. J. E. S. resigned to us, and we in turn to E. C. P., and thus the sport went on until time for the evening "take up." The expertness of the men here evidenced remarkable skill, for the three hundred decoys and box were "decked" in just forty-seven minutes. The wind proved favorable, and the Lilly showed a clean pair of heels, while we wiped out our guns and returned them to their cases. By the time we had arrived at Havre de Grace, the steward had placed a most excellent repast upon the table, of which we partook liberally, enjoying all the while the keen satire of J. E. S., and the retaliating home thrusts of E. C. P., as the incidents of the day were recounted. Our bag numbered one hundred and fifty-six ducks for the day. Consequently we were honored by the distinguished title of "Duckers." Had our bag been light we should have been dubbed "City Sports" by our jolly captain. This was, indeed, a red-letter day, brother sportsmen, and rest assured that we were all extremely sorry when we stepped aboard the evening express train that the end was at hand.

Doc.

For Forest and Stream and Rod and Gun.
SCENES IN THE SIERRAS.

THE scenery of the Sierra Nevada Mountains is the most picturesque of any of the Rocky Mountain chains. Approaching from the plains, the dark outlines of the hog-backs and foot-hills are seen, and behind those the Alpine snow-capped peaks of the first snow-range rise high toward the sky. On the crests of the hills as you enter them, a few scraggling, stunted cedars appear, and the bottoms are dotted with straggling sage and grease bushes, with an occasional "Spanish bayonet." The hills are rigged with ragged granite rocks, and loose boulders are seen on every side. On these ridges and among the boulders are the winter feeding-grounds of the antelope and big horn sheep. Further into the mountains are groves of spruce and pine trees, and the bottoms are covered with dwarf willows and quaking aspens, better known in the mountains as "quakin' nsh." The spruce and a few fir trees grow up the mountain sides to an altitude of twelve thousand feet, and above timber line there is a rich growth of short grass and flowers, forming thousands of acres of beautiful pastures, where countless bands of antelope, mountain sheep, elk and mule deer graze.

These verdant slopes are nourished by numerous rivulets, fed by the slowly melting of the perpetual snow banks on the sharp rock summits. Going still further into the larger ranges, deep, rocky gullies and dark canyons are traversed, miles in length. Their vertical sides are dressed with spruce trees and vines, which grow from the crevices of the rocks, hanging pendant or meeting from opposite sides, thick arches of foliage are thus formed which the sun's rays never penetrate. In these shady passes the long-crested jays and nut-crackers resort, and their harsh notes reverberate in noisy chorus.

After traveling for several hours through a dark canyon, it is a pleasant change to turn a sharp angle in the trail and come out into the bright sunlight of the bottoms. When exploring the Rocky Mountains, one never knows how soon he will have to take the back trail. Oftentimes several days are spent in useless travel when trying to reach a mountain peak which appears to be but a few miles away. Rivers can usually be forded successfully, but heavy fallen timber, and the vertical sides of high rocks are barriers often met with which defy progression.

When viewing the many ranges from a high peak, the aspect is strange and wild. When looking back over a month's trail, which can only be located by mountain peaks, the many beautiful valleys which have been crossed are lost from view, and on every side the numerous ranges appear to be packed closely together, resembling in the distance huge waves out at sea. The general surface is occasionally broken by the larger mountains, whose peaks tower far above the ranges, their snowy caps making conspicuous landmarks, which are discernible at great distances. One of the most noticeable of these peaks is the Mountain of the Holy Cross. Near its summit are two large fissures in the rock which cross at nearly right angles. They are filled with snow nearly the whole year, and some seasons the snow cross is plainly seen during the entire summer. When visiting it in the latter part of August, '73, the cross was somewhat wasted and shortened at its lower end.

The Eagle River is the first one met after crossing the "divide," and its waters reach the Pacific Ocean. It is one of those clear, turbulent, refreshing streams peculiar to the Rocky Mountains. Its waters were teeming with salmon trout, and a friendly trapper and the writer packed two ponies with them in three hours' fishing. In exploring these vast mountain chains one may wander for months without seeing a human being. Straggling prospectors and an occasional Indian hunter are the only people who have the hardihood to venture far into the mountains. J. H. BATTY.

Fish Culture.

BENEFICIAL RESULTS OF SALMON HATCHING ON THE SACRAMENTO RIVER.—The Sacramento River furnishes one of the best illustrations in this country of the beneficial results of fish culture. Not only have the Sacramento salmon been captured by every possible device, in season and out of season, but nine-tenths of the spawning-grounds—in fact nearly all but those of the McCloud River—have been wholly destroyed by the hydraulic operations of the miners, and yet in spite of all these calamities the salmon of the Sacramento have actually largely increased in number through the instrumentality of the Salmon Hatching Station of the United States Fish Commissioner on the McCloud River. This fact becomes the more impressive when it is remembered that the young salmon which have been returned to the river have been only the surplus that Professor Baird could spare after furnishing all the States of the Union and several foreign countries with as many California salmon eggs as they wanted. This appears to furnish pretty good evidence of the possible efficiency of fish cultural operations. The last year, it is true, the applications were for over ten million eggs (10,000,000), while the supply was only seven million (7,000,000), so that some applicants were disappointed; but this was owing to a combination of adverse circumstances, among which was the secret fishing conducted out of season by the salmon canning establishments before they could be reached by the law. As this is not likely to occur again, it is confidently hoped that in the future the McCloud Station will be able to furnish all the California salmon eggs that are wanted in the United States, and in all parts of the world, besides being able to put enough salmon back into the Sacramento to keep up and to materially increase the stock of that river.

TRANSACTIONS OF THE AMERICAN FISH CULTURISTS' ASSOCIATION.—We are in receipt of a copy of the transactions of the association for 1876 and 1877. In this publication may be found all the topics discussed by the association, with copies of the papers read before them. This pamphlet is certainly the most

interesting of all reports issued by the association, as it contains information of the most valuable character. We must compliment the association on the excellent style in which their transactions have been printed. We call particular attention to the seventh annual meeting of the association, which will take place on the 27th and 28th of February. A general invitation is extended to all who may take an interest in the subject of fish and fisheries.

AMERICAN FISH CULTURISTS' ASSOCIATION.—The annual meeting of the American Fish Culturists' Association will take place on Wednesday and Thursday, Feb. 27th and 28th, 1878, at eleven o'clock, in the rooms of the Directors of the Fulton Market Fishmongers' Association, foot of Beckman street, New York. The place where the meeting will be held is particularly suited to the requirements of the association, as it is in the midst of the wholesale fish business of the metropolis. It fulfills exactly the aim of the association in popularizing the study of fish. Papers of interest will be presented by the various sections appointed at the last meeting. There will be an exhibition during the meeting—a particularly fine display of fish, which collection will be furnished by the principal wholesale fish dealers of New York.

LUNLOW TROUT PONDS.—This well-known fish nursery in McKean county, Pa., will have plenty of brook trout eggs to dispose of this season. Brook trout eggs will be ready for shipment from Nov. 10th to Dec. 20th; salmon trout from Dec. 20th to Jan. 20th. Brook trout fry can be sent by Jan. 20th and salmon trout fry by Feb. 20th. The prices are as follows: Brook trout eggs, \$3.50 per thousand; salmon trout eggs, \$3; brook trout fry, \$4.50 per thousand, and salmon trout fry \$5 per thousand. For large quantities of eggs or fry a reduction of prices is allowed.

NEW YORK.—The first shipment from Caledonia, for 1878, was of 45,000 brook trout eggs and 54,000 young salmon trout, which were last week sent to be distributed in the lakes and brooks in Essex county, owned by the Addison Duck Club.

—Twenty-five thousand California salmon were recently deposited in Cayuga Lake.

PENNSYLVANIA.—Twenty thousand California salmon fry have been planted at Sinnemahoning. A lot of 37,500 salmon eggs from the Schoodic salmon breeding establishment, at Lake Stream, Me., were received at Marietta, and an invoice of 100,000 brook trout, from Corry, Pa., are to be placed in the streams about Marietta.

OHIO—Lancaster, Feb. 11.—The State Fish Commissioners recently deposited in the waters of the Big Reservoir twenty-five thousand Columbia River salmon minnows. The attempt at restocking these waters, however, can only prove an unavailing expense, until the unlawful, wholesale netting which is practiced there the year round, is prohibited. If the Legislature has any idea of pisciculture their attention should be immediately turned to this matter. S. G. V. G.

MICHIGAN.—Twenty-five thousand salmon ova from the Government Hatcheries were received at the Michigan State Hatchery, at Niles, January 25.

CALIFORNIA.—Mr. Stephens, of Sebastopol, is engaged in carp culture. He has extensive hatcheries in Caulder Creek.

Natural History.

ICHTHOLOGICAL NEWS.—We have received from Prof. D. S. Jordan, the well known ichthyologist, three papers relating to the fish fauna of several of the Western and Southern States, which constitute a very valuable addition to our knowledge of the ichthyology of this country. In his Contributions to North American Ichthyology, published as one of the Bulletins of the U. S. Nat'l Museum, Prof. Jordan gives us a Review of Rafinesque's Memoirs on North American Fishes. The author has endeavored, by means of careful comparison of specimens of all the species known to exist in the region worked over by Rafinesque, with the latter's descriptions, to identify beyond a doubt all the names given by this early author. By this means many of the vexed questions relative to the nomenclature of the Ichthyologia Sbiocensis and Rafinesque's other papers on fish, are finally set at rest. A complete catalogue of the Rafinesquian genera, with their equivalents in the nomenclature of to-day, is added to this paper, and will prove of vast service to the student.

The second paper on the Fishes of Northern Indiana was printed in the proceedings of the Philadelphia Academy, and is based on material "collected, in the summer of 1875, in the streams and clear, deep lakes of the Northern part of Indiana." About sixty species are represented, most of them small. A list of the localities, with the species from each, is given, and the whole paper (55 pages) is extremely interesting.

In a communication to the N. Y. Lyceum of Natural History, Dr. Jordan gives a Synopsis of the Fishes of Upper Georgia, with several supplementary papers on fishes of Tennessee, Kentucky and Indiana. These papers are of no little interest as treating of a fish fauna, to which little attention has of late been paid.

TRAINED BRONCHOS.—New attractions at the Aquarium are the trained broncho horses, which go through a variety of very remarkable feats. The accomplishments of these equine performers consist of leaping through hoops of flames, sawing on a single plank (balanced on a saw-horse, of course), jumping over each other, and over gates ten feet high, rolling barrels up an inclined plane, a military drill, etc.

A SINGULAR COMBAT.

SPRUCE PARTRIDGE VS. SPANISH ROOSTER.

DONALD, CAP RANGE ROAD, ST. FOYE,
Near Quebec, Jan. 2, 1878.

EDITOR FOREST AND STREAM:

As a sportsman and an ardent admirer of the feathered tribe generally, I should deem myself remiss were I to omit to record so singular a combat as the one here referred to. The incident alluded to occurred some years ago in presence of myself and several members of my family, and would, perhaps, have been forgotten, had I not, while looking over old memoranda ancient birds, found the following description of this battle, the like of which probably few, if any, have had the good fortune to witness. I copy the description as I find it, written shortly after being an eye-witness to the occurrence, trusting that, in justice to our plucky little Canada grouse, you will record his valor in the pages of FOREST AND STREAM:

"On this balmy, cloudless May morning, the cry of 'Your gun, quick!' roused me from an unusually prolonged nap. After a very hasty toilet I found myself, gun in hand, on the kitchen stoop. From the alarmed cry of the person who called, I concluded that I was about to confront some very unusual denizen of the forest—a bear, a lion-cervier, or perhaps, the dreaded cat-a-wampus (*Felis concolor*), which, it is said, has for some time haunted the outskirts of the settlement at Valcartier. Great was my surprise, indeed, when, instead of any of the above formidable gentry, I beheld a male spruce partridge (*Tetrao canadensis*) engaged in mortal combat with the Spanish knight-errant of our poultry yard. The combatants fought in the manner common to the *Gallinaceae*—cycling each other with outstretched necks and drooping wings. At each attempt to strike on the part of the rooster, Tetrao, with the rapidity of a flash, would hop, or rather fly, over the head of his unlucky opponent, and passing, would use, as weapons of offence, both wing and claw with astonishing effect. At each onset, this passing was repeated several times without intermission; when, as before, the posture of attack would be resumed. In this manner the combat was carried on, round after round, but it soon became evident that, owing to his activity and strange and superior mode of attack, the smaller of the two opponents must eventually become the victor. Feeling his advantage, the little hero's fury knew no bounds. Striking from all sides, he punished the unlucky *Chevalier des poules* till his crest and wattles were torn to shreds, and, half blind, bleeding and stunned, he became utterly demoralized, and took to his heels. Little, however, did his flight avail him. Tetrao, bent on carrying hostilities to the bitter end, followed the *soldard*, knocking him down repeatedly by the violence of the blows, till, vanquished beyond hope, lying flat on the sod, his head bruised and bleeding under a tuft of grass, Gallus surrendered at discretion.

"Victory complete, our forest hero, after briefly cycling the prostrate chivalric, giving way to the tender emotions of love, flew towards the hens; and in his flight, by a tremulous motion of his wings, produced that singular sound known as drumming. Alighting in the midst of ponlets, and matronly Brshmas, the commotion was general; yet they manifested none of that *saute qui peut*, as when the dreaded hawk attempts a foray. A nervous hop aside, a mistrusting side glance, and a cackle expressive of surprise, was all the fear evinced. On reaching the ground, our little grouse paid court with outspread tail and trailing wings, by strutting about, displaying his graceful form and delicately pencilled livery; anon slightly oscillating his body from side to side; then, with a few rapid forward steps, curving his neck, would emit a short, sharp sound, like spiff, spiff. Thus parading and drumming (produced by this species while flying downward from a tree), a gallant sought for several days to win favor. All to no purpose, however. Disgusted at the marked want of appreciation on the part of *Mesdames les poules*, our brave inhabitant of the sombre swamps took flight toward his native wilderness, there to seek, and find and win a more brida worthy of his chivalry."

The Canada grouse, or swamp partridge, as this pretty species is called, is, except when driven from its haunts by some accidental cause, rarely met with in the woods and groves which, like dark green islands, dot the gradual declivity, from the base of the Laurentides, to the ancient Stadacona and the banks of the St. Lawrence. A few, I am informed, still linger about the swampy strip which, with more or less interruption, stretches westward from the Chaudiere Falls to the famous Cariboo hunting grounds in the rear of Chantilly. From this locality, owing to large fires which at the time raged about Chaudiere, the individual above alluded to came.

In the district of Quebec, the favorite home of the spruce partridge is amid the vast extent of gently undulating hills that diversify the divide, or watershed, between the Saguenay country, St. Maurice, and St. Lawrence. Here, by placid lakes and limpid streams, it finds ample food, and in the dense undergrowth of stunted spruce and small *Carnicora*. Seldom disturbed—except at distant intervals by a wandering family of Montagnais Indians, a Canadian hunter, or passing explorer—and having for companions several species of sylvan warbler, vireos, thrushes, and other migratory song birds, the Canada grouse propagates, live, and die in the enjoyment of that blessing, which many seek and find not—Peace and plenty. J. N.

RECENT ARRIVALS AT THE CINCINNATI ZOOLOGICAL GARDENS.—One horned owl, *Bubo virginianus*, presented; three Axis deer, *Cervus axis*, presented by the King of Wurtemberg; one European blackbird, *Turdus merula*, presented by Mr. Anton Deneke, City; one red fox, *Canis fulvus*, presented; six undulated grass parakeets, *Melospittacus undulatus*, hatched in garden; seven pug dogs, *Canis domesticus*, born in garden; one leopard, *Felis pardus*, deposited by Sells Bros.; one Virginia deer, *Cervus virginianus*, presented by Mr. H. Caldwell; two grizzly bears, *Ursus horribilis*, born in garden; one hooded finch, *Spermestes cucullata*, hatched in garden; two undulated grass parakeets, *Melospittacus undulatus*, hatched in garden; one wild cat, *Felis tusa*, purchased.

ANIMALS RECEIVED AT CENTRAL PARK MENAGERIE FOR WEEK ENDING FEB. 9, 1878.—Four flying squirrels, *Pteromys volucella*, presented by Mr. W. A. Lyon, Ironclad, N. Y. One Virginia deer, *Cervus virginianus*, presented by Mrs. Sage, N. Y. Two ring doves, *Turtur risorius*, presented by Mrs. Webster, N. Y. Two green monkeys, *Cercopithecus callitricus*; Hab. West Africa. One mouslache monkey, *Cercopithecus cephus*; Hab. West Africa. Four sooty mangabeys, *Cercopithecus fuliginosus*; Hab. West Africa. Thirty-seven small Rhesus monkeys, *Macacus rhesus*; Hab. India. One markhor, *Capra mageros*; Hab. Panjab. W. A. CONKLIN, Director.

NOTICE TO SPORTSMEN.—Having received so many communications asking us for information in regard to our six-section bamboo trout, black bass, grise and salmon rods, we have prepared a circular on the subject, which we shall take pleasure in forwarding to any address. We keep on hand all grades, the prices of which range from \$15 to \$150. We put our stamp only on the best, in order to protect our customers and our reputation, for we are unwilling to sell a poor rod with a false enamel (made by burning and staining to imitate the genuine article) without letting our customers know just what they are getting. P. O. Box 1,294.—[Adv.] ARREY & SMITH, 33 Malden Lane.

ROBBING THE DEAD FATHERS.—As a precaution against ghouls, the Regents of the Mount Vernon Association have connected Washington's tomb with the Mansion by an electric burglar alarm.

Woodland, Farm and Garden.

THIS DEPARTMENT IS EDITED BY W. J. DAVINSON, SEC. N. Y. HORTICULTURAL SOCIETY.

THE NEW YORK HORTICULTURAL SOCIETY.

AT the last meeting of this society, in addition to the splendid head of the Double Poinsettia and the noble dishes of mushrooms shown by Messrs. Bennett & Henshaw, a very instructive and entertaining lecture on "Small Fruits for the Family Garden," was delivered by Dr. Hexamer, Newcastle, N. Y., giving among other thoroughly practical information those varieties of small fruits, which from their freedom of growth in almost all soils, and under different conditions, hardness, fair flavor, good size, and general good qualities, are essentially the "fruit for the people." Commencing with the strawberry, he said that the variety known as Charles Downing for a main crop, with Duchesse for an early and Kentucky for a late sort, seemed to give all the requirements necessary for a bountiful supply during the season. And for the amateur who wished to try other sorts of higher flavor, he recommended Black Defiance, Lenning's White, Seth Boyden, Burr's Pine, and, for heavy soils, *Triomphe de Gand*.

In raspberries the Black Cap, Doolittle, Miami or Mammoth Cluster and Davison's Thornless were highly spoken of, and the suggestion offered that as they are propagated from tips only, they must not be planted so deep as the other kinds which are propagated by suckers and layers. Of these, the Philadelphia, Highland Hardy, Clark, and Cuthbert (a late variety, but large and fine) were pronounced the best hardy sorts; while of the tender sorts, requiring shelter and protection in winter, the Hudson River Antwerp and Brinkley's Orange were the favorites. Of blackberries, the Kittatany, hardy and prolific, and the Dorchester. In currants the cherry and Versailles, which were pronounced much alike, the old red Dutch and white grape were recommended; and among gooseberries, though all subject to mildew more or less, the Houghton and Downing. The favorite Concord among grapes was awarded the palm of superiority as being everybody's grape, and succeeding well in almost any location, while in sheltered places the higher flavored sorts, such as Delaware, Iona and some of Rodgers' seedlings, could be grown.

The address was received with great favor, and a hearty vote of thanks awarded to Dr. Hexamer. We have much pleasure in stating that at the future monthly meetings of the society, addresses may be expected on "The General Culture of Greenhouse and Bedding Plants and Kindred Subjects," and at the next meeting a letter will be read from J. A. Gardner, Esq., Indianapolis, on "Forestry." Premiums for cut flowers, hyacinths, primulas, etc., in pots, will also be competed for, and as these exhibitions are free to the public, we hope many will avail themselves of the opportunity afforded them of a few hours' instruction and recreation.

OUR NEW JERSEY GARDENS.

NEW Jersey is proverbial for its greenhouses and market gardens, and in the rarer and finer classes of plants South Amboy undoubtedly takes the lead. On a recent visit we found at Mr. R. H. Rathbun's a splendid collection of Agaves and other succulents, many of them very rare; a fine collection of Azalias just starting into bloom, besides many plants of peculiar interest to the lover of the curious and beautiful in nature. A finely-grown plant of the extremely curious New Holland Pitcher plant, *Cephalotus follicularis*, is very interesting, showing the finest colored pitchers we have ever seen. His collection of ferns, palms, marantas, and other exotic plants is very fine, and, with the extensive, healthy, and well-grown collection of orchids, show the care and attention bestowed on them by his energetic and able gardener, Mr. W. Clements. A plant of the rather weak-growing *Dendrobium Pierardii* is worthy of particular mention, the stems being over five feet in length, and bearing over 550 flowers. We never go to South Amboy without making Mr. G. Such's extensive green-houses our objective point, where the presiding genius, Mr. Taplin, dispenses lore on orchids and pitcher plants, with a zest that made enthusiasts of us all. Here we found, in addition to the many palms, *Dracenas*, *Pandanus*, *Crotons*, *et sic genus omne*, a fine lot of orchids, either in or showing bloom; notably, *Cattleya*, *Triana*, *Laelia anceps*, a very fine variety of *Oncidium bicallosum*, the lovely light pink East Indian Butterfly orchid, *Phalenopsis Schilleriana*, and its lovely white Congener *P. Amabilis*. *Sophranites grandiflora*, *Odontoglossum Rossi*, in many varieties, undoubtedly native hybrids; *O. Pescatorei*, *Vanda tricolor*, and many others. In the cool houses, *Laelia gratissima*, with its large *Hydrangea*, like heads of fragrant pink blossoms, was still in good shape, though in bloom for over two months; *Lapageria rosea* and *Thunbergia Harrisii* with its wealth of light blue trumpet-shaped flowers, were also very fine; while immense plants of the most lovely of all the New Zealand ferns (*Gluchenis* in many varieties) showed the master hand of the cultivator. But after all, to the intelligent observer, the palm of superiority must be awarded to the seedling pitcher plants raised by Mr. Taplin, crosses between *Nepenthes Rafflesiana*, as the female parent with *N. Hookeri*, *distillatoria* and *Hookeri*. We have here a most wonderful variety, surpassing anything we have yet seen of British or Continental origin in brightness of color, shape and

size of pitchers, as well as vigor and gracefulness of growth and habit. Altogether a visit to South Amboy at no matter what season of the year, is a treat to even the veriest tyro in horticulture.

The Kennel.

TO CORRESPONDENTS.—Those desiring us to prescribe for their dogs will please take note of and describe the following points in each animal:

1. Age. 2. Food and medicine given. 3. Appearance of the eye; of the coat; of the tongue and lips. 4. Any changes in the appearance of the body, as bloating, drawing in of the flanks, etc. 5. Breathing, the number of respirations per minute, and whether labored or not. 6. Condition of the bowels and secretions of the kidneys, color, etc. 7. Appetite; regular, variable, etc. 8. Temperature of the body as indicated by the bulb of the thermometer when placed between the body and the foreleg. 9. Give position of kennel and surroundings, outlook, contiguity to other buildings, and the uses of the latter. Also give any peculiarities of temperament, movements, etc., that may be noticed, gas of suffering, etc.

FIXTURES FOR 1878—BENCH SHOWS.

St. Louis Bench Show, St. Louis, Mo., Feb. 19, 20, 21 and 22. Entries close Feb. 5.

Boston Kennel Club Show, Boston, Mass., March 26, 27, 28 and 29. Dr. E. J. Forster, Secretary.

Baltimore Kennel Club's Show, Baltimore, Md., April 23, 24, 25 and 26. L. R. Cassard, Secretary.

The Westminster Kennel Club (New York) Bench Show, Gilmore's Garden, May 16, 17, 18 and 19. Dr. W. Seward Webb, Secretary.

BLUE BELTONS.

IN reply to several correspondents who ask particulars as to blue Beltons, taking the late Mr. Edward Laverack's work on the setter as authority, we condense from his book as follows: The origin of the Belton is not well known. The Marquis of Breadalbane had only Beltons in his kennel. There are black and tan Beltons, but blue were preferred. Many years ago, through Cumberland and Northumberland, England, the breed was known. Mr. Laverack's acquaintance with the breed dated back in 1873 to some forty-seven years before. A dog called Fred II. was supposed by Mr. Laverack to present all the best physical traits of the Beltons. On page 22 of "The Setter," by Edward Laverack, we find the following description: "Head long and light, not snake-headed or deep-flewed, but a sufficiency of tip, remarkable for being very strong in the fore-quarters; chest deep, wide, and ribs well sprung behind the shoulders, carrying the breadth of back to where the tail is set on; immensely strong across the loins, shoulders very slanting and oblique, particularly short from the shoulders to where the hind-quarters meet; color, black, or blue and white ticked; coat, long, soft and silky in texture; eyes soft, mild and intelligent, of a dark hazel color; ears low set in and close to the head, giving a round development to the skull." There are lemon and white Beltons, although Mr. Laverack declares these to have been very fine animals, he still gave preference to the blue Belton.

No dogs who do not get the color from Laverack blood can fairly be called blue Beltons. Mr. Laverack wrote: "If I had not kept my breed of blue Beltons pure, this rare old strain would have degenerated in a similar manner" (to other degenerate strains). The best specimens in America find examples in Mr. Smith's "Paris" and "Pearl," Mr. Beecher's "Blue Belle," by "Pride of the Border," and Mr. Olcott's "Guy Mannering" and "Roderick Dhu." There are others equally true in color, but not so well known. Laverack's old "Blue Dash" had little entire black, except her ears, and the nearer a "blue and white ticked" setter of pure or part Laverack strain resembles him in color, the nearer he approaches to the true blue Belton type. Some critics may hold that no dog, however black and white ticked, is a true blue Belton, unless he is a pure Laverack; but generally the term is admitted as applying to any setter bred wholly or in part from "Laverack blood that approaches the hue of old 'Blue Dash.'" His owner says that "when this dog was first exhibited as a specimen of the blue Belton, most of the public and judges had never seen the breed;" which is another way of stating that they were purely his own. As other specimens of it, he mentions Garth's (Q. C.) "Daisy," Lewellin's "Countess" (a beautiful and perfect specimen), and Dickens' "Belle."

THE BEST BIRDS TO BREAK DOGS ON.

WRITING to the Chicago *Field* under this caption, Arnold Burges gives as his decided opinion "formed from experience" that the ruffed grouse is "the best bird of all to break dogs upon." The arguments that he advances in support of this assertion are more plausible than practical, and but one side of the question is discussed. This is the first occasion we have known any one to advocate breaking dogs first in cover, and upon the wildest of our game birds when found in thickly settled districts. Differing in opinion from Mr. Burges so widely as to consider the ruffed grouse the least suitable for this purpose of all the game-birds usually shot over dogs in this country, I venture to present some facts that serve to support my opinion and that furnish ground for objections that to my mind far outweigh the arguments used in favor of the subject. The tenor of Mr. B.'s argument is, that owing to the wariness of these birds, a young dog should first be broken on them to develop caution, a keen nose and slowness on a trail. Does Mr. B. desire that a dog's first lesson shall teach him to trail? A dog takes naturally to this

mode of hunting, and after acquiring the habit in cover adheres to it when taken to the field, unless extraordinary care is taken to break him of what may be to some very desirable in cover, yet is detestable when it becomes the habitual mode of hunting in the open. First impressions are oftentimes the most durable ones, and therefore care should be taken that these impressions should be such as to leave a desirable effect on the pupil's mind. This would hardly be the case if the first lessons were such as to teach him to hunt with nose to the ground, seeking the foot-scent that he might find game by trailing. All dogs have a natural propensity to hunt in this manner, and the repeated hunting of ruffed grouse alone would inevitably confirm a dog in the habit unless he were constantly corrected. Although shooting many varieties of game over my dogs and devoting much time and attention to make them equally good in cover and open, I know full well that few, very few, sportsmen do the same. Mr. Burges will probably allow that it is not over easy to teach a dog to hunt fast and in fine style in the open after it has become habituated to hunting close and slowly in cover, seeking the foot-scent by preference and finding game like a hound by the trail, which it follows cautiously until the bird rises; or else, if the bird at last lies and suffers the dog to approach near enough to take the body scent, he catches it while on the trail with head down and stern depressed, and "freezes" in that position. There are some qualifications quite desirable in a dog for cover-shooting that are quite the reverse for open shooting, and to possess both in perfection a dog must be so thoroughly broken as to leave the slow, pottering gait and habit of trailing the moment that he emerges from cover to hunt in the field, and ranging fast and wide carry his head and stern well up, not seeking to find game by the scent on the ground, except when after a crippled bird. This is a matter of training, and bigger training, too, than is ordinarily attained. It is no difficult matter to teach a dog to hunt close in cover if he is under good control and hunts for his master and not for himself; for except when excited by the near presence of game, the scent of which has already been detected, the dog no sooner misses his master than he returns and hunts within sight or hearing. Mr. Burges' arguments are good if the dogs are to be broken especially or solely for cover shooting. But if to be used principally for open shooting I would not allow a young dog to be taken into cover for his first field lessons, nor indeed until after he had been worked sufficiently on game in the open to become quite controllable, and familiar with the work expected of him. I do not doubt that Mr. B. can break dogs first in cover and make them equally good in the open. But if he habitually does it, he obtains results quite at variance with the vast majority of dogs so hunted. Too often has my eye been pained by the appearance in the field of dogs of really fine qualities, marred by bad habits contracted in the cover. Ruffed grouse, like other birds, vary their habits according to locality, etc. When much shot at they are very wild, but in localities little frequented by man they are quite the reverse, and may not only be easily approached, but may be shot from the trees one by one until several are killed ere the remainder will seek safety in flight. "None but pot-hunters would kill them thus," has often been remarked of shooting game birds sitting, yet this bird is generally considered as an exception to the rule. They are very desirable additions to the larder, and when found in the dense forest where, owing to their surroundings and their habits, they cannot be shot on the wing, afford no sport, and are killed solely for the pot.

To illustrate the difficulty of obtaining a wing shot at ruffed grouse in such localities I will relate an incident that occurred to the famous sportsman "Cale" Loring, who was the most wonderful field shot of whom I have ever seen record. It was near the close of a day in early autumn, while traveling by canoe with an Indian hunter toward Northern Maine to hunt moose, and the falling shadows warned him to select a camping ground. Suddenly a pair of wood-ducks flew around a bend of the stream and directly toward the canoe. Too near to turn back, they separated to pass the canoe, one on each side. But Cale's gun was lying at hand, in readiness for any unexpected shot wherewith he might obtain a good supper, and both ducks fell to a right and left shot from either shoulder, for he had the remarkable faculty of shooting from either shoulder, and could not turn quick enough in the canoe to kill them otherwise.

Great was the astonishment of the Indian at this feat, it being the first time that he had ever seen a bird shot while flying. Poor "Lo" thought that the devil's power was used. "Ugh! kill um so every time!" "Most every time." "Kill um all kinds so?" "Yes, all kinds." "Kill Injun partridge?" "Yes; Injun and onc." While this conversation was going on, the Indian making long pauses after each query, the ducks were picked up and the canoes beached, unloaded and turned bottom up on the shore. A pair of small ducks were just enough for one man's supper after an all day's paddle, so they immediately set out in search of partridges, as grouse are commonly called in Maine. Soon a dozen were found feeding on the ground. "Ready now?" asked the Indian as the birds began to run. "Ready all the time," was the reply. The Indian clapped his hands, but the birds only ran the faster. He then threw a bit of the dead branch of a tree at them and one or two went to the lower branches of the nearest tree, flying but a few feet and giving no time for a wing shot. After repeated clubbing the others were gradually flushed, but with like result, it being impossible to make them fly far enough at a time to afford a wing shot. Yet so shy are the same birds when frequently shot at that it is often difficult to get near enough to them for any sort of a shot, not lying to either dog or man. Especially is this the case in open woods free from underbrush, where they will run rapidly and take flight out of range. Even when not thus shy they will almost invariably first use their legs ere resorting to their wings as a means of escape. And owing to their habit of running are they especially undesirable birds upon which to break dogs. When a dog has been hunted upon no other game, and has become proficient upon ruffed grouse, he hunts in a slow, pottering manner, necessarily so, to be successful in any great measure, for the birds run so that the foot-scent is most often the first taken, and the game is found by trailing, which should be done in a slow, cautious manner, lest the wary birds be unintentionally flushed. Now, when the dog is first taken to the open he hunts in like manner, and continues to do so until he is taught that another style must be adopted. By the time that this other style (a fast gait, with head and stern well up, wide ranging and no trailing), is thoroughly learned, the dog must have another course of training in the covers, to teach him to resume there his work as first taught, and to know that he must do this in cover and so in the open, and never confound the two duties. All this has been, and can be, done; but, not only must a dog be highly trained for such work, but his training must

he kept up, and he must be used alternately in cover and open if possible.

For my own part, I would prefer a dog to hunt always in a fine, dashing style, even though occasionally flushing in his eagerness, than to hunt by trailing or in a slow, pottering style. Mr. B.'s premises in regard to breaking young dogs upon sby birds, to teach cautiousness, are all well enough; but ruffed grouse are ill adapted even for that purpose, since their habit of running is likely to lead the dog into worse faults than could be compensated for by all the cautiousness acquired. Moreover, thick cover is an entirely unfit place to give a young dog his initiatory field lessons, for at that time especially should he be constantly under the eye of his breaker. It is much easier to teach a new virtue than to correct an acquired fault.

I heartily agree with Mr. Burges that too much attention cannot be given to thoroughly breaking the dog in the yard ere allowing him to go into the field. This is of great importance, but too often neglected by sportsmen who break their own dogs, and also by professional breakers, who obtain quicker, but not better results, by taking puppies into the field with old dogs to learn to find game ere they have been brought under control. However well yard-broken a young dog may be, it is impossible to keep him constantly in sight in thick cover, provided he does any hunting; and there would be great danger of his acquiring a fondness for hunting hares and other fur almost before his breaker would suspect it. Mr. B.'s idea of choosing the cover for the initiatory field lessons is certainly a novel one, and I hardly think that many sportsmen will endorse his preference, unless they wish their dogs broken especially for cover shooting.

The snipe, as found in the North and East in autumn, is far preferable for developing the same qualities, "keen nose and cautiousness," than is the ruffed grouse, and the *habitat* of the snipe is far better suited for breaking a dog. I am well aware that in the West and South the principal snipe shooting is in the spring, at which time the habits of the birds are different from those during the autumn migration. But go to Canada, New Brunswick, Nova Scotia, or the Northern Atlantic States in September or early October, and you can find game that will bring out the good qualities of your dogs. If you desire wild birds and a strong scent, select a cold, damp, windy day. Take your young dog and hunt up wind. If the birds are plenty he'll soon take the scent; but not from the ground. If he flushes, as is very likely at first, you can see how and why he does it, and govern yourself accordingly. Here there being nothing to hide him from view, every opportunity to teach a virtue or encourage him is a praiseworthy action can be taken advantage of, and faults can be corrected ere they become confirmed. On the day described the birds will be wild enough, but the scent is good and can often be taken at eight or ten rods distance by a keen-nosed dog.

As the dog catches the first scent he slackens the pace, and with head raised sniffs the air, soon learning to hunt thus for game, and not with nose to the ground. There is no trailing in this shooting, although snipe will often run where the ground is smooth with sparse cover, for the body scent of this bird is, under ordinary circumstances, stronger than the foot-scent.

Again, if your dog is sufficiently cautious, and you wish to practice him on close lying birds, select a calm, warm day, and the best feeding-grounds. Now, the birds will suffer both the dog and yourself to approach very near, and here is the opportunity to teach your dog staunchness, if he needs any lesson in that line.

If in a locality where ruffed grouse abounded, and no other game upon which dogs could be broken, then would I give them their initiatory lessons on game in the cover and upon grouse; but it would be "Hobson's choice," and not my own. Although not here expressing an opinion as to which of our many game birds may be best adapted for the field education of dogs, I certainly do not consider the ruffed grouse to be so, but quite the contrary, both from its habits and its *habitat*.

Of course I am writing, as I judge did Mr. Burges in the article referred to, exclusively of pointers and setters. I trust that he does not advocate trailing as an accomplishment that should be taught these dogs. But little encouragement is needed for the acquirement of that which is so congenial to them, and if once confined trailers it is often very difficult to entirely break them of a habit that is so detestable when adhered to in the open. It is presumable that one so well known in connection with canine matters in this country as is Mr. Burges, has had much experience with dogs in the field. Therefore it is the more remarkable that he should advocate breaking first in cover and upon ruffed grouse, dogs that are to be used for mixed or open shooting. Mr. Burges says: "We see then the advantage of giving the dog his first lessons upon grouse (ruffed grouse) since, when proficient upon them, he is fitted for all others." I would add to my remarks on the subject that I trust my readers can see the disadvantage of giving the dog his first lessons upon ruffed grouse.

EVERETT SMITH.

For Forest and Stream and Rod and Gun. AFTER THE HOUNDS.

REMINISCENCES—NO. II.

AFTER being entered at hares, as described in my last, I was in due time promoted to fox hunting. As soon as my legs were long enough to grip a pony I was mounted on a pad saddle, without stirrups, and permitted to follow the hounds. I took to fox hunting as naturally as a duck to water. At first I did not pretend to ride straight across country as my seniors did, but a pretty good knowledge of the topography of our county enabled me, by cutting across and dodging around, to hear, if not see, much more of the chase than one would suppose, and not unfrequently I contrived to be in at the death. In my youth I hunted with two subscription packs of fox hounds of considerable note, some account of which I propose to give in future numbers of your paper. One of these packs was in Baltimore and the other at Washington City, and both were at their best about the time of General Jackson's second term. As for private packs they were innumerable, for the planter in the slave States who did not keep from one to ten couples of hounds was an exception to his class; and from the day when the crops were secured in the fall, so that no injury could result from leaving down the fences, to seed time in the spring, hunting was the chief recreation of the landed gentry of the South, and took precedence of shooting, deer driving and all other field sports.

Among the private packs which I best remember were those of Mr. Ramsay Waters, at Annapolis; the Ogles, at Bel Air;

Mr. Charles Hanson's, near Baltimore, and Major Harry Carroll's, at Perry Hall, near the same city.

In Virginia, the Taylors, of Mount Airy; the Corbins, of Moss Neck; the Chibesters and the Broadnaxes were all famous for their hounds and the matches they made upon them. Indeed, the venatic passion in the Old Dominion is still so strong as to have survived all the disasters of the late civil war, and as a proof of it, we may read in a recent issue of a local paper—*The Roanoke Valley*—a challenge from Mr. Winbush, near Lynchburg, and Mr. Stokes, of Lunenburg, to run their combined packs against those of Mr. Broadnax, of Brunswick, and Mr. Tucker, of Gaston, for a very heavy wager.

Of all the private packs I ever followed, except my own gray-fox pack in Mississippi, that owned and hunted by Mr. Ramsay Waters, at Annapolis, Maryland, afforded me, I think, the best sport; not that the hounds were better, or even as good as some others, but because they hunted a better country, where foxes were numerous, as they always are in a tide-water section, abounding in ducks, fish and crabs, all of which are favorite tid-bits on Keyward's bill of fare; and then the level lands were cut up there into innumerable small peninsulas, or "necks," as they are called, in which the fox can be hemmed in as it were, and prevented from making straight runs of ten and twenty miles, as he will frequently do in the upper country. For some reason, probably because I had the luck to be a prominent actor on the occasion, a run which I had, when not quite twelve years of age, with the Annapolis pack, made so strong an impression on me that I can recall all its incidents as vividly at this moment, after a lapse of fifty years, as I could the day of its occurrence.

My father and myself went to breakfast with Mr. Waters, who lived in one of those old-fashioned colonial houses, near St. Anne's Church, full an hour before day—and a bountiful breakfast it was, such as can be had only in the tidewater counties of the Southern States. "Peach and honey" to begin with, half a dozen varieties of hot bread, two-year old home-cured ham, smoked sausage, oysters in every form, broiled ducks and partridges, and that most delicate relish peculiar, I believe, to the Southern States, corned shad. While enjoying our meal we could hear the impatient baying of the hounds, some eleven couples, which, under charge of an old negro, were waiting us at the door, in the most frequented street of the old metropolis. At the very first peep of dawn we were in the saddle, the hounds were uncoupled, and we started for one of the neighboring "necks," in which we hoped to find an old red dog-fox, famous for having repeatedly beaten the best packs in Anne Arundel and Prince George counties. As we slowly trotted along, the dormant echoes of the sleeping town were suddenly aroused by a deep, prolonged, but musical, howl from one of the dogs. Our host, who was leading the way some ten yards in front, pulled up and observed the challenge came from old "Trueman," the most reliable hound in his kennel, who was never known to "open" on anything but the trail of a fox, and that, as extraordinary as it might appear, he was now giving tongue within the limits of the city on a fox trail and nothing else; and while he was yet speaking, half a dozen dogs joined in. The cry proceeded from a small market-house which stood at that time at the right of the main street leading from the city and near the suburbs.

As the sequel will show, it was the trail of the identical fox we were looking for; he had ventured, as doubtless he had frequently done before, into the market-house to pick up some of the offals usually to be found in such places. The trail was yet warm enough to afford us a good cry, and it was followed without difficulty down the road, across a couple of fields and into quite a large cover of second growth pines near South River ferry. When here, the cry of the hounds, which had been swelling as we advanced, suddenly burst into a thunderous tempest of sound, which we were afterward told was distinctly heard across South River two miles away. Old Reynard was up, and, flourishing his white-tipped flag in defiance of a foe he had beaten so often, he broke cover gallantly, but meeting the horsemen in the road he darted back again, and here, as if to supply his lithe limbs for the coming contest, he ran in circles within the cover for twenty minutes or more, and then dashed away in full view of the field, evidently aiming for the up country in the neighborhood of Elkridge, twenty miles away, as he had often done before to the discomfiture of his pursuers; fortunately, he encountered a string of market wagons and was coursed by some cur dogs, this caused him to double back, and he headed for Primrose Hill, a country seat belonging to the late Lewis Neth, situated on a peninsula opposite to and in full view of Annapolis. At this double, a check, the only one during the whole chase, occurred, and this gave Mr. Waters time to tell us that he now felt confident of either killing the fox or of running him to earth. To avoid the latter, it was determined that I, the only boy present, should be detailed to watch the earth and prevent the entrance of the fox.

As the run was now confined within the limits of the "neck," and the hounds on such good terms with their fox as to make it next to an impossibility to lose him, Mr. Waters pulled out of the chase and took me to the earth about a half a mile away. This fox burrow, one of the most ancient and extensive in the State of Maryland, dug probably by the first red foxes that crossed the Chesapeake more than a century ago, runs so far under ground and has so many galleries as to make it a difficult task to dig a fox out. It is just under the brow of an almost perpendicular cliff eighteen or twenty feet high, and overlooks the whole peninsula clear away to the bay shore. Here, after hitching my pony some fifty yards away in a thicket, I was left by my guide with the strictest injunctions to remain seated in the mouth of the den so as to fill it up completely, and on no account to leave my position even for a second. Somewhat consoled for being thus thrown out of the active pursuit by the responsibility of my functions, I willingly obeyed orders, nor had I any cause to repent, for from my commanding position I had a better view of the chase than those who followed the hounds; indeed, except when at rare intervals fox and dogs were concealed by the tall grass or thickets, I witnessed the whole of it with an excitement more intense than I had ever yet experienced in my young life.

The distance blended the fierce cry of the pursuing hounds into the sweetest music, and as the chase drew near or receded the harmony was like that of an Æolian harp played upon by the summer winds. I could every now and then see the gallant fox, yet fresh and strong, skimming along far in advance, with the ease of a swallow cutting through the air; then, half a mile in the rear would come the gaunt, long-striding hounds, four or five abreast, with sterns down and heads up, running on a burning breast-high scent, and gradually gaining on their quarry. Since that day I have witnessed some of the most stirring scenes in the whole range of field sports, both home and abroad; I have treed and shot the black bear and the catamount in the Stygian swamps of Louisiana; some of the biggest bucks of the Alleghenies have dropped in their

tracks at the crack of my rifle; I have fired into clouds of wild-fowl at Carroll's Island until my gun was too hot to hold; but for delicious excitement nothing will compare with what I experienced on that day when I sat almost breathless in the month of the fox den at Primrose, and were I to live a thousand years I never would forget it.

At the end of I know not what time, for I was too much excited to note it, it became evident that the fox was failing fast and minding his last foil. He had probably found too heavy a meal in the market-house, and from some cause could not throw it up as foxes and dogs readily do when hard pressed. Be that as it may, when he last crossed my view he was making shorter turns; he labored in his lope, and his brush was trailing on the ground, and as he disappeared from view under the creek bank the clamorous pack was but two hundred yards behind him. After disappearing from sight under the bank, the chase led up the creek to my left, and I could hear the roaring cry gradually receding in my rear, until it became almost inaudible, and I began to fear that Reynard was making a bold push to escape from the "neck," but the failing condition in which I had seen him last reassured me, and presently the music became more and more distinct, nearer and nearer came the cry rapidly swelling into a perfect hurricane of sound. Just then, when I was ready to jump out of my very skin with suppressed emotion, a few clouds of earth fell upon my head, and the fox, now dead beat, jumped down almost in my lap. It would be hard to say which was most startled, he or I. I leaped to my feet and he made a great bound in the air and fell rolling heels over head down the face of the cliff, and before he could recover his legs the whole pack came after like a roaring avalanche, covering me with dirt as they passed, and nearly carrying me with them in their descent. In an instant the poor fox disappeared beneath a living mound of yelling, snarling, writhing hounds, and before I could reach him he was crunched beneath the savage fangs of his enemies into a limp, disjointed mass. As soon as I could I out with my barlow, whipped off the brush and stuck it in my cap. When my father and the other gentlemen joined me they were greeted by the proudest twelve-year-old boy in the proud old State of Maryland. F. G. S.

THE REAL BRITISH BREED OF DOGS.—Incredible, but often truthful, stories are told of the endurance of dogs in running deer and foxes. Sometimes hundreds of miles of ground are run over. The biggest and, proportionately, the most truthful, story we have ever yet heard, is told by the Lynelburg *Virginian* of Jan. 30, ultimo. It purports to come from an old negro beater named Lake, and is included among the reminiscences of the writer, from which we quote. The writer is referring to the prodigious performances of a hound named "King." He says:

"As far as we could see, King had been chasing the deer for twenty-four hours, which, of course, was so improbable that the bare possibility excited much discussion. Uncle Sam and Lake, however, stood to it that the dog had been running the deer since the day before, as it appeared.

"I chanced to ride with Lake some two or three miles immediately after this incident, and expressed strong disbelief in the likelihood of King's performance. Lake insisted upon that such a race was nothing to be wondered at. 'V' sir,' he said, 'Mas Sam's stock of dogs is the real British breed, and dat race of King's is nothin' to what is known 'em do. Dar was an ole red fox dar in de mount jes 'bove Mas' Sam's, and many was de race I had after him, but I never could catch him, cos for want of time. I was always 'bliged to blow off de dogs and give him up. Well, I swore, come Christmas, I would catch dat fox if it took me all de holidays. I know'd 'zactly where he lay, and by day Christmas morning I had him up. I run dat fox all Christmas day and all Christmas night. Next mornin' Mas' Sam he sends one of de bigger boys to see what had come of me and de dogs. I took dat nigger's fresh horse, and I runs dat fox all dat day; you never hearn such a chase. About night Mas' Sam sends annudder nigger. I takes his horse and runs dat fox all dat night. Next mornin', 'bout daybreak, dat horse was broke down, and I gits down off him and takes after dat fox on foot. I was so tired I could jes barely walk; but, Lor' bless you! it was all de same, for de dogs were jes' ahead, yellin' like mad, and de fox in sight—all walkin'. Me an' de dogs walked after de fox till ten o'clock dat day before we cotched him, an' when Mas' Sam sent for us dey had to git a wagon to haul me and de dogs home.' 'Why, Lake?' 'Fac, sir; you jes' ask Mas' Sam. I tell you dem dogs is de real ole British breed. Dey 'lows no varmint dst runs on top of de ground to git away from 'em, once de scent gits hot.'"

RUSSIAN SETTERS.—"E. A. B." asks upon what page in "Stonehenge" I find the quotations made in my article upon this subject. In reply I would say that by "Stonehenge," I referred to the well-known English writer upon canine matters, Mr. J. H. Walsh. If, as "E. A. B." says, "Stonehenge" gives four pages mainly in his favor as superior to the English setter, he has very much changed his mind since writing the following in his "British Rural Sports": "Many good sportsmen use these dogs constantly, and I have seen some of them do their work well; but they are so unsightly to my eye that I should never be willing to exchange the noble-looking English or Irish setter or pointer for such a poodle-looking brute as the Russian;" and, furthermore, expresses my own views in these words: "But as to my taste, all the beauty of shooting consists in pleasing the eye by the fine working of handsome dogs. I could never get over the unsightliness of these uncouth creatures." ANICUS CANUM.

—Mr. N. P. Leach, of the Quebec Game Protective Club, Montreal, has just lost a very valuable Norfolk spaniel, winner of the first prize in Montreal in 1876, and one of the best ruffed grouse dogs known. His death was caused, it is believed, by a kitchen girl in a hotel throwing him a piece of hot meat just off from the coals. A *post mortem* examination showed his stomach, lungs, and intestines near his stomach to be badly inflamed, while the intestines further downward were white and hard as a whip cord.

A DRUGGIST'S MISTAKE.—Mr. Tremaine, of Allegheny City, Pa., reports the death of his Irish setter puppy Bob, winner of first and special prices at Pittsburgh last month. He was poisoned by a mistake of an apothecary in filling a prescription. Suit has been entered for recovery of his value. Bob was by Rufus II., out of Moll II.

MICHIGAN—*Detroit, Feb. 9.*—J. N. Dodge has had the misfortune to lose the stud beagle dog Rally, property of General Rowett, of Carlingville. Rally made his escape by climbing over a couple of high fences. RED RUFUS.

RILL—*Columbia, Tenn., Feb. 11.*—Mr. Dew's bitch pup Rill, winner of the puppy stakes at Nashville field trial last year, died with distemper a few days ago. He had refused \$300 for her. VAL.

SALE—*Mr. L. F. Whitman, of Detroit, has sold to A. G. Smith, of New Philadelphia, O., the Rob Roy, Mell, white black and tan dog Dike R.; also to George Carpenter, of Gwasso, Mich., the blue belton bitch Louie R. This disposes of the entire litter.*

NAMES CLAIMED—*BELLE and JIM.*—Dr. S. Reilly Beecher, of Lebanon, Pa., claims the name of Belle, orange and white setter bitch, born Dec. 29, 1876, out of Dr. H. A. Rosenthal's Sport and Flora. Also the name of Jim, black and white, born 1877, sire, Jos. Montgomery's Gordon Ned, dam Metzger's orange and white Fan.

WHELPS—*Strathroy, Can., Jan. 31.*—L. H. Smith's field trial setter bitch, "Chip," nine puppies, to Byron's "Gladstone."

Brooklyn, Feb. 10.—H. A. Rosenthal's setter bitch Flora whelped on the 6th ult. ten pups by Sport. All strong and healthy.

GLEN—*New York, Feb. 13.*—The setter bitch Glen, owned by C. De Ronge and H. Iuman, whelped yesterday four puppies, three black and white, and one pure white—three bitches and one dog. Sire, Mr. D. Gleott's Guy Manning. C. De R.

VISITS—*Feb. 4.*—D. C. Sanborn's "Nellie," Hampton champion, to L. H. Smith's "Leicester." L. H. Smith's "Victress" to "Leicester," and "Pearl" to "Paris."

Claremont, N. H., Feb. 3.—Wm. Jarvis' "Rose," by famous champion "Palmerstone," to champion "Elcho."

SPLIT BAMBOO RODS.

To our customers and the public:—In reply to the damaging reports which have been circulated respecting the quality of our split bamboo rods, by "dealers" who are unable to compete with us at our reduced prices, we have issued a circular which we shall be pleased to mail to any address, proving the falsity of their assertions.

CONROY, BISSETT & MALLESON,
Manufacturers, 65 Fulton Street, N. Y.

Game Bag and Gun.

GAME IN SEASON IN FEBRUARY.

Sparrows, brown and gray. Wild duck, geese, brant, etc.

FOR FLORIDA.

Geese, Wild Turkey, Woodcock, Quail, Snipe, Ducks and Wild Fowl.

"Bay birds" generally, including various species of plover, sand piper, snipe, curlew, oyster-catcher, surf birds, phalaropes, avocet, etc., coming under the group *Limicola*, or Shore Birds.

FIRE-ARM PATENTS, WEEK ENDING JAN. 25.—Gun-lock, Nichols & Livingston, 193,669; guns, breech-loading, Nichols & Livingston, 193,670.

WEEK ENDING FEB. 1.—Fire arms, extractor, Jones & Marsden, 193,745.

ROD AND GUN CLUB OF SPRINGFIELD.—We beg to acknowledge from the Rod and Gun Club, of Springfield, copies of their constitution and by-laws for 1878, with an extensive list of members, and with its most efficient officers the club enjoys high reputation in Massachusetts for its sportsmanlike character.

BEAR HUNTING IN ULSTER CO.—*Poughkeepsie, Feb. 10.*—Wednesday, Jan. 23, a party from the vicinity of Ball Run, town of Denning, while out hunting roamed a black bear from his winter resting place under the roots of a maple tree. The bear was driven out by the shots of the party and escaped, but soon returned and showed fight. He was finally brought down by a rifle shot from Jack Atwell. He weighed about 200 lbs. Wednesday last King Sheeley and brothers, of South Hill, while hunting on Moose Mountain in Denning, discovered a black bear. After tracking him some distance and wounding him, the dogs brought him to bay. He showed fight and closed on King, striking him on the left shoulder and knocking him down, causing a severe bruise. The dogs then seized the bear, and were engaged in a desperate struggle when King finished Bruin with an ax. The bear weighed nearly 500 lbs, being a monster both in size and flesh. While engaged in dragging the body to a wood road at the foot of the mountains, the dogs began to bark furiously at an overhanging tree, and, on examination, a den containing two young bear cubs, one black and the other white, excepting a dark stripe along its back, was discovered. The party took the cubs out of the nest and took them home.

OUR HARRY.

GREENVILLE SPORTSMAN'S CLUB.—The following officers have been elected: Pres., G. Carlin; Vice-Pres., J. H. Phillips; Treas., C. R. Beatty; Sec., Dr. F. Herrick—all active sportsmen. The club will be represented at the State Sportsmen's Association, at Wilkesbarre, in June. B.

TENNESSEE—*Columbia, Feb. 11.*—Notwithstanding the large bags taken, there will be a great many quails left over for breeding, and the shooting bids fair to be uncommonly good next season. Rabbits in abundance; no good bags have been made so far. Duck, geese and snipe shooting has almost been a total failure, owing to the mildness of the winter North. Mr. C.—— and myself bagged sixteen mallards and summer ducks, in two or three hours shooting on the river, which is the best bag made so far. Close season begins 14th inst. VAL.

SOUTH CAROLINA—*Charleston, Feb. 2.*—Weather has been bad for hunting during the past week, and only a few small bags of birds have been brought in. Ducks have made their appearance in large numbers in the neighboring rivers and rice fields within the last three days. A few members of our club, after two days of capital sport, brought home three deer.

FLORIDA—*Crystal River, Jan. 23.*—Three days in the last two weeks a drove of wild turkeys have come to the yard surrounding the dwelling house, and quail come about the house, or within fifty yards of it, nearly every day. A. B. D.

MOCK—*Detroit, Feb. 9.*—G. Stenton, J. Eldridge and E. H. Gillman, returned this week from a week's sport at St. Clair flats. They had a very rough time and deserved better success. Working over twenty-five miles of territory at the flats their bag was 275 canvas backs and 130 red neck and blue bills. RED RUFUS.

LETTER FROM "PRIVATE" DOHERTY.—Mr. Doherty is the energetic but disgusted secretary of the recently defunct game club of St. Charles, Ill. He is a sport of the first water from the "ould dart," but a Yank by adoption. He says this himself, and we believe him. He is not at all flattered by the disbanding of his game club, nor of the material of which its members were made. He writes:

"There are a few true sportsmen here, but the rest are—well, I don't know what to call them. For a specimen of them I will tell you of a hunt we had. We started about seven in the morning and were gone all day, and had found plenty of game. There was one of our party who has a single breech-loading shot gun (he has had it for ten years), and about the same number of shells (he has got them yet), and he never shot his gun off but once all day, and then he cried for half an hour, for he missed a partridge on the set. Them is what constitutes our gun club, with a few exceptions."

SPIRIT LAKE, IOWA.—A correspondent refers to Spirit Lake as one of the choice places for mallard, ducks and prairie chickens:

"This beautiful sheet of water," he writes, "is situated in the northwestern part of Iowa, and holds out advantages to the sportsman with which few of its companions can compete. The numerous thickets that dot its margin afford fine woodcock shooting, and the prairie which surrounds it on all sides teems with grouse. On its northern shore is the little village of Spirit Lake, which contains a very fair hotel kept by a Mr. Randolph, who is always ready to accommodate sportsmen as far as it lies in his power to do so, but if the stay is to be a long one I should prefer to camp on the western shore of the lake."

The favorite shooting stand is at the pass which nearly divides the lake, and where thick brush effectually conceals the sportsman. Standing here one morning in September, at daylight, the writer and his friends shot teal and mallards until they and their retrievers were well nigh tired out. At 8 o'clock they went to breakfast, and after breakfast took a turn on the prairie after grouse. He concludes:

"I shall long remember that morning's sport, and the beautiful working of Mr. B.'s splendid Irish setter, Docter. His rapid ranging and the steadiness with which he held his point when he found birds. At times there were three and four birds up at once, and the air resounded with their whirring wings and the sharp cluck of the old hen, to which we added the crack of our shot guns and our words of command to the dogs."

Another correspondent expatiates on the big bags of ducks they make out in Colorado. Here is what he says:

DUCK SHOOTING IN COLORADO.—Our best autumn shooting is done here on a stormy, disagreeable day, either when a cold drizzle of rain falls, or when snow fills the air. At such times the ducks come down in great numbers from the ponds and lakes in the mountains to the streams at their foot. And there the dwellers on the plains have grand sport.

Monday, October 21st, was a day long to be remembered by sportsmen of Colorado who lived anywhere between the Platte and the Arkansas. For two days the sky had been overcast with clouds. Monday came very cold; the snow fell steadily, and soon its effects were seen in the great flocks of ducks that came from the mountains. It had doubtless snowed there the previous day. My friend, Charlie S., a young fellow not yet out of his teens, took down the fowling-piece, a plain old muzzle-loader that was not dignified with name of any maker. Off he went to the neighboring ponds. To use his own language "they were covered." Lying down flat he made a raking shot into a flock, and as they rose he discharged his second barrel. The result of the two shots was 18 ducks; his first fire killed 12, and his second killed 6. He loaded again, quietly as possible, and soon another flock settled in the same place, and this time six more fell a prey to his destructive fire, making a total of twenty-four killed at three shots. Better work than this, done at inland shooting with a common-place old gun, I have never seen done.

After a time two of his cousins joined him, and as the ducks whirled and circled about them they loaded and fired as opportunity presented, and when they came to count up their birds they lacked but a few of two hundred. Enough were kept by the boys to make a good dinner for the two families, and 180 were sent to the nearest town for sale in the market, where they commanded the enormous price of ten cents each. C. B.

CALIFORNIA.—An unusually large number of swans have been killed in the western part of the State this season.

CANADA—*Montreal, Feb. 9.*—Cariboo are becoming quite plentiful in some sections of the townships. STANSTEAD.

WILD PIGEONS.—Correspondents will oblige us by keeping us informed of the whereabouts of wild pigeons. The birds were in Southwestern Missouri at latest advices.

CAPTAIN BOGARDUS AND HIS SON.—Captain Bogardus has brought forward a rival in the high art of shooting. According to the laws of heredity, capabilities for shooting should run in the whole Bogardus family—men, women and children. As it is, Master Bogardus, a fine looking young lad of 13, handles a breech-loader with consummate skill, and breaks the hardest shooting balls, right and left in the neatest style. For a quiet and easy method, with *sang froid* and adroitness, Master Bogardus' performance is quite wonderful. At his debut at the Tivoli, Master Bogardus never missed a ball. The Captain, now entirely recovered from the strain on his system by the 5,000 ball match, excels, if any thing at present, his former feats. The captain's fancy shots consist in pulling the trap with his back to the stage, wheeling and hitting the ball. The whole performance may be summed up in four words, "there are no misses."

RECOIL.—A correspondent writes us:

"Have any of your readers noticed that recoil is greater in

damp weather and less in dry? Such has been my experience. I think it greater during a damp, driving snow storm than at any other time."

[It might be possible that the heavier the medium the gun is fired into, as the most laden atmosphere being—the greater the recoil. But this is purely theoretical. Query—Has it ever been tried scientifically?]

PENETRATION—USING A FINE BOARD.—For the benefit of a great many of your readers, who cannot get the pads for trial, which are spoken of in your paper, I would tell them that, after having made a great many trials and witnessed the shooting of a good many guns, that if any one can drive a No. 8 shot, 14 oz., with 4 or 6 drs. of any kind of powder, through one-half inch of pine board, at 30 yards, he is doing remarkably well. He may be satisfied that he has an excellent gun. I have seen it tried so many times, I am convinced that if a gun will do it, it is a good gun, and shoots hard enough to kill up to forty yards or more. G. F. G.

A GUN WITH A HISTORY.

THROUGH the courtesy of Dr. Emil Bessels, who accompanied Capt. Hall in his last Arctic expedition in the *Polaris*, I have had the opportunity to-day of handling and inspecting a firearm with a history. The weapon is owned by the Doctor, and was carried by him up to 81 deg. 50 min., north, to which point on Hall's Land, he, with others of the *Polaris* party, penetrated Robeson Channel in an open boat. During the summer of 1872 ice formed in their rear and cut off retreat, so the party was compelled to leave *Polaris* Camp with as light loads as possible, and tramp back many miles through the snow to *Polaris* Bay. They left behind them in the boat this gun, a chronometer, sextants, and other instruments and books, and there they remained until in 1876 a sledge party from one of Sir George Nares' ships, while exploring, struck the camp and gathered up the articles. The gun was but slightly injured by its long exposure to the polar climate, and a good thorough cleaning has so far restored it that the Doctor has been able to realize an advantage from the courtesy of Captain Malcolm, R. N., through whom it was restored to him, by using it this fall on quails and ducks successfully. The gun is a fine twist barrel, Lefaucheur, of .14 calibre, and for service is unimpaired, and but slightly injured in appearance. The Doctor showed me, also, some of his books and papers which had been subjected to the same exposure with but trifling injury. The chronometer, one of Negus' make, was carried on board the ship, wound up, and run with a uniform and small rate until it reached England. It is probable that the preservation of these iron and steel implements, through so long an exposure, was due to the absorption by the snow of a larger portion of the oxygen of the atmosphere.

I also saw a pretty little chest, filled, to my certain knowledge, with most excellent smoking tobacco, upon whose lid there was a silver shield, on which was engraved:

EMIL BESSELS.

THIS BOX IS CONSTRUCTED FROM A PORTION OF A CANNON BELONGING TO E. B., PICKED UP AT LIFE-BAT GAVE ON JULY 28, 1875.—B.

A. H. M.

The initials being those of Capt. Malcolm who returned them. PISKOO.

PIGEON PIE.—Take six young pigeons, have them neatly drawn, trussed and singed, stuff them with the chopped livers mixed with parsley, salt, pepper, and a small piece of butter. Cover the bottom of the dish with rather small pieces of beef. On the beef put a thin layer of chopped parsley and mushrooms. Season with pepper and salt. Over this place the pigeons. Between each put the yolk of a hard-boiled egg. Add some brown sauce or gravy. Cover with puff paste, and bake the pie for an hour and a half.

BIRDS TOWERING WHEN SHOT.—*Editor Forest and Stream:* I notice in a recent number of the *FOREST AND STREAM*, a statement taken from an English paper, that birds which tower after being shot, are not, as has been supposed, shot in the head, but through the lungs. This is contrary to my experience. I have seen many ruffed grouse tower and some quail, and have always found that they were shot in the head. One exception was very singular. I once fired at a partridge which flew directly across me, about forty yards distant—first nine barrel and then the other. She took no notice of either, but flew straight on for about twenty rods, then suddenly turned back and came towards me. When she reached where I was standing, she suddenly began towering, and after three circles in the air, going higher and higher, and in smaller and smaller circles, she suddenly fell dead within six feet of where I stood. On examining her, I found that she was shot in the neck, about one inch below the head. T. S. S.

THE BOGARDUS BALL.—This popular ball, which bears the name of the champion, is rapidly taking a prominent position among sportsmen. So constructed as to break readily when touched by a shot, the Bogardus glass ball fills exactly the place of the pigeon. The making of glass balls is now quite an important branch of manufacture, and what with turning out traps and balls Captain Bogardus has his hands full.

THE HUBER TRAP.—This trap has certain peculiarities of make which call the attention of gentlemen who desire an excellent apparatus for throwing glass balls. The springs are of double-coiled steel-wire, and are not only light, but wonderfully powerful and enduring. The manufacturers guarantee any of their traps for six months. The range of the balls thrown from the Huber trap can be so managed as to throw them at varying speeds and distances. A ball may be sent 140 feet, at an elevation of twenty-five or thirty feet, or a driving bird can be lured with the ball, the rise not being over seven feet. The trap is well and solidly built on an oak frame, and thoroughly secured and bolted. It can be easily turned in any direction, and may be packed for shipment in a small compass. The growing popularity of this trap is the best criterion of its merits.

OUT! OUT!—A man is oiling his gun, and just then his dog comes in and jostles his arm, and down trickles the lubricator over his trousers. Now, for this kind of thing, nothing is better than Parrel's Lightning Radiator. It is not only for men's unmentionables that the Professor

Lightning Eradicator is good. A man has a wife, and that man's wife has a shawl, and somehow the man's wife's baby butters that shawl. Then the lightning eradicator comes in. Professor Parret, having at many industrial fairs cleaned out all the concerns, is the recipient of numberless medals. As editor's coats are always old, seedy and greasy, a good many of them attest to the excellence of the Lightning Eradicator in the region of their collars.

MIXING DITTMAR WITH BLACK POWDER.

NOROTON, CONN., Jan. 25, 1878.

EDITOR FOREST AND STREAM:

Perhaps my experience with Dittmar powder may be of interest to your readers. I used a quantity of Dittmar powder, wounding more birds while I used it than I ever had before. Then this thought occurred to me, "does the Dittmar give as good penetration as the black powder?" So I set up a target with a *Harper's Monthly* for a penetration pad, and fired ten shots of Dittmar and ten of black powder (Hazard's "Sea Shooting"). The result was that the black powder penetrated 90 sheets, while the Dittmar only 63. The shells were all loaded with 4 drs. and 1 1/2 oz. of No. 4 chilled shot. As to the pattern, the black was a little behind the Dittmar, but not enough to make it of any account. I next took a quarter of a pound of Hazard's Sea Shooting and mixed with it 12 drs. of Dittmar, loading the shells the same as before. I got a penetration of 102 sheets with a good pattern, and I also found the mixed powder to be very clean. By the time this reaches you I will be after ducks with my mixed powder. Will not some of our brother sportsmen who have time to spare make some trials with the Dittmar powder and let us know the result. Let us say "Amen" to the "recall" talk and have some more powder discussions.

BACK ACTION.

TRAP SHOOTING.

MASSACHUSETTS—Salem, Feb. 7.—Match between A. D. Gardner and E. Reeves. Score:

Reeves.....1 0 0 1 0 1 1 1 1 1 1 1 0 0-10
Gardner.....1 1 1 1 1 0 1 0 1 1 0 1 1 1-12

FOUNTAIN GUN CLUB.—Brooklyn Driving Park, Parkville, L. I., Feb. 9.—Regular monthly contest at pigeon shooting for the championship medal, shot for at seven birds each from 11 and T traps, handicapped distance, 80 yards boundary; Fountain Gun Club rules:

For Forest and Stream and Rod and Gun. CANOEING.

ELECTION DAY EXCURSION OF THE "RAMBLER" AND "QUI VIVE."

IT was high noon on the sixth day of November, 1877, when two voyagers drew their canoes from the monotonous stretch of canal they had traversed to gain the headwaters of a stream they desired to run, and sliding them down a steep decline thickly overgrown with tangled briars and saplings, broke forth at length into an open, grassy spot upon the river bank.

Second River, a stream with some fifteen feet of channel width, runs over a rocky bed through some of the most picturesque scenery to be found in eastern New Jersey. For the most part the banks are high and steep, well wooded with evergreens, and rocky. Its course is one nearly continuous rapid, and it is navigable only when swollen by heavy rains, when the mimic fury of its rift delights the canoist. The running of such a stream is exhilarating, but not dangerous.

"Well, Qui Vive, as you are more experienced in these matters, you may lead the way," cried the navigator of the Rambler as we pushed off. With a laughing reply I shot my light raft to mid-stream, and cautiously took the first rift. A jump, a shock, a splash, two strokes of the paddle and a stop; the Qui Vive was fast, half-way down the pitch. Quickly making use of my paddle as a setting pole, I lifted her from the rock and continued on my course. With like trouble the Rambler passed, and then we ran rift after rift, with only an occasional bump on a rock or scratch across the face to bother us. Presently, warned by our ears that we were approaching something unusual, we effected a landing. A few rods down the stream we discovered a fall of about four feet, so completely choked up with rocks as to be impassable even for canoes. Over and among these rocks the impetuous stream foamed and roared, flinging its white spray some feet in the air as though indignant at the barrier. A single glance showed us that we must carry around this obstruction. A few yards farther down a large tree had fallen across, so we carried our boats, one at a time, past both, and, lowering them tenderly down the steep bank, were soon afloat again. For nearly a mile I had a glorious run, striking heavily several times, but not fastening to the rock once. At length I reached another rocky fall, just below which a stream joined with ours. Here I landed, and after a look at the fall, started in search of the Rambler, which had not put in an appearance. Some 300 yards up river I discovered the canoe, diagonally across a rift, hard and fast among the rocks.

"Hello, there!" I cried, as I worked my way down the hill; "why don't you push ahead?"

"Can't do it; I'm fast," came the answer.

There he sat in the canoe, halless, his face scratched and dirty from encounters with numerous tree limbs and trailing wet, climbing vines. How I laughed!

"You don't intend to stay on that rift all night, do you?" I inquired.

A brief but determined effort, and he was free; then a race, and I beat him to the Qui Vive by a few yards. After an unsuccessful search for the missing hat, we launched upon the now broad and pleasant river. The scenery had changed. We no longer ran through a wooded and rocky defile, but on the right towered a hemlock and pine-covered hill, with here and there an outcropping of red shale or sandstone, while to the left lay a wagon road, with white houses at intervals, beyond which the upland farms sloped gradually away to wooded heights. Aun we would float out upon a pretty mill-pond, when we would carry around the dam and put into the rapid stream below. At one place we passed the picturesque ruins of an old mill or manufactory, with its crumbling brick walls, red-tiled roof and old-fashioned water-wheel fast going to decay. Strange it seemed to find here, within twenty miles of the great metropolis of enterprising America, the landmark of ancient activity. I should like to know the history of that old mill.

At another place we carried past a fall. The river, converging to a narrow rock-bound channel, rushed down a sharp decline, then plunged, one mass of angry white water, into a circular basin of rock some fifteen feet below. The leap was bold, and the basin that received it boiled and steamed like a caldron. The fall was wildly beautiful. The stream had eaten its way through the soft red sandstone under the very base of the hill, and the tall old hemlocks above leaned over as though to shelter it. Long we looked in admiration, but at last turned away and resumed our journey.

With plenty of water on the rifts, we got along well till we had passed our third dam and made some distance on the stream below. Here we encountered a rapid situated in a sharp elbow of the river, with two more immediately below. The white channel waves first kept the left bank, but presently, in an irregular and broken manner, crossed to the right shore, which they followed closely around to the quiet water below. Now, in rapids, the wildest and whitest water is the safest; and the rule is, keep her straight and smash your paddle before you smash your boat. Entering to the left I essayed to cross where the channel waves did, but miscalculating the strength of the current, was swept down bodily and fastened half out of water upon the rocks. As she struck my light craft heeled over and the water began to pour into the well. Fixing my paddle blade on bottom I lifted with all my strength. Once, twice, thrice I tried, and was victorious. Like an arrow I shot out from that rift and entered the next, which I passed in safety. Then came a real fall of nearly four feet, with a veritable foamer. Water enough there was, and with a wild yell I took it under full speed of current and paddle. The keen air cut against my flushed face with grateful coolness, the white spray flew high over my head, every muscle was strung, every nerve tingled with excitement, and my canoe seemed like a thing of life as I took that glorious plunge and fairly flew down the little rift below.

No sooner had I reached still water than I saw before me high stone dam, through which the water disappeared by huge sluiceway armed with flood-gates. Stemming the current I slowly made my way back to the foot of the rift. On either hand mud-flats extended. There was nothing else to be done, so, paddle in one hand and dragging the Qui Vive with the other, I made my muddy way to *terra firma*.

Up the stream I discovered the Rambler fast upon the crooked rift. I was making my way toward him, when, barefooted, he stepped overboard. Turning the canoe to the channel he jumped into the well, while I stood there and watched him run the rapids and take the fall. He meandered ashore through the mud, as gracefully as myself I presume, but I could not help laughing at his black stockings, scratched face and wind-tossed hair. Without incident, save turning around on a shallow rift, the canoes reached the Passale. Hoisting our close-reefed mainsails to the stiff northwest breeze, we reached Newark in good time, and housed the canoes, feeling well satisfied with our day of life in the open air. MAGUA.

NEW BEDFORD YACHT CLUB.—The officers for the ensuing year are: Commodore, J. A. Hawes; Vice-Commodore, E. B. Hammond; Fleet Captain, T. G. Wing; Secretary, G. W. Parker; Treasurer, E. Dews; Measurer, W. Nye, Jr.; Directors, H. F. Hammond, J. A. Bullard, G. D. Kingman, R. S. Lawton, G. W. Parker, J. H. Garnett, W. R. Myrick, F. C. Baneroff, W. Fisher, A. G. Alley, R. S. Morgan.

NEW YORK YACHT CLUB.—At the annual meeting Monday evening, there were eighteen yachts represented, and a large attendance of non-yacht-owning members. The annual regatta was fixed for the 13th of June. The special committee appointed at the last meeting to confer with Mr. George L. Schuyler, with regard to the American Cup, reported progress. The club adopted a resolution to continue in their present rooms for another year. A resolution was adopted to increase the dues for life membership from \$100 to \$200. Vice-Commodore Stillman, of the schooner-yacht Wanderer, presented the club with a painting of that vessel by A. Cary Smith. The officers elected for the ensuing year were: Com., S. Nicholson Kane, of the schooner-yacht Restless; Vice-Com., William H. Thomas, of the schooner-yacht Rambler; Rear Com., J. J. Alexandre, of the sloop-yacht Vision; Sec., Chas. A. Mintou Treas., Sheppard Homans; Measurer, A. Cary Smith; Fleet Surgeon, G. S. Winston; Regatta Com., Charles H. Stebbins, Alex. Taylor, Jr., William Krehbs; House Com., Fletcher Westray, N. D. White, J. O. Prouditt, H. N. Alden, T. B. Asten.

--Higgins, the English rower, has challenged Hanlon to a £1,000 race.

ICE YACHTING.—Kingston, Feb. 10.—Ice hunting has been quite lively in this section for a few days back, but is now ruined by the rain. If it should now freeze up again the ice will be in a still better condition. OUR HARRY.

THE SAPHRO.—A Smyrna, Asia Minor, correspondent of the New York Herald, tells us that the famous American yacht, Sappho, now the property of Prince Maifeo Sciarra Colonna, is at present lying in that harbor. She has just returned from a cruise in the Black Sea and Grecian Archipelago. She will be in New York in the winter of 1878-9. Her crew are all Italians, commanded by the same thorough yachtsman, sea-man and gentleman who was her captain with Mr. Douglas, Captain Van Wyke.

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

A number of anonymous correspondents will understand why their queries are not answered, when they read the lines at the head of this column.

F. C. O., Danbury.—We send you a form for a club.

F. S. will find about opening of trout season in this issue.

M. H. B., Packerville.—Address Arnold Burges, Hillsdale, Mich.

R. T., Philadelphia.—Send as the result in as condensed a form as possible.

A. B., Manchester, N. H.—Dr. Lyneum's writings are not published in book form.

M., Danphin, Pa.—Write to Messrs. Peters, Calhoun & Co., Newark, for a McCallan tree.

H. G. C., Indianapolis.—Have sent your card to Messrs. Tatham, who will give you full information.

H. D. B., Cottonwood, Ill.—Pray give me P. Webley & Son's address? Ans. No. 84 Weaman st., Birmingham, England.

SANCHO PANZA.—For swan's eggs write to J. H. Batty, New Utrecht, New York; C. J. Maynard, New Ipswich, Mass.

J. W. B.—The officers of the Adirondack Club are: Pres., J. R. Thompson; Sec., Thos. J. Hall; Treas., W. E. Pearson.

W. H. E. Bryant, Kan.—Does Kay manufacture wire cartridges for buck shot? Ans. He does not. We do not know of any but Eley.

S. H. A., Troutman, Pa.—The quarter of 1857 has no value. The quarters of 1823 and 1827 are worth from \$1 to \$10, but must be in good order.

H. B., Philadelphia.—If your puppy, 9 weeks old, will not eat oatmeal and milk, or mnsb, try him with bread panada and milk, or with fine grist well boiled.

W. O. W., Charlottesville, Va.—The regular U. S. Ordnance Reports might be difficult to procure, so we understand. Get Col. J. G. Benton's "Ordnance and Gunnery," published by Van Nostrand, N. Y.

PHILADELPHIA.—I have a 10 bore breech-loading gun, twist barrels, 32 inches, half pistol grip stock, rebounding locks, made by —, London. What is the reputation of the above? Ans. Very good reputation.

J. A., Escanaba, Mich.—1. Can I get pin-fire shells 14 and 16? 2. Are there metallic pin-fire shells in the market? 3. Where can I get them nearer than New York? Ans. 1. Yes. 2. No. 3. Chicago or Detroit.

J. H. W., Rosedale, Kan.—Please tell me the nearest point to get Paine's feather-filled balls? also price. Ans. Cannot be had anywhere but at Bohemian Glass Works, 24 Pearl St., New York: price \$18 per thousand.

H. O. M., Philadelphia.—My bitch was put to dog, and failed to drop pups. Was in her second heat. I hunted her for three days after she came from dog. Was that the cause of her failing to pup? Ans. Some other reason.

ENQUIRER.—Feed your red bird on hulled rice, uncooked. You can only tame him by gradually accustoming him to your presence. The 150 binding of E. & S. is red cloth with black leather back. Send numbers by express.

S. B., Geneva, N. Y.—Give me the address of some first-rate gunsmith who can alter a muzzle-loader to a breech-loader, and do it cheap and well; and what would be a moderate price? Ans. Genev, Chambers st. Cost you from \$45 to \$50.

M. E. B., Windom, Minn.—Will you please inform me how far the shooter should stand from the trap in glass ball shooting, and how far and high the balls should be thrown? Ans. Distance from traps 18 yds., balls should be thrown from 12 to 15 ft. high.

FLANKERS, Hudson.—1. What is good for a dog to purify his blood? 2. What shall I use to get vermin off of my puppy? Ans. 1. If you are sure that your dog's blood is impure, which you may not be correct about, give him castor oil. 2. Use kerosene, best and safest method.

A. D., Plymouth, Mich.—Would you advise crossing beagles and harriers? Would they run foxes equally well? or would you advise full blood? Ans. Do not cross the breeds, unless compelled to do so. Such a cross might produce good dogs, but it is advisable to keep the strains distinct.

H. D. J.—What is the market value of Wilson's American Ornithology, with notes by Jardine, with editions including the birds described by Audubon, Bonaparte, Nuttall and Richardson, New York, T. L. Maganoo & Co., 16 Beekman st., quarto, 1854? Ans. The market value is not more than \$1.50.

H.—1. Where can I get a catalogue giving the common and scientific names of birds? 2. What is the value of ostrich eggs? Ans. 1. "Key to North American Birds," by Elliott Coues, is the best work for identification. Published by Dodd & Mead, 75 Broadway, N. Y. Price \$7. 2. Ostrich eggs cost \$5.

ENGINEER, Wellesville, N. Y.—I have \$— to buy a No. 1, a No. 2 or a No. 3; which would you prefer? Ans. All excellent and a toss up between them. Had we the money to spend it would be between No. 1 and No. 2. No. 3 excellent every way, but perhaps not quite as high finish for the same money.

G., Boston.—Have a setter pup sold me, is a Gordon with good pedigree. He is a handsome red. Is said his mother, Meg (imported), was real also. Is he likely to be a good dog, being of that color? Ans. A good dog may be of any color. Red is certainly a favorite, but not the typical color of the Gordon strain.

F. W. P., Walla Walla, W. T.—For instructions in taxidermy consult Brown's "Taxidermist's Manual," price \$7, Orange Judd & Co., N. Y.; "Taxidermist's Manual," Hancey & Co., 119 Nassau st., N. Y.; "Practical Naturalist's Guide (English)," J. D. Sabin & Son, Nassau st., N. Y.; Coues' "Manual of Ornithology," and J. C. Maynard's "Naturalist's Guide."

BERG, Red Bank, N. J.—Will you please inform me where I can purchase some "Blue Rock Pigeons" for breeding? I have sent to Kelcho & Bro., and to Herman Cahill. Neither of them deal in any but fancy pigeons. Ans. You will probably have to send to England unless some one seeing this line has them to offer. They do not seem to breed well in this country.

W. D. C., Washington, D. C.—1. How can I determine the exact calibre of my gun? 2. By what rule do makers measure guns? Ans. Take calipers and measure inside, and any gunsmith will, from his muzzle gauge, tell you calibre. 2. The gauges of guns were started originally in this way: A 10 bore would carry ten balls to a pound, a 20, twenty balls to a pound. Approximately, a 10 bore is about $\frac{1}{4}$ of an inch, a 12 about 1-16 less, and a 16 in the neighborhood of $\frac{1}{8}$ of an inch. A great deal of trouble is caused by differences in gauges of guns, for which cartridge manufacturers are blamed. It is the gun-maker always, who is at fault.

G. M. S., Gananoque.—1. What height of ceiling is necessary for a room to throw up glass balls in from a Bogardus' trap? 2. Are there any rules to be obtained for the management of a shooting gallery such as Coullin's? 3. Is not the rage in his gallery (Conlin's) an iron tube? Ans. 1. Twenty-five to thirty feet. 2. Not that we know of. Address Coullin personally. 3. No.

C. A. D., Melrose.—I see in the N. Y. Clipper Almanac, 1878, that Jan. 25, 1877, Dr. A. Carver beat Captain A. H. Bogardus 50 balls—48 to 37—Palace Opera House, San Francisco, Cal. It is said that Dr. Robinson, of San Francisco, beat Capt. Bogardus the first time and Bogardus beat Dr. Robinson the second time. Is N. Y. Clipper Almanac right or wrong? Ans. The Clipper is correct.

VALLEJO, Solano Co.—Estes & Lauriat, Publishers, Boston, will send you a catalogue with names of all works relating to Yachting. None are now in print. If you could get a copy of the "Kedge Anchor," printed for the author in 1843, it would be very serviceable. Apply also to J. W. Boulton, Publishers, 760 Broadway; also "Alston's Seaman's Ship," Wiley & Son, New York, 1871.

CONSTANT READER, North East, Pa.—Does shooting across a ravine have any tendency to lower the shot from the same distance on level ground? Does shooting downward from a hill or bluff carry over? Ans. These ideas are purely speculative and are abstractly theoretical. No. Up hill or down dale over water is all the same. We take the fault of our sense of sight as having to do with such matters.

S. O. S., Chittenango.—Have a spaniel pup, 9 mos. old. His eyes ran, and he has had two fits. Fits last five minutes. You would think he was dead, but he revives, and seems to be as well as ever. What shall I do for him? Ans. It may be that the puppy is about to have distemper, in which case he should be put under the treatment proper for that disease. In many cases, however, the symptoms you describe indicate worms, for which give area nut and castor oil.

S. P., Delaware.—Loaned a 12 bore breech-loader, 36-in. barrel, to a friend. He stuck the muzzle in the snow, got it choked with the snow, fired it, and it bursted some inches from the muzzle. Will shortening the barrel 4 or 6 inches hurt the shooting powers of the gun? Ans. If not a choke-bore, and you do not say it is, you might be pleasantly surprised did we inform you that by cutting off some 4 inches, your gun would be as good as before, and, just as likely, better.

INQUIRER, Brooklyn.—1. In shooting glass balls from Bogardus traps is it an infringement of the Bogardus rules for glass ball shooting to put any substance in the cup in order to change the natural light of a ball thrown from a trap set level on the ground? 2. Does Bogardus, when shooting at double glass balls, place either ball neck downward in the cup? Ans. 1. You are at liberty to cause the balls to go in any direction desired. 2. No, it would break nine out of ten balls.

C. O. D., South Gardner, Mass.—In the target used by the Schutzen Corps, the circles are extended. The printed target stops at the 11 circle, but in shooting at 200 yds., it is carried out to the 1 circle. This accounts for some of the lower scores. Some day, this method of target, we think, will be adopted for all rifle shooting. It shades off the exact skill of the rifleman, and no ties are possible. Your drawing is correct. All you would have to do would be to make ten more circles.

W. F. S., Concord.—Can you send me the name and address of some reliable person in Sanilpoint, Province of Ontario, Can., from whom I can obtain all the particulars relative to the "Conlongo District," such as procuring guides, provisions, camping outfit, etc.? Also, the best hunting localities, and, in fact, everything connected with it? Ans. See five columns of FOREST AND STREAM, Vol. 1, No. 24, for fullest particulars. See also, Hallock's "Sportsman's Gazetteer and Guide."

MOURICH, New Westminster, British Columbia.—Please give method of preserving castoreum, i. e. beaver casior for druggists' use. Ans. Castoreum is found in the two glands beneath the root of the tail of the beaver. When fresh it is of a yellowish red color, changing to a light brown when dried. To prepare it for market mix with ground nutmeg, powdered cloves, ground cinnamon and a drop of essence of peppermint. Stir in as much whisky as will make a paste, after which bottle and keep carefully corked.

B. D., Mt. Morris, N. J.—1. What is your opinion of Dittmar powder for field use in breech-loading shot-guns—is it safe? 2. Will it ignite by concussion? 3. Is it more liable to corrode, or injure the barrels than other powder? 4. Is its penetration as good as the black? 5. If so why not in more general use? Ans. 1. Under certain precautions Dittmar's powder is excellent. 2. It will not ignite by concussion. 3. It does not corrode. 4. Its penetration is excellent. 5. No fellow knows; see prior F. and S. for fullest description of Dittmar powder.

NEWFOUNDLAND, New York.—Have a Newfoundland dog about 14 months old, whose eyes are weak and suffer a continual watery discharge. From his 6th month to about the 10th the left eye was discharging considerable matter, and as I did not get possession of the dog until he was 7 mos. old, do not know the reason. He has a soft, long and healthy coat, a good appetite, and buoyant spirits. What shall I do to effect a cure? Ans. Feed no meat for a time, wash the eyes with warm water, and then with a lotion containing 2 grs. of alum to 1 oz. water.

FAIR SHOT, Chicago.—1. Is four drachms Dittmar powder the right charge for a 10 gauge gun weighing nine pounds? 2. Does it (Dittmar) require special care in manipulating? 3. Is it more dangerous carrying brass shells loaded with that than with black powder? 4. In shooting backshot ought they to chamber in the shell, or the muzzle of the gun? 5. How does the — gun rank? Ans. 1. Four drachms. 2. No special care. The Dittmar should be treated like gunpowder as to ramming; the mistake is to overcompress it. 3. No. 4. Chamber in the muzzle by all means. 5. Very good.

F. H. L., Lynn.—Give me full description of the target used by the German shooting association. Ans. A series of concentric rings starting from a bull's eye $\frac{1}{4}$ diameter, with 7 rings $\frac{1}{4}$ of an inch wide all in the black. Then come 8 other rings $\frac{1}{4}$ inch all on the white; sixteen rings in all. The centre bull's eye counts 25. Shots in each ring within $\frac{1}{4}$ of an inch from the 25 bull's eye being counted one less. Outside of the tenth ring other rings are made $\frac{1}{4}$ of an inch apart, so that 1 is the lowest count. The printed target in use has only the counts from 25 to 16. We will give a cut of it shortly.

F. B. B., Brooklyn.—1. Do you consider a — gun, laminated steel barrels, double locks, slide or snap action, a good arm, safe and serviceable? 2. Is it a fully established fact that a choke-bore will kill game from ten to fifteen yards further than a gun of the ordinary bore of the same make and calibre, the charges and other conditions being the same? Ans. Do not know the maker. Would be doubtful about it, as the name used recalls, or imitates, that of a real good maker. 2. Assumed rather than fully established. The best proof, however, that the choke-bore is the gun of the future is that without an exception all the great gun builders are making them.

G. F. G., Amherst, Mass.—1. Which is the better powder for an M. or B. L. gun, coarse or fine, pattern and penetration considered? 2. Is the Oriental FFG a quick powder? 3. What would be its effects as to pattern? 4. What grade of Hazard's is best for glass balls with muzzle-loader? 5. Do all choke-bore lead? 6. Do you publish glass ball shooting? Ans. 1. We prefer coarse to fine powder.

Think that the best patterns are made with coarse—slow—powder, and better penetration with finer—quicker—powder. 2. Rather quick. Use FG. 3. Good pattern, not much penetration. 4. Hazard's Electric. 5. Ought not to lead so as to be annoying. Is your gun smooth? 6. We do.

BOXING GLOVES.—Can you tell me why pugilists split into their hands as a necessary part of the programme? Ans. This is one of those insignificant customs, which are oftentimes the survival of very curious, as well as very ancient, beliefs. Lecky, in his "History of European Morals," says that among the Romans the human saliva was believed to possess many mysterious properties; and he quotes Pliny: "If a pugilist, having struck his adversary, splits into his own hand, the pain he caused instantly ceases. If he splits into his hand before striking, the blow is more severe." You will find this subject very fully discussed in Mr. E. B. Tylor's "Primitive Culture."

J. V. C., President Louisville Gun Club, Louisville, Ky.—The question of handicapping 10 bore guns against 12 is now up before our club. Of course, there is a great diversity of opinion on the subject. It is contended that 10 bore guns should be put back 5 yds. on single, 3 yds. on double birds. This I think excessive. I have both sizes, and am interested. Will you give me your ideas? Ans. No American rules govern this case. But we should adopt the English ones. In England one yard only is given for each difference in calibre. For instance, a 10 and a 16 bore shoot; the 16 has 6 yds. given him. The 10, then, in your case, is handicapped 2 yds. Five yards we would deem excessive.

SUBSCRIBER, Amanda, Ohio.—1. In loading paper shells how much is left above shot wad to be turned over? 2. What number of Orange Lightning is nearest in size to Curtis & Harvey's Diamond Grain No. 6? 3. Is the action of the — gun considered strong and reliable, and is the gun a good shooter? 4. Do — make only two sizes and weights, and are their guns bored to shoot open, or close, as ordered. Is it a good gun, price considered? Ans. 1. About $\frac{1}{4}$ of an inch. 2. Very closely resemble one another. 3. Is considered excellent, especially the last model. 4. Yes. The last model made is choked; think they have both kinds—cylinder and choked—very good arm.

ENQUIRER, Morrisania.—The substance of your inquiries has been so fully presented in the "Journal of Commerce," that we copy from that paper as follows: "Congress never did in express terms declare the bonds payable in gold. The greenbacks are payable in coin. Silver was a legal tender for all debts up to April 1, 1853; then the fractional silver coin was reduced 7 per cent., and was made legal tender for only five dollars. Every one for twenty years has understood 'payable in coin,' when either the interest or principal of the public debt were referred to, as payable in gold for all principal sums, and in silver only as to the fractional parts of the dollar. Silver is still a legal tender in many countries."

JARRET, Malvern, Mass.—Excuse my ignorance, but please inform me what a "cooley" is, mentioned in one of your editorial rambles in Minnesota? I judge it to be a small valley or hollow between hills. Ans. Properly called, a ravine, distinguished from other hollows by their being caused by running water, chiefly from melting snows or heavy spring rains. They are filled with greener vegetation, scrubby and ranker grass than the adjacent prairies. Deer and other animals resort to them for food, rest, moisture and shade. The word cooley will be found in the vernacular from Michigan to the Pacific; but it is not known, or used, south of Missouri, to any extent. In the southwest it is replaced by the synonym "irreen," or drain.

L., Lilesville, N. C.—1. My setter sing, eight years old, in good health and condition, has twice recently, though not in succession, miscarried when from five to seven weeks "gone." Can you suggest a remedy? She is too fine for her name and blood to pass away. 2. Who lives or shoots at "The Cedar's"—Frank Forester's old home—now? 3. Is the blue wing teal strictly a migratory duck? 4. What is the technical name for our Carolina "summer duck" which stays here all the time? Ans. 1. Keep the bitch in good order, not too fat; give her gentle exercise. Sometimes, however, miscarriage becomes a constitutional vice and no remedy can be suggested. 2. Place was burned and never rebuilt. 3. The blue wing teal is decidedly a migrant and this instinct is exceptionally strong. 4. *Aiz sponsa*.

A. W. S., Harrisburg.—Some two months ago, during hunting, my dog slipped, and fell on his head. In two weeks his head commenced swelling. A physician examined the dog, and decided that the blow was serious. The dog having been lanced under the right eye, there was a large discharge of matter. After six weeks the left eye showed swelling, and seems to be afflicted like the right eye. This has been cut, and is discharging. Was the treatment proper? What ought I to do? Ans. We suppose the doctor diagnosed injury of the periosteum, and if correct, there is likely to follow disease of the bone. The treatment would seem to be correct enough, provided the incisions were sufficiently free to allow complete escape of the matter, which should not be allowed to accumulate at any point. The dog's strength should be kept up by giving quinine, if necessary, and he should be kept at rest where he can have pure air and sunlight.

W. C. S.—In the remarkably good chapter on fly making in Hallock's "Gazetteer," there are one or two terms which, when taken in reference to color, I do not understand. May I then ask you what are the meanings, in this connection, of hyaline and subhyaline? Intense, I presume, being some kind of clay color? Again, would you kindly describe the best knot for joining gut in casting lines, and, also, for making a loop? I find, for the latter, that a bowline knot, although the firmest possible, breaks the gut. Ans. 1. Hyaline and subhyaline are used to designate two different shades of that indefinite color which belongs to the wings of the common house fly. Nature imitates them in the silvery-colored feathers of various birds. 2. Luteous is deep orange-yellow. 3. The water-knot is the best for joining gut lengths, where descoids are to be inserted. This knot and the loop can hardly be described without a diagram. To prevent the bowline from breaking, take a second turn with the end. The difference in strength is as 8 to 3.

A CONNECTION.—In our last issue, in answering E. G. B., by the omission of an 0, a 30-in. target was described as a 2-in. one. Trusting that the world will still roll on as usual, we cry "Mea culpa."

ALLIGATOR BOOTS AND SHOES.—The Messrs. H. & A. Mahrenholz have made a specialty of manufacturing boots and shoes of alligator skin. People who even put their trust in leather are skeptical sometimes as to the advantages of alligator. It is thought that that portion of the skin which lies between the scales is deficient in strength and tenacity. There never was a greater mistake than this. Subjected to a rending strain at the centennial exhibition, alligator skins, when properly tanned, were found to stand an enormous amount of tension. Not only is an alligator skin boot and shoe tough, but it is actually water-proof. As prepared by the Messrs. Mahrenholz, this particular leather is as soft and elastic as calf skin. When apartments have to tramp on wet and boggy ground, there is no shooting boot or shoe equal to those manufactured by the Messrs. Mahrenholz out of alligator skins. The peculiar trade mark of the house has, no doubt, attracted the attention of our readers. It is a "gator enjoying a diminutive colored brother. The motto should be, "come out of the wet," as applied by the "gator to the little nigger. Allegorically it means that, with a pair of alligator boots or shoes, the wearer always can "come out of the wet."

A WEEKLY JOURNAL.

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCUCLATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

No. 111 (old No. 103) FULTON STREET, NEW YORK.

(Post Office Box 2532.)

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Twenty-five per cent. off for Clubs of Three or more.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

* Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, FEBRUARY 14, 1878.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith, and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous contributions will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mailservice if money remitted to us is lost. No person whatever is authorized to collect money for us unless he can show authentic credentials from one of the undersigned. We have no Philadelphia agent.

Trade supplied by American News Company.

Western Manager.

VOYAGING ON THE UPPER MISSOURI.—We must not delay the correction of an ambiguity which appeared in our issue of Feb. 7 under this title. Mr. Ingersoll, speaking of the Gros Ventre Indians seen at Camp Cooke, or, as it is more generally called, Fort Claggett, at the mouth of the Judith River, says: "The Gros Ventres are a band of the Hidatsa or Minnatarce Indians, etc." This is, of course, quite correct, but it is misleading, for this reason. There are two bands or tribes of Indians in the Missouri region called Gros Ventres—the Gros Ventres of the Prairie, who live high up on the river, and some of whom are always loitering about Claggett's, and the Gros Ventres of the Village, who live with the Mandans and Rees at Fort Berthold. The latter are a branch of the Hidatsas, while the former are really a band of Arrapahoos, who have strayed far to the North and have made peace with their hereditary enemies, the Crows. Of late years these Gros Ventres have wanted to move South and join their tribe again, but the mountain Crows will not allow them to go. The Gros Ventres of the Village have never been up the river nearly so far as the mouth of the Judith.

SOLITUDE HATH CHARM.—We spoke incidentally the other day of the seclusion so often indispensable to the scientist and student of natural history. There is at least one man in America who appreciates such retirement, and it is certainly not his fault if he fails to have it. According to the New York World, Dr. Coues, the naturalist of the Hayden Survey, does not seem to care for company:

On the door of his office at Washington is the inscription, "Notice to Visitors: Blessings brighten as they take their flight," and the walls are hung with such mottoes as these: "Exeat Omnes." "He who robs me of my time confers the charm of his personal presence at the expense of science." "Freedom from interruption confers a peace of mind that religion cannot give." "Brevity is the soul of wit in visiting." "The simple fact of a door has a certain suggestiveness." Indeed the collection is so unique that people will often stay over a train to visit this lover of solitude.

—The "Dolor" is what the merchants call it now.

—We were honored last Friday by a call from George Dawson, Esq., the veteran editor of the Albany Journal, who dropped in to talk for a moment of the "Pleasures of Angling."

KIT CARSON.—In a recent issue we had occasion to inform a correspondent that Kit Carson did not serve in the war of the Rebellion—that is, he was not in the Confederate service. An old comrade at Washington, D. C., has very kindly recalled to mind the following facts of his war history. He says:

"Old Kit, together with St. Vrain (an old frontiersman), raised a Union cavalry regiment (First New Mexico), in 1861, to which he succeeded St. Vrain as colonel in that year, and for gallant and meritorious services at Valverde and other points, he was brevetted Brigadier-General by President Lincoln, in March, 1865. Brave, modest old Kit Carson, whose only pride was in being an American, and, in his own language, 'one of the meanest of the lot,' served his country too faithfully and well to have his services ignored or forgotten by the people he so loved to represent."

Alas! it is too true that the deeds of our heroes are soon forgotten. The survivors of the past generation, however, who were contemporary with Carson and St. Vrain, will long cherish their memory, not only for their services in the trying period of the war, but in the ante bellum days of those hardy mountaineers and prairie travelers who were the pioneers of States which have since become magnificent.

[FROM OUR SPECIAL TEXAS CORRESPONDENT.]

RANCHE LANDS IN TEXAS.

SECOND LETTER.

FORT GRIFFIN, TEXAS, Sept. 26, 1877.

Civilization, as a rule, comes as certainly from the East and advances Westward, as does conquest come from the North and progress Southward. The gradually abandoned posts of the United States troops in western Texas mark the line of lovely territory where the stars and stripes had, in the interests of civilization, to be heralded by the bayonet and sword; but the sword has now been transformed into the plowshare for at least 150 miles west of Fort Worth, and even the most advanced west Texan outpost—Fort Griffin, from which I write—is at least 100 miles too far east of where the furthest outpost ought to be. In expressing this opinion, however, I rather anticipate my personal experience of the outer frontier and its Comanche Indian troubles. I shall in time come to them, but for the present pursue my sketch of the proposed extension of the Texas and Pacific line, with which subject the Senatorial halls of Washington will, doubtless, ere long be ringling, and on which matter mighty and vigorous blows of logic will be dealt out, received and returned.

In Texas, and especially in Northern Texas of course, to speak of the possible failure of the Texas-Pacific bill is to write or confess yourself an ass; and indeed, though I do not carry the lone star on my banner, I sincerely wish the Texas-Pacific God-speed—first, in the interest of the nation and the world; secondly, for the sake of Texas and the great and useful cause of emigration; for it is perfectly wonderful how little makes the settler comfortable and happy in Texas. Meat is cheap and abundant; of game there is decidedly more in the Lone Star State than in the rest of the Union put together. Once away from the Rio Grande frontier—that source of so much disquiet and discomfort—you find the counties well organized, the laws well administered, and life and property safe and protected. The wonderful collection of ruffians, robbers and scum of the earth, that the Eastern Hemisphere and, in a whisper be it said, not a few of the Eastern States contributed to Texas and then accused her of harboring, never have found things pleasant here, and fled them more disgraceful every day. The courts from Fort Worth—north, south and east—have filled the State penitentiary pretty quickly, and turned the balance of kleptomaniacs and oppressors of the feeble and weak, of which they had judicially taken cognizance, over to Col. T. W. Pierce, to perfect his already almost perfect road—the Galveston, Harrisburg and San Antonio.

Then out West, vigilance committees give short shrift to the evil doer; in fact, the same spirit that has made Kansas one of the very best governed States in the Union is at work in Texas. Capital, therefore, and honest labor need not be afraid to travel westward with the Texas-Pacific, nor, indeed, to travel well ahead of it.

Well, but about the land? Jump with me into a little two-mule coach at Weatherford; the gentleman who professionally indulges in games of chance is on the box with the driver, and Col. Strang, with me, in propria persona, and the reader in fancy, behind. We drive through some rough ground, and down a steep arroyo, over, oh! such a bad road; then, if you are fond of conjuring up tricks, watch us—

The Colozel and I sit dignifiedly bolt upright—crack, bang, over a rock. Tableau—the Colozel's nose is buried deep in the rear pocket of the gentleman who indulges in games of chance. Crack, bang, over another rock! The Colozel is shot back into position No. 1, while I advance upon him, chin foremost, with lightning-like rapidity, squashing him, and more especially his hat, into a corner. Then with one masterly crash forward, we both lose our seats, and temporarily repose on the flooring of the coach; as in Pope's Homer,

"Thus fell two heroes; one the pride of Thrace
And one the leader of an Epeian race."

This is Homer's way of putting it, but probably my rendering would be more descriptive. It runs—

"Thus fell two tourists; one was a hard case,
He gave a yell, for he had bruised his face."

But even rocky ravines come to an end, and this one eventually brought us up on a splendid plateau, on the edges of which, next the water, cultivation, both of corn and cotton, was highly successful. Want of water is certainly the chief drawback to the majority of land out here, and, except along the banks of the few streams that constantly flow, agriculture is a rather sickly experiment. In this county—Parker—and its next adjoining one—Palo Pinto—the valley of the splendid Brazos River (nearly all of which is taken up, of course, however, only in alternate sections by the Texas-Pacific land grant) affords any number of miles of magnificent farming lands, and those who have gone still farther west than the Brazos valley, prospecting for agricultural sites, have returned thither. The few who have tried raising crops near Griffin, have achieved only most lamentable failures. Sheep, cattle and goats are the members of the dumb creation that, as the Texas and Pacific goes west, are destined to enliven the wide, splendid ranges now the all but last home of the hardy buffalo.

Near the borders of Parker County we thrive up and down rather steep stony hills, very fairly timbered with oak and pecan. The contour of the country is here handsome in the extreme; and the valley soil is sandy red loam. Sleek, quiet, happy-looking cows grazed over long, open glades, which ran everywhere between belts of timber, until at length, they all run into an immense, rolling, well-grassed prairie, with only an occasional clump of timber on it. One or two more valley

vistas present themselves to our view as we top sundry unnamed hills, and then we reach Big Sandy Creek, on which is the rancho of Mr. Newberry. This Big Sandy, I presume, is a constantly running stream, though it is an insignificant looking one; but here corn and cotton were both excellent, and Mr. Newberry's dear little children looked as healthy and as bright as though they had lived all their lives in the Garden of Eden, or in some happy valley in bracing, invigorating Colorado: a healthy peach orchard proved the district to be suitable for fruit growing.

Two other Newberrys—all brothers—had ranches farther on; and then, after a long forest drive, Mr. Welles' rancho is reached, and a camp meeting shed, primitive and rustic in the extreme, trees felled and squared on the upper side for seats. The pillars of this humble temple were rough poles, and the roof leafy boughs arranged crosswise. Another long forest drive, and then we strike the Mesquite tree for the first time. The fruit of this tree is simply invaluable for cattle, sheep, or horses, in the winter, and where it exists in quantity, animals cannot, at any rate, starve. The Mesquite grass, however, we have, up to this, very sparingly struck, and, until the Brazos is crossed, it does not appear in any quantity; but, fortunately, across the Brazos is just where this valuable grass is most needed, for it gets on so well and vigorously with a minimum of moisture, and constitutes such rich cattle pastures, which without its presence would be barren wastes.

About Rock Creek a great deal of land is fenced in, and fairly well cultivated. Over Rock Creek rises quite a mountain, densely timbered. The creek, the hill and the appearance of the timber, would here strongly remind one who has traveled in England of the ground above Taplow on the Thames.

We had come fifteen miles in four hours, which is the average pace put on by stage coaches on here, and at a very nice little house we stopped for dinner. The soil here, as red as red can be, and as it approaches the Brazos, gets immensely rich. First up a steep, timbered hill, and then down its opposite side, brings us in this very fine river, which was up. The turbid vermilion water-level, with high banks, swept with mighty force forward. It was about 500 yards wide, and the strain on the ferryboat rope was intensely severe, as that unroofed Noah's ark bore the coach, together with a very heavy wagon, across to the westward shore. Had that well-worn rope given way, there would have been to a certainty a vacant Brevet-Colonelcy in the army, a vacant special correspondence in the FOREST AND STREAM staff, and an idle monte table in Fort Griffin; but the rope did not break, so the army has still its full complement of Brevet-Colonels, the FOREST AND STREAM's most blundering correspondent still runs his head against Mexican and other all but unsolvable problems out here, and the monte table at Griffin runs full swing at a profit. S. NGENT TOWNSEND.

We append the following letter from a correspondent in Montana, bearing upon the subject of stock grazing in that Territory, which will prove most interesting to our readers:

Montana is well named, for at every point as far as the eye can reach, are mountains, wood and water in abundance everywhere, and for grazing and pasturage it ranks far ahead of any country in the world (so learned men say). Cattle, sheep and horses are the stock raised, and the rankest scrub in Montana ranks a No. 1 in a Chicago market. Buffalo and bunch-grass grow on the mountains, and what is called "blue joint" in the valleys and basins below. There is very little, if any, hay cut, and what is cut is fed to the horses they ride, or stock horses, as they are called; but even those, if they are not used much are sometimes put in pasture, or even picketed out all winter. Horses, as a general thing, can't be made to eat grain as long as there is a spear of grass or hay in sight. There is a man on the next rancho that has a valuable young stallion. He has been trying for the last week to make him eat oats, but so far has not succeeded in making him touch them; and it is not the fault of the grain, for Montana, as a grain growing country, can't be beaten. This will prove it: I can make bread that will stand inspection with any bread I ever saw, not excepting my mother's, and that, too, with nothing but sour dough and soda.

There is little or no rain from the last of June till the following spring, and the grass has no chance of losing its nutriment. It comes on the ground, and as there is very little snow, stock keep rolling fat all winter. Cattle have been known to come out in the spring actually too fat for the market. A ranchman drove a lot of cattle last December to a corral, a distance of over 600 miles, and had no chance to feed only at night, and he averaged twenty miles a day. When he arrived they ranked as "not beef" cattle, and he received the very highest price paid.

If I had time and space, I could relate a thousand similar instances. As I said before, there is a very little snow, and what little we have will come one day and go the next. Do not judge from this that we are troubled with sloppy weather, far from it. The snow disappears from before what is called a Chenook wind. It is a sea-breeze soil very warm. It always follows a storm, and if we were blessed with a few orange trees, it would make one think they were in Florida spending the winter.

CHARLES KIMBALL.

GAME PROTECTION.

CONNECTICUT.—A Hartford correspondent writes of the working of the new game law in that State:

The number of woodcock found in October and November was greater than before for ten years. Co-operation of adjacent States will restore the abundance of game found in former years. Quail were scarce in the seaboard, but abundant as usual in the interior; probably because the farmers in the latter localities took pains to feed them. The law allows landholders to trap quail on their own property, and where snarers took advantage of this privilege the diminution of birds was very noticeable. The Hartford Game Club accomplished much by promptly securing the conviction of law-breakers in the early part of the season. T. S. S.

GAME PROTECTION WANTED IN DANBURY, CONN.—A correspondent informs us that Danbury is badly in want of an association for the protection of game. Quail have been recently shot and sold in the vicinity of Danbury. The best method then, as our correspondent proposes, is to found a sportsman's club. In this way, not only all the pleasure of the field would be more thoroughly enjoyed, but by means of a regular constituted organization, those trespassing on the game laws can be prosecuted and punished.

THE ADIRONDACK CLUB.—The Adirondack Fishing and Hunting Club have the control of over 95,000 acres of land and water in the Adirondack tract, in Essex county. A fine fish-holding house has been built, and Mr. Seth Green, Superintendent of the State Fisheries, has stocked it with 50,000 eggs of the lake and brook trout. Mr. C. G. Atkins, Superintendent of Fisheries of Maine, has sent 25,000 eggs of the Maine land-locked salmon, and from Samuel Wilson, Commissioner of Fisheries of New Castle, Ontario, 50,000 eggs of the famous Lake Ontario land-locked salmon have been received. These fine fish are not generally known in this State, and a most desirable addition to the native Adirondack game fish, and will be placed in Lake Henderson, one of the main

sources of the Hudson. Arrangements have been made with Mr. Green to furnish the club with one of his best men to take charge of and superintend their fish-breeding establishment, so as to insure its success. The club have purchased, in Canada, and forwarded to their preserve, a bull and cow moose, and have contracted for more. Within the next five years the club entertains the hope that they will be enabled to restock this favorite resort with fish and game. The Adirondack Club is incorporated under the Game laws of the State. Its officers are: J. R. Thompson, Pres.; Thos. J. Hall, Sec.; W. E. Pearson, Treas.

NEW YORK ASSOCIATION FOR THE PROTECTION OF GAME.—The monthly meeting was held on Monday, the 11th. The chair was occupied by Mr. D. H. Lawrence. Mr. Thomas N. Githbert, Secretary, informed the meeting of the interest taken in other States in the topics treated by the association. Recalling the history of game protection, the Secretary states that the first game laws were only passed in 1848. Mr. Charles E. Whitehead, counsel to the association, stated that the recent action of the association in not enforcing the law in relation to the sale of venison after January 1, had resulted in the wholesale vending of the forbidden game by small dealers, who said they had sold it on the assurance of the wholesale dealers that the association would not deal harshly with them. The action of the association had demoralized the dealers, and he hoped no such leniency would be shown them next season. He had commenced some fifteen suits for selling venison out of season, and had brought three to trial, gaining two. Dr. A. R. Strachan was duly elected a member, and the name of Dr. G. Winston, President of the Mutual Life Insurance Company, was proposed and laid over until the next meeting, under the rule. Ex-Congressman Clinton L. Merriam, of Lewis county, N. Y., gave information in relation to the wholesale destruction of deer in the Adirondacks. He mentioned one case in which three young men had gone up there, hired five guides, secured as many hounds, and mercilessly slaughtered the deer. They were, of course, arrested, but compromised the matter by paying a slight fine. Such acts worked incalculable mischief, and he hoped the association would take some action with the view of securing legislative aid. Senator Alfred Wagstaff assured the gentlemen that Senator Turner was about to introduce a bill authorizing the Governor to appoint State Game Constables, who would see that the game laws were properly enforced all through the State. It was determined to combine with the West for the purpose of stopping the shipment of game to New York out of season.

NEW JERSEY STATE CONVENTION.—A convention of delegates from Cape May, Cumberland, Atlantic, Burlington, Ocean, Monmouth, Hudson, Bergen and Middlesex counties, one hundred members in all, met at Trenton, Feb. 5, to discuss the present system of net-fishing. A committee having been appointed, framed a bill prohibiting all seine fishing from June 1 to Sept. 15.

—The Sportsman's Club of Cecil County (Md.) have sent the Legislature the draft of a law for the protection of fish in the Elk River.

LOUISIANA.—*Opclousas*, Feb. 10.—The season for deer closed last week. This game is reported plentiful in the eastern part of the parish. A change in the law, making the season open Nov. 1, instead of Aug. 1, as now, would prove beneficial.

—Remonstrances to the proposed five years' prohibition law in regard to quail shooting are pouring into the Ohio Legislature from all over the State, and its passage is considered pretty effectually defeated.

OHIO.—The Jefferson Game Protective Association was organized at Jefferson, Feb. 4, with the following officers: Pres., Geo. W. Beckwith; Vice-Pres., J. L. Brown; Treas., L. H. Means; Sec., W. D. Honells, Jr.

MICHIGAN.—*Honell*, Feb.—A club has just been organized here to be known as the Howell Game Protection and Shooting Club. The following officers were elected: President, H. B. Blackman; Vice-president, L. S. Montague; Secretary, C. G. Jewett; Treasurer, E. H. Rubert.

MICHIGAN STATE SPORTSMAN'S ASSOCIATION.—The State Sportsman's Association of Michigan convened at Battle Creek Feb. 5, with Pres. E. S. Holmes in the chair. Representatives were present from the St. Clair, Detroit, Bay County, Kent County, Howell, Saginaw, Hastings and Battle Creek Associations. Among the papers read was one by E. R. Miller, Esq., of the Fish Commission, on the prohibition of lake trout and whitefish selling during the spawning season, and for a brief time thereafter. The entire cessation of all netting of whitefish when running in large schools into shoal water to deposit spawn, and of trout while seeking the reefs for spawning, was urged as the only means of restoring the fishing industry of Michigan to its position among the other commercial interests of the State. The paper prepared by Mr. John Davidson, of Monroe, advocated the strict protection of all ducks that breed in the State, viz.: Mallard, wood-duck, and teal, between the 1st day of February and the 1st of September. Following the discussion of this topic came an able presentation by Senator J. L. Burleigh, of Ann Arbor, of the need of more stringent game protective enactments. Prof. H. B. Roney, of East Saginaw, read an able essay on "The Importance of More Effective Legislation for the Protection of Game and Fish." The difficulty of securing proper enactments, the writer thought, was the lack of a healthy public sentiment and laxity of public opinion on the subject. Statistics show that of the enormous amount of venison shipped from fifty-four stations in the northern part of the peninsula, during two months of the present winter, about four-fifths went to markets in other States. The subject elicited a lively discussion among the members, one subject of warm dispute being the prohibition of still hunting deer, and legalizing only hounding. Other papers were on the hauling of a gun, by Mr. T. S. White of Grand Haven; and one on Michigan grayling, by Mr. E. Harbeck, of Battle Creek.

The next meeting will be held at Lausling the third Tuesday of January, 1879. The officers for the ensuing year are: Pres., Dr. E. C. Holmes, Grand Rapids, re-elected; Sec., Dr. J. C. Parker, Grand Rapids; Treas., N. A. Osgood, Battle Creek.

FISH AND GAME PROTECTION CLUB OF THE PROVINCE OF QUEBEC.—Our thanks are due to the club for their polite invitation to dine with them on the 7th of February. If only time and space were annihilable we might undoubtedly have dined in Quebec with our many Canadian friends. We look, then, with intense longing at the savory bill of fare, which,

starting with bare soup, runs all through the culinary gamut of game. Some of the toasts were kindly thought of and most appropriate. We, though absent, feel sure that the toast, "Our Sister Societies in the United States," was well received and heartily responded to. Our well-known contributor, R. H. Kilby, Esq., is the President, and A. Shewan, Esq., Secretary of the Fish and Game Club.

The Rifle.

THE FOREST AND STREAM AND ROD AND GUN TOURNAMENT

For the Short-Range Championship

And three team medals, which will be awarded to the teams making the first, second and third best scores. Other prizes will be offered also, to take place at Conlin's shooting gallery. Open to teams from any organized rifle club.

Conditions.—Teams—Each team shall consist of ten men. The teams participating must be composed of members of the various clubs which they represent. Rifles—Limited to ten pounds in weight; minimum pull of trigger, three pounds; 22-100 cal. Teams can furnish their own rifles and ammunition, or use those at the gallery, as they may desire. Number of Shots—Ten by each competitor. Sighting Shots—Two shots will be allowed each competitor. Position—Off-hand. Targets—200-yards targets, according to the regulations of the N. R. A. reduced in proportion to the range at the gallery. Practice—No practice allowed on the day of the match. Entrance Fee—Five dollars to be paid at the office of the FOREST AND STREAM AND ROD AND GUN, No. 111 Fulton street, N. Y. All teams desiring to compete must be entered ten days before the time the match is announced to take place. The match to be governed by the rules of the N. R. A. relating to teams. Captains of the competing teams shall meet one week before the commencement of the match, make all preliminary arrangements, choose referees, and decide in what order their respective teams shall shoot. The referees shall elect an umpire, whose decision in all cases shall be final.

The match will commence on Monday, March 11.

—We beg to acknowledge from Messrs. Remington & Sons the receipt of a nickel-plated, pearl-handled revolver, as one of the prizes for the FOREST AND STREAM AND ROD AND GUN tournament.

"NICK" ON THE TROPHY CONDITIONS.

FROM an association numbering among its managing members so large a proportion of practicing lawyers, the National Rifle Association has its laws and regulations in a most remarkably inchoate state. Among the smaller clubs throughout the country it is no uncommon thing to adopt as their standard the rules of this prominent organization, and it becomes the more important, therefore, that these rules for the conduct of rifle shooting should be drawn with all the fullness and perspicuity possible. The association could well afford to drop all the wrangles into which its opponents and ill-advised friends would draw it on the question of representative nationality, and make itself a model of its kind, to which growing clubs could look up to with the assurance that a sound, progressive example was set before them. But, instead, the records of the association show a system of tinkering, patching, altering and amending, practiced on the unfortunate by-laws and regulations, until they teach and direct almost everything in their assertions, and practically amount almost to nothing in their many contradictions. Of course it has often occurred that the legal rifle managers enjoy interesting matches of interpretation, and the board meetings were often the scenes of amusing mimic battles of gab between the hair splitters. The climax came when one of the members of the board discovered, or thought he had, that the association had been living for five years or more a lawless life, in that the by-laws had never been legally adopted. Of course an issue was raised, the lawyers wrangled, and once again the directors performed each his part in a grand legal circus. A compromise was reached, and now the association rests on the belief that it has a set of by-laws, at least until another legal light chases away the notion.

In legislation affecting the association there has been the same halting mode of procedure. Several acts have been passed, each tacking on some feature which a little more care and circumspection in the drawing of the original bill would have included. There was, of course, much that was fresh and untried in the work of drawing up laws touching rifle associations. No models existed on which to frame their requirements, and to a certain extent it was necessary to feel the way; but allowing for all this, there has been a great amount of blundering, and a liberal stumbling upon good luck rather than its intelligent pursuit.

No small share of the apparent success thus far of the N. R. A. has been due to the support of the general public and the earnest endeavors which the secular and non-professional press has given to the topic of well-directed rifle practice. There have been hickerings which have at times found their way into the columns of the sporting papers, but the great world without, who have no axes to grind, and are therefore not wroth when the grindstone fails to turn, are not dissatisfied with the progress thus far made; but the fact remains that the path has been a devious one, according to methods more blindly lucky than discreetly shrewd and business-like, and to-day it would be an economical use of time and effort if some one should take upon himself the codification of the mass of by-laws, rules, regulations, precepts and directions already passed by the directors of the N. R. A.

The latest case where this want of intelligent drawing up of rules and conditions has come to the surface, is in the specifications governing the contests for the Centennial trophy.

The loose wording, fixing the qualifications of entrants as respects nationality, has already been so thoroughly ventilated in the British team, that I will spare anything but their mention. But now arises the question of the control of the matches, and at the meeting of the team a few days since the topic was mooted, and sufficient opinion expressed to show that very diverse opinions are entertained on radical points. The conditions say, positively, that the winning team, or a majority of it, shall prescribe time and place for the next annual contest; beyond this the conditions refer solely to the match proper. There is no mention made as to the manner of selecting the representative teams. No line or method of securing the best shots fixed, and the whole matter, in fact, left open for a vast amount of future discussion. In the two contests thus far had, the National Rifle Association has assumed the control without any special protest or objection. The results certainly could not have been more brilliant under any management, and though in equity the National Rifle Association should have extra privileges of supervision in any further contests or selections as a matter of absolute right and law, the conditions give them no more control than the veriest backwoods target company. In fact there is no particular mode of selection fixed. The match was to be carried on pretty much as the practice of the N. G. S. N. Y., with a constant hope for the best. The riflemen of the land are supposed to draw themselves together into a sort of "a fortuitous concourse of atoms," and some bow or other create a representative team—a theory of evolution without the presiding intelligence. The present team think it should be left each year with the holders, but there are objections to this opportunity for self-advancement. In England the difficulty was easily managed in a dictatorial manner "by the direction of the Council." Scotland picked and sorted so carefully as to leave her best men at home, while Ireland, having little room for selection, was soon antistified. Canada, we need hardly recall, sent a club team, which might or might not have been representative.

But now the practical question arises: If Gen. Dakin's team fix Chicago as the place, will the National Rifle Association enter upon the work of fixing conditions? And, if not, who will? Will the Dearborn Rifle Club assume the charge or the Northwestern Rifle Association? Perhaps we may have no match this year, or it may be that Creedmoor will be the battle-ground again, and then the control would naturally go to the N. R. A. Altogether there is room in the loosely drawn conditions of the Centennial trophy for a host of perplexing complications, and it may be that the trophy will ultimately fall a victim to these *lapsa penna*. NICK.

MATCH FOR THE TROPHY.

The following notice has been sent by the Secretary of the N. R. A. of America to the various rifle associations of the world:

NEW YORK, Feb. 8, 1878.
Sir—I have the honor to invite your attention to the following resolution unanimously approved by the Board of Directors of the National Rifle Association of America, held Tuesday, Feb. 5, 1878, viz.:

"Resolved, That the secretary be directed to notify the riflemen of England, Ireland, Scotland, France, Germany, Australia, the Dominion of Canada, the South American States, and all other countries having rifle associations or clubs, that the next match for the Centennial trophy will take place in this country in September next, open to the riflemen of all countries on the same terms as the former competitions, provided that notice be received by this association on or before June 1, 1878, from the riflemen of any country or any foreign rifle association that a team will be sent to represent them in such match. That in case no such notice be received by that date or match take place, that such match will be postponed to the year 1879, the trophy to remain in the meantime in the possession of the last American team, as at present, and to be inscribed as having been won by America in 1878."

A printed copy of the conditions of the match above referred to is furnished herewith, and I have great pleasure in expressing the earnest desire of this association that your country may be represented in the third competition for the American Centennial Trophy.

I am, sir, with great respect, your very obedient servant,
GEO. S. SCHUMMERHORN, JR., Sec. N. R. A.

Copies of the foregoing sent to N. R. A., Great Britain; National Association of the Riflemen of Germany; Société Générale de Tir de Salses, Switzerland; Ulster Rifle Association, Ireland; West of Scotland Rifle Club; National Rifle Club of Scotland; Victoria Rifle Association, Montreal; Dominion of Canada Rifle Association, Ottawa, Canada; Province of Quebec Rifle Association, Canada; Société Havraise de Tir, Havre, France; La Société de Tir des Communes de France; Calcutta Rifle Association, India; Southern India Rifle Association, India; Coburg Rifle Association, Canada; Prince Edward's Island Rifle Association; Ann Rifle Club, Lima, Peru; Port Elizabeth Rifle Association, South Africa; Demerara Rifle Association, West Indies; New South Wales Rifle Association, Australia; Victoria Rifle Association, Australia; Irish Rifle Association, Ireland; Guelph Rifle Association, Canada; Victoria Rifle Club, Canada; Ontario Rifle Association, Victoria, Canada.

NATIONAL RIFLE ASSOCIATION.—At a meeting of the Board of Directors, held on Tuesday, Feb. 8, mention of which was made in our last issue, the president, Judge N. P. Stanton, announced the result of the annual meeting of the association, and reappointed the members of standing committees for the ensuing year. He recommended the equalization of the salaries of the assistant secretary and the superintendent of the range at Creedmoor, and that the Range Committee should assist in the work of making the headquarters a centre of information, etc. Secretary Schummerhorn announced that the report of the association was nearly ready for printing, and 1,000 copies would be distributed at an early date. The report of Treasurer Wylie showed a balance on hand of \$50.87. Gen. John B. Woodward reported that the committee had drafted a skeleton form of a proposed programme, which was submitted to the Executive Committee for revision and action. The plan embraced was similar to the one which governs the matches of the National Rifle Association of Great Britain. The number of shots per man in all matches was placed at seven, and the number of men in each squad at four. In the majority of matches subscription prizes would be allowed. The spring meeting will open on Thursday, May 23, with the "Leech Cup," which will be contested on the old range, while the targets on the new range will be allotted to matches for "volley firing" and "skirmishers." On the second day ten matches will be contested at 300 yards, five at 800 yards, three at 900, and three at 1,000 yards. On the third day thirteen matches will be contested at 200 yards, seven at 500 yards, and 6 at 600 yards. In conclusion, Gen. Woodward stated that the profits of the spring meeting last year were only \$85, while under the proposed plan he thought some money might be realized by which many needed improve-

ments could be made. It was decided to have copies of the new regulations printed and placed in the hands of directors for their examination, upon which action will be taken at a special meeting. The editor of the *National Guardsman* has offered a long-range rifle, valued at \$125. Mr. J. W. Frazier would give a cash prize of \$250 in gold, to be shot for upon conditions to be arranged by the executive officer at the spring prize meeting at Creedmoor. Gen. Shaler offered resolutions calling for a convention of the officers and members of the various rifle clubs throughout the country to meet in this city or at Creedmoor during the spring prize meeting. The secretary was directed to notify the riflemen of all countries that the next competition for the "Centennial trophy" will take place in the month of September next, and in case no reply is received from any team by June 1 next, the contest will go over until 1879, "scoring a walk-over" for the American team. Thomas G. Alvord was elected an honorary director of the association. On motion, the treasurer was instructed to secure a loan of \$2,000 for the payment of the floating debt. On motion of Major Fulton it was decided that hereafter no match should be shot at Creedmoor unless 10 entries had been secured. William Richardson and Orlando L. Stewart were elected life members.

POSSIBLE INTERNATIONAL MATCH IN PARIS.—On the 9th of this month a dispatch was received in New York, purporting to come from the Directors of the Paris Exhibition, announcing that a rifle match was to be held during the Exposition for the championship of the world, shooting to be at 800, 900 and 1,000 yards, open to all teams.

In a letter from Paris from the correspondent of the *New York Times*, dated Jan. 24, mention is made that certain difficulties in the way of foreign riflemen coming with their arms into France had been temporarily removed through the efforts of M. Waddington, the Minister of Foreign Affairs. A society of riflemen in France, called *La Société Nationale du Tir des Communes de France*, has been created in order to develop and encourage a taste for rifle practice. The *Times* correspondent brought forward some facts not very well known. In 1876 only 1,511 communes had organized clubs; in 1877 there were 2,492, and no less than 113,866 persons belonged to them. Vincennes, quite near Paris, would furnish every facility for a rifle range, or the plain of Sartory, at Versailles, only a few miles distant from Paris, would be equally available. We should very much favor some kind of a rifle match in Paris, and we are pretty sure our American riflemen would show well to the front. Will our friends of the *Chasse Illustrée* show their accustomed energy and bring the matter into prominence.

NEW HAVEN (CONN.) RIFLE ASSOCIATION.—At Quinnipiac range, Feb. 7; no prize matches, the time being principally taken up in practice. But part of the members entered for the two gold badges, the result of which was as follows:

For All-Comers' Badge.	
Dr A. Rieckholdt.....	4 5 4 4 4 5 4 4 4 42
C. Z. Gordon.....	4 5 5 4 3 5 4 4 4 40
J. E. Stetson.....	4 4 4 4 3 4 5 4 4 40
E. A. Folson.....	5 4 4 4 4 4 4 3 5 40
W. E. Story.....	3 4 4 3 5 4 3 4 4 39
F. Doerschuck.....	2 4 4 0 3 4 3 4 5 4 38

—The New Jersey State Rifle Association held their meeting last week. Col. E. H. Wright, the president, in the chair. Mr. Man, Chairman on Legislation, reported that the bill in-

corporating the association had passed the Assembly. The proposed range at Elizabethport was 1,500 feet wide at the south end, and 300 feet wide at the north end. Its extreme length was 3,500 feet. Another range "on the other side" of Bergen Hill, Major Fulton said, was as large as would be required, and could be obtained for the sum of \$1 a year. It is accessible by seven different lines of railroads.

UTAH RIFLE ASSOCIATION.—At a meeting, held Jan. 31, at Salt Lake City, a territorial rifle association was organized. Communications from the Corinne, Springville and Beaver rifle clubs were received, all expressing their fullest sympathy with the association. G. A. Mears was elected president, J. A. Groesbeck, vice-president; J. H. Latey, treasurer, and F. J. Evans, secretary.

SHOOTING RUNNING DEER.

REPLY TO "DEER-HUNTER."

MINER'S RANCH, San Diego County, Cal., Jan. 4, 1878.

EDITOR FOREST AND STREAM:

In your issue of Dec. 20 I notice a slight exception taken by "Deer-Hunter" to my views of the distance necessary to shoot ahead of a running deer with a rifle. For this I am obliged to him, as it gives me an opportunity to explain more fully what, for the sake of brevity, I left in my former articles too much to implication. I stated then that the distances given could not be relied upon, from the impossibility of making a measurement, and that they were giving only as hints to aid others in learning it for themselves. What at fifty yards appears to me like four feet, might appear to another as only two feet, and be in reality three feet. Furthermore, I neglected to state that all my remarks applied only to hitting in the best place—the shoulder or just behind, instead of the paunch or haunch, which latter may, of course, be done with much less margin, and where the deer is close or running slow, without any.

"Deer-Hunter" says: "Few hunters will agree with me as to this distance, etc." In this he is correct, and that is the main reason why there are so few good running shots with the rifle. The majority of running shots in timber will be on deer, either driven toward one or sprung from their beds by very cautious still-hunting, and will be inside of fifty yards. The great majority of runs of the latter kind will also be quartering or straight away, and may unquestionably be generally struck without holding off the deer. I do not claim that it's always necessary inside of fifty yards to allow margin, but that it is generally necessary if you wish to hit the shoulder, absolutely so if the speed is great, and always expedient. At sixty or seventy yards and over, this expediency becomes a necessity, unless the deer is running very slow.

There is a difference in the speed of balls, a round or light conical ball, with plenty of powder, traveling up to 100 yards much quicker than the ponderous bolt now so much in vogue. But this difference is not enough to allow one to neglect holding ahead at any considerable distance—say sixty or seventy yards or over—if the deer is under ordinary speed.

I have never yet missed a deer by holding too far ahead, although I have held as far as 10 feet on some that were killed. But I have missed dozens and dozens by holding on the body, although at short distances I have also hit them while so holding on. And I repeat it, old hunters to the contrary notwithstanding (for many of whom, as practical men, I have the greatest respect, and as companions and friends the most pleasant recollections and kindest regard), that the distance ahead, necessary for good, successful shooting—not occasional hitting—is much greater than one would naturally suppose, or is supposed even by those who do occasionally hit. I base this statement not only upon a large number of shots, both successful and unsuccessful, at deer in every possible form of running, but also at rolling wheels, running hares on dry ground, where every ball can be plainly seen to strike, birds skimming along water, etc.

Three times this very year it has happened in trailing up a wounded deer that had had time allowed it to lie down, that it lay out of sight and sprung within fifteen or twenty yards of me, and started off at a lively pace. So close were they, that, notwithstanding the number of times I have been deceived, it seemed so absurdly unnecessary to hold ahead that I did not do so. One running quartering got scratched on the off-ham, though I held on the near shoulder; another, on which I had to make a snap-shot or none, though running broadside, had a hind-leg broken; and the other, nearly broadside, was missed, and I saw the dirt fly from the ground in line with his tail, but a few inches behind. Twice at deer, only walking, at seventy or eighty yards, I have held a few inches ahead, and struck just in the shoulder. In the former article I spoke of a deer coming in the direction of an 11 o'clock wind toward me, and firing at 75 yards so as to see a strip of daylight ahead of his breast, and striking in the middle. That was a mistake of either my pen or the compositor. The distance was only 35 yards, and the deer was not running extra fast either. That calculation was based upon a similar shot upon the previous day—a fawn running away slanting, instead of toward me, which I hit in the rump while holding on the shoulder. It would only weary the reader to give more instances, of which I remember many striking (not always on the deer) ones. But the sum of my experience has been that, though a good standing shot with rifle and good wing shot with shot-gun, I never could hit a deer at any distance until I commenced holding far ahead, and since then have had little trouble except on high jumps or irregular ground, which will bother any one. After missing scores of good chances, my eyes were fully opened only by shooting at a running wheel, to which I kindly recommend "Deer-Hunter" or any one else who wishes to solve the "lateral motion" question.

The reasons why some "old hunters" will not agree with me (though I believe the majority with) are these: Old hunters, especially the real old Leather-stocking type, though the best fellows in the world, generally capital shots and good hunters, are often amazingly ignorant in the abstract of principles, which they implicitly, but unconsciously, follow in practice. Though I have rarely been so happy as when smoking or talking with them round a backwood's log-fire after a day's hunt, enjoying their large-hearted hospitality, I know no class of men from whom so little can be learned.

Many are full of theories, and are implicit believers in nonsense, which their every-day's practice or a few moments' thought would

show to be wrong. I scarcely know one who owns a modern breech-loader of the long or mid-range pattern who is not ready to swear on a stack of Bibles that it "holds up" (shoots level) forty rods, when in fact at 100 yards the ball drops six or eight inches below the round ball of the old muzzle-loader that he has discarded. The majority—I do not refer to the hunters of the plains—have about as much idea of distance as a woman has. "That old buck"—it's most always an "old buck"—"I killed yesterday" is always at least "forty rod off." I know some men whom I've heard detail the killing of dozens of deer, and it was almost invariably "forty rod off" or "sixty rod off." The facts, that in timber, twenty rods is a long shot, and more deer are killed inside of fifteen rods than over it. Some of the best hunters I ever knew had filed on the half-cock notch, "because it was dangerous" to carry it so, and I'll bet "Deer-Hunter" that to-day, in the Wisconsin backwoods, he will find the majority of the old muzzle-loading rifles so fixed. The nearest I ever came to getting a thrashing was in a quarrel with a first-class hunter, of the real old style, for carrying my rifle at half-cock, when a mule could hardly pull it off. He argued that if it caught in brush and was pulled back, that the notch of the "tumbler" would pass the "dog" (isn't it?) in its descent, and let the hammer fall on the cap. And afterward, in discussing the point before several others at a turkey shoot, he was backed up by the rest, and they only "caved" when I offered to give my rifle to any one who could fire it in that way, and they actually tried it. These are only a few samples.

Now, most of the shooting these men have done is at standing game. But few of them are good running shots, but some are splendid ones. But nearly all their experience has been in timber, at very short distances, on deer at a moderate gait, and with round balls. Of course many such shots can be hit by holding "on the shoulder, low," as "Deer-Hunter" says; but they make no account of the number they don't hit, nor of those that are struck in the paunch or haunch instead of shoulder.

Moreover, I am satisfied that they often hold a little ahead without knowing it. Some do know it, and avow, as I do, that it's the only true way to success. But I know that others say they do not. It may seem absurd to say that a man can shoot ahead without knowing it. But it is not strange when we recollect how a preconceived theory will often influence our observation of the simplest facts. A man knows that his Sharpe or Maynard or Remington holds up higher at 300 yards and over than his old muzzle-loader and round ball. Therefore, it holds up higher all the way. This is the whole basis of this belief, to which many cling with an utter blindness to facts, or the plain principle of low initial velocity from weight of the long-range ball. Just so with some running shots. They have the "lateral-motion" theory in their heads, and unconsciously argue thus: "The motion of the gun carries the bullet ahead, therefore it's unnecessary to shoot ahead. Therefore I don't."

Now, this may seem too ridiculous, but I have heard it not only from riflemen, but from several first-class duck shots. One of the best shots I ever knew, and one of the best friends I ever had, used to swear positively that he never held ahead, because the motion of the gun was sufficient; while I, shooting by his side, had to hold from one to three feet ahead in crossing shots, and never could touch a crossing duck at over 30 yards by holding directly on.

In this "lateral-motion" idea, which I see "Deer-Hunter" has, a very natural mistake is made. The motion of the barrel, as a radius vector (like a wheel-spoke), is mistaken for a lateral, equal motion of the whole cylinder, which forms the bore. In the latter case the ball partakes of both motions, and its actual motion in space is that of the diagonal of a long narrow parallelogram, built upon the line of fire and the line of lateral motion. Thus, if a ball were fired from one railroad car to another, both at same speed, it would strike a target on the other the same as if both were at rest (allowing of course for wind), just as an apple tossed up in the car returns to the hand again. Here the path of both ball and apple, though apparently straight, is not so in fact.

But where the gun is simply moved on a pivot at its breech, the ball pursues a straight line. If it were not so, a ball thrown from a light tube, by a whirling motion by hand, would be plainly seen to take a crooked path in the air. And, if this were true, the great host of authorities, who tell us we must shoot ahead with a shot-gun on crossing birds, would be in error. An old hunter once undertook to explain this away to me by saying a ride ball was so much swifter than shot. But for forty or fifty yards, a gun, properly loaded for ducks, heavy with powder and light with shot, gives about as high velocity to heavy shot as that of a round rifle ball, and higher than that of a long slug.

If holding on were sufficient, how could such a riflemen as Col. Gildersleeve have missed, as he did on his first trial last spring, twelve shots out of thirteen at the Creedmoor running-deer target, at only 100 yards—a target that moved with a smooth, even glide, on tramways, and where the conditions of every shot were all alike, and the speed very slow? The Colonel could certainly hold his sights on its shoulder through that kind of motion, and if "lateral motion" were sufficient he surely would not have missed the whole body.

"Deer-hunter" says, "Others affirm that the best way is to carry the aim ahead of the deer, and when he jumps into the sights pull." I have heard this often, and it cost me over a dozen as fine deer as ever waved, with flaunting handkerchiefs, farewell to a mortified hunter, to satisfy me that it is worthless. When he jumps into the sight is just too late, unless very close, as any one can find out by making a swinging target, and resting the rifle, with a board so fixed that he cannot possibly see the target until it swings into the sights. The fact is that those who shoot successfully this way—and there are many who do—put just before he jumps into the sights, although some say and, I believe, really think that they do not. But the strongest proof lies in the statement itself. Why carry the sight ahead of the deer at all, unless for the purpose of shooting ahead? Why resort to this bungling process when it's so much easier and more certain to draw directly on him? Where is the difference in effect between letting the deer jump into the sight and making the sights come to the deer. If he could be hit by either method, the latter would be by far the most accurate. The very fact that the latter way won't work proves that the other must be different from it.

He says, "When the deer reaches ground he is practically in a

state of rest." While it is impossible for him to be absolutely at rest, his forward motion is then so slackened, by changing into up and down motion, that, if close by, a ball fired directly at him will hit him somewhere. But this is only when he is jumping high. And if he is seventy or eighty yards away you cannot get the ball into that place until he is out of it, unless you fire before he reaches it.

If "Deer-Hunter" will read this carefully, he will, I think, find that there is no difference between us (except the lateral motion, which I hope he will abandon), my position being only that a deer may be hit close by or going slow, without holding ahead of him, but that even then you will be more sure of him by holding ahead; and that at any considerable distance or speed you must hold ahead to hit him forward of the flank, although I may be a foot or more out of the way in my estimate of the amount of margin necessary. Of course, in the instances given, allowance must be made for poor shooting, as I don't claim to be a crack shot, and no one can put a ball just where he wants to under such circumstances. But I have fired far more than enough shots to eliminate all rosinia of chance from the problem, and to satisfy me beyond all doubt of what I stated, that the distance necessary to hold ahead for good success is much greater than is generally supposed, and that ignorance of this fact is the main reason why so many good hunters make such wretched work on running deer with the rifle. And however good work one may do by holding on, it only proves to my mind that he could do splendid work by holding ahead.

If I have dwelt upon this point to a tedious extent, it is because of its importance; because the reason why they do so is so little known or suspected by those who are mortified by missing, and because all books that I have seen are silent upon this kind of shooting, the best, most scientific and important in the whole range of rifle hunting, and the grandest and most satisfactory in the whole line of sporting.

If any "old hunter" should feel sore at anything I have said, I have only to say—I didn't mean you; I've left a class of exceptions and you belong to them; but you know it's true of the next man. What some old hunters don't know would make a good sporting encyclopedia; what many do know, but can't or won't tell, would make a still better one; and what many do know and can tell is better yet, and I hope some of them will comply with "Deer-Hunter's" polite request to "give us their views, practice and experience through these columns." T. S. VAN DYKE.

PROJECTILES.

DOES A BULLET COMMENCE TO FALL AS SOON AS IT LEAVES THE MUZZLE?

We publish the following interesting correspondence in full, and have to thank Col. Ship, of the Virginia Military Institute, for the lucid explanation he gives of some not very well understood laws in projectiles:

RICHMOND, Va., Jan. 29, 1878.

RIFLE EDITOR FOREST AND STREAM AND ROD AND GUN:

Some weeks since I purchased your book on "Long-Range Rifle Shooting," having seen it advertised in the F. and S. ANN R. and G., a paper which is read regularly by a majority of the members of our club (rifles). At one of our meetings I stated that you had asserted, on page 84, "If a gun is fired in a perfectly horizontal position the bullet commences to fall as soon as it leaves the muzzle." This produced a lengthy discussion, some contending that where a large charge of powder was used it would not be the case. We finally agreed to leave it to Col. S. Ship, of the Virginia Military Institute. I inclose you his reply, which I think will interest a good many of your readers; certainly all in this locality.

Yours truly,

C. P. STOKES.

LEXINGTON, Va., Jan. 26, 1878.

C. P. STOKES, Esq., Richmond, Va.:

Dear Stokes—You ask, "Will a bullet, shot from a rifle, the axis of the bore being parallel to a perfectly level plane, be the same distance from this plane, when ten feet from the rifle, as when it left the rifle?" You say: "I have contended that it commences to fall the instant it leaves the muzzle, unless the gun has some elevation." You are right in your view, but wrong in your qualification. It begins to fall whether the gun has elevation or not. It is true, if the axis of the bore is perpendicular to your horizontal plane—that is, if the angle of fire is 90 deg.—the bullet will go straight up, but gravity is directly, in this last case, opposed to motion, and the bullet will go up with a velocity equal to the difference between that impressed by the impulsive force of the charge and the retarding force of gravity; it is pushed up by the charge, it is held back by gravity; it moves in the direction of the resultant. So gravity prevents the bullet attaining the height it would attain but for gravity, and the influence of gravity is manifested in its retarding effects, not in this instance by an actual downward motion. But if the axis of the bore makes with the horizontal any angle less than 90 deg., then the bullet will begin to fall the instant it leaves the muzzle, and the spaces fallen through will be proportional to the squares of the time during which it is falling. Suppose a gun fired over a horizontal plane, with the axis of the bore parallel to the plane, it will strike this plane at a certain determinate distance, depending upon charge, piece, bullet, etc., and this distance is called the "point-blank range." If gravity did not pull the bullet down, the range would be the same when the axis was horizontal as when it is inclined upward; that is, when the angle of fire is zero, and when it is some quantity greater than zero, which is counter to the fundamental principles upon which the science of ballistics is based. Returning to your supposed case, let us assume that the initial velocity of projection is 1,600 feet; that is, that the bullet will traverse 1,600 feet of space in the first second after leaving the piece, then it will require the 160th part of a second to go ten feet. But we know that under the influence of gravity a heavy body will fall 16.0833 feet in the first second of fall, or 160.833 inches. Then, in the first ten feet, it will fall 1.26th of an inch. This of course is merely for illustration, and does not represent the facts, for if a bullet traverses 1,600 feet in one second it will accomplish the first ten feet with a velocity vastly greater. In my calculation I assume that equal spaces would be described in equal times, which is not true, and hence really, although the bullet must fall, it would not fall as much as 1.26th of an inch in going ten feet. The equation of the trajectory in vacuo is $y = x \tan \phi - \frac{g}{2v^2} x^2$. Your supposed case makes $\phi = 0$; hence, $\tan \phi = 0$, and the equation remains $-x^2/2v^2$. You see the gravity is still in the equation when $x = 0$, or when axis is parallel to the horizontal plane. If the axis of the bore is horizontal, the resistance to be overcome before the bullet can be moved, are inertia, friction, and the resistance of the air. If the axis is inclined upward, making an angle with the horizontal, the resistances to be overcome before the bullet moves are inertia, friction,

resistance of air, and the components of weight in the direction of motion. This last element does not enter where the axis of the bore is horizontal, and this may be what your opponents are driving at. Gravity opposes no resistance to motion in a horizontal direction, but it acts in the direction of the vertical, and will pull the bullet down in the first ten feet; even in the first one-tenth part of an inch. This point is material to a full consideration of the subject.

Yours truly,

SCOTT SHIP.

Several of our solvers consider this an ingenious and difficult problem. Brief and to the point reviews will be given space hereafter.

OPINIONS OF THE PRESS.

Mr. Kunkel's well known ability guarantees an excellent chess column to the readers of the FOREST AND STREAM.—*Chess Record*, Mr. E. A. Kunkel, a devoted chess student and an enthusiastic lover of the game, having severed his connection with the *Globe* is now conducting a chess column in the well known and popular sporting journal—FOREST AND STREAM. Since *Wilke's Spirit* has discontinued chess it leaves a vacuum which a live chess department in a widely circulated and influential paper like the FOREST AND STREAM will acceptably fill and is sure to profit by. This undertaking gives Mr. K. a broader field in which to display his talent, and we wish him success.—*Hartford Times*. We congratulate the FOREST AND STREAM upon the acquisition of Mr. E. A. Kunkel, formerly chess editor of the *Globe*. His name is a guarantee that this chess column will be the liveliest in the metropolis.—*Holyoke Transcript*.

The following is the first of the Philadelphia consultation games, Messrs. Elson and Neill playing against Messrs. Davidson and Reicheim. This game with notes is taken from the *Chess Record* which Mr. Reicheim so ably and entertainingly edits:

Game No. 9.—RUY LOPEZ.

10—B-K3	10—Kt-K3 (c)	22—Kt-Kt3 (n)	22—Kt-Kt3
11—Kt-B5 (d)	11—Castles	23—Kt-Kt3	23—R-B3
12—P-K B4 (e)	12—B-B4	24—Kt-K4 drawn game	

NOTES.

- (a) The method of the Morphy period, and to our mind about as effective as any other; although Steinitz and the German school incline towards 5—P-Q3, holding that this opening cannot bear the strain of a more open assault.
- (b) This is perhaps slightly preferable to advancing the P-K5 at once.
- (c) The black allies consider this line of defence a mistake.
- (d) An interesting deviation suggested by Mr. Davidson, giving rise to many complex and beautiful variations.
- (e) Best. Black cannot play P-B3 in reply, because of 13—Kt-Kt3 ch, 14—P-B3 and P-K6.
- (f) The only good way of proceeding with the attack.
- (g) Played with rare good judgment. This appears to be the best promise of relief.
- (h) Both attack and defence are most delicately poised. Very exact maneuvering is necessary.
- (i) 18—R-Q is a powerful move and was carefully considered; but the charms of the more aggressive 18—P-B3 prevailed.
- (j) Some remarkable variations arise here. Suppose:

10—P-Kt3	10—Castles	20—Q-Kt3 Kt	20—Resigns

NOTES.

- (a) This move we consider inferior to B-B4. An analysis of this line of attack appeared, we believe, in a recent number of the *Schach Zeitung*.
- (b) P-Kt3 P may be here played with perfect safety. The taxi move brings the Q into play too early.
- (c) P-Kt3 B is the better move.
- (d) This move is quite weak, and the attack on the B P useless. Black now has a safe game, and the Gambit Pawn can be maintained. R-K was the proper move.
- (e) Kt-Kt3 P, and Black could still make a gallant fight. White's next move is very pretty, although obvious.

CURIOUS JOTTINGS.

—Mr. M. D. L. Buell, Lebanon, Ill., desires to play by correspondence with second-class players; and W. Russell and J. Hayward, of Hannibal, Mo., wish to play, by postal card, two players consulting against them.

—It has been calculated that out of every 100 problems in two, three and four moves, which have been published, in 7 of them the King moves first, in 9 the Pawn, in 13 the Knight, in 16 the Bishop, in 22 the Rook, and in 33 the Queen. Now is the chance for composers to move the unobtrusive Pawn on the first move, and construct a difficult problem.

—We call the attention of our readers to our two-move photographic tourney. Thus far we have received only one two-move problem accompanied by a photograph—all the way from Europe. Shall we not receive a few more?

—A new chess column has made its appearance in the *Holyoke (Mass.) Transcript*. It is edited by R. H. Seymour, and the problems in charge of George E. Carpenter, of Tarrytown, N. Y.

—Mr. Peller has added a third and large diagram to his column in the *Hartford Globe*. One of this week's games is kindly contributed by our friend and former editorial associate.

—Of the *American Chess Journal* the *Herald of Hannibal, Mo.*, says: "Work is actively progressing on the first number under the new management, and when it does appear, we predict it will be a thing of beauty, and, of course, a joy forever." * * * * * After the first number the *Journal* will come as regularly as your grocer's bill."

—"A Chess Century" is the title of a problem book published by Dr. R. L. C. White, containing a hundred and odd elegant problems entered in one of his tourneys. The price is only \$1.00.

—The St. Louis Down-town Chess Club will give a handicap tourney open to all the players of St. Louis. The entrance fee will be \$1.00 to members of the club and strangers. There will be three classes, and competitors will be classified according to their strength. Eleven names have already been enrolled.

Sea and River Fishing.

THE TROUT LAW IN NEW YORK STATE.—Sec. 20. No person shall kill, or expose for sale, or have in his or her possession, after the same has been killed, any speckled trout, save only from the first day of April to the first day of September, under a penalty not exceeding twenty-five dollars for each fish. (Amended Ch. 411, Laws of 1877.)

Inasmuch as it was inadvertently stated in our last issue that the open season for trout fishing would begin on Long Island on the 15th of March, we take occasion to publish the full text of the amendment to the law as it was passed by the Legislature of 1877—an amendment which it would appear the writer of the erroneous paragraph had forgotten. For many years an exception to the general law of this State was allowed to Long Island. We are glad that greater uniformity has now been secured.

FISH IN MARKET.—RETAIL PRICES.—Striped bass, 20 to 25 cents; smelts, 15; green do., 15; bluefish, 15; frozen salmon 30; mackerel, 25; Southern shad, 50 cents to \$1.50; white perch, 15; Spanish mackerel, 35; green turtle, 20; terrapin, \$18 per doz.; halibut, 12; haddock, 8; codfish, 0 to 8; blackfish, 15; flounders, 12; sea bass, 18; eels, 18; lobsters, 10; sheepsheads, 25; scallops, \$1.25 per gallon; soft clams, 40 to 60 per 100; whitefish, 18; pickerel, 18; salmon trout, 18; black bass, 18; hard crabs, \$2.50 per 100; smoked haddock, 12; smoked salmon, 16; dry cod, 7.

VERMONT.—*Ferrisburgh, Feb. 8.*—Fishing through the ice has been followed for some time, smelt and perch biting freely.

VERMONT.

MOVEMENTS OF THE FISHING FLEET.—The fishing arrivals for the past week included three more vessels from Fortune Bay, N. F., which corroborate the previous reports of interference with the Newfoundland herring fishery and the failure of the business for the Gloucester fleet. The receipts of frozen herring from Newfoundland will be the lightest known since business was engaged in, comprising one fare in por another at New York. Herring are plenty in

the Bay of Fundy. The number of Bank and La Hève arrivals for the week has been 23, and the receipts 600,000 lbs. halibut and 370,000 lbs. round codfish. There are some sixty vessels engaged in the Georges fishery, but the arrivals are not yet numerous. Five arrivals have been reported since our last issue, bringing about 100,000 lbs. round codfish.—*Cape Ann Advertiser, Feb. 9.*

NEW HAMPSHIRE—Dover, Feb. 10.—A string of over fifty pickerel were taken from Bow Lake by two fishermen. Fine fish taken this winter. ROBERT.

TENNESSEE—Columbia, Feb. 11.—Although trout (bass) fishing is in season, the river is too high to make it pleasant or successful. Anglers are making preparations to catch large croels when the water falls. Some bass and perch in market from Swan and Redfoot Lakes. VAL.

MISSOURI—St. Joseph, Feb. 6.—The fishermen of St. Joseph are setting their nets and raking in the whitefish daily and with great success.

MURDOCK LAKE FISHING CLUB.—We are pleased to note the re-election of that genial gentleman and piscator, Mr. D. L. Dickinson, to the Presidency of the Murdock Club of St. Louis.

TROUT MINING AT LAKE BIGLER, CALIFORNIA.—In the general freeze Emerald Bay has been frozen solid. It is one vast ledge of ice from the surface of its transparent waters to the bottom. From some cause the fish, especially the trout, have fairly swarmed there. When the great and sudden freezing came it imprisoned them by hundreds of tons all over the Bay. There they are fixed, like a bee in a drop of amber. Of course the fishermen of the Rubicon and its neighborhood are reaping a rich and novel harvest. The present abundance of fish in the Carson market is due to this remarkable occurrence. Monk says that the Bay presents a wonderful appearance. He says in all truthfulness that Sailor Jack and some associates have actually sunk a winch in the ice between the boat landing and Captain Dick's Island, and that by dint of tunneling and stoving in the solid ice they are actually mining out the imprisoned trout by the cart load. Hank says he has an interest in one of these extraordinary "claims," and that he has every reason to expect prompt and numerous dividends. The present state of the weather seems to guarantee a continuance of this strange species of mining for some days yet to come, if not, indeed, for the remainder of the winter. This class of phenomena occurs only at very rare intervals. In 1845, Back Cove, an arm of Casco Bay, was a scene of such a freezing as this. All sorts of salt-water fish, such as frequent the more shallow bays and estuaries—smelt, tom-cod, eels and flounders—were frozen in and captured by the million. The tom-cod, when thus frozen, may be thawed out in cold water and restored to life. For this reason this small member of the finny tribe is known as the "frost fish."—*The Carson (Cal.) Appeal.*

CANADA—Montreal, Feb. 9.—Large quantities of *salmo fontinalis* are now being taken through the ice on the lakes throughout the eastern townships. February 3d, while some workmen were cutting ice in the Coaticook River, near that village, several large trout appeared in the water that filled the holes, and one of them, a 24 pounder, was thrown out on the ice with a shovel and captured. Fishermen here say that this season it is a common occurrence for trout to appear in the holes that they have cut to fish through. It cannot be hunger that caused this, for the fish are in good condition, and I can only account for it in this way—that the soft weather has kept the water up against the ice, and the trout come into these holes after a fresh supply of oxygen. STANSTEAD.

ERRATIC FISH HOOKS.—*Milwaukee, Wis., Feb. 5.*—Your readers, many of them no doubt, read the description of a curious fish-hook, in a late number of *Harper's Weekly*, which was of a French pattern in use by the fishers along the Newfoundland coast. This hook had been found in a cod fish caught along the New England shores, a distance of 2,000 miles. The West, not to be outdone, "goes" a thousand miles better. Mr. J. Tyrrell, a messenger in the United States Court, recently purchased a codfish in this city, in which was found one of the hooks referred to. The hook has been examined by the dealers of this city, but nothing could be found that resembled it. Dr. Foster, of the United States Court, was unable to find a similar one in a collection of several thousands. It is quite evident the hook has made a journey of upward of 3,000 miles.

Those cute foreigners have a fashion of introducing their fish-hooks into foreign countries, which we Yankees don't know anything about. Seriously, the hooks were undoubtedly used by the French fishermen, at Caraque, Quirpon (Str. of Belle Isle), or some other French fishing station on the American coast. If we knew in what locality the codfish were caught, the whole thing might be easily made plain. It is not at all likely that the codfish have run over to Europe to smuggle French fish-hooks into America. We don't believe they are interested in thematter in the slightest degree.—ED F. and S.]

THE WISCONSIN EDITOR ABROAD.—We have frequently been indebted to the *Ashland Press* for Wisconsin fishing items, and we have never failed, so far as our own modest attainments in the manufacture of fish stories would allow, in heartily seconding the efforts of its energetic editor, Mr. Sam. Fifield, in his efforts to herald abroad the piscatorial attractions of Wisconsin waters. It is with something akin to dismay, therefore, as we open the last number of the *Press*, and seek the usual account of a bigger haul than the last big haul, that we learn of the absence of that wielder of the pen, which is mightier than the fishing rod, and read this weak-kneed salutatory from the temporary captain of the editorial craft:

"We cannot conceive of a more trying ordeal than to be suddenly called from the paths of virtue and honesty to the editorship of a paper which has achieved a national celebrity for the magnificence of its fish stories, and the impressiveness with which they are told. If, as we undoubtedly shall, we fall behind what is expected of us in the way of sustaining the reputation which this leading authority on matters piscatorial has achieved, we will say to our readers that our life habit has been to confine ourselves strictly to the truth in all statements, and that with no more foundation to go on than the fact that a few thousand tons, more or less, of herrings have been caught through the ice on our bay within the last three weeks,

and perhaps as many white fish, lawyers and trout (lake trout—our law-abiding citizens would catch no other), it is an up-hill business to attempt. We do not claim to be as utterly incompetent as George Washington; but to edit a great family journal like the *Press* requires a breadth and capacity for—for this kind of thing, to which we make no pretensions."

THE BLACK BASS OF VIRGINIA.

BALTIMORE, Jan. 22, 1879.

EDITOR FOREST AND STREAM:

Having been an interested and enthusiastic reader of the articles in former numbers referring to the modes of taking bass, I have at last concluded to ask you or some of your readers and correspondents for an explanation of a phenomenon that has appeared strange to me and for which I have, in vain, sought a satisfactory solution from others older and more experienced than myself.

I have fished exclusively for bass for several years, principally in the Great Cacapon, the Potomac, and in that portion of the south branch of the Potomac which runs through Hampshire County, West Virginia, but have only noticed the peculiarity to which I allude in the last-mentioned stream. In fishing at the same spots I have frequently taken two bass, about equal in size and weight, but so different in color as to almost seem different species. One would have the regular deep color that is associated with the name black bass, while the other would be very, very light; a pale green, in fact. Now, is it the difference in sex that produces this dissimilarity, or an irregularity in the time of spawning, or can the paler fish be diseased. The fish were taken from the same pools, sometimes two at a time, rising to exactly similar flies or taking exactly the same kind of bait. I have always found the darker fish much more game than the other and affording superior sport, while the paler fish after a few dashes comes as naturally to the landing net as a common chub. Another difference: In stringing bass to keep them alive while nothing I use a leather string with a sharp piece of telegraph wire at one end and a stout piece of wood at the other instead of passing the string through the gills of the fish I pierce a hole through the membrane below the lower lip and out at the mouth. This does not interfere with respiration, and the dark colored fish will be as lively at the expiration of several hours as when caught, but the light colored ones do not seem to stand it much over one hour. In examining a string of fifty bass, two hours caught, I found every black fellow as strong and hearty as ever, while every pale one was stiff and dead. Now can you or any of your friends explain these facts to me? I may mention that I have generally noticed this phenomena in July and August.

According to a request in a former issue I would like to give what my experience has taught me to be the best weather for fishing in the waters I have mentioned. For fishing with bait of any kind, minnows, helgramites, crayfish, etc., a bright, sunny day, cloudless and with little breeze is the best, for bass do not seem to feed as greedily in dark, lowering weather as they do when the sun shines. Last summer I fished for two hours one July day on the South Branch, during a steady rain, and did not get a nibble, though using minnows, which I regard as the very best bass bait. I may here state that the water was slightly milky. At the end of two hours the sun came out very bright and warm, so I retraced my steps to the place I had started from and fished the ground over again. Now, however, I took bass as fast as I could land them, all along the places where a short time previous I had failed even to get a single bite. But with the fly there is a difference, for though I regard bright weather as best, yet I have had very good success with bright flies even during a heavy shower. The best flies for general use I have found to be large sized, dark colored ones made of pheasant's feather or mallard. The smaller bass will bite equally well at them, while a good sized individual will hardly notice a small fly except occasionally. There should be a slight breeze, just to ripple the surface of the water and rattle its glassy transparency. I prefer a common dick reel, with about thirty-five yards of fine waterproof silk line tapered. The click of the reel is sufficient in itself to hook the fish without necessitating that turn of the wrist which the tyro generally makes too soon or too late, in either case losing the fish he has induced to rise to his bait.

I hope you will give me a solution of my problem. Yours, etc.,

GREYSTEEL.

Commenting upon "Greysteels" atements, our obliging correspondent at Leesburg, Virginia, remarks:

LEESBURG, Jan. 24, 1879.

I have noticed the two different looking bass he describes; one a dusky black with broad finger marks ranging in intensity of coloring almost mottled in hands; the other pale-green tending to a whitish-yellow, each kind whiter on belly than on back; the dusky one thick and chunky, the pale-green slender and rather slim. The dusky is more vigorous, longer lived, and more gamey. I believe they are male and female. I have never to my recollection seen but one dusky mottled bass smaller than a pound fish, though anglers here say they have noticed the two kinds of all sizes. I think at first they are all alike of an almost uniform color, pale-green; as they grow older the males show the mottled bands and dusky look; the females get darker but not mottled. This is only conjecture, but I shall examine next season so as to determine, if possible, the true state of the case.

I have always been most successful in pleasant weather whether I used the fly or minnow. Brightness no drawback in minnow fishing if the water be clear; and, when the water is not clear, the brighter the better. In fly-fishing, the water being clear and the sun bright, I cast where shadows fall; if the water is clear and the sun not bright I cast anywhere. I hardly ever take a fish in a sunny part of the stream when the water is clear and sun very bright. I believe they see me under such circumstances. I believe in moderate sized flies, of a size rather large for trout, but much smaller than the bass flies of the stores. I like the fly to look large but the hook to be rather small for a bass hook. Nos. 4 and 5 Sproat bend are large enough. T. W.

SALMON ON THE ST. MARGUERITE.

31 LIBERTY STREET, NEW YORK, Feb. 4, 1879.

EDITOR FOREST AND STREAM:

Having made an engagement with my friend, E. A. Green, Esq., of Newark, N. J., who by the way is the original inventor and maker of our present split bamboo trout and salmon rod, we met at the St. Louis Hotel, Quebec, on the 11th of last July, I having preceded him a couple of days, and selected our provisions for the "trip," and had all placed on board the steamer leaving that day for the Saguenay River, of which the St. Marguerite is a branch. I here learned that we had lost at least three weeks of the very best time, salmon having been abundant in the river on the 20th of June, and all old anglers know fresh run fish always take the fly much the best.

We also learned that the lawless, Willis Russell, Esq., of St. Louis Hotel, Quebec, and Robert Marc Powell, Esq., of Philadelphia, had made arrangements with the lessees of the net fisheries near Tadoussac, where all salmon have to pass in reaching this river, to have those nets all raised two days each week, which gave us almost a guarantee of still having good sport.

Our steamer left Quebec at 7 A. M., and at daylight next morning we

landed at the mouth of the St. Marguerite (having taken a small sail-boat in tow from Tadoussac, a distance of 12 miles, on which we stepped to go ashore). On landing we fired a double gun, the usual signal to call out the trusty guardians, Johnny Jourdan, and we were soon taken to his house, and eating an early breakfast of fresh laid eggs and fried salmon prepared by his good wife, he, meanwhile, not being idle, as the little pony and cart at the door ready to carry our "traps" gave ample proof. After a drive of six miles we arrived at the Home Pool and "Our Little Cottage Home," a neat and tasty frame dwelling of six rooms, and furnished with whatever is necessary to make one comfortable, not excepting bed curtains to keep out black flies and mosquitoes. Here on the piazza one can sit and watch the salmon leaping in the pool in front of the door. From this pool the travelling is by canoe, and the stations are from three to six miles apart up to the Upper Forks; and at each station you find the same style of cottage, there being six in all on the river.

Our two first days' fishing gave us eleven salmon weighing 18½ pounds, and more lively or gamey fish we never saw. The weather now soon changed and became excessively hot, the mercury showing 90 deg., and even 92 deg. in the shade, and the water stood at 71 and 71 degrees, a heat never before known in this region, causing both salmon and trout to desert the pools and gather around the springs and the mouth of spring brooks in large numbers. In several places we saw as many as 100 and 200 salmon, and in one place we estimated the number at between 500 and 600 salmon and quite as large a number of large trout. These fish lay like sticks of cord wood, their heads to the cool spring water, and the majority motionless.

We also proved the old adage, that "Salmon will never rise to a fly unless in swift water," erroneous. In casting one day for a very large trout, apparently a six-pounder (myself and others having taken several exceeding that weight in this river), the smaller trout would chase the fly and we were compelled to raise it to prevent their getting it, we noticed a noble salmon start suddenly in that direction. I immediately returned the fly in front of the large body of salmon, when three started for it and one captured it, which, after a half hour we landed and it proved a 20-pound fish. These brooks are generally near a level part of the river and distant from any pool, which made it much more difficult to capture our fish after hooking them. We both used over 150 yards line on our reels, and each lost salmon by their getting out all our line and breaking loose, and we ran them with a canoe when necessary. On our last day's fishing we left camp taking but one rod between us, and fished alternately at the same pool, and at 9 A. M. we had secured four salmon besides losing three more with flies, one of which took out my whole line before he broke loose. Our whole trip, which included not over 11 days' actual fishing, gave us 36 salmon, weighing 459 pounds, an average of 13 7-12 pounds each. The removing of the nets proved to us that the river is the home of large salmon, and as the le-sees are putting 100,000 young salmon yearly in the river it must continue to be so. Had the weather continued cool and comfortable as when we first arrived or as on our last day's fishing, we are satisfied our catch could only have been told by the amount of our endurance, for on the last morning's fishing at no time was it necessary to cast five minutes to hook a salmon.

I hope that on your next trip for salmon you may have as good sport and enjoy it as well as did your friend, SAMUEL STREET.

A STRANGE PUZZLE.

BOSTON, Jan. 1.

Your mathematical puzzle seemed to interest your readers. I enclose another which is simple, but puzzling. The point of it is that a square of eight inches, say, can be cut up into four pieces which can be put together so as to make a parallelogram of 5x13, that is to say larger by one square inch than the original square was, as a square of eight inches contains sixty-four inches, whereas a parallelogram of 5x13 contains sixty-five. This seems an absurdity, but the accompanying outline will show that it can be done. It will be seen that the square—it is on the scale of ¼ inch—is divided into the figures 1, 2, 3 and 4, which figures can be arranged as in the second

outline, making a parallelogram 5x13. Wherein lies the fallacy? The second outline is only to show how to place the figures after they have been cut, but the way to do the problem is to make a square of eight inches, one-half, or one-fourth, cut it up as shown and see than it does fit into the parallelogram. F.

NICHOLS & LEFEVER,

SYRACUSE, N. Y.,

MANUFACTURERS OF

DOUBLE AND SINGLE-BARREL BREECH-LOADING SHOT-GUNS

Double-Barrel Breech-Loading Rifles, and Shot and Rifle combined. Muzzle-Loading Creedmoor guaranteed to be the best, and not to give "UNACCOUNTABLE MISSES."

Our Catalogue for 1878 will be ready January 15, giving full description of gun, recent improvements in same, matters of general interest to Sportsmen, etc., etc.

Tiffany & Co., Silversmiths, Jewellers, and Importers, have always a large stock of silver articles for prizes for shooting, yachting, racing and other sports, and on request they prepare special designs for similar purposes. Their **TIMING WATCHES** are guaranteed for accuracy, and are now very generally used for sporting and scientific requirements. **TIFFANY & CO.** are also the agents in America for Messrs. **PATEK, PHILIPPE & CO.**, of Geneva, of whose celebrated watches they have a full line. Their stock of Diamonds and other Precious Stones, General Jewelry, Artistic Bronzes and Pottery, Electro-Plate and Sterling Silverware for Household use, fine Stationery and Bric-a-brac, is the largest in the world, and the public are invited to visit their establishment without feeling the slightest obligation to purchase.

FOR SALE.—A fine setter pup eight months old, half Gordon and half native; black, with white star on breast. Address JACOB SMITH, No. 205 Broad street, Harrisburg, Pa. Feb14 1t

TATHAM'S

IMPROVED CHILLED SHOT.

American Standard Diameters.

(RED LABEL.)

Gives greater penetration and better pattern than ordinary shot, by reason of retaining its shape under concussion and impact, soft shot being jammed out of shape while leaving the gun. Equally well adapted to choke-bored, modified chokes and cylinders.

Our chilled shot will be found free from shrinkage, more spherical, more uniform in size heavier and of brighter and cleaner finish than any other. SEND FOR CIRCULAR.

TATHAM & BROS., 82 Beekman St., NEW YORK.

Also manufacturers of PATENT FINISH, AMERICAN STANDARD DROP SHOT, and COMPRESSED BUCK SHOT, more uniform than the ordinary moulded shot.

The Kennel.

EMPIRE STATE KENNEL FOR SALE.

Thoroughbred Gordon Setter puppies, out of our Gordon setter bitch "Border Lily," by L. H. Leonard's Gordon dog, "Pride of the Frontier," whelped January 25, 1878.

The above stock comprises the celebrated Major S. Stockton, Dr. J. H. Gaultier, John (of Morpet), Langstaff, Sir Arthur Chichester, and George, Duke of Gordon's dog.

See article on "The Gordon Setter," in the Chicago Field of January 19, 1878.

Special inducements to applicants in the South and West. Address, FISHER & BICKERTON, 110 Flatbush ave., Brooklyn, N. Y. Feb14 4t

For Sale.

100,000 Brook Trout fry for sale. Address OSCAWANA TROUT FARM, Crogers, New York; or H. P. LEGRAPPE, Bowery National Bank. Feb7 4t

FOR SALE CHEAP.—One-fourth interest in a well-located brook trout hatchery of most unlimited capacity, within 2½ miles of a depot; also a good farm of 200 acres in connection with hatchery. Enquire at this office for further particulars. Jan31 1f

LIVE QUAIL.—I have a choice lot of live quail which I offer at one dollar per pair. Address, CHARLES FREDRICKS, 73 Mauger street, Brooklyn, E. D. Feb14 1t

FOR SALE.—Five pictures after hand-sewn—"The Stag at Bay," "30x43"; "The Monarch of the Glen," "31x41"; "The Challenge," "The Combat," "The Defeat," each 22x33. These pictures have been highly praised by the press, and are so nicely worked in ink that it requires very close examination to distinguish them from the finest steel engravings. Price \$175, or will exchange for a 12-gauge breech-loader of equal value. Address, JAMES P. LAHR, Portsmouth, Va. Feb14 2t

TO FISH CULTURISTS.—For sale, a fine property at Randolph, Cattaraugus County, N. Y., admirably adapted to raising fish; unfailing springs of water with the best lay of the ground for making ponds. A fine stock of brook and salmon trout now on the place. Will be sold cheap. An excellent chance for making money or securing a comfortable home. Sixteen acres of land. Address B. FORBES AND SON'S Office.

FOR SALE.—An interchangeable Parker, B. L., 10 and 12-gauge, short and long, heavy and light, cylinder and choke-bore; patterns from Parker Bros.; P. G. stock, checked and engraved, splendid gun and in perfect order. Last chance. Address, DR. J. P. MCLEERY, Milton, Pa. Feb14 1t

Gunpowder.

THE HAZARD POWDER CO.

MANUFACTURERS OF

GUNPOWDER.

Hazard's "Electric Powder."

No. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. only.

Hazard's "American Sporting."

No. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6 1/2 lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot-guns.

Hazard's "Duck Shooting."

No. 1 (fine) to 6 (coarse). In 1 and 5 lb. canisters and 6 1/2 and 12 1/2 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG, in kegs of 25, 12 1/2 and 6 1/2 lbs. and cans of 5 lbs. FFG is also packed in 1 and 5 lb. canisters. Burns strong and metal. The FFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard Rifle powder of the country.

Superior Mining and Blasting Powder.

GOVERNMENT CANNON & MUSKET POWDER; ALSO, SPECIAL GRADES FOR EXPORT OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents in every prominent city, or wholesale at our office.

Sportsmen's Goods.

BOSTON SHOOTING SUIT.

Manufactured only by

G. W. SIMMONS & SON, BOSTON, MASS.

THE BEST IN USE.

ONLY ONE QUALITY MADE AND THAT IS THE VERY BEST.

Each article—coat, trousers, vest and hat—have the name and manufacturer's address stamped upon it, and no suit is genuine without it bears this imprint.

The suit can be sent, securely packed, by mail to any part of the United States or Canada on receipt of \$1.25 above the price of the suit.

We make no discount except to the trade. We make but one quality, and that is the VERY BEST. The price of the suit complete is \$13.

The suit consists of coat, trousers, vest, and choice of either cap with havelock, or hat.

The material is of the best quality of duck, waterproofed by a patent process. The color is that known as "dead grass shade."

The seams and pocket corners are riveted, and nothing is neglected to make the whole suit complete in every way.

OUR PATENT DECOYS

have entirely superseded the old-fashioned umbersome, wooden decoys. The birds are hollow, and six of them occupy about the space of one wooden decoy. The Duck Decoys of all kinds are \$12 per dozen; geese, \$3 each; yellow leg, \$4.25 per dozen; black breast plover, \$3.75 per dozen; red breast plover, \$3.75 per dozen; golden plover, \$3.75 per dozen; turnstone, chicken plover, etc., \$3.75 per dozen; sandpipers, \$3.50 per dozen. We are now making standing geese for field shooting.

THE HUNTER'S TENT

is made of tan-colored duck; light, easily transported. Size, 7 ft. by 8 ft. Price, \$10 complete, made on the umbrella principle, folding into a neat roll 3 feet long.

In the judges' report at Philadelphia they were commended for excellence in every part. Very novel and practicable; adapted to all out-of-door purposes where lawn, beach, hunters and camp tents are used; quick folding; all sides strongly fortified; enables them to stand against wind and rain. Rev. F. B. Savage, of Albany, N. Y., who camps out in Florida in winter, and the Adirondacks in summer, writes this about the tents:

ALBANY, July 31, 1877.

Sirs—I have just returned from a three-weeks' camping expedition in the Adirondacks, and have had the three tents bought of you put to the severest tests of exposure both as to wind and storm, and I do most unhesitatingly say they are the most complete thing of the kind I ever used.

1st. They are easily put up or taken down.

2d. They are perfectly waterproof.

3d. They are a good height and all the room is available.

Our party asked for no better. They were admired by all who saw them, and one party insisted on buying one of ours that was to spare. Rev. Dr. Daryea, of Brooklyn, and the Rev. Dr. Irwin, of Troy, both endorse what I say about your tent. With kind regards, yours truly, F. B. SAVAGE.

Tan-Colored Leather Pliable Waterproof Suits.

Shooting Coats, Jackets, Breeches, Vests and Hats at following prices: Coats, \$22; Breeches \$16; Jackets, \$18; Vests, \$12. These form the most elegant shooting equipment known. They are indestructible.

A recent notice in the FOREST AND STREAM, from a correspondent, says:

Whenever a sportsman, or even one who does not claim the distinction, finds a really good and useful article, it is no more than fair that he should let others have the benefit of his knowledge. For this reason we would call attention to the Tan-colored Leather Shooting or Fishing Suits, made by G. W. SIMMONS & SON, of Boston, Mass., the manufacturer of the famous "Boston Shooting Suit."

I saw these goods advertised in your paper, and wrote to the parties for samples. I found the material as soft and pliable as a piece of kid. I tested it by soaking in water twelve hours, and found it as nearly waterproof as one could desire, and after drying was happily surprised to find it had not stiffened in the least. I have since then received a full suit—coat, vest and breeches—ordered by letter from measure taken by myself.

The goods are splendidly made, well lined with flannel; in fact I do not see how they can be improved.

My friends are unanimous in their verdict that G. W. Simmons & Son's leather goods cannot be excelled in quality or beaten in price.

For every kind of sportsmen's goods address

G. W. SIMMONS & SON, Oak Hall, Boston, Mass.

PRICE, BOXED, WITH DARTS, SLUGS, TARGETS, &c., \$10. FULL NICKEL PLATE \$12.

THE NEW IMPROVED AIR RIFLE. Especially Adapted for Target Practice. SPLENDID FOR SHOOTING SMALL GAME and touching up CATS OR DOGS. Just the thing for Taxidermists to collect specimens. There is no report or danger attending its use, or any auxiliaries required to operate it. It can be loaded with ease and rapidity. It is extremely simple, and has no delicate parts to get out of order or wear out. For sale by the Trade generally. Sent upon receipt of price or C. O. D. SEND FOR CIRCULAR. H. M. QUACKENBUSH, Patentee and Mfr., Herkimer, N. Y.

Hart's Sportsman's Favorite Metallic Shells. FOR BREECH-LOADING SHOT GUNS.

These Shells are easily loaded, and the caps easily extracted from inside. Head solid and much thicker than any Shell now made, giving a solid seat for cone or anvil, which prevents it from driving through or springing away, thereby causing misfires. The Cone is made of nickel, and fastened solid in its place. Neither rusts nor corrodes fast, like movable anvil made from steel. The Nickel Cone also prevents misfires when a cap has been left on shell for a few days, which is liable to occur either in steel or iron. These Shells are finely finished, and made any length ordered, from 2 1/4 to 3 3/4 inches. Shells and Loaders and Descriptive Price-Lists can be obtained from all the leading Sportsmen's Houses throughout the country. FROM CAPTAIN BOGARDUS, CHAMPION WING-SHOT OF AMERICA. Messrs. GEORGE E. HART & Co., Gentlemen: The fifty Shells I received from you to-day suit me better than any I have ever used. They are stronger and better in every respect, and I shall use them in all my shooting hereafter. Yours truly, A. H. BOGARDUS.

ESTABLISHED IN 1837.

Consult your interest by sending for our revised and reduced prices.

Excelsior

LATEST IMPROVEMENT. Double Treadle, including one door. Saws, thirty invaluable First Sawing Patterns and prepared Wood, to the value of \$2. A complete set of Lightening Saw, Power Drilling attachment, Winch, Oil Cup and Screw Driver. Saws, 1 1/2 inch thick. Price, complete, \$2.50 and delivered on board cars or at Express office, \$3. Saw only, without attachments, \$9.

SMALL STEAM ENGINES. With Copper Boiler, to drive Light Lathes, Scroll Saws, etc. Are all sizes from 1/2 up to 3 horse power; either plain castings, partly finished, or complete, ready for use.

The "Scientific American" of June 30, 1875, says of the above, in an extended Editorial, introducing our manufactures to the public: "It can turn wingwheels, wash machines, or ice cream freezers, run coffee mills, pump water through a house, actuate foot lathes, scroll saws or light boxing machinery, run knitting or sewing machines, turn a griststone or emery wheel, work ventilating or hand threshing machine cutters, meat or feed choppers, or sausage machines, drive small blowers for pneumatic dispatch tubes in a building, or for a blacksmith's forge, or compress air or work an air pump on a small scale in a laboratory. These are a few only of the purposes to which it can be applied."

Also Engines and Boilers capable of propelling boats from 18 to 23 feet long, 4 1/2 to 5 1/2 feet beam, with draft of water 18 inches and rudder post of oak, pine plank, copper fastened throughout, fitted seats all around the boat, lockers and coal bunkers, and have two coats of paint. These the safest and fastest, as they can be made to attain a speed of from 6 to 16 miles per hour. They are adapted to a great variety of uses, such as Excursion, Shooting, Fishing or Pic-Nic Parties, for travelers, voyagers, boatmen and tourists, and especially owing to their light draft of water for exploring expeditions and surveying parties. The Engine and Boiler can be easily detached from the boat, and is then available for Agricultural, Mechanical, Commercial or Domestic requirements, or for the use of Amateurs, when power is needed for running light machinery.

Price of 20 foot boat, complete, \$425.00
Price of Engine and Boiler, without boat, including driving pulley, 275.00

BUFFALO PONY PLANCER.

Nearly One Thousand in Use. Buffalo Pony Plancer. Will extricate itself and pay expense of running in 8 days. Price from \$50 and upwards, each.

LIGHT MACHINES FOR PONY OR HORSE POWER.

The great success of these machines is unparelleled, and it may be confidently assumed that no article has ever more clearly proved its superiority for the quantity and quality of its work than this. It is made in several sizes, and can be fitted up suitable for bullock, mule, steam or wind power, in addition to those above mentioned.

THE WONDERFUL

MASON'S CHART

PIANO

OR

ORGAN

PLAYING

LEARNT IN A DAY.

A few months since, this invention was advertised very extensively in all the leading papers of the United States, and since then, it is safe to say, there has never been such an overwhelming demand for an advertised article. Orders have poured in from every quarter of the globe where an American paper could reach; and editorial notices, flattering in the extreme, have appeared not only in American papers, but in the leading papers abroad; and we have received gratulating testimonials from the Highest Musical Authority in the World, of the great merit and usefulness of Mason's Chart. The call for agencies has been unparalleled from the time, have appeared not only in American papers, but in the leading papers abroad; and we have received gratulating testimonials from the Highest Musical Authority in the World, of the great merit and usefulness of Mason's Chart. The call for agencies has been unparalleled from the time, have appeared not only in American papers, but in the leading papers abroad; and we have received gratulating testimonials from the Highest Musical Authority in the World, of the great merit and usefulness of Mason's Chart. The call for agencies has been unparalleled from the time, have appeared not only in American papers, but in the leading papers abroad; and we have received gratulating testimonials from the Highest Musical Authority in the World, of the great merit and usefulness of Mason's Chart. Guns, Rifles, Etc.

THE CHOKE-BORE MATCH.

*W. W. GREENER begs to inform his numerous patrons in America that his gun has again come off victorious at the great match of Choke-Bore vs. Cylinder Bore, at the London Gun Club, on May 23, beating seventeen of the best shots in Great Britain who used guns by the best London makers, viz.: Four made by Grant, three by Purdy, three by Dougal, one by Lancaster, Boss and others.

[See London Field, May 26, Editorial Remarks.]

"Mr. Cholmondeley Pennell, the winner of Mr. Purdy's massive fifty guinea gun, weighing over 90 lbs., for the highest score, shot wonderfully well, killing all his birds at 30 yards with the first barrel. The gun he used was a full choke, by Greener, of Birmingham. The result of the trial served to show the superiority of the choke at the long range, Mr. C. Pennell cutting down his birds in a marvellous way with his heavy Greener."

W. W. GREENER,

St. Mary's Works, Birmingham, and
48 Haymarket, London.

Read "Choke-Bore Guns and How to Load," by Cassell, Petter & Galpin, New York.

HENRY C. SQUIRES,

No. 1 Cortlandt St., New York.

A

New Recoil Pad.

To prevent the RECOIL of a GUN, I have a **HEEL PAD**, made of VERY FLEXIBLE RUBBER, which is put over the Butt of Stock, on the principle of an overshoe. It does away with the heretofore expensive mode of altering the stock and applying an unsightly looking Heel Pad, spoiling the symmetry and looks of the whole Gun, and which, when adjusted, must remain. Whereas the **NEW RECOIL PAD** can be put on and taken off in a moment, so as to be used for heavy charges only.

It has been pronounced by the most prominent sportsmen to whom I have shown same and who had tried it, as the most complete article ever invented in this line. It is an indispensable accessory to a sportsman's outfit. Very respectfully,

Charles L. Ritzmann,

IMPORTER OF FINE GUNS, Etc.,

Feb 14 1t

Mortimer & Kirkwood,

GUNMAKERS,

24 Elm Street, Boston.

Feb 14 1y

ESTABLISHED 1845.

Sara J. McBride,

(Formerly of Mumford, N. Y.),

669 Broadway, N. Y.; Redditch, England,

Manufacturer and Importer of

Fishing Tackle.

FLIES selected for the different seasons and for any given stream or locality.

TAPERED CASTING LINES for trout and salmon. Also, the celebrated Salmon Lines without knots, Tapered and Reel Lines of horse hair and English waterproof braided silk.

REEL LINES of every style and quality.

RODS and REELS of the best manufacture.

HOOKS, Gut, Colored Mohair, Feathers of all kinds, Tying Silk, Tinsel and all material necessary for making flies, supplied to amateurs.

BAITS for trolling, artificial Minnows and spoons. The best BAIT of the pike for pickerel, perch, bass, sea trout and salmon.

Medal, with Special Diploma, Decreed at International Exhibition, 1876.

My motto is, **THE BEST GOODS AT THE LOWEST FIGURES.**

BOATS! BOATS! BOATS!—The lightest and most durable boat in the world. Weight, 25 lbs. and upward, built of white cedar. **H. M. SPRAGUE, Manufacturer, Parishesville, St. Lawrence County, N. Y.** Jan 17 8m

Three-Barrelled

BREECHLOADING

Guns.

Two-Shot
And One
Rifle.

A new feature in the Sporting Line. Forms a light and compact gun from eight to ten pounds, giving to sportsmen the very thing so often wanted in all kinds of shooting. We are also manufacturing a Double-Shot Gun, containing more good points than any other gun in the market.

PRICES—Three barrel, \$75 to \$250. Double barrel shot guns. Damascus barrel, \$50 to \$200. Twist barrel, \$35.

SEND FOR NEW CIRCULAR.

W. H. BAKER & CO., Armory, 20 Wallon Street, Syracuse, New York.

IRA A. PAINE'S

FEATHER FILLED GLASS BALL.

PATENTED OCTOBER 23, 1877.

The "Standard" Ball.

The Bohemian Glass Works would respectfully call the attention of all dealers in Glass Balls to the fact that the Paine Patent Filled Ball is the STANDARD AND ONLY BALL, MADE TO A SCALE, therefore we would respectfully caution the dealers against having in a stock of unsaleable articles for the Spring Trade, when you can purchase the Best Ball ever made at prices less than is charged for other inferior balls.

No other ball affords the PLEASURE of the Feather Filled Ball, and no other Ball is as beautifully made. It will break in every instance when hit by shot, and is sufficiently strong to prevent breakage either by transportation or falling on the grass.

Every ball is weighed and examined, then packed with the greatest care, in barrels of 300.

Send for price list. Special inducements to the trade.

HEADQUARTERS BOHEMIAN GLASS WORKS, 214 Pearl Street, N. Y.

Bogardus' Patent Rough Glass Balls and Glass Ball Traps.

These Traps are the only ones that give satisfaction, as they are simple of construction, easily set, and not liable to get out of order, and they throw the ball in a manner that more closely resembles the flight of a bird than any other trap in the market. The Patent Rough Glass Balls are made of uniform weight and thickness, and have a corrugated surface that strengthens the ball for shipment to any part of the country, prevents the planing of shot, and thereby insures the breaking of the ball when hit.

CAPTAIN BOGARDUS was the first to introduce the ROUGH BALL, and at a price far below a smooth ball at that time.

Balls and Trap can be ordered through all Gun Dealers.

Liberal discount to the Trade.

DIY IMPROVED TRAP (warranted), which will throw a ball in any direction from the shooter at the option of the puller, is now ready for the market. Price \$8.

HEADQUARTERS FOR BALLS, HAGGERTY BROS., 10 Platt St.

FOR TRAPS, GEO. E. HART & CO., Newark, N. J.

Second and enlarged edition of "Field, Cover and Trap Shooting," containing instructions for Glass Ball Shooting, will be ready Feb. 1. Price \$2, by mail, postage paid. Address, Capt. A. H. BOGARDUS, International Hall, N. Y.

THE UNITED STATES CARTRIDGE COMPANY, LOWELL, MASS.

Manufacturers of the

CENTRAL FIRE, SOLID HEAD,

BRASS SHELL, RE-LOADING CARTRIDGE,

Used by the Army and Navy of the United States and several Foreign Governments.

All kinds of RIM FIRE AMMUNITION.

Special attention paid to orders for TARGET PRACTICE CARTRIDGES.

Send for Illustrated Catalogue.

WALLACE & SONS, Agents, N. Y. City.

Sportsmen, Attention

Keep Your Feet Dry.

The only premium awarded by the Centennial Commission, Philadelphia, 1876, for Alligator Waterproof Boots and Shoes.

Goods sent to all parts of the U. S., C. O. D.

Catalogues containing full instructions for self-measurement sent free on application.

503 Broadway, New York.

NEW YORK SHOOTING COAT.

MADE OF WATERPROOF VELVETEEN, CORDUROY, FUSTIAN OR CANVAS

Having the above Coat thoroughly tested the past season by sportsmen in different parts of the country, I can confidently recommend it by numerous testimonials as to Comfort, Style and Convenience. The Coat in any material is cut in the English style, and made in the most thorough manner.

Coat, Vest, Trousers and Cap complete if desired.

I have also completed a Canvas Fishing Jacket, with a necessary pockets, etc.

Rules for Measurements and Samples and Price List sent upon application.

F. L. SHELDON, Rahway, N. J.

For Forest and Stream and Rod and Gun. Voyaging on the Upper Missouri.

By ERNEST INGERSOLL.

No V.—[Continued from page 2.]

BUFFALOES—MOUTH OF THE MUSSEL-SHELL—INDIAN FIGHTS—WOOD CUTTING AND LOADING AT NIGHT—CORRALLED IN THE LADIES' CABIN—FORT PECK AND WOLF POINT.

COW ISLAND passed, the strikingly grand portion of the Missouri River scenery is left behind, for the mountains are now completely traversed, and ahead are only the vast plains, which stretch in uninterrupted levelness to Lake Superior. Yet the country is by no means flat, and it is only now and then that one can look more than two or three miles away, even from his elevated perch in the pilot-house. But the valley of the river is wide, the tortuous channel winding about between low "hottoms" covered with acres of luxurious grass, or dotted with cottonwood groves, or strewn with sand and drift-wood, the record of past inundations; and the shores are no longer water-gullied ugly exposures of white clay rising steeply from the water, but pretty groups of green and rounded hills, or long slopes whose gentle undulations are defined by gleaming lines of golden light reflected from the polished stems of the sward of ripened grasses. Ahead the eye can trace for many miles the wood-lined trough of the river's course, and northward the tops of the Little Rockies are just visible, while a blue sermited line on the southwestern horizon indicates the Judith range; these are the last glimpses of the Rocky Mountains.

Early on Sunday morning we reach Dry Point, so named by Lewis and Clarke, and come in view of an immensely wide meadow known as Buffalo Flat. Nor was it long before an occupant made his appearance, and then another and another, until a dozen heavy old buffalo bulls were bounding along a narrow path by the river bank, easily keeping pace with the steamer, and undergoing a fusillade from a hundred rifles and revolvers. But I think none of the bulls struck where they were aimed, and the shaggy patriarchs were spared for future chase. This was only the beginning of buffaloes. All day long they were present to our vision, and within range of our Winchesters, sometimes singly, sometimes in hundreds, on both sides of the river. Unless in a large herd, they would travel always in single file, and on an even, regular gallop, as though all in the line were somehow connected and operated by a single piece of machinery. Where there were great grassy bottoms there was little indication of paths, but in other places trails, deeply worn, seemed always to be followed. Often these trails passed along the face of some exceedingly steep bluff, yet the huge animals would gallop over the narrow ledge, up-hill and down-hill, with a wonderful sure-footedness. Their agility is surprising. Sometimes in their fright at our cannonading and the puffing of the engines, they would step carelessly, causing the narrow shelf to break away, whereupon they would scramble up the acclivity and leap other breaks in the path in a manner even a dog might emulate. If, as occasionally happened, they did roll over into the river, it seemed to make little difference, for they are admirable swimmers. In one place I saw a large herd rush headlong over the perpendicular bank there fully fifteen feet high, and start to swim across the river, keeping only their eyes and noses above water, and making good speed. But generally they seek conveniently low points of access for crossing, and these places soon become worn down into broad roadways. But a disadvantage of this course is that the soft soil of the bank is soon trodden into a deep, tenacious mud, in which half a herd will get mired. We saw scores of the animals almost completely buried in the blue mud, their frantic attempts to leap out only serving to sink them deeper. This most usually occurs when they are landing, and after exhausting every effort in a vain attempt to leap out, sensible buffaloes will work their way slowly backwards into the water and swim to another landing-place. But often they are entirely unable to get out of the mud backward or forward, and die there of suffocation. Twice the steamer was obliged to stop to allow herds to swim across her bows, where they seemed to have a passion for going; and one old bull we completely keel-hauled from stem to stern. It was a sorry looking hison that rose in the wake of the paddle wheel! The buffaloes afforded us amusement all day, and fresh beef for the rest of the voyage, with small loss to them, I am happy to say, despite the large quantity of ammunition wasted (none of which was mine, mark you!); and if it had not all been written before a vast deal might be said concerning them. After this day's trip, however, we saw no more of them. A finer pasture ground than this part of the Missouri Valley, bounded by the Milk River on the north and the Mussel-shell on the south, could not be found. The traditions of their abundance here half a century ago read like fairy tales,

and even now it is the favorite hunting ground of all the Indians westward and southward for 500 miles.

Now I must take the reader back a little.

The most important tributary the Missouri receives from the south, except the Yellowstone, is the Mussel-shell. It takes its name, I am told, from the Mussel-shell Mountains, which in one aspect have a fancied resemblance to a clam-shell set up on edge. If anybody has a better explanation for the name let them treat this theory charitably. Taking in all its windings, this river is 250 miles or more long, for the last half of the distance flowing through much the same regions of bad-land and prairie as the Missouri below Fort Benton, and like it the water is yellow with clay in solution. The triangular plain between the rivers is a great resort for all large game, and as a central point between hostile tribes has been the arena of almost continued Indian warfare. The junction of the rivers occurs in a broad, beautiful lowland where groves of large cottonwoods are thickly interspersed with thickets of willows and the briery shrubs common to this region, with patches of green prairie here and there. It is no wonder that so charming a spot early attracted the attention of the fur-traders and afterwards of the government, both of whom have had posts here at intervals. Finally, in 1867, an attempt was made to establish a town here which was to be the terminus of a wagon road from the mining regions of Montana to the Missouri. The single log-cabin erected was called Kercheval City, but in a few months it was abandoned, and the river undermining it gave it a free burial. The next year a second town called Mussel-shell enjoyed a temporary prosperity, but the wagon road scheme again fell through, and the town was a second time given to the bears. But there was one man in Montana who had faith in the new enterprise, and the resolution to make a third effort to plant a white settlement in this favored spot, which should be the importing town for the Territory. This was Col. George Clendenning, formerly of the regular army. One of the settlers of the ill-fated town of Mussel-shell, he clung to the locality when the settlement was abandoned, and for four years bled it unaided in the interests of civilization, in his trading post of Fort Sheridan. His idea was, that, as steamboats could reach that point long before and long after the state of the river would permit them to ascend to Fort Benton, it would be advantageous to the Territory and profitable to the new town if all the Missouri River freight was discharged there, and transported overland to Helena and the other market towns. His earnest faith brought adherents, and "Carroll" was laid out. The whole town at present is about the size of a Pennsylvania farmer's collection of barns, that is as to the area it covers; but no one building is more pretentious than its log-built fellows. For a while Carroll flourished, and a line of stages, even, ran between there and Helena. But it was finally decided that the cost of constructing a really good road for freighting over the mountains would be much greater than the improvement of the river above Cow Island. Thus Carroll has followed its predecessors to decay, while Fort Benton is rapidly growing in prosperity, being the natural channel of commerce. Col. Clendenning still lives there, keeping an Indian trading post and living an adventurous life.

It was at this point, the scene of so many fights, that an incident occurred which you are sure to hear of all through the West. In 1869 a considerable colony of traders had gathered and had built a stockade fort. One day a company of Sioux, angry at something, attacked the fort, killed some white men and retreated, challenging pursuit. A party under the leadership of Johnson, instantly followed and fought the Indians on the open prairie, killing their chief. Then to terrify the Indians (and to feed his own mad thirst for revenge as well, I suspect), Johnson tore out the chief's quivering liver and ate it in the presence of both parties. He was a "terror" to friend or foe ever after.

Below the mouth of the Mussel-shell the country is even flatter than before, and the shores are lined with groves of aged cottonwood trees, sometimes with underbrush underneath and sometimes as clear of anything but grass as are the glades of Central Park. One of these groves was reported to be the home of millions of hornets and was called "Hornet's Nest Bend" accordingly, but I saw none. Several times black-tailed deer—two or three does and a buck in all the pride of new antlers—were surprised feeding on the shore as we swept quietly round a curve, and would stand gazing at us in stupid surprise till the crack of wanton and ever-ready rifles broke the spell of their wonder, and bade them be off. I am happy to say that none were even wounded, so bad marksmen were our passengers. Looking southward from this part of the river you see a land-mark known as Round Butte, which is useful to steer by, but not much of a hill, and just as it is beginning to fade out of sight in the twilight we stop for the night where a perfect forest of trees cover the hottoms to the very edge of the high bank.

Standing on the forward part of the hurricane-deck, I watch the steamer slow her speed, see the inky deck hands run a gang-plank half its length over the bow and stand on its hither end, while a slender young darkey, rope in hand, runs out to the trembling extremity. Now he is near enough, and, springing ashore, he clutches the tufts of grass, digs his fingers into the soil, and is lucky enough to scale the almost perpendicular wall before its crumbling drops him back into the water. A cable is drawn ashore and attached, the deck hands swarm up the bank, and with spades cut an approach

to the deck down through the edge. Then, firmly fixing a bridge of planks, they are ready to begin their evening's work of loading wood.

Outside the circle of the bustling little throng, nothing could be more peaceful than this Sabbath evening scene on the far frontier, where not a sign of human occupancy distracted the eye from the purity and complete beauty of nature. The sun behind me sheds soft, level rays straight down the stream, illuminating the aisles of the vividly green woods on either shore, so that I can see far between the twisted trunks. Between these emerald walls lies the blue—intensely blue—winpling river, interrupted by long lines of yellow sand, like bars of gold on a cerulean field; while the robin's egg sky overhead is dashed with streaks of cloud as though designed in counterpart. And beyond the azure river and verdant boundary of bushes and spreading breadth of forest, rise the hills, aglow with a light that makes them glitter like gilded domes. To my right stretch miles and miles of russet and yellow plain, a ruined wigwag in the foreground; to my left, a picturesque desolation of white sand and piled up flood-debris; behind, a blaze of sunset light where the curtains of Heaven have been drawn aside.

Meanwhile the passengers have scattered through the groves, cutting canes, picking such berries as are to be found (mainly a very bitter baw), and watching the deck-hands "wood-up." It takes twenty-five cords of wood a day to run these boats down stream; up stream, when they run all night, still more. This is cut by men who live alone, or two or three together, at convenient points along the river long enough to cut large piles of wood. In the upper portion, where wood is scarce, this often has to be chopped at long distances and hauled to the bank on sleds in the winter; but lower down it is piled up just where it is cut. Considering how many boats pass up and down in the course of a season, these solitary wood-cutters must reap a good reward for their labors. Nor do they seem to mind the solitude. An annual trip to Bismarck in order to squander all their earnings in a few days of debauchery; and an occasional visit to some trading post on the river, with the brief appearance of the casual steambot, satisfies their longing for society.

The wood is taken aboard on the darkies' heads under the lashing tongue of an Irish brute of a mate, whose profanity is simply continuous and coarse, without an atom of the originality and humor in it that distinguishes the swearing of the mountain men. It serves to keep the negroes briskly at work though, and even forces them to curse each other in a fashion always amusing.

"Look ahead!" I heard one say, "you get up outen dat lazy trot er I'll light a fire under yeah 't'll start yeah to eternity!"

This work done they go down on the lower deck, get a soap-box for a table, a fruit-can for a dice-box, and play chuck-and-luck by the light of a lantern as long as they can get any one to play with them. Hundreds of dollars sometimes shift hands at these nocturnal games, while disguised faro or draw poker is demanding equal attention in the cabin.

It was at this stopping place that I was called upon to undergo a very trying ordeal. It had got to be pretty late, and nearly everybody had turned in. I had bidden "good night" to the last trio of ladies some time before, but, attracted by the beauty of the night, still sat outside my stateroom and smoked a meditative pipe. Suddenly I heard my name uttered rather hesitatingly in a feminine voice. I turned, and a familiar face peered forth from one of the stateroom doors, with a quizzical look in the blue eyes.

"The ladies wish to see you in their cabin." Then my fair informant disappeared, shutting the door.

"The devil!" thought I. "Do you expect me to open that door and invade that sacred shelter? Not I," and I went back to my pipe.

In about ten minutes, however, the same messenger reappeared to know why I had not come, since I was urgently in request. This time she did not shut the door, so I followed her into the little cabin.

All the stateroom doors were open, and a pretty disheveled head was visible here and there. Standing by the doors, loling in the easy chairs, stretched upon lounges, making nice undulating heaps on mattresses in the corners (for berth accommodations were limited), were the occupants of this *sanctum sanctorum* of a steambot's bouse.

I halted; my native modesty was not to be trifled with, and I was about to flee as becomes an unprotected male under such circumstances; but by accident the door behind me had been shut. So I stood still, resolved to die sooner than yield, and gradually became less nervous.

Meanwhile a marvellous whispering was going on, and, finally, the lady who had been sent to call me was made to act as spokeswoman.

"Mr. Ingersoll," she began, "the ladies wanted to ask you—(Oh, Lord! what next!) whether you thought they would better go to bed to-night."

"Go to bed! why, you are already a-bed, aren't you?"

There was a slamming of doors and tittering from the blankets. Evidently I had made an unlucky remark in my astonishment.

"Yes—no—hut—we're afraid we'll be murdered by Indians."

Ah, that was it, was it? Picture my relief! Then they all found their tongues; told me how the captain had said

For Forest and Stream and Rod and Gun.

A SQUIRREL STEW IN TENNESSEE.

this and a boy had seen that, and their imaginations had conjured up a thousand other things, so that altogether they had frightened themselves nearly to death. Now, I knew that there really was danger that we might be fired into by Indians before morning, and for the next forty-eight hours; but would you have me say so? Not a bit of it. I assured them of our complete safety; wasn't an Indian within 5,000 miles; wouldn't dare shoot if there was; no end of valiant men aboard ready to lay down their lives; careful watch kept, etc. The staterooms had all opened again, and now I had an audience not often vouchsafed a man away from home. It was becoming jolly, and I was administering comfort with great unctiousness, when a baby tumbled out of a berth, and there was a diversion of attention which brought so strongly into view the peculiarities of the situation that my auditors all vanished like ghosts at sunrise, and I prudently retreated to my neglected pipe. It is very curious that next morning every lady I consulted was "sound asleep" at the time, "wasn't afraid," and had no knowledge whatever of the scene I had attended! Very curious, wasn't it?

Soon after breakfast the next morning (Monday) we reached Fort Peck, our first sight of it showing some Indian bodies on stagings ornamenting one bluff, and a perpendicular soldier ornamenting another. When the fort itself appeared there was little to be seen but a tall stockade, with bastions at the corners and some roofs. The gates were open, however, and a group of Indians and scarcely less civilized traders were standing on the bank. This is an agency for the Yanktonais—a band of Sioux—and a part of the Assiniboines. It has long been occupied as a trading post by one organization or another, but was being abandoned when I was there. The river had cut into the bank some hundreds of yards, and is still undermining the soil, so that in a few years no ground will be left to build upon. The houses arranged around the inside of the quadrangle are built of adobe, and are dirty things to live in, but that is of small consequence when you can sleep out of doors quite as well as in the house, and have no careful wife to be worried about dust. The whole centre of the fort was occupied by an enormous pile of what looked like bales of hides which had been eaten through and through by worms, or ruined by long exposure. I heard our Pilgrim groaning to a friend over the waste, and rather enjoyed his dismay when he found that this was "pemmican;" not genuine pemmican, but strips of dried buffalo and elk meat, which is brought in by the Indians and kept to be resold to them in the starvation days of midwinter, or used by the hunters and soldiers who have to make long winter journeys, and can carry food in no other form so condensed. It looks anything but eatable corded up here in the dust, but can be prepared and cooked so as to be not only highly nutritious, but very palatable. As for the Pilgrim, when told what it was, he forgot his mortification in dilating upon the value and utility of this northwestern comestible.

The Milk River comes in here from the north, and is the most considerable of the northern tributaries of the Missouri. I could trace its course for many miles by the groves of cottonwood along its southern bank, and the steep bluffs upon the northern. The Milk River flows from its source near Chief Mountain on the boundary line nearly north of Fort Benton in an almost due East direction, and enters the Missouri at such an acute angle that the meadows between the two rivers, though less pleasant, are even more extensive than those at the mouth of the Mussel-shell. The valleys of the Missouri and the Milk are separated from each other by a slight watershed, the only considerable heights being the Bear's Paw and the Little Rockies, and north of the Milk the same plains country continues, forming an admirable game range and a hunting ground for all the Blackfoot and Hidatsa Indians, although nominally in the possession of the Gros Ventres alone. The soil is said to be highly cultivable, and large settlements are anticipated.

At Fort Peck lived for many years—and died in 1873—one of the most estimable men that ever upheld the reputation of Montana—James Stuart. He was a horn leader of men, and conducted with the greatest skill many of the most difficult explorations and prospecting trips which the early settlers and gold seekers of Montana engaged in. But he was more than a sagacious and intrepid mountaineer and hunter. A man of good education and scientific tastes, he embraced every chance to add to his information and improve his knowledge of medicine and surgery. Well acquainted with the Indians of the region, he was careful to observe and record their customs, vocabularies, tribal relations, and everything concerning them, and accumulated a great amount of the most valuable information. He was beloved and honored throughout the Territory, not only by the whites but by Indians. Living a most adventurous life, in constant peril, he survived all danger to succumb at last to acute disease. He had expressed a desire to be buried in Deer Lodge Valley, Montana, and two of his brothers—to one of whom, Mr. Granville Stuart, now cashier of the First National Bank in Helena, I am greatly indebted—went to bring him home. An incident of this trip, which I find in the "Contributions to the Historical Society of Montana" will well illustrate plains life. The body was placed in a metallic case, and on Oct. 24, 1873, the funeral cortege, consisting of the Stuart brothers and nine companions, started from Fort Peck on the weary journey of 500 miles. It occupied twelve days, seven of them being through the Sioux country. At one point in the journey sixty Sioux warriors suddenly appeared on the edge of a ravine close to them, and recognizing Agent Simmons, approached and inquired the meaning of the procession. On learning that the coffin contained the body of Po-te-ha-ka (the Long Beard), each Indian dropped his bead, clasped his hands and pressed them upon his mouth, indicating in their expressive sign language that a friend was dead.

Fort Peck fortunately escaped the Indian raid it anticipated, thanks to the presence of Capt. Murdock's companies (D and I), of the 6th infantry, who were occupying an extremely pretty little canvas town in a cottonwood grove near by, guarding stores for General Miles, who was looking after Sitting Bull, the Sioux, with one eye, and Joseph, the Nez Perce, with the other; but before now it is abandoned.

Below Milk River the water becomes more and more dense with mud, the sand bars of increasing frequency and the snags innumerable. The hills on either side dwindle so that you can see far away—or could, were it not for the almost continuous forest, in which a few varieties of hardwood trees begin to mingle with the enormous cottonwoods. Everything is utterly wild and untouched, nothing, save here and there a chopper's ruined hut, or a pile of wood ready for our use, or an Indian's body, mounded on a staking, out of reach of animals, with tattered garments flapping in the breeze, hints that men have ever before looked upon this wilderness. The boat goes steadily on, and at sunset we reach Wolf Point and stop for Monday night, 750 miles from the source, 2,150 miles from the outlet of the noble stream that bears us along.

IN the month of August, when the cock quail sits on the top rail of the fence, piping his melodious Bob White among the corn-covered uplands, and his mate is hidden away amid the weed-covered fence corners, busy with the cares of incubation, and the nimble gray squirrel makes many a furtive excursion into the cornfields; then it is that the burdened Granger of the Southern States, with his crops laid by and his cotton not yet beginning to open, turns his thoughts to the enjoyment of a social gathering, with a squirrel stew as its principal feature. Accordingly, a day is decided upon, the neighbors notified, and all make ready to enjoy themselves. The place of meeting is always some shady grove surrounding a babbling spring or artesian well, and by nine or ten o'clock the company have arrived, including the hunters, who, detailed the day before, have been out since sunrise with shot-gun and small-bore, and now appear well laden with their feathery-tailed game.

The large iron pot, filled with pure water from the well, is placed on the fire, and into it are put the squirrels, together with tomatoes and okra, while slices of bacon, a few onions, salt and red pepper are added for seasoning, and all is left under the supervision of a sable attendant, who occasionally stirs the slow boiling mixture with a long cedar paddle. Near by the carcasses of a lamb or kid and a shoat or two are barbecuing over a shallow pit, while some white-headed Uncle Tom or "Dan'l" is in attendance and hastes them from time to time with a mixture of butter, vinegar and red pepper. Near by the company are assembled, some engaged in pistol or rifle practice; others, younger, or, perhaps, more energetic, are heating themselves and laying up sore joints for the morrow by jumping, running races or pitching horse-shoes. Others still may be seen enjoying a quiet game of euchre or set-back seven-up; while others, more moral or even more lazy than these, recline under the shade and talk of crops, guns, dogs and horses—while all keep an eye upon the fires, where the cooking goes steadily on under the direction of some local authority on matters of gastronomy.

After a while the head cook calls for volunteers to carve and scrape corn. The corn is reserved until the last, and a short time before the stew is done must be scraped from the cob and added to thicken the stew, which, in a short time afterward, is ready to be eaten. The test by which to determine whether the stew is done is to see if all the ingredients have become totally irrecoznizable, for not until then is the stew said to be done. In the meantime the barbecue has been taken up, carved and placed in large wooden trays, from which it is distributed to the waiting guests, who stand around rude tables hastily constructed of rough boards. The stew is served in bowls, plates, or pans, as may be most convenient, and as it comes steaming from the large pot—shades of Soyce and Oude! what a savory mess it is! Sliced tomatoes, cucumbers and delicate silver-skinned onions furnish the side dishes; loaves of white bread and pans of corn bread flank the plates, and the whole is washed down with copious draughts of ale and bitter beer. Delicious melons, with thin rind and bright red meat, together with juicy peaches and purple figs, furnish the dessert, and the whole makes a feast that no one who has once enjoyed can ever forget.

One must be careful not to confound these social gatherings with the political barbecue, where rival politicians meet to praise themselves and vilify others, and where a noisy, though generally good-natured crowd, push and grab over tables covered with chunks of underdone or half-burnt sheep meat, pork or beef. It is to be regretted that the squirrel stew is growing to be a thing of the past—a recollection of other days. Alas! the irrepressible freedman, with his rusty musket or pot-metal shotgun has well nigh extirpated the entire race of squirrels.

The roasting ears grow hard along the wood-lot fences unmolested, and the pecan and hickory nut fall only to gladden the heart of the grunting hog, while the frisky little quadruped, whose graceful form and happy chatter used to enliven our Southern forests, and whose savory carcass furnished forth many an appetizing dish, has become, in most places, as rare as a turkey or a deer.

Many experiments have been made in adding other vegetables to the stew, but it is generally believed that okra, tomatoes and corn are all that are needed, while others, though they may detract from its merits, can certainly add nothing to them. I regret that I cannot give an exact receipt by which others may concoct this delicious dish, but my labors have been devoted to the decomposition rather than the composition of stews, and my knowledge embraces only a qualitative not a quantitative analysis of their constituents. Perhaps this may elicit a good recipe by which denizens of localities where squirrels are yet to be found may concoct these appetizing messes, much to the delight of their palates. It has been my good fortune to assist in demolishing many of the chef d'œuvres of cookery, but I have never eaten anything with greater relish than a plate of squirrel stew cooked and eaten *al fresco* in the society of the social and warm-hearted Southern planters.

WILL.

Fish Culture.

THE FIRST SOLES FOR AMERICAN WATERS.

THE preliminary trial of transporting soles across the Atlantic having just been made at the most unfavorable season of the year, and on so small a scale owing to the difficulty of obtaining specimens, that I had decided to say nothing at present about it, contenting myself with a full report of all connected with it to Prof. Baird, under whose orders I acted; but after hearing all sorts of uncertain rumors concerning the expedition, and seeing a notice in a newspaper that the "experiment was a failure," I have thought it best to give the facts. Some time ago Mr. J. G. Kidder, of Boston, suggested to the Commissioner on Fisheries that it would be desirable to introduce this favorite English fish into the waters of Massachusetts Bay, and offered to secure the necessary accommodation for the person in charge, and the tanks on some steamer of the Cunard Line. My recent trip to Germany was

considered as a desirable time to set if it would be possible to transport soles, if not the very best season for procuring them.

We had no knowledge of their tenacity of life or ability to live long in cans, all of which we possess now, therefore the experiment was not, in this sense, a failure. An honored tutor of mine, long since dead, used to say: "No properly conducted experiment is a failure. We may not succeed in all that we undertake, but an experiment undertaken to decide a point at issue is a success no matter which way the results point."

I proved that soles could be brought across even in mid-winter, and they seem to be easily killed by cold, according to the reports of the fishermen, who say that they die in the cans or fish-cars at night if there is a frost. Of this I am a trifle skeptical, but they do leave the shores for deeper water in cold weather, hence my failure to get specimens in December from the shrimp netters who fish near the shore. The men who catch soles for market go far out at this time of year and stay from three to four days, using heavy trawls that take an hour to lift and get out again, so they leave them down for a whole tide, and when raised the fish are dead in the net, or so bruised as to be valueless for transporting.

I had despaired of getting fish to make the attempt with, and had decided to return without them, when Mr. Long, Curator of the Southport Aquarium, taking pity on my condition, gave me the specimens from his show tanks which he will not be able to replace before April or May. On the 3d of January I left Liverpool in the Cunard steamer "Siberia" with twenty-four soles, and lost three within a day or two from bruises.

I watched them until midnight each day, aerating the water every three hours, and turned in, trusting to the sailors to give a change of water at 4 A. M. when washing decks, cautioning them against cold water. They went well until the 11th (eight days), when all but two were killed by the change of water in the morning between the hours of four, when the decks were washed, and seven, when I arose. The remaining two were safely brought over, and on the morning of the 16th deposited on "Stelwagen Bank," off Nahant, in eighteen fathoms of water.

The knowledge gained of the habits and seasons, as well as the tenacity of life in limited supplies of water, all of which have been faithfully recorded and sent to Professor Baird, together with the fact mentioned that two specimens that were in a separate can were brought safely in the coldest time of year, will be of great value in future transportations of this fish on a larger scale. Should that pair of fish escape the all-devouring jaws of the cod, it can no longer be said that Americans are a soulless race.

FRED MATHER.

Abstract of the Second Biennial Report of the State Fish Commission of Iowa, 1875-'76, and 1876-'77.

THE report of the Iowa Commissioner, Mr. B. F. Shaw, is

a report of progress in nearly every department of the labor of the commission for the past two years. The document is one more indorsement of the continued and nearly uniform success of piscicultural undertakings in every portion of the United States. As the work of the past has been largely that of importing migrating fish, the attention of the commission during the past season has been devoted to native and non-migratory fish. The work promising the best results is that of taking young fish from the sloughs of the Mississippi and planting them in good waters throughout the State.

During the months of May and June all varieties of bass push into these sloughs to deposit their spawn. As the water begins to fall the parent fish retire to deeper water, leaving their young in the shoal water, where they are free from the rapacity of larger fish. Communication between the sloughs and the river is cut off, and the fish are left to perish in what are at first small ponds, then mud holes, and finally dry land.

Having received an appropriation for the purpose, the commission in 1876 equipped a small steamer for fishing in the Mississippi, and an aquarium car for the transportation and distribution of the young fish. The arrangement of the car was very simple, but it answered the purpose admirably. Two large tanks, holding each about twelve barrels, were placed in one end of the car as high as they could be raised, and firmly fixed in position. A tin conductor, extending the full length of the car, was connected with the tanks by rubber hose. Along each side of this conductor was inserted wooden faucets, eighteen inches apart. Beneath these the cans containing the young fish were placed in such a manner that the water from the faucets ran into it in a constant stream at one end, and ran out of the other end through an opening covered with wire cloth. These cans were four feet long, eighteen inches wide, and twelve inches high. The water supply was taken into the casks directly from the railroad water-tanks, through an opening in the top of the car. To guard against accident from lack of water, it was so arranged that after the water had been once used it ran into a reservoir beneath the car, and by use of a pump and hose could be thrown back into the casks for use again as many times as necessary. Air-pumps were also provided, but they found no necessity for their use.

The commission received very material assistance from the railroad corporations, to whose liberality the success of the work is largely due. The total number thus distributed was 319,000, the distribution being made as general and equitable as possible. The plants comprised black, yellow and striped bass, croppies, sunfish, perch, drum, wall-eyed pike, river herring, skip-jacks and minnows.

The commission would urge the enactment of a stringent law protecting the fish of the Mississippi and Missouri rivers during the spawning season. The seining as now carried on is surely and rapidly depleting these streams. Of Penobscot salmon 90,000 eggs were received, successfully hatched and distributed in the northwestern part of the State. Only about 25,000 California salmon have been distributed, a portion of these going to private parties. Those previously planted are reported as doing well. There are in the batching-house 800,000 lake-trout eggs, the fry of which are to be placed in the lakes of the State. It is hoped to obtain from the U. S. Commissioner a large supply of land-locked salmon; ten thousand were duly hatched and disposed of.

There are few good trout streams in Iowa. It is, however, the intention of the commission to have these well stocked, toward which 80,000 fry were deposited in suitable streams in Jan., 1877. The smaller rivers and creeks are thought to be well adapted to the grayling, and it is proposed to secure a

Natural History.

BIRDS WITH TEETH.

WE live in an age of surprises; some of them agreeable, but too many saddening. With what feelings of regret do we not contemplate the abolition of time-honored customs, the breaking down of old institutions and the exposure of fables of legends in whose truth we have religiously trusted from earliest childhood. Truly this is a world of change and there is nothing in it which is stable. Those of us who in our secret souls still cling to the beliefs of the past may well cry out, *O tempora, O mores*, whither are you leading us? Many a supposed old fable is now known to be a truth, and what we have always regarded as truths are often, in these latter days, proved to be arrant falsehoods. The kraken, long classed among the myths of the dark ages, has been proved to exist, and even the much ridiculed sea serpent is believed in by many intelligent people. An eminent ornithologist has asserted in a late work that pigeon's milk is no longer a myth, but a fact; and still more recently our trust in that ancient simile, "as scarce as hen's teeth," has been overthrown, and that venerable saying is added to the already long list of shattered beliefs which we must banish from our minds forever.

Figure 1.

SKELETON OF HESPERORNIS REGALIS.—Marsh.

Of all the great variety of fossil animal remains found by the geologist bird bones are the rarest. This is due in part to their small size as compared with the bones of beasts and reptiles, but still more to their extremely delicate and fragile character. A combination of lightness and strength is obviously essential to the conditions of a bird's life, and the bones which make up the skeleton are unusually strong, containing in their composition a much greater proportion of the phosphates of lime than is found in the bones of the mammalia. This, while it adds to their strength, of course increases their weight and to compensate for this increase, most of the bones of the bird-skeleton are hollow, either containing large air cavities, or being partially filled with a cancellated network of bone which, while adding little to the weight, increases very considerably their strength, permitting, however, a free circulation of air. These air cavities not only lessen the weight of the bird, but, being filled with air much warmer than the outer atmosphere, the specific gravity of the bird, and consequently the labor of flying, is considerably diminished.

It is apparent that bones constructed on such principles as the foregoing, while they are of the greatest possible use to their possessor, are badly fitted for withstanding the rough usage to which they are likely to be submitted after death and during the progress of geological changes. This pneumaticity of the bird's bones is therefore very much against their preservation, and when subjected to the great pressure of superincumbent masses of earth they are likely to be crushed and the fragments, when the beds which contain them are denuded, washed away, scattered and lost. Only two specimens of the Jurassic bird, *Archaeopteryx*, have been found, both imbedded in the lithographic slate of Solenhofen, a matrix which is exceptionally favorable to their preservation, and but two cretaceous birds are known from England, both in a very imperfect and fragmentary condition. In this country, however, in the soft yellow limestone which underlies so large a portion of the plains of Kansas, and in the green-sand deposits of New Jersey, have been found more cretaceous birds than are known from all the other deposits of this age put together.

In 1872 Prof. Marsh described several species from these localities, and since that time a number of others have been found, mainly in Kansas, so that at present the bony framework of two widely different types is quite fully known. The most extraordinary fact about these ancient forms is that, so far as the skull is known in the different species, they all pos-

sess teeth, thus clearly indicating an approach to the reptiles from which it has long been believed that the birds originally sprang.

Figure 2.

ICHTHYORNIS DISPAR.—Marsh.

Twice natural size. 1 & 2. Top and side view of left lower jaw; 3 & 4. Front and side views of a cervical vertebra.

One of these remarkable birds, *Ichthyornis*, the one in which the presence of teeth was first detected, agrees in many points with some of our modern forms, resembling more closely a tern, or gull, than any other existing bird. It was well fitted for flight, having a strong keel on the sternum and very powerful wings, while the legs and feet were comparatively small and weak. Still, the presence of teeth in distinct sockets, the fact that the vertebrae are somewhat *biconcave*, the latter a character only of the fishes and lower reptiles, together with other peculiarities less striking to the non-scientific mind, clearly entitles it to the position of the type of a new sub-class of birds which Prof. Marsh has happily termed *Odontornithes*, or birds with teeth. This form too is so different from another toothed bird discovered by the same paleontologist in substantially the same geological horizon that it has been placed in an order by itself, to which has been given the name *Odontoptormae* in allusion to the manner of implantation of its teeth.

The other peculiar group to which we have referred has for its type the genus *Hesperornis*, and differs almost as widely from *Ichthyornis* as from modern birds. Like its contemporary it had teeth, but these teeth were not in sockets, but were implanted in a long groove in both the upper and lower jaws; in the latter, however, the teeth did not extend to the extremity of the bill, but were confined wholly to the middle and posterior portion. *Hesperornis* was a water bird, and in the general configuration of its body approaches quite nearly the loons of to-day. The resemblance, however, is merely superficial and adaptive, being a consequence of its aquatic habits. In total length, measured from the extremity of the bill to the tips of the toes, it was about six feet, and was thus larger than any living bird except the ostrich and its allies. Its legs were enormously stout and powerful, as it was necessary that they should be, since it lacked any other means for locomotion. It was even worse off than the existing penguins, for they can use their rudimentary wings in swimming, while *Hesperornis* had no visible wings. That this was the case was first inferred from the fact that the sternum, or breast bone, is destitute of a keel, being flatter than even that of the ostrich. More recently, the discovery of the humerus, or upper arm bone, has confirmed this supposition, and it appears that this was the only bone of the wing present, and that even this was concealed beneath the skin. Thus *Hesperornis* was, so far as wings are concerned, even worse off than the Apteryx, in which the bones of the wing, although very small, are all present. Many of the characters of the skull on this genus seem to ally it to the *Rallies* (ostrich, cassowary, apteryx, etc.), and, in his recently published Nashville address, Prof. Marsh has remarked that it "was essentially a carnivorous swimming ostrich." Too many remarkable features are collected here, however, to admit of its being placed with any known group, and hence it becomes the type of a second order of *Odontornithes* under the name *Odontolea* (teeth in grooves).

The two types above described include, so far as known, all the toothed birds hitherto discovered. It is true that the *Archaeopteryx* has been thought by some to have possessed teeth, but a careful examination of the specimen by the best

supply of these fish in the spring. Having received from the Holyoke (Mass.) Hatchery 150,000 of the Connecticut River shad, the commission deposited them in the Des Moines, thus making a total of 350,000 which have been placed in that stream. Iowa received, as her share of the whitefish hatched at Northville, Mich., 125,000 young fish, which were safely transplanted into Clear Lake. Although arrangements had been made for a supply of 300,000 eels, owing to the very unfavorable season only 100,000 were received. These were deposited in the main streams crossed by the Northwestern Railroad.

The increased interest in fish culture, and the establishment of private fish ponds is noted with satisfaction, and the conviction expressed that in a few years this pursuit will become one of the leading producing interests of the State. In conclusion, the work of the past two years aggregates a distribution of 5,315,700 fish, and the success attending the work, the improvements in facilities, the marked benefit already resulting from the work of the past and the promise of the future, combine to encourage continued effort and warrant the belief that appropriations of time and money will be rewarded with liberal returns.

EGGS OF THE WHITE FISH AND SALMON FOR GERMANY AND FRANCE.—On the 26th of January, by direction of the United States Commissioner of Fish and Fisheries, Mr. F. Mather received some 50,000 eggs of the *Coregonus albus* (white fish) from Mr. F. Clark, of Northville, Mich. These eggs were forwarded in the steamer Mosel to the *Deutsche Fischer-Verein*. On the 16th of February, some 25,000 eggs of the land-locked salmon, coming from M. C. G. Atkins, of Bucksport, Me., were shipped by the Donau to the same association. In a few days a consignment of the eggs of the land-locked salmon will be sent by Mr. Mather to the *Societe d'Acclimatation* in Paris.

Extracts from Letters Concerning the Condition of the California Salmon Eggs on Arrival at their Destinations.

NEW HOPS, Pennsylvania, October 9, 1876.

LIVINGSTON STONE, Esq.:

Dear Sir—I received the seventy-five thousand (75,000) California salmon eggs on Thursday last. They were in splendid order, there being only eighteen hundred (1,800) dead eggs in the lot, and I have only lost since one hundred and forty-two (142) eggs.

Truly yours,

J. B. THOMPSON.

ST. PAUL, Minnesota, October 9, 1876.

LIVINGSTON STONE, Esq.:

Dear Sir—The salmon eggs assigned to our State came safely on the 5th inst. and were in fine condition, for which accept our thanks.

Very respectfully,

R. O. SWEENEY.

BELLEVILLE, Illinois, October 13, 1876.

LIVINGSTON STONE, Esq.:

Dear Sir—The Belleville Fishing Club received one hundred thousand (100,000) California salmon eggs on the 6th inst. The eggs were well packed and in excellent order.

Most respectfully yours,

LOUIS C. STARKER.

WESTPORT, Fairfield Co., Conn., October 16, 1876.

L. STONE, Esq.:

Dear Sir—I am happy to inform you that our consignment of California salmon eggs was received in good condition, less than two per cent. being dead. Yours truly,

E. M. LEES.

MADISON, Wisconsin, December 11, 1876.

LIVINGSTON STONE, Esq.:

The California salmon eggs are now hatched. A better lot of eggs were never taken from fish. You and your assistants are entitled to great credit for the skill and care with which they were packed.

Yours truly,

W. WELCH.

REEDSBURG, Oct. 9, 1876.

LIVINGSTON STONE:

Dear Sir—The eggs arrived this morning in good order, only four hundred and fifty (450) poor eggs among the twenty thousand (20,000). I send thanks for the careful packing. Yours truly,

C. F. REED.

BALTIMORE, October 13, 1877.

L. STONE, Esq.:

Dear Sir—The two crates of eggs reached me some three days since, and were in very good condition.

Very truly yours,

T. B. FERGUSON, Commissioner.

Redding, California.

TOLEDO, Ohio, Oct. 13, 1877.

LIVINGSTON STONE, Esq.:

My Dear Sir—The consignment of two hundred and fifty thousand (250,000) California salmon eggs reached me on Tuesday last, 9th inst., in good condition, not over one in five hundred being spoiled. They were at once placed in the hatchery here, where they are doing well.

Very truly,

EMERY D. POTTER.

CHICAGO, Oct. 15, 1877.

LIVINGSTON STONE, Esq.:

Dear Sir—The salmon eggs arrived here about ten days ago, in most excellent order. Yours truly,

N. K. FAIRBANK.

VIRGINIA MILITARY INSTITUTE, Oct. 21, 1877.

LIVINGSTON STONE:

Dear Sir—The eggs came to hand in a good condition, between three and four per cent. showing dead after being in water twenty-four hours. Some of the trays are now hatching, and with no accidents, hope to have a very successful season. Very truly,

M. McDONALD.

ELGIN, Illinois, Dec. 17, 1877.

LIVINGSTON STONE, Esq.:

My Dear Sir—The California salmon eggs came in very nice shape, and hatched with but small loss. Yours,

W. A. PRATT.

[Extract from the *Lyttelton Times*, Christchurch, New Zealand, November 14, 1877.]

FISH CULTURE IN OPAWA.

The Wellington consignment of American salmon ova arrived on Saturday last by the "Rotura." The splendid condition in which they arrived reflects great credit on those in America who had charge of the collecting and packing, which, in general respects, is an improvement on the English method.

—Brookhaven, L. I., has appropriated \$300 from the bay revenues for Chester River oyster culture in the bay east of Blue Point, during the coming spring.

anatomists, warrants us in believing that the teeth referred to the bird are *fish teeth*, which were accidentally deposited in the same slab with the bird bones. Prof. Owen, too, has described a toothed bird from the Sheppey Eocene, but, in this case, the "teeth" were merely protuberances of the bone of the jaw, and were in no sense true teeth, but were like those irreg-

Figure 3.

HESPERORNIS REGALIS.—Marsh.

larities in the bone, sometimes seen in the bills of some of our lamellirostral birds. All the known specimens of the *Odontornithes* are in the Peabody Museum at New Haven; and it seems strange that, while Prof. Marsh has secured so many and perfect specimens, representing such diverse forms, none of the exploring parties which, during the past ten years, have so thoroughly explored the West, should have secured a single specimen.

In *Ichthyornis*, then, we have a gull or tern-like bird, about the size of a pigeon, possessed of great powers of flight, no doubt a swimmer and capable of wandering at will over the Cretaceous Ocean, which once spread far and wide over what are now the great plains of the West; in *Hesperornis*, a bird fitted admirably for life upon the water, but probably almost helpless on land, and certainly incapable of flight. Both species, no doubt, lived upon the fish with which this ancient sea was so abundantly supplied, and both, very likely, bred upon the numerous islets which then first faintly foreshadowed the Rocky Mountains of to-day.

Strange creatures—were they not?—and fit contemporaries of the wonderful forms which swarmed in and about the waters of that period. What wonder that in the constant struggle for existence that must have been going on between huge Mosasaurs, Plesiosaurs, Turtles, Sharks and Pterodactyls, almost all the forms perished so completely that our present seas contain but a few genera representative of this epoch of the distant past.

SQUIRRELS AND EMASCULATION.

NASHUA, Jan., 1878.

EDITOR FOREST AND STREAM AND ROB AND GUN:

Having for the last few years devoted from ten days to a fortnight's time to hunting squirrels both in the East and West, I have naturally been interested in the discussion in the columns of the FOREST AND STREAM AND ROB AND GUN in regard to the cause of the absence of testicles in a large proportion of the males of the gray and black squirrels. From my own observation and from that of others who have had equal or even better opportunities, and who have noticed the same peculiarity in a large proportion of the males which they had shot, I am convinced that the loss of the organs is not in the majority of cases, though it may be in a few, attributable to the *Ostrea emasculator*.

I have found the grub in the backs of perhaps half a dozen squirrels, though never in the testicles of over five hundred which I have brought to bag during the last ten years. Out of that number it is safe to state that not one in twenty males have been found entire. I have shot more or less red squirrels within the same time, but never noticed that that branch of the squirrel family was devoid of any of its reproductive organs. In many sections it is found in abundance, while the gray and black are very scarce, or not found at all. Why is not the red squirrel equally subject to the attacks of this Epiuran emasculator.

The gray squirrel is not wanting in pluck, for I have frequently witnessed combats between the males in the rutting season that proved that they are hard fighters; on the other hand I have seen the diminutive red chase a gray squirrel out of sight. On one occasion I witnessed a red squirrel drive a gray off a dead tree by the river side plump into the stream.

Now, for one, I don't believe that the black or gray squirrel runs from the red from lack of courage, but that they instinctively know that in the contest they would be castrated, and—well, who wouldn't run? The theory that the old males castrate the young I don't believe in, for it is against the natural law of reproduction of species.

WEBB.

MEDFORD, Mass., Jan. 26, 1878.

EDITOR FOREST AND STREAM:

In your last issue of FOREST AND STREAM in regard to squirrels and emasculation, Chittis says, "I never saw a gray or red so afflicted, nor ever heard of it, though they live in the same wood." I was much surprised, for here I am positive it is quite different. This last fall I had fair luck in shooting grays, and of all that I have ever shot or have seen that were killed in this neighborhood only two were devoid of testicles, while with the red precisely the reverse was true. While in the woods May 15, 1876, I discovered two nests of the *Hudsonius*, from which I captured eight young ones. They were two-thirds grown, and lively, and when placed in confinement were well able to take care of themselves. Of the eight six were males and without those necessary appendages. During the following summer six others were caught by different persons, and of the lot only two had escaped castration.

May 14, 1877.—I found a nest of the *Hudsonius* in an old apple tree in the thickest part of the wood. It contained six young ones, about a day or two old. With the aid of a pocket lens I came to the conclusion that the males were perfect. I visited the nest six days later expecting to find that the old male had performed the operation, but, to my disappointment, they had disappeared, probably removed by the old ones on account of my former visit.

MEMOIR.

LILESVILLE, N. C., Jan. 28, 1878.

EDITOR FOREST AND STREAM:

While I have no new theory to offer, or new doctrines to promulgate, I have a fact or two bearing upon the subject which may not be amiss. The idea of one species, genus or color of squirrel performing castration upon those of another won't do. Nobody in this section of country ever saw a "red" squirrel, unless in some menagerie or "show." The black, or "fox" squirrel, though in years long ago plentiful, has herabouts almost entirely disappeared. Of the gray we always had, and yet have, an abundance, and of them I have killed, and yet kill, many upon which castration has been performed. The belief has always been that it was done by the older ones upon the young, for "reasons satisfactory to themselves." Certain it is, as before said, it is not here at least, the result of enmity or warfare between one kind and another, for we only have one kind. As to the worm, "wolf," grub or insect theory—having never before seen or heard of it—I have no opinion to advance. I know this though: Scars, especially on the *emasculator* of not over a year old, are plentiful to be seen, as any of our hunters will testify. A worm, or insect, would hardly leave such.

And another thing I know; aye, all of us do, that those squirrels which are left, as Baba threatened to "leave" Don Juan, are invariably fatter, more delicate and loothsome than all others.

E. R. L.

MOFFLINTOWN, January 28, 1878.

EDITOR FOREST AND STREAM:

It is my opinion, based upon ocular demonstration, that the testicles of the gray and black squirrels are not developed until the second year. I can safely say I have shot hundreds of squirrels that were apparently without these organs, and in every case they were young squirrels, but I found upon skinning them that the testicles were underneath the skin, and about the size of a small soap bean.

I have no doubt that you have observed the same thing. Now, might it not be possible that the "emasculator," when properly investigated, is simply the age of the squirrel. I should be pleased to hear from some of your readers what has been their experience in this matter.

Very truly yours,

J. E. H.

BERLIN HEIGHTS, O., Jan. 26, 1878.

EDITOR FOREST AND STREAM AND ROB AND GUN:

Regarding the castration of the gray and black by the red squirrel, I am an unbeliever in the whole thing. I believe them, however, as liable to castrate as to bite off an ear or two, or bite them on any part of the body, and no more so. Young squirrels, and old ones out of the rutting season, may and do carry those organs within the abdominal cavity, as the human foetus is known to until a certain stage of development. This is a well-known fact to zoologists that the squirrel is not the only animal which lacks at certain seasons a development of those organs, though I believe the squirrel stands A No. 1 for inordinate development for an animal of his size. I believe I stand alone in this view of the case, and ask only for fair investigation. Take such specimens as you consider castrated to your M. D., and let him examine for you. They may be very small when found, but nevertheless I believe you will find them.

TONIC.

CLEVELAND, Jan. 29, 1878.

EDITOR FOREST AND STREAM:

I send to you by express a box of squirrels we found here on the market. Labels are attached as follows: "Male and Female; Fox Squirrel." This squirrel is often found emasculated. They inhabit a country where the "Chickaree" is a perfect stranger, and the "bob fly" is not known. The pair of black squirrels (male and female) are good specimens of their kind. It is rare in this locality that you find the black squirrels emasculated. This variety of the squirrel is now becoming scarce. Years ago they outnumbered the gray. The female specimen of the gray squirrel is perfect; so are the two males; one an old fellow, the other a yearling. But now I would call your attention to the pair of emasculated (?) gray squirrels, and, if you have good practical anatomists on hand, I would like to have him carefully dissect and search for their generative organs. My impression is he will find them wanting; not as the result of the handwork of the "Chickaree" or the grubbing work of the "bob fly," but the result of a natural law that has caused an arrest of development. The result of numerous dissections of the male squirrel, with testicles and without, has led me to the conclusion that this anomaly is entirely owing to the non-descent of the gland or its imperfect development *in utero*. Again, I ask for a careful dissection of the two emasculated (?) gray squirrels. As this matter of the male squirrel being often found without testicles has been a disputed question for many years, suppose through the medium of the FOREST AND STREAM we now settle the question.

Yours truly,

DR. E. STERLING.

BIDDEFORD, Me., Feb. 16, 1878.

EDITOR FOREST AND STREAM:

I have been always told by experienced gunners that a considerable portion of the male grays were thus maltreated and abused by the little reds, but, up to the present time, and during a careful observation of several years and inspection of a large number of gray squirrels that have been shot by myself and others, I never have found a male squirrel in which the testicles were not to be found. The specimens were numerous in which they appeared to be absent, but upon careful examination, I have always found the apparently missing organs in the cavity of the abdomen; and this condition seems to be quite common in squir-

rels under one year of age, and occasionally in old specimens. I have found these organs in a similar position, and in almost all, they can be easily pressed through the inguinal canals into the abdomen.

The little red squirrels in this region are much more numerous than the gray. During the past season I shot as much as three or four bushels of them, and have examined many shot by others, and results are as in former years, as previously stated. I think the prevalent idea in this matter must be a mistake—in the main at least. So far as I know, ova, such as have been described in this connection, deposited in the integument of animals, do not go deeper than the cellular tissue beneath the skin during any period of their development; therefore, they cannot become a destructive agent to these organs.

And again, the organs are protected by a distinct and strong envelope of their own (the *Tunica vaginalis*), which is in no way connected with the scrotum, and is freely moveable within it. Without any doubt these organs are sometimes destroyed by disease and accident in squirrels as in all other animals, but I do not believe this theory of castration that is in vogue. I have often seen the red drive the gray, and watched them all through the performance.

ONSERVER.

[We have received a great number of communications on this subject, from which we have selected the foregoing; and, since it has been so fully discussed in our columns, it seems proper that we should advance a few suggestions in the matter and state, at least, the results of our own experience.]

The evidence which has been presented by a number of our correspondents at once negatives the idea that this absence of generative organs is confined to any particular species of squirrel, and the only testimony in favor of the idea that the act of castration is performed by one squirrel on another is that adduced by "Jacobstaff" in a recent communication, where he states that he killed a red and a gray while the operation was being performed. Everything else on this point is mere hearsay: "It is said," "We are told," and "It is the general opinion" that the old castrate the young—the red the grays, or the grays the fox squirrels, etc. Under these circumstances, we think that in the case which came under the observation of "Jacobstaff" the castration must be regarded as a mere accident of the combat which he interrupted. Now we venture to say, and careful observation will bear out the statement, that of all the squirrels supposed to be without testes not one in ten really lacks these organs. The rodents are peculiar in many points, and this is one of them, that their testes are contained in the abdominal cavity, and thus, in the young at all times, and in the old usually, they are not to be found by mere inspection. Often it is necessary to dissect a specimen before these organs can be seen. This point is brought out well by J. E. H. and Tonic, and is hinted at by Dr. Sterling. In support of this position we quote from two of the most eminent living anatomists, Owen and Huxley.

Owen says of this order (Com. Anat. Vol. III., p. 649): "The testes undergo a periodical increase of size and change of position, passing from the abdomen into a sessile scrotum, and being again retracted after the rut (except, perhaps, in *Leporidae*) within the abdomen." Huxley, in speaking of the group, says (Anat. Vert. Animals, p. 436): "The testes do not leave the abdomen, but come down into the groin in the breeding season." This is the view which we have held all along in the discussion, but we have preferred to wait until it should be clearly brought out by some correspondent before alluding to it. Now as to the specimens sent us by Dr. Sterling, which, when they came to hand, were unfortunately a good deal decayed, but which (so far as it was possible to determine) only serve to strengthen our belief that this is the correct light in which to put the matter. There were six males in the lot, viz.: one fox squirrel, one black and four grays; and of these, the two first mentioned and the oldest gray, showed at once that they were entire, the testes being very prominent. An examination showed that the three animals were quite old, their teeth being considerably worn down. The second gray, labeled "young male, testicles intact," was dissected, and proved to be as labeled, although we could see nothing of the organs until a knife had laid them bare. The last two grays were labeled "Emasculated (?)" and we examined them with a good deal of curiosity. They proved, however, to have apparently complete testicle, although they were small and withdrawn into the abdomen. They were both young animals. We would suggest, then, that the announcement of the absence of the generative organs in squirrels be delayed hereafter until they have been carefully looked for with the knife, for we feel confident that much of the present discussion has arisen from careless observation.

All this, however, does not help us out on the question of *Ostrea emasculator*. That there exists such a parasite we cannot doubt, for it is vouched for by too many eminent scientific men. We acknowledge, however, that we have never seen it.—Ed.]

A QUAIL AT SEA.

WAREHAM, Mass., Jan. 10, 1878.

EDITOR FOREST AND STREAM:

A mystery is solved after the lapse of forty years. In 1837 I was a sailor boy on board a brig cruising on the coast of Africa. On the 1st of November in the former year, when eleven degrees north of the equator and between eight and nine degrees from the coast, while at the wheel between the hours of three and four o'clock P. M., starboard tacks aboard close hauled on the wind, under full sail, with light breeze and smooth sea, making a Southeasterly course, I sighted a bird from the direction of the coast crossing the ship's bows some one hundred yards distant, and at an elevation of twenty to thirty yards from the water's surface. At once I recognized him as a stranger in that locality and when he attained the bearing of four or five points off our weather bows, he set his wings and, so to speak, scaled toward the ship, and, as though acquainted with marine etiquette, boarded the ship in the weather waist and flattered down to the lee scupper. I told our captain, who was at my side at the time, that a quail had boarded us and now lay on the lee scupper. Said he: "Fudge! A quail this distance from the land! Not much. But," said he, "go fetch him." I darted

to the spot and secured him without the least trouble, for he lay exhausted and famishing, and, like a well bred setter, retrieved him to my master. "By thunder!" said he "it's a quail. And yet it can't be a quail. But still he has all the marks of a land bird—yes, it's a genuine quail. But where did he come from is the mystery, for 'tis said quails can only fly while they hold their breath." At last it was admitted by all on board that our new-comer was a quail. I placed him in a cage and nursed him with all of my skill, but on the second morning of his incarceration I found him cold in death, the vital spark having departed during the previous night. The death of my little voyager, and at once my pet, caused me to mourn, as I had laid all my plans to take him home and Americanize him in the old Bay State.

The silent and death of the bird created a foreboding panic on board, as it was looked upon as a harbinger of death by the old and superstitious sailors. For days the principal topic of conversation in watches on deck and watches below was of ghosts, hobgoblins, flying Dutchmen, Will-o'-the-Wisps, Finlanders and the like. "Twas a bad sign, and something is going to happen," said an old canvas-back, bearing a look of a large amount of suppressed wisdom held for future use. Something did happen. We arrived home as America all well on the first of the following July. On the fourth I dined with a convivial party, when I related the story of my quail, and, naturally enough, the party were unbelievers, and one rose to his feet and moved that with full glasses and standing we slug "Robinson Crusoe."

Hundreds of times I have related this quail story, and as many times my audience were unbelievers. Yes, for forty years I have been jested and joked for my quail story, but with all the opposition to those years, I have never for a moment doubted that the bird was a genuine quail. And now, in conclusion, although at a late day, I must give thanks to Mr. Everts, of Vermont, for unveiling the mystery and making clear in my mind as the brilliant sun at noonday that mine was a migratory quail.

CYRUS LISCUM.

A LITTLE AUK ON SHORE.

FORT HAMILTON, Jan. 21, 1878.

EDITOR FOREST AND STREAM:

About ten days ago Mr. Bell, of this place, sent me a little auk (*Mergulus alle*) which had been captured under the following peculiar circumstances.

Mr. Bell's little son was playing in a large open field in the village, when he noticed a singular looking bird on the ground attempting to fly. It would flutter along for a short distance and then fall, as though hurt, or exhausted. The boy, after a short chase, managed to throw his hat over it. It took it home to his father who, after looking over Wilson's Ornithology, found it to be a little auk.

The bird was placed in a cage and fed upon snout and chopped crabs. When placed in a tub of water it swam round and round, constantly dipping its bill in the water. Its position when standing was nearly erect, the body thrown slightly forward and the weight resting on the toes. It lived about a week after its capture and seemed to be doing well, when one morning it was found dead in its cage. The cause of its death is unknown, but it was supposed the cat had frightened it to death by springing at it, as on two occasions before the cat had made the attempt and the bird had shown great terror at the sight of the animal. Mr. Bell politely sent it to me. I carefully skinned and prepared it for stuffing, but could not discover that the bird was injured in any way. It was a valuable addition to my cabinet, as they are rare birds about here, or anywhere else I believe.

Now the bird came to be in such a place as a grass field half a mile from the nearest beach I cannot imagine, except that it had attempted to fly across Long Island, and becoming fatigued had descended to the earth. Its small wings and heavy body seem to favor this hypothesis. It might have been driven on shore by a violent gale, but I do not recollect any recent storm.

DE LAGNEL BERRIER.

—We have received Dr. A. E. Foote's *Monthly Bulletin* of the Naturalists' Agency of Philadelphia. Dr. Foote advertises a large list of minerals, birds' eggs and other specimens, as well as many scientific publications, especially those of the U. S. Government.

A NEW CHIMERA.—Under the name *Chimera plumbea* Prof. Gill has recently described before the Philosophical Society of Washington, a new fish to American waters. Of this ancient group, the Chimeroidea, but few species now exist, and the discovery of a new one is a fact of high interest. The specimen upon which this species is based was caught near La Havre Bank, about 250 miles southeast of Halifax. The specific name *plumbea* is in allusion to its color.

THE AMERICAN PREHISTORIC MAN.—To Professor Edward D. Cope is due the discovery of the oldest traces of man in America. It is not yet quite fixed by geologists whether the western hemisphere is positively older than the eastern world. Certain low hills in Canada, not very far from the lakes, were, according to Lyell, asserted to be of the earliest formation. This discovery, then, of Professor Cope's, may be of the most valuable character. In 1877, in a lake basin of Oregon, mingled with strange fossils of animals, these traces of man were found. Flint implements were brought to light in abundance, in a deposit of sand and ashes, mixed with the bones of gigantic extinct llamas, horses, sloths, birds and fishes. As a paleontologist, Professor Cope's labors are of the most distinguished character, and his name must always be associated with these wonderful discoveries.

CALIFORNIA QUAIL WANTED.—Our correspondent, "G. N. B.," who writes us from Latrobe, Pa., asks us where he can obtain California quail for breeding purposes. We should have recommended Reiche, of Chatham street; he failing, we know not to whom "G. N. B." should apply. Will the party referred to in our correspondent's note below, please send us his address? "G. N. B." says:

I saw a notice some time ago in FOREST AND STREAM that some party in Ohio had been successful in raising a brood of California quail. I had a pair, but lost the cock bird. The hen laid thirteen eggs, but of course, having no cock with her, the eggs did not hatch; would like to try it again this year, but have tried Reiche and others and have been unable to find birds of that kind east of Rocky Mountain. Will you please give me the address of this party in Ohio, that I may correspond with him, and perhaps secure a cock from him. My paper containing the article has been mislaid.

ALL SORTS.—Editor *Forest and Stream*.—Salem, Jan. 15.—I recently mounted a fine snipe (*G. wilsoni*), shot by Mr. R. Nelson, of Peabody, about New Years. This is the latest I ever knew about here, though others have been taken almost as late. The bird was in good order and fine feather. A harlequin duck was recently shot off Tinkers Island. This is rare. I wish some one would inform me why the little auks (*M. alle*) are so plenty this winter. They are not so as a rule, except by severe weather. I am now handling some fine black tail deer heads and antlers, and some fine prong-horned antelopes from Kansas and Colorado. I also saw at a friend's house recently some beautiful specimens of Western natural productions, including a beautiful work-box for a body, covered on the outside with minerals of thirty-five different kinds, all from Colorado, and also saw fine samples of petrified wood and nuts, and some agatized wood, said to be harder than petrified.

TEAL.

[In a petrification, the organic matter may be replaced either by carbonate of lime or silica. If by silica, the resulting rock will of course be the harder of the two.—Ed.]

A WHITE OPOSSUM.—Our frequent contributor, Mr. W. Vic, of St. Louis, informs us of the presentation recently of a white opossum with pink eyes to the Zoological Society of St. Louis.

NOR A TURBOT.—A correspondent from Fall River, Mass. sends us a neatly drawn sketch of a flat fish, which he describes as follows:

"When I first caught this fish I thought he was as wide as was long, which was not confirmed by measurement. Color, he spotted side very dark, a rubber black, with irregular white spots, both in size and shape. He was transparent, so that the bones were clearly discernible; the other side white as snow. The fins looked like ice formed from spring water. The mouth opened very large; he would close it with a quick snap."

The inquiry is made of us "whether it is a turbot?" We do not think from the description and size, 12 by 8 inches, that it is by any manner of means a rare fish. It is probably sand flounder, or daylight, window pane or water flounder—the *Lophopsetta maculata*. The American turbot is as yet *non inventus*.

GOPHERS AND THE LEVEES.—The gopher is a serious problem in Mississippi. He honey-combs the levees with his network of holes and passages, and one-half the breaks in the levees are traceable to his mischief. A bit of civil engineering on his part, the projection of a new tunnel, or the excavation of a new and more spacious domicile for the advent of his bride and mother-in-law, may bring the destruction of the floods upon square miles of fruitful lands. The safety of crops, property and lives all depends upon the caprice of a burrowing varmint.

THE OOLACHAN.—Through the kindness of S. R. Throckmorton, one of the Fish Commissioners of Cal., I was shown a candle fish (the Indian name is "Oolachan") that had just been brought from Nass River, near Cook's Inlet. The fish was about seven inches long, and resembles somewhat the N. E. Coast smelt, but more delicate in form and appearance, being longer and more slim, has a sharp nose and is covered with very fine scales of a bright silver color. I should judge by this dried specimen that they must be a fish of great beauty and symmetry. They use this fish for fuel and for light, it being full of oil. They come in in shoals so thick that they take them out in masses with a sort of split-shovel. They are now taking oil from them and shipping it in large quantities as an article of commerce. These fish are said to be of the most delicate flavor and will fairly melt in your mouth. Smoked and dried they are said to excel any herring known. Now there is a fish for you that will keep you warm, and furnish you light and the very best kind of food.

San Francisco, Cal., Feb. 7, 1878.

B. B. P.

[The spelling of this fish is not yet quite positively determined. It is called both Oolachan and Oolachan. At the Centennial quite a number of specimens were exhibited. The oil from this fish was remarkably clear and sweet. The dried fish seemed wonderfully fat. We have heard that to capture them the Indians use a flat bit of thin board, into which sharp nails have been driven. When a shoal of fish is approached, the Indians, by striking into the fish, impale them, and thus catch large quantities.—En.]

ANIMALS RECEIVED AT PHILADELPHIA ZOOLOGICAL GARDENS FOR WEEK ENDING FEB. 12, 1878.—Two opossums, *Didelphys virginiana*, presented; two red-shouldered hawks, *Buteo lineatus*, presented; one eland, *Oreos caprina*, purchased; one siren, *Siren lacertina*, presented.

ARTHUR E. BROWN, Gen'l. Supt.

Woodland, Farm and Garden.

THIS DEPARTMENT IS EDITED BY W. J. DAVIDSON, SEO. N. Y. HORTICULTURAL SOCIETY.

THE CROSSING OF LILIES.

MR. FRANCIS PARKMAN is famous as a horticulturist as well as an historian. In a new number of the "Bulletin of the Bussey Institution"—of which he was formerly Professor of Horticulture—he has now given the history of his "Hybridization of Lilies," carried on for ten or a dozen years. He began by crossing two superb Japanese Lilies, *L. speciosum* and *L. auratum*. The first year he failed; the second year brought one splendid success; for it gave us that superb lily, twelve and even fourteen inches from tip to tip of the extended petals, which, when sent to England, astonished the horticultural world, and which there received the name of Parkman's Lily (*Lilium Parkmanii*). The other results obtained in this and the succeeding operations, were of little or no practical value, but were as surprising as the Parkman Lily is magnificent.

We expect offspring to take after both parents, a hybrid to inherit somewhat equally the characters of the two species that compose it. That was the case with the Parkman Lily,

which has the fragrance and form of *L. auratum* and the brilliant color of the best races of *L. speciosum*. But this was the result in only one case out of more than fifty. Every other seed that germinated and lived in bloom produced flowers exactly like those of the female parent, *L. speciosum*. But they were hybrids nevertheless. Mr. Parkman took all the necessary precaution to prevent access of owa pollen; and the seedlings showed the blood of the male parent in their stems, though not in the blossom; for these were mottled in the manner characteristic of *L. auratum*. Though the male parent showed for so little in the first generation, there was reason to hope it might be impressed on the second. So Mr. Parkman fertilized several of these hybrids with the pollen of *L. auratum*, precisely as their female parent had been fertilized. The result was a very little seed set, but enough to produce eight or ten young bulbs. Of these, when they bloomed, one bore a flower combining the features of both parents. All the rest bore flowers not distinguishable from those of *L. speciosum*.

Was this inveterate habit of taking after the mother only, or mainly, a peculiarity of these two species, or was it a character of Lilies generally? To settle that question, Mr. Parkman crossed *L. umbellatum* with the pollen of *L. auratum*. The progeny was not to be distinguished from *L. auratum*, yet showed its hybridity in the imperfect condition of the stamens of many of the blossoms, and in the abortion of the pistil of some of them. Next he crossed *L. longiflorum* with the pollen of a deep red variety of *L. speciosum*. Seeds were abundantly formed; but the plants raised from them produced the flowers of the female parent, unchanged, the pure white being without tint or spot. Some of these he now crossed with *L. auratum*, in some instances successfully; but in the offspring neither *L. speciosum*, their grandfather, nor *L. auratum*, their father, had produced any effect whatever on the pure white of their petals; yet the anthers had been affected, taking a chocolate tinge from the father; and as before many of the flowers were now tried in the third generation, with pollen both of *L. auratum* and *L. speciosum*; but not one would bear seed.

Moreover our American *Lilium superbum* was fertilized, under every precaution, with the pollen of six foreign species; seeds were abundantly produced in some instances, though in many the pods contained only chaff; several hundred bulbs were raised, but when these came to bloom, not a single flower of them all was distinguishable from that of the pure *L. superbum*. Nor in this case was there any mark of the male parent to be found in the stem, or leaves, or bulbs. All this is very curious indeed. We knew that offspring might take a great deal more after one parent than the other. But that the female sex should be so prepotent in Lilies, is a quite unexpected result. That in so many cases the influence of the male parent should be imperceptible is most wonderful.

PROF. ASA GRAY.

Editor *Forest and Stream*: The above article, published in the *American Agriculturist*, is of great interest to all who have experimented in this way, or who wish to see the varieties of this lovely class of plants multiplied. I have for a number of years tried the same experiments with that class of plants, and have raised a great number of hybrids from *L. speciosum*, some of them very beautiful, having very large flowers and rich coloring, but all of them were *L. speciosum*. There is one having a flower as large as a *Lilium auratum*, the color dark scarlet, edged with white; it flowered for the first time last summer. Another one grew to the height of eight feet, straight as an arrow, bearing thirty-one flowers on a single stem, the bulb not very large at the time it sent up its flowering stalk; but this fall the bulb is very large. I presume it must be crossed with a *Lilium superbum*, indicated by its straight habit and numerous flowers; the color is the same as *Lilium speciosum rubrum*. One of my hybrids has a buff-colored ground, spotted with deep pink, the petals very broad and greatly reflexed, the flower large; has the shape of *L. tigrinum*. Some hybrids of *Lilium speciosum* have very small flowers, about the size of *Lilium martagon*; some have large spreading white flowers. It would take considerable time to mention all of them, but if there should be any person who is interested in that class of plants they are welcome to come and see them. I have also hybrids of *L. auratum*, but they keep to the mother plant as a general thing. Some have pure white flowers, some with a yellow band; the flower in most part resembles *Lilium auratum*. I have raised seedlings of *Lilium longiflorum*, but without any gratifying result. I would advise those who try to hybridize lilies to experiment with *L. longiflorum taketiana*, which has not so much honey coming through the pistil. I have never got *Lilium brownii* to seed yet, and have raised seedlings from *L. martagon*, but without any difference from the mother plant. I have one good hybrid of *Lilium tigrinum*; both male and female can be seen in this plant; it has the flower of *Lilium tigrinum*, the petal broad and bright colored, the base white, with the leaves and growth of *Lilium bulbiferum*. Last summer it had eleven flowers on one stalk, seeded freely, and had small bulbets in the axil of the leaves. There is one also that has the appearance of the mother plant, with flowers about the size of *L. tenuifolium*. Of *Lilium bulbiferum* I have an endless variety, some of them very beautiful. Every seed will produce a variety, and some of them could, without difficulty, be separated from the mother plant. I have expended a great amount of labor on *Lilium superbum* without any success. The flowers I have tried to hybridize have formed black seed. The seedlings of *Lilium canadense* differ very little from the mother plant. My seedlings of *L. Humboldtii* and *L. Washingtonianum* have not flowered yet. I will here remark that I have not had so much difficulty in getting lilies to seed as to get the seed to grow. I am trying from year to year to find out how to manage them. Some of the seeds are very tender, particularly that of *Lilium tigrinum*. I advise those who wish to raise seedlings, to sow the seed as soon as ripe in seed-pans and put them in a dry cellar, and keep them there until March, or till the mother plant commences to grow. Remove them to a cool part of the green-house, and do not water them too much. Those who have not got a green-house should have a frame in the garden, covered with sashes, having the glass painted; raise them a little, so that the hot air will escape. Some of them will flower the third summer. The best soil to use is loose, sandy loam. Seeds of American lilies can be sown in frames in the garden, if the frames are filled with dry leaves over the soil during the winter. I will be most happy to see or correspond with any one interested in this badly used class of plants.

FREDERICK HANSON.

119 and 121 Nassau street, New York, Room 34.

THIS YEAR'S NOTES.—January—Thresh corn, also your old son; it will do them both good. Cast manure to the field and leave it there. Sow peas and darn your stockings. See to your digging, also to your "diggings." Neither are *infra dig*.

February—Sow onions for early crops and give them great attention. Onions should always be strong. A sage always looks after his onions. See to cabbage. If you are unable to, ask your tailor.

March—Plant potatoes; if not in the ground, "plant" them in the saucepan and eat 'em. Leeks should be seen to; especially if they are in your boots. Stick forward peas. Peas should know their position and not be forward, therefore stick 'em.

April—Make up a bed for encumbers and give them an extra blanket; tuck them in carefully. See to spring vetches—they "vetches" a good price—but don't tare them. See to your rye. In fact, always keep your weather rye open.

May—Hoe caulidowers; in fact, hoe whatever you can and don't pay it. Sow swedes, they're *swede* things. See to maize. May's a good time for it.

June—Make hay while the sun shines. He doesn't shine very often. Wash and shear sheep, especially black sheep, such as "tecs." Give an eye to your "salary." Get a "rise" if you can.

July—Hay just now should be hay 1. Mind your peas; also your q.s. Sow collard cabbage. "Collar" it from your next-door neighbor. Hoe freely and defy the County Court. August—Cut corn crops; also bunnions. Sow chickweed and groundsel for your singing birds. It's such a "lark."

September—See to your pigs lest for *pork-you-pine*. Take up onions, especially if there drukk and disorderly. But don't eat them; especially if you're going to see "her." She mightn't like it.

October—See to your cows. Fork over asparagus, but don't fork over your rent if you can help it.

November—Bring dairy cows to the yard, and get your chalks ready. Muke cider but don't drink it. Slugs and snails are now active. Let's not be sluggish, but let's (s)mail them. Train up gunpowder. See to squibs and guard your guys.

December—Wheat may still be sown, so may buttons, but leave that to your wife. Repair your fences and offenses, because it draws near Christmas. Prepare your plums for the pudding, *pudding* aside all animosity. Sow, that you may reap pleasure from the season.—*Fun (London)*.

A HINT TO FARMERS.—Here is a French fashion which deserves to be adopted in this country. In the State forests of France the subjoined notice is pasted in conspicuous places, where the young and old that run may read:

"Hedgehog—Feeds on mice, small rodents, slugs and grubs; do not kill a hedgehog. Toad—A farmer's friend; destroys twenty or thirty insects per hour; do not kill a toad. Mole—Destroys grubs, crickets and insects injurious to agriculture; no trace of vegetable matter is ever found in its stomach; does more good than harm; do not kill a mole. Cockchafer and his grub—Each insect lays 70 to 100 eggs; kill the cockchafers; each department of France loses annually thousands of francs by the injuries of insects. Birds are the only enemies capable of coexisting with them. Children, do not rob the birds' nests."

LOOK INTO YOUR FLOWER POTS.—We publish the following item, with the fond hope that every one of our lady readers may be incited to root up all their choicest flowers in an apprehensive search for domesticated reptiles:

A lady in Black Rock noticed for several days recently that the earth in one of her flower pots was disturbed, and at last made an examination, which brought to light four live adders about a foot long, snugly curled up in the bottom.

A PRETTY WAY TO TRAIN FUCHSIAS.—When a slip has grown six or eight inches high, nip out the top down to the last set of leaves; it will then throw out branches on each side. Let these grow eight or ten inches, then nip them out as before, the tops of each branch when grown the same height as others, nip out again; then procure a stick the size of your finger, eighteen inches in length; take hoop-skirt wire, twice back and forth alternately through holes made in the stick (equal distances apart); place this firmly in the pot back of the plant, tie the branches to it, and you will have, when in flower, a beautiful and very graceful plant. One trained in that way last season was the admiration of all who saw it.—*Small Fruit Recorder*.

—The schedule of premiums offered at the regular meetings, as well as the semi-annual exhibitions of the New York Horticultural Society, is now published; and from the liberal manner in which it has been compiled and the increased interest manifested by growers and others in its welfare, we anticipate still finer exhibitions by the society than those of previous seasons. Any one interested can have a copy free of charge on application to the secretary.

SPLIT BAMBOO RODS.

To our customers and the public:—In reply to the damaging reports which have been circulated respecting the quality of our split bamboo rods, by "dealers" who are unable to compete with us at our reduced prices, we have issued a circular which we shall be pleased to mail to any address, proving the falsity of their assertions.

CONROY, BISSETT & MALLESON,
Manufacturers, 65 Fulton Street, N. Y.

NOTICE TO SPORTSMEN.—Having received so many communications asking us for information in regard to our six-section bamboo trout, black bass, grise and salmon rods, we have prepared a circular on the subject, which we shall take pleasure in forwarding to any address. We keep on hand all grades, the prices of which range from \$15 to \$150. We put our stamp only on the best, in order to protect our customers and our reputation, for we are unwilling to sell a poor rod with a false enamel (made by burning and staining to imitate the genuine article) without letting our customers know just what they are getting.

P. O. Box 1,224.—(Ado.)

ABBEY & IMANIS, 38 Maiden-Lane.

The Kennel.

TO CORRESPONDENTS.—Those desiring us to prescribe for their dogs will please take note of and describe the following points in each animal:

1. Age.
2. Food and medicine given.
3. Appearance of the eyes; of the coat; of the tongue and lips.
4. Any change in the appearance of the body, as bloating, drawing in of the flanks, etc.
5. Breathing, the number of respirations per minute, and whether labored or not.
6. Condition of the bowels and secretions of the kidneys, color, etc.
7. Appetite; regular, variable, etc.
8. Temperature of the body as indicated by the bulb of the thermometer when placed between the body and the foreleg.
9. Give position of kennel and surroundings, outlook, contiguity to other buildings, and the uses of the latter. Also give any peculiarities of temperament, movements, etc., that may be noticed, signs of suffering, etc.

FIXTURES FOR 1878—BENCH SHOWS.

St. Louis Bench Show, St. Louis, Mo., Feb. 19, 20, 21 and 22.
Boston Kennel Club Show, Boston, Mass., March 26, 27, 28 and 29.
Dr. E. J. Forster, Secretary.

Baltimore Kennel Club's Show, Baltimore, Md., April 23, 24, 25 and 26.
L. R. Cassard, Secretary.

The Westminster Kennel Club (New York) Bench Show, Gilmore's Garden, May 16, 17, 18 and 19.
Dr. W. Seward Webb, Secretary.

DIFFERENT TASTES AS TO COLORS OF DOGS.

EDITOR FOREST AND STREAM AND ROD AND GUN:

Under above heading you published a very interesting article written by Mr. Everett Smith in a late number of your valuable paper.

Although I agree with Mr. Smith on many points, yet I think that his love and preference for the "red dog" has led him to make some statements which are at variance with noted authorities and my own experience. I shall give my reason why I don't agree with Mr. Smith, and hope he will accept it in as friendly a spirit as it is given. I fully agree with him in describing the different colors, and can only say: "Let every body suit himself." Color is a matter of taste, and I believe no good dog is of a bad color. Mr. Smith says that he is well-pleased with the red color for general shooting at grouse, partridges and woodcock, and considers it highly preferable for snipe-hunting; but here I beg to differ with him. Everybody must admit that it is of first importance—hunting any kind of game birds—that the dog is constantly in sight, more or less. It is not only to have better control of the dog, but also the hunter is not deprived of the pleasure of seeing his dog make game or come to a point, as also to fill his game-bag in a sportsmanlike manner. Most of our upland shooting is done in fall, when the leaves or vegetation are mostly of red brown or yell lowish colors. Especially a great deal of grouse, quail, or cock-shooting is done in alder, scrub or red oak covers, where it is almost impossible to keep sight of a "red" dog; whereas a more or less white one would make a much more striking contrast to all surroundings. The latter undoubtedly would need no bell to tell his whereabouts. I remember on one occasion that a red dog, a son of Fouk's "Tom," was pointing a cock, not thirty yards from us, for over fifteen minutes, while we eat our lunch without noticing the same. I could mention several such instances, where the "red color" was the only fault. I once would undoubtedly have shot a red pup accidentally had not the owner, my companion, just warned me in time, who chanced to see the dog in the proposed line of fire. When on a point, the red dog often looks too much like a stump, and is in fall cover the worst dog to keep in sight.

Now, for snipe shooting. Here, I think, I can talk considerably from my own experience. I have hunted setters of almost all colors on snipe, and again think that "red" is worse than any other color, with the probable exception of light chestnut or brown. I am here, of course, talking about the color only, as I think that the Irish dog, with whom the red color originally belongs, is as good for snipe as any breed in existence. However, I prefer a cross with the English, to have more of the white color, besides some of the Irish spirit. A snipe dog should be as fast as possible, and I prefer one that is not afraid to range off half a mile under certain circumstances. But how would you see a dog at such a distance on meadows, full with yellowish-brown reeds, cat-tails and bluebird? It would be very difficult, indeed. A white dog, however, you can watch, even if there are only a few inches of white visible. Mr. Smith says that he often had shots at plovers, etc., which he would have lost had his dog been of a more striking color. This I do not doubt. However, when snipe hunting, the bag is, with me, by no means of first consideration, as Mr. Smith also says; although I always try not to let an opportunity pass to get a crack at ducks or plovers. I then either let the dog make "down charge" a distance off, or call him in "to heel." But just this statement is a direct admittance of Mr. Smith, that the "red color" is not as easily seen as any other, even in the meadow.

When hunting slow, not far-off-ranging, dogs in the open, it matters not of what color they are, as one is as easily watched and controlled as the other; but it is only natural that red is the worse color to keep sight of in all fall covers, or at a distance in meadow-shooting.

I like the Irish dog on account of his good field qualities and beauty, but have come to the conclusion that his color is the most impracticable for both cover and meadow-hunting, at least for this part of the country.

JUSTUS VON LENNERKE.

COLORS IN SETTERS.—*Pomfret Centre, Conn., Feb. 14.*—In the issue of the FOREST AND STREAM of Jan. 31st, Mr. Everett Smith gives us a chapter on the color of setters, and tells us there is no such color as a blue setter. I believe Idstone is considered good authority on setters, and if Mr. Smith will turn to the eighty-third page of Idstone, second edition, and read the bottom paragraph, he will see that the writer acknowledges that there has been such a color, though he has never seen one. And furthermore, if Mr. Smith will call on me I will show him a blue, white and tan setter. Not a black roan one, but much nearer an indigo blue than either Dr. Jarvis' Elcho, or Plunkett, formerly owned by Dr. Goldsmith, is a red color. Some of Mr. Smith's ideas remind me of what a

neighbor of mine said about his wife. He remarked that if all men were like him they would have all wanted his wife. So it is fortunate we are not all alike in tastes. I think if American sportsmen would breed more for the quality they desire in the field, instead of trying to get some particular color, the setters in this country would soon average better than they now do in this respect. The practical sportsman seldom buys a dog merely to look at, although good looks are desirable if they can be obtained without detracting from their usefulness. I have no objection to breeding to a first-class dog of any color, though, like Mr. Smith, I have my own fancy in this respect. But my taste does not run to so-called *Irish red*. I like white—clean, pure white, if I can get it. I go in for solid colors. If spotted, let each color be clear and distinct—black and white, or orange and white I prefer. This is merely my fancy. Good setters can be obtained of nearly all colors, blue not excepted.

ETHAN ALLIN.

HEARING ON THE DOG QUESTION.—At the hearing before the Committee on Agriculture, in Boston, on the 12th inst., at the State House, Hon. T. J. Gargan took the floor for the petitioners; Mr. Brown, of the law firm of Brown & Avery, represented the Kennel Club, and Mr. Lothrop took the part of the Society for the Prevention of Cruelty to Animals. The object of the petitioners is to make the owning of dogs a responsible matter, by having a law passed that will be stringent enough to compel people that own worthless animals to give a bond for any damage their dogs will inflict, and to make this general. To pass a law or license large enough to compel all to own pure breeds, and do away with the mongrels or curs that are now a terror and nuisance to the community. It is believed that if such a law was enforced there would be fewer cases of hydrophobia. The petitioners are eager and hopeful, and desire the support of all those who are interested in this matter. If the license is large enough people will prefer to keep good breeds, if they must have dogs; and if a bond is required from every owner there will be less damages to pay and fewer cases of apprehension.

THE LAW OF DOG BITES IN ENGLAND.—According to the curious reading of the English law in regard to dog bites, in order to sustain an action it is necessary to allege and prove that the dog was a bad dog, and "accustomed to bite mankind." In other words, a dog must make a first bite before he can be judged. In a recent case, a lady in London was bitten by a dog known to be vicious, and the jury gave a verdict of £23 to the plaintiff. In an effort made to set aside the verdict, it was claimed that the bite was only a first bite. The decision of the court was sustained.

SUFFERINGS OF A DOG FROM STRAW IN THE BOWELS.

AN INTERESTING POST MORTEM EXAMINATION.

EDITOR FOREST AND STREAM AND ROD AND GUN:

The following case came under my notice lately, and as I took notes of it at the time, and think it would be interesting to some of your readers, I give it just as it is dotted down. About two months since a friend of mine came to me to ask my advice as to what he should do with his pointer dog (a very fine one, over whom I have killed many a quail), as he knew I prescribed occasionally for dogs as well as men. He said the dog was suffering very much pain, restlessness, and was continually straining. Nothing had passed for several days except blood. His rectum was very much enlarged and swollen. I had him brought over to my office. I carefully examined him both externally and per rectum with my finger, as expected to find a mass of faeces lodged near the anus, which was very much enlarged. I could detect nothing in the bowels whatever. I gave him an injection of soap and water—about a quart—but nothing passed except the lojection and a little bloody colored matter. The dog strained a good deal afterward, and whimpered with pain when he did so.

I gave him five grains of calomel, and ordered him to have an ounce of castor oil in two hours. In about four hours he was relieved quite naturally, a quantity of healthy matter having passed. Still the straining continued more or less. I came to the conclusion that the dog must have swallowed a bone or other hard substance, which had lodged across the bowels some place out of reach, which by its irritation caused him to strain so. I had him dieted on vegetable food with very little meat, and for some time he seemed to get a good deal better, and was able to run about quite lively.

In about three weeks I got an urgent message one morning to say that the dog appeared to be dying, and would I go over to see him. I found him lying in his kennel moaning most piteously. I had him brought out, and observed a very large swelling about the size of a two-quart bowl under his tail. His back was very much curved up and his eye liquid, as if suffering extreme pain. He was very much thinner than he had been, yet he was in good condition. His nose was cool and moist; rather too much so I thought. I examined him again and found some large impacted masses within the rectum. Having oiled my finger well I introduced it carefully, and after a good deal of trouble I managed to dislodge quite a quantity of hard, compact lumps. I worked away at him for a long time, and by pressing with my left hand on the bowels externally, and with the finger of the right hand internally, by degrees I got away about a pound weight of these hard substances, which, very much to my surprise, contained nothing but short straw baked hard together.

I found a good deal of trouble at the inner sphincter, which was just as high as I could reach. The masses which were above it, when forced down by the hand on the outside, were always surrounded by the bowels, and it requires a good deal of manipulation to get the masses free from the upper bowel, which was thus forced down through the inner sphincter. After taking as much as I could (I had to leave off, as my finger got so sore working at the straw which was as hard as brick) I left him, having ordered him to be well steeped with warm water to relieve the external swelling.

Next morning I again went to work and got away about quarter of a pound of similar matter. I could still feel more higher up in the bowel. I left him another day and again succeeded in getting away a good deal. At the end of this operation the lumps became much smaller and contained more feculent matter, but still very hard. Had his hindquarters held up and injected about two quarts of warm water, which worked out the bowels and returned very quickly. As he seemed rather cold, and his tongue cold and glazed, I gave him an ounce of brandy and some strong beef tea. He was to have a small dose of castor oil at night, as I believed all the impacted masses were away. The next morning the bowels moved well; not much straw and very little blood. He seemed rather better; was inclined to lie in the "down charge" position, and to be weak. The swelling about the anus was very much reduced. He had quite a quantity of beef tea and some boiled rice and milk during the day.

Next morning he was found at 7 A. M. just giving his last groan, and

did not appear to have struggled much. I performed a post mortem on him eight hours after death with the following results:

Body not quite cold, reflex morris not complete. I carefully removed the skin from off the thorax and abdomen, opened the abdominal cavity by pinching up the muscles so that I could not injure any of the viscera. At first there was a considerable flow of sanguinolent serum, about 80 ounces (2 quarts) in all as near as I could estimate. The peritoneum appeared healthy, but a very little coagulated. The next thing that came into view was the greater omentum, which was in a highly congested state, of a dark, coffee color, and full of dark fluid blood. The lesser omentum was in a similar condition. The stomach appeared healthy, and contained about a pint of half digested beef tea, and a wad of straw, which was loosely packed into the pelvic or lower opening. The peritoneal surface of the bowels for their entire length appeared congested, and of a bright red color. They contained nothing whatever except a little mucus, no food of any kind; the lower portion of the colon was much swollen and thickened, but the mucous surface was not as much damaged as might have been expected, considering the amount of rough usage it must have had. All the other organs were healthy.

This is just as I found matters, and now I am at a loss to determine the cause of his rapid and almost to the end painless death. Would the inflammation of the mesenterics with the effusion of blood and serum cause it? Did this inflammation, or rather congestion, take place from the removal of the pressure from the solar plexus of nerves, more particularly the celiac division of the epigastric nerves, for undoubtedly these large masses of impacted matter must have pressed considerably on the nervous supply of the bowels?

Did the removal of that pressure from both the nervous and arterial trunks cause death from shock? I can't imagine there was much active inflammation, as he would have had more pain on pressure over the bowels at least 12 hours before death, which he certainly had not. Another point to this case, the wad of straw which was in his stomach and none in any other part of the canal. Could it have been possible for the whole amount of straw which was removed from him before death to have remained in the stomach for a length of time, and only be set in motion by the original doses of castor oil? For I have since learned that he had been pretty well-to-do before I saw him first, without producing any effect. I suppose the castor oil gave him at the outset of my treatment must have acted on the secretions, and thus produced the stools he passed four weeks before he died.

Question: If he had been given an active emetic at the beginning would he have got rid of the straw by the mouth? This occurred to me when I found the straw in the stomach. It is easy to see where the straw came from, as he was a most ravenous feeder and used to carry all the meat and bones he could beg or steal to the neighborhood into his kennel, which was bedded with straw, he must have swallowed the straw with his other food, and as it did not digest it was retained in the stomach and bowels, for he was never observed to pass any straw before I removed the first lot four days before he died.

I think this case teaches one useful lesson, never to allow dogs to carry their food into their kennels if littered with straw or other litter of an indigestible kind.

Perhaps some one may suggest the cause of death in this case, which to me seems rather obscure.

I am yours, etc., J. S. NEVIN, M. D.
London, Ont., Feb. 4, 1878.

ST. LOUIS BENCH SHOW.

ON Tuesday the St. Louis Bench Show opened with great eclat. Certainly the most sanguine expectations of the officers of the St. Louis Kennel Club were more than fulfilled. Nearly 1,000 entries have been made. Some of the finest dogs in England have been sent in for exhibition. As we have competent representatives in St. Louis, we will be enabled to give our readers the leading events of the show. We present this week as much of the list of entries as our space will allow. In this catalogue may be seen the names of many of the stars in the canine firmament:

CLASS 1—Imported and Native English Setter Dogs.

T H Scott, Kilvington, Thirsk, Yorkshire, England, Pound, 2 yrs and 4 mos; Quince, Prudence, 1st at Taviestock, 1st and cup at Cambermoure. Rock, 4 yrs; Rock, Polly, Pearl, 3 yrs; Sam 1,433, Snake, 1,561; 1st, Tiverton, 2d, Liskeard.

Geo B Olason, Milwaukee, Wis, Royal Duke, black, white and tan, 19 mos; Carlowitz, True, \$500.

Capt J W Foster, Leesburg, Va, Duke, black, white and tan; 27 mos; Pride of the Border, Kirby, not for sale; prize winner Baltimore and New York. Sam Tilden, lemon and white; 19 mos; Rock, Kirby, \$100; winner Baltimore and New York.

T Donoghue, LaSalle, Ill, Brussels, black, white and tan; 2 yrs and 7 mos; Leicester, Dart, not for sale; winner Chicago.

P H Bryson, Memphis, Tenn, Gladstone, blue belton; 19 mos; Dan, Petrel; 1st in puppy stakes, Nashville, 1877; not for sale; winner, Memphis, field trials.

L H Smith, Strathroy, Ont, Bronte, white and lemon; 15 mos; Leicester, Viorese; winner London, Ont.

J C Higgins, Delaware City, Del, Lincoln, lemon and white; 1 yr and 10 mos; Dan, Lill II; not for sale; winner England.

E A Abbott, Marshalltown, Iowa, Robin, orange and white; 4 yrs; Joe, Fanny; not for sale.

F Masfield, 821 Preston Place, St Louis, Dan, black and white; 14 mos; Dick, Belle.

H W Gause, Wilmington, Del, Warwick, lemon and white; 10 mos; Leicester, Petrel; not for sale.

J H Whitman, Chicago, Rattler, black and white ticked; 17 mos; Rob Roy, Pickles, \$500; winner St Louis.

Arnold Burges, Hillsdale, Mich, Druid, black and white; 5 yrs; Prince, Dora, \$5,000; winner, England, field trials.

Henry Otten, Baltimore, Tell, white and orange; 3 yrs.

P H Morris, New York, Lark, orange and white; 4 yrs; Phil, Dido, \$2,500; winner, New York, Philadelphia and Pittsburg.

CLASS 1—Imported and Native English Setter Bitches.

T H Scott, Kilvington, Thirsk, England, Pliny, 3 yrs; Sam, 1433; Snake, 1561.

W A Strother, Lynchburg, Va, Frost, lemon and white; 23 mos; Leicester, Viorese; not for sale.

Theo Morford, Newton, N J, May, orange and white; 4 yrs; Joe, Nelly; not for sale; winner, Springfield, Mass.

L H Smith, Strathroy, Ont, Pearl, blue belton; 3 yrs; Prince, Lill II; not for sale; winner, New York.

D C Sauborn, Baltimore, Mich, Nellie, black and white; 2 yrs; Belton, Dimple; exhibition only; winner, Hampton field trials.

H W Gause, Wilmington, Del, Belle, black, white and tan; 27 mos; Pride of the Border, Kirby; not for sale; winner, Baltimore.

James H Drew, Columbia, Tenn, Queen, white and black, ticked; 2 yrs; Rob Roy, Pickles; \$300.

J H Whitman, Chicago, Floss, orange and white; 2 yrs; Rock, Pickles; \$300.

Arnold Burges, Hillsdale, Mich, Queen Mab, black, white and tan; 4 yrs; Dan, Nellie; \$5,000; winner, Chicago and Memphis.

CLASS 6—Imported English Setter Dogs.

T H Scott, Kilvington, Thirsk, Yorkshire, England, Pound, 2 yrs and 4 mos; Quince, Prudence; 1st at Taviestock, 1st and cup at Cambermoure. Rock, 4 yrs; Rock, Polly, Pearl, Sam, 1433, Snake, 1561; 1st at Tiverton, 2d at Liskeard.

Geo B Olason, Milwaukee, Wis, Royal Duke, black, white and tan; 19 mos; Carlowitz, True; \$500.

Capt J W Foster, Leesburg, Va, Sam Tilden, lemon and white; 19 mos; Rock, Kirby, \$100. Duke, black, white and tan; 27 mos; Pride of the Border, Kirby, not for sale.

D O Bergundthal, Indianapolis, Ind, Blake, black, white and tan; 4 yrs and 6 mos; Dan, Itaby; not for sale.

T Donoghue, LaSalle, Ill, Brussels, black, white and tan; 2 yrs and 7 months; Leicester, Dart; not for sale.

P H Bryson, Memphis, Gladstone, blue belton; 19 mos; Dan, Petrel; not for sale.

L H Smith, Strathroy, Ont, Bronte, white and lemon; 15 mos; Leicester, Viorese; not for sale.

J C Higgins, Delaware City, Del, Lincoln, lemon and white; 1 yr and 10 mos; Dan, Lill II.

E C Waller, Chicago, Prince Peg, blue belton; 16 mos; Rock, Peg; not for sale.

H W Gause, Wilmington, Del, Warwick, lemon and white; 10 mos; Leicester, Petrel; not for sale.

J H Whitman, Chicago, Rattler, black, white, ticked; 17 mos; Rob Roy, Pickles.

Arnold Burges, Hillsdale, Mich, Druid, black and white; 5 yrs; Prince, Dora; \$5,000.

Baltimore Kennel Club, Baltimore, Grouse, liver and white; 4 yrs; Sam, May; not for sale. Rock, liver and white; 4 yrs; Sam, May.

CLASS 6—Imported English Setter Bitches.

T H Scott, Kilvington, Thirsk, England, Pliny, 3 yrs; Sam, 1,433; Snake, 1,561; not for sale.

Capt J W Foster, Leesburg, Va, Brenda, black, white and tan; 27 mos; Pride of the Border, Kirby; not for sale.

John W. Monson, St Louis, Mo, Rose, lemon and white; 3 yrs; Rock, Pickles; \$200.

W A Strother, Lynchburg, Va, Frost, lemon and white; 23 mos; Leicester, Viorese; not for sale.

L H Smith, Strathroy, Ont, Pearl, blue, belton; 3 yrs; Prince, Lill II; not for sale; Morsey, black, white and tan; 3 yrs; Leicester, Dart; not for sale.

John Davidson, Monroe, Mich, Doll, black, white and tan; 5 yrs; Prince, Dora; not for sale; exhibition only. Nellie, black and blue, 3½ yrs; Sam, Bill; \$200; exhibition only. Ailsa, white and black, 1½ yrs; Royal, Nina; not for sale; exhibition only.

H W Gause, Wilmington, Del, Belle, black, white and tan, 27 mos; Pride of the Border, Kirby.

James H. Dew, Columbia, Tenn, Queen, white and black, ticked, 2 yrs; Rob Roy, Pickles, Zephyr, black, white and tan, 2 yrs; Whip, Fanny, Rose; \$200.

J H Whitman, Chicago, Floss, orange and white, 2 yrs; Rock, Pickles.

Arnold Burges, Hillsdale, Mich, Psycho, black and white, 16 mos; Rob Roy, Queen Bess; for sale.

Wm B Wells, Jr, Chatham, Canada, Star, blue belton, 2 yrs and 8 mos; Leicester, Dart; not for sale.

J C Higgins, Wilmington, Del, Pique, lemon and white, 10 mos; Leicester, Petrel; not for sale.

CLASS 6—Imported English Setter Puppies Over 6 and Under 12 Months.

T H Scott, Kilvington, Thirsk, England, 7 mos, Blue Prince II, 6,097, Prue, 5,774; 7 mos, Blue Prince II, 6,097, Prue, 5,774.

D O Bergundthal, Indianapolis, Ruby, black, white and tan, 7 mos; Blake, Fanny, \$100.

S Fleet, Spier, M D, 162 Montagne street, Brooklyn, Wanda, blue belton, 7 mos; Paris, Pearl; not for sale. Maida, black, white and tan, 8 mos; Dick, Chio; not for sale.

John R Chickener, Morrisville, Ill, Dollar, black, white and tan, 6 mos; Rake, Fanny; not for sale.

D O Bergundthal, Indianapolis, Phyllis, white and lemon, 9½ mos; Leicester, Petrel; not for sale.

Joe C Higgins, Delaware City, Del, Pique, white and lemon, 10 mos; Leicester, Petrel; not for sale.

H W Gause, Wilmington, Del, Warwick, lemon and white, 10 mos; Leicester, Petrel; not for sale.

Arnold Burges, Hillsdale, Mich, Queen Vio, black, white and tan, 10 mos; Rob Roy, Queen Mab, \$500.

CLASS 6—Imported English Setter Puppies Under 6 Months.

J McWorter, Canton, Mo, Ombrage, lemon and white, ticked, 4 mos; Afton, Ailsa; not for sale.

G W Bailey, St Louis, Sovereign, liver and white, ticked, 2 mos; Carlowitz, True.

CLASS 7—Native or Cross-bred English Setter Dogs.

Theodore Morford, Newton, N J, Gun, orange and white, 1 yr; Glen, May; not for sale. Don, orange and white, 4 yrs; Joe, Gypsy; not for sale. Quail, orange and white, 1 yr; Joe, Puss; not for sale.

J G Marriott, 2,715 State street, St Louis, Frank, lemon and white, 18 mos.

Alfred S Kregel, Jefferson City, Mo, Jim, liver and white, 5 yrs; Jack, imported bitch, \$500.

S C Edgar, St Louis, Josh Billings, orange and white, 2 yrs; by Phil; not for sale.

C P Budd, 612 Olive street, St Louis, Ned, lemon and white, 3 yrs; not for sale.

Charles Stockton, 1,418 Garrison avenue, St Louis, Frank, liver, 22 mos; Nep, Gordon bitch.

John Davidson, Monroe, Mich, Laddie, lemon and white, ticked; 18 mos; Rock, Flora II, \$200; exhibition only. Afton, lemon and white, ticked; 18 mos; Rock, Flora II; not for sale; exhibition only.

John S Shaw, St Charles, Mo, Cap, orange and white; 7 yrs; Sincho, Spot, \$500.

R E Carr, 3,130 Lucas avenue, St Louis, Grouse, white and brown; 5 yrs; from imported stock.

O F Garrison, Carondelet, Mo, Sport, brown and tan; 2 yrs.

F A Churchill, St Louis, Duke, white and chestnut; 3½ yrs.

Charles De Ward, Lucas avenue, St Louis, Dan, lemon and white; 6 yrs; Grouse, Maude, \$300.

E C Waller, Chicago, Jack, lemon and white; 3½ yrs; Rock, Juno, \$250. Jeff, lemon and white, 22 mos; Dr Gunn's dog, Juno, \$150.

W T Irwin, Topeka, Kansas, France, liver, ticked; 15 mos; Belton, Daisy, \$150.

Geo K Hopkins, Alton, Ill, Beppo, liver, ticked; 2 yrs 10 mos; Joe, Bell; not for sale.

E A Abbott, Marshalltown, Iowa, Robin, white and orange; 4 yrs; Joe, Fanny; not for sale.

F Mansfield, St Louis, Dan, black and white; 14 mos; Dick, Bell; not for sale.

Joe H Suesseel, St Louis, Mo, Heek, liver and white; 2 yrs; not for sale.

J J Bailey, 1,542 Chouteau avenue, St Louis, Jeff Davis, lemon and fawn; 18 mos; not for sale.

C O Dutcher, 2,813 Cass avenue, St Louis, Rip, red; 2 yrs; \$50.

Wm Vie, St Louis, Franco, orange and white; 4 yrs; full pedigree; not for sale. Doc, orange and white; 2½ yrs, \$50; exhibition only.

Dr I W Steedman, St Louis, Ponto, black; 4 yrs; not for sale.

Fred Schreiber, 416 Sould street, St Louis, Tom, white and lemon; 3½ yrs, \$75.

J McWorter, Canton, Mo, Frank, black and white, ticked; 3 yrs; Bingo, Lady, \$50.

T W Jackson, Chatham, Canada, Bruce, chestnut, ticked; 20 mos; Rock, Flora II.

John O F Delaney, St Louis, Lesse, black and white; 1 yr.

H C Pierce, St Louis, Princes, orange and white; not for sale.

Isaac Weighell, Rochester, N Y, Horton, white and lemon.

A C Waddell, Kansas City Kennel, Kansas City, Shot, liver and white; Frank, Daisy; 3 yrs. Count, 3 yrs; Dash, Rose.

CLASS 7—Native or Cross Bred English Bitches.

Theo Morford, Newton, N J, May, orange and white; 4 yrs; Joe, Nelly; not for sale. Beas, orange and white; 1 yr; Joe, Puss; not for sale.

Chas F Limburg, Mo Pacific Railway, St Louis, Gypsa, brown and tan; 22 mos; J L Patterson's dog out of Lanham's Gyp.

T Donoghue, La Salle, Ill, Daisy, orange and white; 2 yrs and 8 mos; Col Kert's Storm, J B Little's Belle.

Rudolph Borchardt, 716 Locust street, St Louis, Fanny, liver and white; 4 yrs; by Edward's Sport.

Geo K Hopkins, Alton, Ill, Bull, lemon and white; 2 yrs and 10 mos; Joe, Belle.

Wm Vie, St Louis, Bessie, orange and white; 8 yrs; full pedigree; \$150. Zita, orange and white; 2½ yrs; full pedigree; \$150.

Erdmann A Herzberger, New York, Fatti, blue belton; 19 mos; Pride of the Border, Jessie.

Fred Utz, Brighton, Mo, Belle, white; 8 yrs.

Baltimore Kennel Club, Baltimore, Lady Ottilia, white and liver; 2 yrs. Alexandrina, white and liver; 13 mos; Carlowitz, Orphina.

A C Waddell, Kansas City Kennel, Kansas City, Mo, Daisy, Dainty, chestnut and white; 2 yrs; Jack, Floss.

C F Demuth, Fort Dodge, Iowa, Kate, lemon and white; 7 yrs; Don, Sallie.

E H Gilman, Detroit, Mich. Not named.

CLASS 7—Native English Setter Puppies, Over 6 and Under 12 Months.

W H Holabird, Valparaiso, Ind, Fanny Davenport, white and black; 11 mos; Rob Roy, Queen Blanche.

James Sherwood, Edina, Mo, Aimee, black and white; 8 mos; Rob Roy, Dream, \$100.

J P Schmitt, St Louis, Sport, orange and white; 8 mos.

F Fink, 1,000 North Ninth street, St Louis, Tin, orange and white; 11 mos; not for sale. Fritty, orange and white; 11 mos; \$50. Belle, orange and white; 11 mos; \$50.

A C Waddell, Kansas City, Fanny, liver, ticked; 8 mos; Jack, Daisy, Dainty.

E H Gilman, Detroit, Mich, Prince, lemon and white, ticked; 8 mos; by imported dog out of Isaac Voght's bitch.

CLASS 7—Native English Setter Puppies, Under 6 Months.

O F Garrison, Carondelet, Mo, Mike, lemon; 5 mos; Sport, Fan.

Otto Holzgrehle, 2,211 Franklin avenue, St Louis, Tom, orange; 5 mos; Jerry, Nelly, \$50.

J J Bailey, 1,542 Chouteau avenue, St Louis, Bob Leo, lemon and fawn; 3 mos.

E H Gilman, Detroit, Mich. Not named.

A C Waddell, Kansas City Kennel, Kansas City, Mo, Sue, orange and white; 3½ mos; Dash, Sue. Jerry, orange and white; 3½ mos; Dash, Sue.

CLASS 26—Imported or Native English Setter Stud Dogs. (To be shown with two of his got.)

L H Smith, Strathroy, Ont, Leicester, white and lemon; 5 yrs; Dan, Lill II.

O F Garrison, Carondelet, Mo, Sport.

W G Thomas, Chicago, Shot, black, white and tan; 2 yrs; Don, Dimple.

Arnold Burges, Hillsdale, Mich, Rob Roy, black, white and tan; 7 yrs; Fred, Rhoebo.

CLASS 26—Imported or Native English Setter Brood Bitches. (To be shown with two of her progeny.)

Capt J W Foster, Leesburg, Va, Kirby, with Duke, Sam Tilden and Brenda.

S E Billbrough, 3,143 Franklin avenue, St Louis, Fanny, orange and white, 3 yrs and 6 mos.

L H Smith, Strathroy, Ont, Dart, Blue Belton, 5 yrs, Prince, Dora.

C F Demuth, Fort Dodge, Iowa, Pickles, lemon and white, 5 yrs, Prince, Lill II.

CLASS 30—For the Best Kennel of English Setters. (To consist of not less than five, imported or native.)

T H Scott, Kilvington, Thirsk, England, Pliny, Pearl, Pound, Ro k, and two puppies.

Henry Griffiths, Butler, Ill, Don, Don II, Andy, Chioe, Juno.

L H Smith, Strathroy, Ont, Leicester, Paris, Bronte, Pearl, Dart, etc.

John Davidson, Monroe, Mich, Doll, Ailsa, Nellie, Afton and Laddie; exhibition only.

Arnold Burges, Hillsdale, Mich, Druhl, Queen Mab, and others.

CLASS 2—Imported and Native Irish Setter Dogs.

T H Scott, Kilvington, Thirsk, Yorkshire, England, Pearl, red, 16 mos; Grouse, Maybe.

St. Louis Kennel Club, St Louis, Mo, Thorstein, red, 2 yrs, \$1,000; not for competition. Sung II, red, 4 yrs; Grouse, Maybe I, \$300. Berkeley, red, 19 mos; Elcho, Loo II; 2d Hampton Field Trials, St. Louis.

E F Stoddard, Dayton, Ohio, Bob, red, 2 yrs; Erin, Queen; 1st Market Drayton, 1st Tarpeley, 1st Donbeigh, \$300; winner, Ireland.

(CONCLUDED IN OUR NEXT.)

SPECIAL PRIZES OFFERED BY THE MASSACHUSETTS KENNEL CLUB.

CLASS A.—For the best kennel of English Setters, either native or imported, to consist of not less than five and to be owned by exhibitor; a fine W. & O. Scott & Sons' breech-loading double gun, presented by Messrs. Wm. Read & Sons, Boston, Mass., value \$150.

CLASS B.—For the best kennel of Irish Setters, either native or imported, to consist of not less than five and to be owned by exhibitor; a fine Fox's patent breech-loading double gun, presented by the American Arms Co., Boston, Mass., value \$150.

CLASS C.—For the best kennel of Gordon Setters, either native or imported, to consist of not less than five and to be owned by exhibitor; a Fox's patent breech-loading double gun, presented by the Massachusetts Kennel Club, Boston, Mass., value \$100.

CLASS D.—For the best kennel of Pointers, either native or imported, to consist of not less than five and to be owned by exhibitor; a fine Daly breech-loading double gun, presented by Wm. R. Schaefer, Esq., Boston, Mass., value \$125.

In classes A, B, C and D the entrance fee is \$5.

CLASS E.—For the best kennel of Water Spaniels, to consist of not less than four, to be owned by exhibitor; a fine leather shooting suit, presented by Messrs. G. W. Simmons & Sons, Boston, Mass., value \$54.

CLASS F.—For the best English Setter Stud Dog, either native or imported, to be shown with two of his get; a fine oil painting (sporting subject), presented by Gaston Fay, Esq., New York, value, \$150.

CLASS G.—For the best Irish Setter Stud Dog, either native or imported, to be shown with two of his get; a pair of gold-mounted revolvers and case, presented by Messrs. John P. Lovell & Sons, Boston, Mass., value \$50.

CLASS H.—For the best Gordon Setter Stud Dog, either native or imported, to be shown with two of his get; a case of Oriental Diamond Grain Powder, presented by Oriental Powder Mills, Boston, Mass., value \$35.

CLASS I.—For the best Pointer Stud Dog, either native or imported, to be shown with two of his get; a case of Enr ka Powder, presented by Warren Powder Mills, Boston, Mass., value \$30.

CLASS J.—For the best English Setter Brood Bitch, either native or imported, to be shown with two of her progeny, a case of Oriental Falcon Ducking Powder, presented by Oriental Powder Mills, Boston, Mass., value \$30.

CLASS K.—For the best Irish Setter Brood Bitch, either native or imported, to be shown with two of her progeny; a sporting rifle, presented by Messrs. B. Remington & Sons, Boston, Mass., value \$35.

CLASS L.—For the best Gordon Setter Brood Bitch, either native or imported, to be shown with two of her progeny; a silver-mounted split bamboo fly rod, presented by Messrs. Conroy, Bissett & Mallison, New York, value \$50.

CLASS M.—For the best Pointer Brood Bitch, either native or imported, to be shown with two of her progeny; one subscription to A. Pope, Jr.'s "Upland Game Birds and Water Fowl of the United States," presented by Messrs. Scribner, Armstrong & Co., New York, value \$25.

CLASS N.—For the best display of Fox Hounds, to comprise not less than two couples, to be owned by exhibitor; a handsome gold and silver medal, presented by Messrs. A. W. Mitchell & Co., Boston, Mass., value \$25.

CLASS O.—For the best Mastiff, dog or bitch, a silver cup, value \$25.

CLASS P.—For the best St. Bernard, dog or bitch, a silver cup, value \$25.

CLASS Q.—For the best Pug, dog or bitch, a silver collar, presented by Al. Watts, Esq., Boston, Mass., value \$25.

Any further special prizes will be published in the sporting papers as received.

The entrance fee for special prizes (for which separate entries must be made) will be \$2, as in the general classes, except in classes A, B, C and D, where the fee is \$5.

In the classes for stock dogs and brood bitches it is understood that the progeny to be entered with them need not be the property of the person making the entry.

In order that the catalogue may be prepared at the earliest possible moment, it is particularly requested that exhibitors will not delay sending in their entries. No entries will be received later than March 13th, except in case of foreign exhibitors, who will be allowed until March 18th.

EXPRESS RATES.—Arrangements have been made with the Adams and the American Express Cos. to transport dogs to and from the exhibition at a reduction of one half the usual rates for dogs, with the understanding that they are released from all liability in case of accident.

Arrangements have been made with all the railroads entering Boston for low rates of fare to exhibitors, also for free passes for dogs accompanied by their owners.

CHARLES LINCOLN, Supt.,
53 Congress St., Boston, Mass.

P. O. Box 3,008.

Entries close March 13, 1878.

THE COCKER.—A correspondent asks us to describe the cocker. The old-fashioned cocker of fifty years ago was a smaller dog than the cocker of to-day. About twenty or twenty-five pounds was a full weight. To-day, by crossing with the springer, the weight has been brought up to thirty and thirty-five pounds. True liver color is the shade most in repute, though all colors are found. The adopted points are, for the cocker or field spaniel: Head, 15; ears, 5; neck, 5; chest, back and loins, 20; length, 5; legs, 10; feet, 10; color, 5; coat, 10; tail, 10; symmetry, 5. Tails are mostly cropped. In judging, symmetry is an important point.

A MOST SINGULAR DOG.—Just a year ago, while in Boston, the editor's attention was called to a most singular dog. At first appearance the dog looked like an enormous gray spaniel. It was very shaggy and feathered from stem to stern with hairs several inches long. The tail was as bushy as a Newfoundland's, and the hair hung over the creature's eyes, as it does over a Skye terrier's. The visible make-up of the animal was ponderous and unwieldy, if not absolutely clumsy. So much for appearances. In anatomical reality, the dog was not a spaniel at all, or in any way related to the tribe of spaniels. Its shaggy coat was only a disguise. It was as complete a disguise as the voluminous wrap which transforms the fairy in the play into a decrepit old woman. Take off the dog's hair, and the body of a lithe, gaunt and perfectly formed greyhound remained! It was a mature, full-grown animal, some two or three years old, if we remember aright. It had all the characteristics of a greyhound. It was extremely fleet, and would jump an eight-foot fence like a kangaroo dog. It would follow game by sight and nose. It was a good hunter. At the same time it would take the water. We recall these facts incidentally now, but intended to state them long ago. The question which we have now to propound, and which puzzled both the writer and all who saw him is: What kind of a canine coandrum is this? Did any one ever before hear of such a breed of dogs?

TWO FIRST-CLASS PERFORMERS.—At Newark, in the play of "School," two really good dogs were introduced in the hunting scene. Nick and Ned were perfect in their parts and did quite as well as the comedians. Some bad young man in the gallery whistled to the dogs in order to make them forget their cues, but the dogs only wagged their tails and refused to budge. A dog before a crowded house facing the foot lights looks at an audience in the blandest way. He expresses as plainly as possible that he has no end of friends in that audience, and that he is not a bit afraid. No, not a bit more than is the Count Johannes. Once, in an Offenbach opera in Paris, a whole pack of hounds were put on the boards. It was their duty to howl in chorus. Somebody threw a link of sausages on the stage, and those French dogs made for those sausages, and there were sixteen distinct dog fights all at the same time. Moral: Pitch bouquets to pretty actresses, but never throw sausages to histrionic dogs.

DR. STRACHAN'S DAISY BOUGHT BY THE KENNEL CLUB.—We notice that the Westminster Kennel Club have purchased from Dr. Strachan, the pointer bitch Daisy. She won the first prize in her class at the New York Bench Show, and was pronounced an extremely handsome animal by the Rev. Mr. Macdouna, who acted as judge. Dr. Strachan's pointers have been a long time famous. Flake and Whisky were bred by him, and Daisy is a daughter of Flake, granddaughter of Flash, and great granddaughter of George, who was brought to this country from the Duke of Beaufort's kennel by the late Sir Frederick Bruce, from whom Dr. Strachan got him. George was a grand pointer, as all admit who ever saw him, and Dr. Strachan says he was the handsomest pointer he ever saw in England or out of it. A worthy sire of many worthy descendants, the Westminster Kennel Club have in Daisy a valuable addition to their stock, and in an interview with the doctor he stated that he would not have parted with her but that she went into such good hands, and where the best use would be made of her.

TO RELIEVE SWOLLEN DUGS IN A BITON.—A correspondent from Philadelphia informs us of the successful treatment of a bitch suffering from distended dug, by the use of bathing the parts with warm vinegar, and then anointing with cat-fish fat. In taking puppies from their mother the same plan is adopted. We do not think there is any specific value in cat-fish fat, any animal or vegetable oil would have a salutary effect.

For Forest and Stream and Rod and Gun. AFTER THE HOUNDS.

HUNTING REMINISCENCES—NO. III.

IN my last, I endeavored to recall some of the incidents of a run with a pack at Annapolis, Maryland. The hounds composing the pack were a fair type of the native fox-hounds of that period; they may be described as rather heavy-headed, with immense pendulous ears, rather too long coupled, and not quite straight enough in the fore-legs, which were strong and heavy in bone. Their sterns, with a small hut decided feather, were carried with a cimeter-like curve, well over their backs. They had been carefully bred, and had descended without the taint of an impure cross from the original stock imported by the founders of the colony. In all probability, Mr. Waters' hounds were just such as old Squire Western is described as riding to, in Fielding's immortal story of Tom Jones.

But it had been ascertained even then, that these hounds, while they could easily dispose of the native gray-fox, were not a match for the imported reds, and efforts were already making to improve their speed, and these efforts were successful, for in a very few years after the run with the pack above-described, a subscription pack was gotten up in Baltimore with a more modern and a far superior class of hounds. Baltimore, the beautiful commercial metropolis of the State of Maryland, was, and still is, admirably situated for the enjoyment of all sports pursued on land or water. Foxes are yet numerous in the "necks," almost within sound of her church bells. The speckled trout are yet to be found in the neighboring brooks, while the waters of her magnificent bay and its tributary streams are teeming with inexhaustible supplies of those wild fowl, fish, terrapins, oysters and crabs, which have made the flesh-pots of old Maryland as famous as those of ancient Egypt. So noted, indeed, was the locality in the olden days for the quantity of game, that one of the earlier Governors of the State built himself a hunting-lodge to the west of the then village of Baltimore; and this ancient lodge, commanding one of the finest panoramic views on the American continent, is now the residence of Mr. John Serdec, and is known to this day as Hunting Ridge.

The above facts, and probably an inherited taste from their ancestors who founded their beautiful city, will account for the very general fondness for field sports for which Baltimoreans are noted.

But let us "hark back" to the hounds.

When the writer was quite a child, so young as to be going to a "dame's" school (in company, by the way, with his lifelong friend, the present venerable Senator from Hartford, the Hon. Carroll Walsh), the most noted fox-hunter in Baltimore was the late Judge Thomas Kell, long since passed away to the happy hunting grounds. The judge was one of those upright magistrates of the ancient regime, without a stain upon the ermine conferred upon him by the selection of the Governor, and not by the usual voice of a greasy mob. With all his legal learning he was a Nimrod in the chase and always happy, on proper occasions, to lay aside the scales of justice to take up the hunting-horn.

The Judge growing old gave up hunting, and turned over his hounds to a club of younger men, who, with his pack as a nucleus, soon got up a subscription hunt, which, for systematic management, the quality of its hounds, its kennels and general appointments had no equal in this country at that day.

The most active members of this hunt, consisting of a number of the most prominent gentlemen of the city, were the late Robert Oliver—grandfather of the Colts and Craigs of New York—and the late John S. Skinner, editor of the old *American Farmer* and Postmaster of Baltimore. The first—the merchant Prince of his day—through his friends, the Duke of Sussex and Mr. Coke, of Holkham, England, procured several couples of hounds from both Britain and Ireland; and the latter, by means of the wide circulation of his paper and an extensive acquaintance throughout all the planting States, obtained some of the best hounds to be had from the best Southern kennels. Of the hounds imported by Mr. Oliver, the only cross which "nicked" with our Southern blood was the Irish, and to the strain so obtained some of the finest hounds now in Maryland, Virginia, North Carolina and Tennessee trace their descent.

The kennel of the Baltimore hunt was situated nearly opposite to that old land-mark of the city—the Three Sun Tavern (the houses of entertainment were not hotels in those days), at the corner of Pratt and Paca streets. It was in charge of old Colonel Amy, who had commanded a militia regiment at the battle of North Point, from which he was famous for having effected a precipitate, if not masterly, retreat. Old Amy was simply the kennel huntsman, and rarely accompanied his charge to the field, but when he did, he always carried slung at his back a curious old leather bottle filled with whisky, and over his shoulder a huge tin horn, the hoarse blasts of which might rival the trump of the resurrection. As the hunt had no well-preserved covers as they have in England, and in which a fox may be found at any hour in the day, the sportsmen had to be in the field by times before the evaporation of the dew. This led them to the very pleasant social custom of breakfasting on hunting mornings in squads of half a dozen or more at each other's houses; and this breakfast was none the worse for the competition among the wives for the reputation of setting forth the most luxurious meal. These breakfasts were generally over one, and sometimes two, hours before day-break.

When the pack was not sent on ahead to the "meet," it was the custom to adjourn to the kennel immediately after breakfast, couple the hounds, turn them out, and then proceed at an easy trot to the appointed place.

A sight that would astonish the modern dwellers in the Monumental City now, was common enough then. A procession of a dozen or more horsemen, followed by fifteen or twenty couples of hounds, proceeding from Pratt street, up Paca, to Market, and down Market, over the bridge through Old Town, toward Canton, through the whole length of the silent, sleeping city.

The writer was an actor in such a scene more than forty

years ago. About a dozen of the club had breakfasted with the late Mr. Thomas Johnston, then residing on the west side of Howard, below Market street. As we issued from the house, and mounted our horses, the old-time watchman, armed with spontoon and rattle, saluted us with his cry: "Past four o'clock, and a cloudy morning." We all turned down Market street, and at the corner of Culvert we were joined by quite a large delegation from Washington City, who had come over to join the hunt, and who, rather than rise at what they called a barbarous hour in the morning, had made a night of it at Uncle Davy Barquins. Alas! they are all gone now, save the writer and Sir Andrew Buchanan, lately H. M. Ambassador at Vienna. Among this large party were Osborne Sprigg, Bernard Carter, Columbus Munro, Captain Ramsay of the United States Navy, and Groome, of the Marine Corps, Sir Andrew Buchanan, of the British Legation, and several other young diplomats, and some Southern Members of Congress. At Gay street a blast from a hunting horn brought out Mr. Ohner, Mr. Gibbs, Colonel John Thomas, and several others who had been breakfasting with Mr. O. Our party continued to increase as we proceeded, and as we clattered over Market street we might, had it been war time, have been mistaken for a squadron of Harry Gilmor's raiders.

Just before reaching the old Canton race-track the hounds were uncoupled and cast off, and in less than two minutes, in a place now covered with dwelling-houses, the mellow bass of old "Ringwood" was heard, and in another instant the united cry of thirty hounds made the "welkin ring" with glorious music. By the merest chance the pack had struck the burning scent of a traveling fox, and they went tearing away with it, giving assurance of a gallant run.

The numerous field of horsemen were taken by surprise. Great confusion ensued, and several of the "green uns" came to grief before the chase had fairly commenced; but the steady old Nimrods, familiar with the country, got away with the hounds. The fox headed as straight as the crow flies for North Point, and for five or six miles they had a magnificent gallop right down the country road in full hearing of the cry. Here a check occurred which enabled the stragglers to get up. Reynard, finding that speed alone could not save him, had recourse to stratagem, and such a stratagem! Its wonderful acuteness would have been incredible to all save an old fox-hunter or a veteran hound. Turning sharp to the right, Master Reynard made straight for the river, where, with his feet actually in the water, he ran nearly down to the light-house. If he had had the luck to have made this run on a rising tide his escape would have been certain, for all scent and trace would have been washed away and obliterated by the rising waters; but the tide was running out, and the trail was all the stronger. He then tried the common dodge of running on logs and the tops of fences, but some of the old hounds could play at that game as well as he. Then he first gave signs of weakening by making short doubles, and running from one pine thicket to another; but still the thunderous cry in his rear grew nearer and nearer. The horsemen, now come to a halt in an open field, viewed him repeatedly, as, rapidly failing, he passed from one cover to another in a feeble lope, which at last was reduced to a trot as he passed for the last time from their view, not fifty yards in advance of the leading dogs; but the nature of the ground still concealed him from their sight. He entered a dense thicket of second-growth pines, with the howling pack close on him, when hang! bang! a double shot was heard, the cry of the hounds suddenly ceased, and a dead silence ensued. Presently out issued from the pines a small man with an immense pair of leather gaiters, reaching almost to his hips, a double gun in his hand, and a huge game bag at his back; on his head was an odd-looking foreign cap. It was one of those little Frenchmen, a class of people who to this day infest the suburbs of our large cities, shooting wrens, robins, tomits, and now and then a chicken, and call it *la chasse*.

Upon being asked if he had seen the fox, the little fellow drew himself proudly up, and pointing exultingly to his bag, as if he had accomplished a great feat, he exclaimed: "Ze fox, Messieurs, I have save him, as he escape from ze dogs. I shoot him pan! pan!" He opened his bag, and there lay, sure enough, our noble fox, murdered by the little pot-hunting frog-eater.

To describe the indignation, the fury, and the profane denunciations of the disappointed hunters, and the astonishment and fright of the little Frenchman as the fox was rudely jerked away from him, and old Mr. Oliver threatened to hang him to the nearest tree with his hide rein, is beyond my powers.

All this, Mr. Editor, occurred long, long ago; but as I here record the incidents of that magnificent run, the pleasure is dampened by the sad reflection that of all the gallant gentlemen who rode to the hounds that day, there are but two survivors.

F. G. S.

SALE OF SCOUT.—Mr. M. Wadsworth, of Bennington, Vt., has sold to David G. Hartt, of North Port, L. I., his Plunkett-Carrie dog Scout and Plunkett-Nell bitch Bate. "Scout is a deep red, and of very much the form of Elcho. He has sired one litter of pups that are very promising. Was whelped March 3, 1876. Bate was whelped March 23, 1876.

SALE.—Mr. E. P. Welsh, York, Pa., has sold to Messrs. B. P. Harrison and W. H. Bernard, of Wilmington, N. C., two black and tan Gordon pups. Dam, Welsh's Kate; sire McCorn's Mack.

WHELPS.—A. Bellart's Rose whelped eight pups, Feb. 4, by Dr. S. F. Spier's Gypsum, six females and two males.

Titusville, Feb. 11.—Fox chasing the chief sport. Proposed new game law greatly opposed by our hunters. G. H. W.

WHELPS.—Boston, Feb. 13.—Alexander Pope, Jr.'s, Gordon bitch Jule, six pups, all black and tan; three dogs.

EDITOR FOREST AND STREAM:

During the past season I have, by my advertisement in your paper, been enabled to put the N. Y. Shooting Coat before the public; and by numerous testimonials, I find I have a coat that I can confidently recommend to any who may wish a coat (or suit) of any goods which I manufacture.

I have succeeded in producing a coat that can be worn with the greatest possible comfort, it being cut so as to enable the wearer to have free use of his arms, no matter how great the weight may be which is necessary to be carried at any time.

I am now prepared to fill any orders I may receive, at the shortest notice. Samples and rules for measurement sent on application.

F. L. SHELTON.—[Adv.]

A WEEKLY JOURNAL,

DEVOTED TO FISH AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INDOCTRINATION OF MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company.

-AT-

No. 111 (old No. 103) FULTON STREET, NEW YORK.

(Post Office Box 232.)

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Twenty-five per cent. off for Clubs of Three or more.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

* Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, FEBRUARY 21, 1878.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith, and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous contributions will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost. No person whatever is authorized to collect money for us unless he can show authentic credentials from one of the undersigned. We have no Philadelphia agent.

Trade supplied by American News Company.

CHARLES HALLOCK, Editor.

T. C. BANKS,
Business Manager.S. H. TURRILL, Chicago,
Western Manager.

—Der Waidman, the leading field paper of Germany, which is published at Ellenburg, Prussia, by F. Van Ivernois, contains, in its issue of January 7th, a portrait and biographical sketch of Charles Hallock, Esq., the managing editor of the FOREST AND STREAM; a complimentary notice from the other side of the water, which we do not fail to appreciate.

A FOREST AND STREAM SCRAP BOOK.—A correspondent sends us the subjoined suggestion for readers of THE FOREST AND STREAM, which we can most heartily endorse. With the exercise of a little caution in the selection of scraps, a home-made scrap book may in time become a treasure house of most valuable and entertaining matter. We are always greatly interested in looking over these collections; they are interesting in two ways—for the intrinsic excellence of the matter contained in the clippings, and equally suggestive as an index of the collector's taste. Our correspondent writes:

"Newspaper Cuttings" is the title of a very complete scrap-book we have lately adopted. It is published by Marcus Ward & Co., of London, and on sale by Claxton, Remsen & Hafflinger, Philadelphia. They will mail it to any address on receipt of the price. Although we are in no way connected with either of the above named firms, we especially recommend this scrap-book to all who may not particularly wish to save all numbers of THE FOREST AND STREAM, and yet would like many of the letters and different articles for future reference. Being of such a class, we find it suits our wants admirably, and now have our first scrap-book of 120 pages full of the choicest selections. The book is just suited for pasting the wide columns from FOREST AND STREAM, and we are particularly proud of our "FOREST AND STREAM Geography," as including in detail accounts and descriptions of many countries and localities nowhere to be found in our modern geographies. We have interspersed the letters and descriptions throughout with a few choice editorials and reminiscences of the editor, together with portraits of the American and English team of the late international rifle match, out of "Hunters' Camp" at the Centennial, "Edward Laverack," "A Friendly Service," "Red Irish Setter Dick," property of Wm. Jarvis, Esq.—all of which, when neatly pasted into the book with a strong solution of gum arabic, make a volume well worthy the pride of any true gentleman and sportsman.

J. LEE SMEDLEY.

JOTTINGS FROM COLORADO.

JACK SNIFE IN PARTICULAR AND MATTERS IN GENERAL.
DENVER, JAN. 5.

EDITOR FOREST AND STREAM AND ROD AND GUN:

In your issue of December 27 I notice that "B." very gracefully and truthfully states the fact in reference to the existence of jack-snipe in Colorado.

I can confirm the statement that they were comparatively plentiful here last fall. A number of local sportsmen had the pleasure of bagging a few on several different occasions, though the bag of P. F. Griffin, made the last week in September, was the most successful in point of number of which I have heard.

The writer of this article has seen jack-snipe in Colorado every spring and fall during the past three years, and apprehends it may be truthfully asserted that they were more plentiful last fall than at any time hitherto since the settlement of the State. It is further believed and predicted that the birds will become more numerous as our agricultural acreage increases, which is tantamount to asserting that as irrigation increases the bird will visit us in still larger numbers. As irrigation increases artificial lakes, with much, soft surroundings, now covered by overwood, and now exposed by the water receding, will multiply and give *Scelopax wilsoni* a decidedly increased accommodation over those of former years. Stable and corn-fields overflowed by the irrigating ditches will also afford admirable places of resort for this wild bird, and thus it is that in these parts those who love and reverence this bird, not only for the admirable sport he brings to those fond of the gun, but as well for his gastronomic value, delight in the anticipation that wisps of this bird will be more numerous in the future than in the past, and that he will prove himself to be a power, viewed from the sportsman's stand-point, in making "the desert bloom as the rose."

While upon this topic, it will not be amiss to allude to the fact that it is one of the woodpeckers of the age that our state Solons did not legislate against shooting jack-snipe in and out of season, inasmuch as in "An Act for the Protection of Game and Insectivorous Birds," passed by the General Assembly of Colorado last March, "the killing, ensnaring, trapping or netting of curlew or plover" is prohibited. What electrifying sport "trapping or netting" curlew or plover would be! For a wonder *Scelopax wilsoni* was not enumerated—nor owls, which latter omis too, as a matter of protection to the far-seeing legislators themselves, was an inexplicable oversight. You see, jack-snipe, owls and the average legislator do not eat grasshoppers, but plover and curlew do, and hence the mighty arm of the law is raised in behalf of the latter, and assists to securing a "survival of the fittest."

Before bidding adieu to Solons, owls and jack-snipe, I have only to add that I saw two of the latter hanging in front of James Cella's restaurant, on Fifteenth street, this city, on Christmas-eve. Inquiry developed the fact that they were killed the preceding day a short distance from town. It is a curious fact that during the month of Nov., the thermometer at the Signal Service Office here registered 18 degs. below zero, while it lingered near zero for several days. Bold, indeed, must be the jack and lady snipe who dare confront such hyperborean blast, and linger in the lap of winter till winter solstice is accomplished, to die an ignominious death at the hand of a "pot-hunter," as evidenced by the fact that the worthy pair found their way to the doors of a noted restaurateur rather than to the table of the slayer.

But not only were jack-snipe more numerous in the vicinity of Denver last fall than usual, but also were ducks of numerous varieties, and swan. Several of our more assiduous gunners shot splendid specimens of the latter on Sloan's Lake, a sheet of water, not more than three miles distant from the post-office.

Elk, deer, antelope, bear and bison have been in market since November 1, not constantly in the above variety, to be sure, yet with the exception of elk and bear.

Coming up Fifteenth street to-day, I was impressed at seeing so many quail and grouse at the various provision stands on that thoroughfare. I wondered where they came from. Was well aware of the fact that Kansas has statutory provision against shipping either of the above birds out of the State at this or any other season of the year. Curiosity prompted me to investigate the source of supply, partly with a view of ascertaining where to go next year to get good quail and grouse shooting. A due regard for truth, Mr. Editor, prompts me to gently whisper in your ear that the quails and grouse in question came, one and all, from "bleeding Kansas." Be it understood that Colorado is a neighbor of Kansas on the west, and on neighborly terms. Colorado, as yet, does not produce doughnuts, geese, ducks, eggs, hogs and the like in sufficient quantities to supply the demands of her citizens for the same, and the same may be asserted of prairie chickens and quails; so she calls on her generous sister, Kansas, to furnish these much needed commodities. But the majesty of the law interposes not when it comes to ship the dunghill, the domestic goose or duck, or swine from Kansas to Colorado. But it interposes when it is proposed to attempt a similar exploit on the artless quail or noble prairie chicken. Still, cunning dealers, either recognizing the "eternal fitness of things," or induced by mercenary motives—let us suppose the former—simply pack featherless dunghill and *Cupidonia cupido*, domes le duc, and *Orlyx virginianus*, in the same box or barrel, and in each instance consign the former to the dealer in this city; and it still remains a question, undecided in Colorado at least, whether duck or quail, if permitted to go unmolested, may, if surrounded with every condition favoring rapid increase of his respective species, would devour the greater number of nascent grasshoppers for the Kansas agriculturist. Be this as it may—and further, by way of mitigating the offense so far as Colorado is concerned—I would respectfully suggest that when plover and curlew get to be "as the sands of the sea shore" here, and devour all our "hoppers," Kansas will either have none of the latter, or otherwise shall have our plover to exterminate them.

I was decidedly interested in the communication of "Veteran," which appeared in your issue of December 27. He is evidently no "sounding brass or tinkling cymbal." He is a grand old "knight of the trigger," and I should like to meet him. As such, his opinions are entitled to respect. He confesses to a mild kind of mania for new guns, "and as proof of the assertion, cites the fact that he orders a new gun yearly every year. He must be one of that fortunate class of persons upon whom the inconveniences of *res angusta domi* rest lightly. He gives some excellent advice to young sportsmen about to select a gun, which, among other suggestions, is "to order from an honest maker of established reputation," but then adds, "to avoid all great establishments which make for the trade." This tabooes many well-known and skillful manufacturers, and that I may deliver myself of certain ideas I shall quote "Veteran" once more, and then "say my say." Nearer the beginning of his article he states: "I do not disparage such great names as Lancaster, Purdy, Boss and Grant, for their works speak for them, but when forty-five pounds will command as much real value as a 60-lb. as I do not see the necessity for paying the excess." Nor do I. And when forty-five pounds, or less, will buy a gun turned out by "one of the great establishments which make for the trade," and which is as elegantly finished, accurately fitted, as nicely balanced, and shoots as strongly, evenly and killingly in the field or at the trap as a forty-five pound gun made by one of the makers "who does not make for the trade," I cannot see why the forty-five pounds, with the order for the gun, had not as well be placed in the hands of the former as the latter; for, Mr. Editor, it seems to me that the facts are those: While

Messrs. W. & C. Scott & Son, and W. W. Greener, of Birmingham, England, and Parker Bros., of America, and doubtless others, of whom I know less, are the heads of "great establishments which make for the trade," they, also, through their agents or local dealers, take orders for special guns, which they construct with special care, putting to such work artists skilled to perfection in the various departments of gun-manufacture, and in this way succeed in manufacturing guns which the manufacturers, or persons for whom they are made, are quite willing to pit against any other gun in the world, whether or not the latter be made by prodigiously high-toned, and still higher-priced makers who do not make for the trade. It is an indisputable historical fact, that Messrs. W. & C. Scott & Son, and W. W. Greener, in England, and Parker Bros., in America, have done more, been most instrumental, as manufacturers, to bring to the notice of the public, and enforce the merits of the "choke-bore" system and its modifications, which, even according to "Veteran's" own testimony, increase the effective range of shot-guns "fully fifty per cent." more than any maker who does not make for the trade. For the Messrs. Scott, Capt. A. H. Bogardus has announced this fact wherever his Scott choke-bore has sent the air. And where has it not? But another grand inducement for the sportsman of average means is, the same enterprising manufacturers furnish excellent shooting weapons of good wearing qualities at moderate cost.

So much: not that I wish to disparage the work of any maker, or class of makers, but that I felt disposed to present a few stern facts.

INSTAOLIO.

GAME PROTECTION.

THE PENNSYLVANIA GAME BILL.—*Sunbury, Feb. 18.*—We are having a lively time just now with our new game bill, which is just reported as amended from the Committee on Agriculture, to whom it was referred back on second reading by the Senate, reported from committee on the 14th, and now awaiting first reading as amended. I wish I had a spare copy to send you, to laugh over the combined wisdom of our Solons. We can do nothing with it in the Senate, but will try and rectify it as much as possible when it gets into the House, or else defeat the whole thing. Think of a section allowing fishing with fine nets of one inch mesh the whole year round, and consider the prospects of resuscitating our rivers, etc., by artificial propagation.

A. F. C.

Our correspondent must remember that the English common law of to-day is a monument of the accumulated wisdom of many centuries, having for its foundation the Roman code. Perhaps it is necessary for their highest excellence that the Pennsylvania game statutes should also be the work of many decades. When it does reach its perfection our friends may rejoice in its precepts, even though there is then neither fish nor game left.

The Rifle.

THE FOREST AND STREAM AND ROD AND GUN TOURNAMENT

For the Short-Range Championship

And three team medals, which will be awarded to the teams making the first, second and third best scores. Other prizes will be offered also, to take place at Conlin's shooting gallery. Open to teams from any organized rifle club.

Conditions.—Teams.—Each team shall consist of ten men. The teams participating must be composed of members of the various clubs which they represent. Rifles.—Limited to ten pounds in weight; minimum pull of trigger, three pounds; 22-100 cal. Teams can furnish their own rifles and ammunition, or use those at the gallery, as they may desire. Number of Shots.—Ten by each competitor. Sighting Shots.—Two shots will be allowed each competitor. Position.—Off-hand. Targets.—200-yards targets, according to the regulations of the N. R. A. reduced to proportion to the range at the gallery. Practice.—No practice allowed on the day of the match. Entrance Fee.—Five dollars to be paid at the office of the FOREST AND STREAM AND ROD AND GUN, No. 111 Fulton street, N. Y. All teams desiring to compete must be entered ten days before the time the match is announced to take place. The match to be governed by the rules of the N. R. A. relating to teams. Captains of the competing teams shall meet one week before the commencement of the match, make all preliminary arrangements, choose referees, and decide in what order their respective teams shall shoot. The referees shall elect an umpire, whose decision in all cases shall be final.

The match will commence on Monday, March 11.

MASSACHUSETTS RIFLE ASSOCIATION.—We acknowledge the annual report of the Massachusetts Rifle Association. The officers are: C. A. Longfellow, President; Vice-Presidents, N. Walcs and J. F. Shepard; Secretary, H. T. Rockwell, No. 39 Arch street, Boston. There are 18 life and 137 annual members. With the excellent results already achieved by the M. R. A., they should expect the most liberal encouragement in the present year.

NEW HAVEN RIFLE ASSOCIATION.—A regular meeting of the directors of the New Haven Rifle Association was held on the 15th—Colonel Smith presiding. Prizes will be shot for on Washington's Birthday. In addition to the matches at all ranges there will be bull's-eye shooting. The entrance fee will be twenty-five cents, one-half of the total receipts going to the person making the most bull's-eyes. The shooting will be in accordance with the rules of the association. The new year of the association will begin April 1. Being free from debt, the association desires to erect new huts in the spring. It is proposed to connect the huts with the firing points by telephone. The Association will have on the grounds, on the 23d, cartridges for the Springfield gun, so that the military-men will have a chance to try the new arm.

THE HELVETIA.—This well-known rifle club will celebrate its twenty-fifth anniversary with a grand shooting festival to be held in September next. Various committees are now consulting to perfect their arrangements. We shall give the public due notice of the leading event.

TARGETS FOR GALLERY PRACTICE.—In reply to a great many inquiries, we give the following general directions as to making targets for gallery shooting. We must state that the construction of these targets is rather conventional than philosophical, as far as proportion goes, the size being adapted to the average skill of the general rifleman. Mr. Conlin's targets, which are generally adopted, are as follows: The 100-foot

target, equivalent to the 200 yard target; bull's-eye, 1 1/4-in. diameter; centre, 3-in. diameter; inner, 5 1/4-in. diameter; target 5 1/2 by 8 1/2 in. The 200 feet targets and 300-foot targets are made in the same proportion.

RIFLE SHOOTING IN 1878.—PROGRAMME OF THE SPRING MEETING N. R. A. OF AMERICA.—The spring meeting at Creedmoor will be as follows: The first day, May 23, will be given up entirely to the "Leech Cup" match, fifteen shots per man at each of the long ranges. This match determines the individual championship of America for the succeeding year. In all the other matches seven rounds per man, with no sighting shots, will be the rule, and except when otherwise specially provided, duplicate entries will be permitted. The matches are:

FRIDAY, MAY 24.
300 Yards.—1. Open to members of N. R. A.; any rifle; standing position. 2. Open to all comers, for stated prizes; any rifle. 3. Open to members of N. G. S. N. Y.; Remington state model rifle. 4. Open to all comers; Remington military rifle. 5. Open to marksmen N. G. S. N. Y.; Remington state model rifle. 6. All-comers match; any military rifle (not special). 7. All-comers match; kneeling position; any carbine. 8. Open to teams of four from any rifle club in U. S.; any rifle. 9. Open to teams of four from N. G. S. N. Y.; Remington military rifle. In the above matches the entries will be limited to 512.
800 Yards.—Any Position. 11. Open to N. R. A. members; any rifle. 12. Open to all comers for stated prizes; any rifle; no re-entries. 13. Open to teams of four from any club; any rifle. 14. Open to teams of four; all comers; any rifle. 15. Open to members N. G. S. N. Y.; Remington military rifle. Special match for four rifles offered by Sharps Rifle Co.; one to teams of four from any military organization; about 800, 900 and 1,000 yards, with any military rifles (not special); half of entries must go to teams making best scores at the several distances. In the 800 yard matches the entries will be limited to 256.
900 Yards.—Any Position. 16. Open to members of N. R. A.; any rifle. 17. For all comers, for stated prizes; no re-entries; any rifle. 18. Open to teams of four from any club; any rifle. In the 900 yard matches total entries limited to 144.
1,000 Yards.—Any Position. 19. Open to members of N. R. A.; any rifle. 20. All-comers match; any rifle. 21. All-comers teams, four men each; any rifle. In the 1,000 yard matches entries are limited to 256.

SATURDAY, MAY 25.
200 Yards.—Position Standing. 22. Open to directors of N. R. A. for special medal; any rifle. 23. All-comers for stated prizes; no re-entries; any rifle. 24. Open to teams of five from any military company; regulation weapon. 25. Open to members of any troop N. G. S. N. Y.; State carbine. 26. Open to members N. R. A.; any rifle. 27. Open to members N. R. A.; any military rifle. 28. Open to members N. R. A.; Remington military rifle. 29. All-comers match; any military rifle. 30. Open to members N. G. S. N. Y.; Remington military rifle. 31. Open to marksmen N. G. S. N. Y.; Remington military rifle. 32. Open to members of any military organization; regulation weapon. 33. Members of N. G. S. N. Y.; Remington State model carbine. 34. Open to all comers; any carbine. The 200 yard shooting will be limited to 512 entries.
500 Yards.—Military Position. 35. Open to all comers; Remington military rifle. 36. Open to members N. G. S. N. Y.; Remington State model rifle. 37. Open to members N. R. A.; Remington State model rifle. 38. Open to all comers; any military rifle. 39. Open to members of any military organization; regulation weapon. 40. Open to teams of four from any military organization; regulation weapon. 41. Open to all comers; any military rifle and any position. Entries in 500 yard matches limited to 512.
800 Yards.—Military Position. 42. All comers match; any military rifle. 43. Open to members of N. G. S. N. Y.; Remington military rifle. 44. All-comers match; any rifle and any position. 45. Open to teams of four from any club; any rifle and any position. 46. Open to teams of four from any military organization; regulation weapon. 47. Open to members N. R. A.; any rifle and any position. In the 800 yard matches entries are limited to 512.

CREEDMOOR, JR., 260 Broadway.—The following are the scores of the prize winners in the \$100 gold match, which was concluded on Saturday the 16th:

Name	Score	Prize
E. J. Yohr	5 5 3 4 5 5 4 5 5 5 4 3	\$30 gold
T. S. Ould	5 5 4 5 4 5 5 5 5 5 4 7	15 "
J. W. Todd	5 5 4 5 4 5 5 5 5 5 4 7	10 "
J. B. Raine	5 5 4 5 4 5 5 5 5 5 4 7	5 "
W. M. Farrow	5 5 4 5 4 5 5 5 5 5 4 7	5 "
C. B. J. J. J.	5 5 4 5 4 5 5 5 5 5 4 7	5 "
Dr. Dunley	5 5 5 5 5 4 4 5 4 5 4 7	5 "

The next match at this 100-yard range will be for \$50 gold, divided into three prizes of \$25, \$15 and \$10 for the first, second and third best aggregate scores made in ten strings of ten shots each; position, standing; rifle, any of .32 cal. or under.

YORKVILLE RIFLE CLUB, Feb. 16.—The following are the scores in the regular weekly practice, at 100 feet, .22 cal. rifle, Creedmoor rules and targets.

Name	Score
G. See	5 5 6 4 5 5 5 5 4 4 45
M. Bailey	4 5 5 5 5 4 5 5 3 3 44
A. Smith	3 5 5 5 4 5 5 5 3 3 44
O. Kelz	4 5 5 4 5 5 4 5 4 3 41
J. L. Harding	5 4 3 4 4 5 5 5 3 3 42
J. R. S. Smith	5 4 5 5 5 5 5 5 4 3 41
J. R. Groomman	4 5 5 5 5 5 5 5 4 3 40
J. O. Hanft	3 3 4 3 4 3 4 3 4 3 36
W. W. Dodge	5 4 3 3 5 3 3 3 4 2 37

ZETTLER RIFLE CLUB, Feb. 12.—One hundred feet; off hand; Creedmoor targets, red-neck; possible 50.

Name	Score
C. Jackson	47
M. L. Rigg	41
P. Fenn	41
The Kilmith	40
D. Miller	40
C. G. Zettler	40
M. Porter	40
M. B. Engel	40
H. Oehl	40

A CHALLENGE.—The Empire Rifle Club hereby challenges any similar club to a match at Creedmoor between the 10th and 20th of April. Ranges, 200 to 300 yards; rifle, any within National Rifle Association rules; position, standing; rounds, two sighting and ten scoring; teams of eight or ten as may be agreed upon. Answers received on or before the 15th of March.

M. M. MALTBY, Secretary,
 No. 33 East Twenty-fourth street.

THE NEW JERSEY RIFLE ASSOCIATION.—The Board of Directors of the New Jersey State Rifle Association met on Thursday last. Col. E. H. Wright, the President, in the chair. The Law Committee reported that the act incorporating the association had been passed by both houses of the Legislature of New Jersey, and had received the signature of the Governor. In accordance with the report a certificate of incorporation was drawn up, and the directors present signed it, the Secretary being instructed to secure the signatures of absent members of the board at his earliest convenience, and Major Anderson Thomas, of Englewood, was chosen to fill the place of Gen. J. B. McIntosh, resigned. The Range Committee will probably select a plot at Elizabethport.

CIRCULAR FROM THE GENERAL INSPECTOR OF RIFLE PRACTICE.—Colonel G. W. Wingate has issued a circular to division and brigade inspectors. Special attention is directed to the fact, that it is in the armories and not in the field that the primary instruction of the soldier should take place. The failure of a large proportion of the troops to qualify has arisen from the fact of their not having been previously drilled in the kneeling or lying position. The General Inspector trusts that by precept and example a feeling of emulation will arise in the ranks, and that to be in the awkward squad will be thought discreditable.

LONG-RANGE TARGET RIFLES FOR HUNTING PURPOSES.

St. Louis, Mo., Jan. 26, 1878.

EDITOR FOREST AND STREAM:

I have taken an especial interest in the discussion now going on in the English and American shooting papers, as to the relative merits of the American long-range breech-loader and the English long-range muzzle-loader. It is in this connection I would submit a few thoughts based upon my own experience with the American arm.

It does seem to me that the mere discussion of the relative merits of the two arms is a great waste of time and thought. It becomes, however, a much more serious matter, and one of greater astonishment, when we reflect upon the amount of time and money and mechanical skill annually expended by the best gunmakers of Great Britain in getting up their fine muzzle-loading target rifle.

Concede, for the sake of argument, that their gun is all, and much more, than they claim; that its accuracy as a target-rifle is much greater than the American arm possesses, what Government would now entertain the idea of arming its soldiers with such an obsolete weapon, when any of the approved, rapidly-firing breech-loaders of the present day can be obtained? What hunter, in pursuit of game, whether a gray squirrel, buffalo or grizzly bear, would be bothered with a muzzle-loader, however fine, when any of the approved breech-loaders could be had? What Englishman, when in pursuit of tigers and lions, dare trust himself with their finest muzzle-loader? The idea is absurd for all practical purposes. The day of the muzzle-loader is passed. The British gunmakers have produced the finest breech-loading shot-guns in the world. Let them then abandon their muzzle-loading rifle, and expend all their thoughts and mechanical skill in the development of their breech-loaders, and there is no good reason why they should not soon produce a weapon that will compete with ours in any long-range match. They must, however, devise a breech action superior to any now used on that side of the water, such as the Snyder, Martini-Heery, or any modifications of these arms. No long-range rifle will be a success, unless it can be not only cleaned from the breech, but thoroughly inspected from the breech, as in the Sharps, Remington or Ballard. This is impossible with the above-named English arms. The same remark will apply to the military arm of the future, and that constitutes the defect in the Martini-Heery, as well as our new Springfield .45-cal. arm.

The conditions of the riding of neither of these arms can be thoroughly inspected under a full glare of light, as should be the case. An inspecting officer, with every facility for inspection, is too apt to be governed by outside appearances.

The report of Colonel Peel to the National Rifle Association takes a more practical view of this question than anything written on that side of the water, especially in the recommendation, at the conclusion of the report, that the efforts of the association should alone be directed to perfecting the best breech-loading military arm. It would have been still more to the point had he recommended the total exclusion of the muzzle-loader from competition at their matches. But even he, in conjunction with Halford, Rigby and others, has taken up the impression that the American breech-loading long-range rifle is as useless for all other purposes, except target practice, as the British muzzle-loader.

My own experience for the past eighteen months with one of the American long-range rifles, satisfies me that with a modification of sights and ammunition, it is as well adapted for hunting as any gun in the world. It can be as well adapted to neatly take off the head of a squirrel or grouse, and for killing large game it has no superior.

On the first of December I returned from a hunting trip to Montana, where I had been for the past sixteen months hunting large game. I took with me one of Sharps long range rifles, of model of 1876, .44 cal., 34-inch barrel, straight-hand-made stock, using a 2 1/2 shell. I had it fitted up with sights suitable for hunting. Beach combination front sight, ordinary open back sight, and on the summit of the stock a short sporting peep-sight, so fitted that it could be readily folded down out of the way. (The peep-sights on most sporting rifles are an abomination, as they are always in the way when turned down, and at every discharge, when using the open sights, it comes back against your cheek-bone and leaves a gash.) The open-sights were used at 100 yards, but at distances for 200 yards and over, the peep-sights were thrown up and used with the pin-ball front sight. It required only a few minutes' work to substitute the Vernier peep and wind-gauge target sights for the hunting sights, and vice versa, so that its use as a target rifle was not interfered with. For hunting, the shell was loaded with 95 grains of powder, and a 450 grain patched ball, wad on the powder, then lubricating wad, then bullet. A good deal of the time I used American ducking, No. 2, a coarse powder, which was packed in shell without much difficulty. Eleven of the sixteen months was passed hunting and fishing in the mountains and prairies lying between Port Benton and the Yellowstone National Park, lying on the head-waters of the Yellowstone and Madison Rivers. My various travels and hunts embraced over 2,100 miles of travel, and during the whole time this gun, strapped to the horn of the saddle, was my constant companion. The surroundings induced me to have it constantly within reach. I hunted all the large game of that magnificent game country, and killed, in more or less numbers, and at distances ranging from one hundred to five hundred yards, antelope, white-tail and black-tail deer, elk, buffalo and grizzly bear. It was exposed to numerous rain and snow storms; was twice "bucked off" by a "Kys" horse, the gun going one way and the rider the other, and, in a few words, was exposed to all the accidents and mishaps of mountain and prairie hunting for two hunting seasons, and in temperatures ranging from summer heat to 15 degs. below zero. It was never once out of order, and though fired more than 2,500 times at game and target, is to-day, excepting a few bruises in the barrel and stock, substantially in as good condition as when turned out of the shop. Of course, the best of care was taken of it. The inside of the barrel was never once allowed to become rusted. No gun could well go through a rougher experience. I met two Englishmen on the Yellowstone last fall, who had with them two of Rigby's finest double Express rifles, but with pistol-grip stocks. The stock of each gun had been broken, and had to be bound and patched up. These facts are mentioned, probably, in too much detail, but do so

to show that at least one American match breech loader is not the "delicate" arm that Messrs. Rigby, Halford and Peel would make the world believe. I will close this communication by an allusion to the charge that the American arm cannot be used without wiping after each discharge. I never considered the accuracy of my gun materially affected by eight or ten discharges, and have used it as many as twenty times without wiping. Of course I recognized the fact that any gun had been fired at as often as possible, and there was leisure, from the willow thicket, and carried in my belt.

I recollect killing a black-tail deer, 500 yards off, after having fired eight cartridges without wiping, and then threw the barrel close around the head as they scampered off. In very rare cases a shell would stick by the jamming of the patching, and occasionally, after six or eight discharges, leading of the rifling would occur; but the same thing is liable with any class of gun. If a muzzle-loader does not jam shells it misses fire from defective tube. Shells would occasionally become expanded in firing; but they were easily brought back to their original dimensions by putting them through the shell-swage.

The loaded shells were carried in an ordinary cartridge-belt, wide enough to cover the patching to protect them from dust. A belt full of shells weighs about five pounds. By keeping the belt well down on the hips, the extra weight was not noticeable.

I hope these details will not appear tedious. Facts, and the experience of hunters in the field is what is needed, and not theorizing. The above is my experience with one of the American match rifles. It is not doubted that other makers turn out equally as substantial an arm. Let us hear from other hunters who have used them in the field.

Were I to advise any one who was just commencing the use of the rifle as to what class of rifle to purchase, I would advise him by all means to get one of the long-range American rifles from such maker as he might elect. Ten pounds is the proper weight for off hand shooting, and with a proper modification of sights and ammunition it is the best for long, short or mid-range target practice, or hunting all kinds of game, and using 95 grains powder and a patched ball of from 1 1/2 to 1 3/4 in. long, according to circumstances. The objection to using it in the settlements at game, is that you would not know when the ball would stop. For small game use the short ball.

W. D. P.

A NEW PLAN OF EXPLODING POWDER IN ARMS.

NEW YORK, January 23, 1878.

EDITOR FOREST AND STREAM:

I have made some experiments in relation to the mode of connecting the ball to cartridges and the firing of explosive compounds. I connected the ball to a roll of paper, and paper is lined with a quick explosive compound. The roll is about one-eighth of an inch thick and about two inches long. The roll is intended to remain to the rear end of the cartridge case, and the gunpowder filled in around it. The other end of the roll should touch the base of the ball. In firing gunpowder in this manner there is an accumulation of pressure and effective force. Thus the roll, although burning with rapidity, is to be so proportioned in length as to continue to burn as the powder is progressively ignited. Thus a comparatively small pressure is exerted as the ball starts, but the pressure accumulates with irresistible rapidity as the entire charge is ignited, and the roll continues to convey the necessary fire of ignition until all the powder is burned, the explosion not putting out the roll or allowing any grains of gunpowder to escape unconsumed. This arrangement causes the ultimate force of the explosion to be directed upon the ball, but my extended tests lead me to know that if the explosion commenced next to the ball by my mode of firing and ran back to the breech, the main force would be exerted there, and but comparatively little on the projectile; so that by arranging my coil or roll accordingly, the force of the explosion can be directed to the bursting of cannon or the performance of other similar work under whatever condition may be understood, and this peculiarity is available. Thereby a small amount of powder is rendered very powerful and efficacious, the accumulated force of explosion being directed against the desired portion of the substances surrounding the powder chamber. My experiments lead me to know that in firing charges of gunpowder the pressure of the gases in the portion first exploded causes the powder to pack and the flame to be excluded. It will be apparent by this mode of firing projectiles, the velocity being increased, less weight can be employed to effect a given object, because the increased velocity given to the ball will make up for its less weight. Also, by my method of firing the powder, the flame that sets the powder on fire penetrates the interstices in advance of any compressing action, so that all particles are consumed and lend their force in the explosion. I also find that the recoil is very much lessened for the reason that all the powder is consumed just as the ball leaves the gun or rifle, and the penetrating force given to the ball is very great.

EDWIN GOMEZ.

SIR HENRY HALFORD AND THE SHARPS RIFLE.—We are in receipt of the following interesting letter from Sir Henry Halford, which we gladly give a place in our columns:

WISTOW, Leicester, England, January 30, 1878.

EDITOR FOREST AND STREAM:

Dear Sir:—Having read a letter in FOREST AND STREAM of January 17 from Sharps Rifle Co., in which they quote a letter of mine, written in 1875, I must beg for a small space in your columns to vindicate myself. Much has been written in the Volunteer Service Gazette about both American and English rifles with which I do not agree, and for which I cannot be held responsible, and I feel that I should not be credited with statements which I have never made. I shall not shrink from upholding what I believe to be true.

I have, perhaps, taken it too much for granted that the criticisms which I passed upon the American rifles after the match at Creedmoor would be taken as applying only to long-range match rifles. I will, therefore, explain what I do mean, namely: That a long-range Creedmoor rifle, with from 100 to 105 grains of powder, and a close fitting long-range bullet, in hot weather, will not take a second cartridge without wiping out. I do not mean that it will never take one, but that nearly all will with it, and have the paper cracked back on the bullet in winter (the time at which that target published by the Sharps Co. was made, and with snow on the ground) most of the cartridges will enter, and in wet weather, too, when there is damp enough in the air to melt the products of combustion. My criticism does not apply to low

charges in military and sporting rifles, nor to 95 grain charges of Curtis & Harvey's powder in Sharps sporting rifles with wads, and a 400 grain bullet, well home in the shell. I have never called American rifles "despicable abortions," for the ample reason that I have never thought them so, nor have I called your riflemen mere trigger pullers; but I do believe that the best results will be got from a team when its members yield to the judgment of their coacher in the matter of wind, and do not argue the matter out over each shot at the firing point. It stands to reason that the coach, who watches every shot, and whose attention is not taken off by the wants of his rifle, must be a better judge of little variations than the shooter who, between his shots, has his whole time, or nearly the whole of it, taken up with cleaning and preparing his rifle.

I think the *Spirit of the Times* match was a conclusive proof of the assistance your team received from their coacher in the Centennial match. All honor to them for their ability, and to your team for their good sense and skill in taking advantage of it. I have said, and again say, that with your team and your coachers, in my opinion, you would have beaten us had the match been shot in England. I am, yours faithfully,

H. ST. J. HALLFORD.

P. S.—I see a very able letter from "T. S. Van Dyke" on sporting bullets. I think he will find the bullets made by Sharps Rifle Company for me in 1876 all that he can desire. The pattern has been in use on deer in this country for more than a dozen years. Metford's shell composition is safer and far stronger than a .32 cartridge.

EXPLOSIVE AND EXPANSIVE BULLETS.

DUBLIN, Jan. 29, 1878.

EDITOR FOREST AND STREAM:

Under this heading, "T. S. Van Dyke" has a very practical letter in your issue of January 17. He has found out by actual experiment much in connection with sporting rifles which is already known, but his experience is valuable as a confirmation of the truth of those arguments which I have urged in support of Express rifles during the last dozen years. The merits of the Express rifle are no longer a matter for discussion among British sportsmen. They are admitted unanimously, and the only question remaining is as to the size of calibre most suited to each description of game. The following are the proportion of the rifles which we supply to Indian sportsmen:

"For bison and large, dangerous animals, such as tiger, bear, etc., calibre, .577; powder, 6 drachms; bullet, 450 grains.

For mixed shooting in the jungles, tiger, deer, etc., calibre, .500; powder, 5 drachms; bullet, 400 grains.

For hill shooting, ibex, markoor, etc., also for antelope on the plains, and deer, calibre, .450; powder, 4 drachms; bullet, 300 grains.

For antelope, and all the smaller deer, calibre, .400; powder, 3 drachms; bullet, 200 grains.

For the same, a lighter rifle, calibre, .360; powder, 2 drachms; bullet, 150 grains.

In all these five sizes the bullets are hollowed in front, the hollow varying in depth according to the amount of penetration desired. The shells used are of brass drawn solid, and can be reloaded many times.

No explosive powder is required to expand these bullets. The resistance suddenly developed by their high velocity is so great that the effect of an explosion is evident when they strike, and this is especially remarkable in soft bodied animals. About ten days since I was hunting fallow deer in a large park in the north of Ireland. The herd was shy, and I had great difficulty in getting a shot, but having at last crept to within 200 yards, I drew a bead and missed. Suspecting that the rifle I carried—a double .450 Express—was undersighted, I resolved, as the deer had vanished at the report, to test the sighting on the first object I could find suitable. This appeared in the shape of a hare sitting up about 100 yards ahead, and presenting her side as an easy mark. I took a full sight and fired. The report of the rifle was followed by a minor explosion, like the bursting of an inflated bladder. The hare lay on one side, which was uninjured; the other side, that next to me, had been blown clean out, showing an opening about nine inches long and three wide, and the whole viscera were on the grass beside her. This bullet, which did not penetrate a hare, was 559 grains weight, one inch long, and made of lead hardened with tin, and swaged. The propelling power was 4 drachms of Curtis & Harvey's No. 6.

I once fired a similar bullet into the head of a wounded hind in the Scotch Highlands. The whole of the top of the head over the eyes exploded, and disappeared, and then fell all around in small fragments. A similar effect may be produced by firing into a bag of wet sawdust—a small bag not bigger than a man's head will expand one of these bullets, which will fly into small fragments. The bag may burst, but flakes of lead will be found in the sawdust. These effects will not be produced by moderate charges of powder—about one grain of strong powder to three grains of lead is the least proportion which develops properly the Express principle.

Your correspondent falls into a not uncommon error when he says that it is necessary to stop up the cavity in front with something to insure accuracy. I do not find that it makes any difference in the shooting when the cavity is left open.

For all American game, except bear, and perhaps buffalo, I would prefer the .400 Express to any other. It takes the American shell 40-70ths, and is very light and handy, about seven pounds being ample weight for a double. It will drop any deer in his tracks, if shot anywhere forward, and not too high.

For a grizzly, however, it has not sufficient lead. If I ever meet a large specimen of that animal where there are no iron bars between us, I will not feel comfortable without a double .500 bore, and five drachms in my cartridges. Nothing is so calculated to inspire confidence under such circumstances as a barrel in reserve. Yours faithfully,

JOHN RIGBY.

EFFECTS OF FIRING WITH HEATED GUN BARRELS.

PORT STEPHENS, Oregon, January 25, 1878.

EDITOR FOREST AND STREAM:

One correspondent asks "Why his gun shoots better after the barrel is heated?" and another (Lara), "Why a ball from an over-heated rifle barrel flies or shoots over?" If you will refer to Benton's "Ordinance and Gunnery," you will find that the temperature of the gaseous products of inflated gunpowder is estimated at about 4,300 Fahr. It will be seen, also, that Count Rumford, in his experiments to determine the absolute force of gunpowder, fired twenty-five grains in an eprouvette by heating the stem of it with a red-hot cannon ball; that experiments were continued by which this absolute force was found to be 29,178 atmospheres, and that "this pressure is much greater than that developed in the explosion of projectiles and mines, owing to the low temperature of the surrounding surfaces, and the large amount of heat which they absorb. It is the same with cannon, for the most rapid firing does not raise the temperature of the bore above 210 degs. Fahr., which is much below that of the eprouvette." The theory is that much of the explosive energy of the charge, resulting from the high temperature of the inflated products, is absorbed by the cold metal; but as the barrels grow warmer the force of the charge increases, and therefore the energy which was lost in heating the gun is saved after becoming heated, and acts on the projectile.

Very truly,

P. L.

Game Bag and Gun.

GAME IN SEASON IN FEBRUARY.

Hares, brown and gray.

Wild duck, geese, brant, etc.

FOR FLORIDA.

Deer, Wild Turkey, Woodcock, Quail, Snipe, Ducks and Wild Fowl.

"Bay birds" generally, including various species of plover, sand piper, snipe, curlew, oyster-catcher, surf birds, phalaropes, avocets, etc., coming under the group *Limicola*, or Shore Birds.

MASTER EUGENE BOGARDUS.

A NEW ASPIRANT TO SHOOTING FAME.

Master Eugene Bogardus, whose picture we give, is thirteen years of age. About two years ago he first commenced shooting, picking up the art in a rudimentary way. His gun which he used then is the same breech-loader that he shoots with now, and is a 10-bore, weighing 8 pounds. Master Bogardus' first practice was on black birds and meadow larks, always shooting them on the wing. About a year ago, having passed, as it were, through the freshman and sophomore studies in the field, he entered the junior class, that is, he solved the mysteries of prairie chickens. With such a mentor as his father he was taken into the prairies. Captain Bogardus informs us that with a dog he often accompanied his son, the boy being instructed to shoot the first bird and leave the second for the father. "But," said the Captain, "I never had a chance at the first bird in case the boy missed it, and just as often when there were two birds Eugene would take both of them. It used to tickle me to see men in the party miss a bird and how Eugene always bagged that chicken as he kept sweeping past. The boy will shoot, maybe, as well as I can, after a while." Master Eugene made his debut on the 11th before the public, and has so far, out of 93 balls, a weeks' shooting, only missed 4 balls. Eugene is a modest, quiet, handsome lad, and takes his laurels with dignified composure.

CANADA.—Danville, Quebec, Feb. 14.—On the 8th ult. I shot two caribou about fifteen miles from here. J. C. D.

MASS.—Nantasket, Feb. 16.—The effect of the game law was very perceptible the past season, as quail and partridge were more plentiful than ever before. Our whistler shooting has been fair, and as soon as our ice goes out we shall have good sport for a few weeks. The birds remain with us all winter, also old squaws; but during the period of ice they are outside, so we get no gunning. Rabbit shooting is very good now. S. K., Jr.

PENNSYLVANIA.—According to the *Reading Times*, snipe have appeared in Berks County, nearly two months before the usual spring arrival.

Sharon, Feb. 7.—The season here has been a good one, and the boys have laid aside their guns well satisfied with the success of the past and with hopes of equally fine sport next season. LEM.

Waynesburg, Feb. 13.—Fall shooting not so good as in other years. Pheasants scarce and wild. Prospects for next season partridge shooting is good, as there were many birds left over. Breech-loading arms are just being introduced among our shooters. E. W. W.

VIRGINIA.—Lawrenceville, Feb. 11.—The season closed with a stock of game on hand unprecedented for twenty years, and a general recognition and obedience to the game law. W. L.

MISSISSIPPI.—Boonville, Feb. 11.—Partridges are very plenty this fall. Good many turkeys, deer and foxes. We are having fine sport. The most successful bird hunter is Judge Boone, T. K. Young, T. S. Hamilton, W. G. Smith. I made a bag of ten partridges and one rabbit the other day. Bags range from twenty to seventy-five. R. B. S., Sr.

OHIO.—Lancaster, Feb. 11.—A bona fide old fashioned wild cat, weighing seventeen pounds, was killed in the neighborhood of Pratt's Mill one day last week. A gray fox, the only specimen of the kind I ever heard of in this part of the country, was run down, holed and caught, near Clearport, recently. Mr. John Hamilton, proprietor of the Sportsman's House, on the Big Reservoir, shot two wild geese on Saturday last from a flock flying over. He reports but few ducks on these waters

as yet. Mr. Hiram Hughes, who resides in Clear Creek Valley, shot a fine twenty-pound wild turkey on Saturday last. A rat hunt, gotten up by the farmers of Hocking Township, resulted in the slaughter of twenty-seven thousand two hundred and twelve of the destructive "varmints" in sixty days. The event was celebrated by a princely banquet, paid for by the defeated side, at the residence of Mr. Peter Crumley, on Thursday last. S. G. V. G.

Our correspondent writes that the bags of quail made in the past season by himself and friend—130 birds a day—are not at all an uncommon record in one of the best quail countries in the world. Our Chinese subscribers will read with peculiar pleasure the account of that rat hunt. We anticipate the reception of twenty-seven thousand two hundred and twelve missives—one for each rat—from as many Mongolians of the Pacific slope, containing all sorts of inquiries about the price of land in the pleasant vales of Hocking rich-in-rats. This immigration will doubtless solve the rat question, and at the same time afford a new species of game for the shot gun of the Ohio sportsman, for, according to the San Francisco hoodlum, there is no close season for Chinese.

MICHIGAN.—Fully twenty-five hundred deer were killed in Green Bay peninsula during the season just closed, and two-thirds of the meat spoiled owing to warm weather.

CALIFORNIA.—A correspondent writes to the *San Francisco Chronicle*: "Roderick Lang, a 14-year-old son of John Lang, residing at Lang's Station, on the Southern Pacific Railroad, Los Angeles county, killed, between the 10th of August and 28th of December last, fifty-five deer."

Napa, Feb. 10.—A sportsman's club has been formed with the following officers: Pres., Charles Pearce; Sec., J. H. Howland; Treas., F. A. Sparrow.

PHOENIX SPORTSMEN CLUB OF SENECA FALLS.—We have to thank this club for copy of the Constitution and By-laws. This club, organized in 1870, has 75 members.

WILD PIGEONS.—A correspondent writing from Painesville, O., Feb. 18, says: "Pigeons are roosting in the big swamp at Bloomfield, Trumbull county, Ohio. They are feeding in that county; also Portage and Ashtabula counties."

KILLING SPARROWS IN ENGLAND FOR A PREMIUM.—In January last, a question was put to us in regard to the killing of sparrows. "A bet B that in England a premium was paid for killing sparrows, and that the person so killing them can have the premium applied to paying his taxes." Our reply was as follows: "A has lost. There are no such foolish things done in England." On the publication of our reply, we received quite a number of letters from various portions of the United States, in which our answer was found fault with, some of our correspondents citing their own experience. To set the matter at rest, we wrote to the *Live Stock Journal and Fanciers' Gazette*, of London, and the editors have very kindly sent us the following in regard to sparrow killing in England:

LIVE STOCK JOURNAL AND FANCIERS' GAZETTE, LA BELLE SAUVAGE YARD, Ludgate Hill, E.C., Feb. 4, '78.

DEAR SIR: In reply to your inquiry, there is no recognized public reward for the destruction of sparrows or their eggs. A few cases have been known in which private families have offered private rewards to village boys, etc., but even these cases have been very few and exceptional. All the course and spirit of English legislation is against such rewards.

Truly yours,

THE EDITORS.

—Our Montreal correspondent, whose pseudonym is appended to the paragraph below, recently paid a fortnight's visit to New York, in the course of which he honored us with a call:

"Among other reminiscences of my voyage to New York, I recall an evening at the Tirolli, giving me an opportunity to witness Captain A. H. Bogardus' wonderful exhibition of glass-ball shooting. The following week I saw Mr. Ira A. Paine display his no less remarkable skill with the shot gun and pistol. His performance with the pistol especially is worthy of notice. In fact I don't quite understand how a man, even with any amount of practice, can acquire sufficient skill as to enable him to break, with a pistol loaded with powder and a solid bullet, almost every glass ball sprung from a trap. I say I don't understand it, if the weapon is loaded as above mentioned, which I presume Mr. Paine expects me to believe. However, his performance was really a very good one, and contributed largely toward making up what we Canadians call 'a jolly good time.' But in justice to the editor and manager of the *FOREST AND STREAM* AND *ROD AND GUN*, I must acknowledge that I look upon my visit to their office as the most pleasant incident of my visit in New York. ROYAL II.

HOW TO COOK AND SERVE THE CANVAS-BACK.—Upon the table canvas-back makes a royal dish. It is seldom served precisely as it should be anywhere out of Maryland. If allowed to remain in the oven five minutes too long it is unfit for the table. A great deal also depends upon the carving. A good, quick oven will cook a full-sized duck in twenty-two minutes. It should never remain in over twenty-five. After a duck is picked and drawn it should be simply wiped dry. Water should never touch it. When done the birds should be placed in pairs in hot, dry dishes. There is no need to prepare a gravy; immediately they are cut they will fill the dish with the richest gravy that ever was tasted. One canvas-back to each "cover" is considered a fair allowance at a Maryland table; but when the bird is only an incident of the dinner and supper, of course half a bird is sufficient for each person. Slicing the bird is unheard of. The two-pronged fork is inserted diagonally astride the breast bone, and the knife lays half of the bird on each side, leaving the "carcass" on the fork between. The triangle of meat an inch thick comprised between the leg and wing, with its apex at the back and its base at the breast, is considered the most delicious morsel of meat that exists. The canvas-back in Maryland is served with large hominy fried in cakes, celery, and a dry champagne, or a bottle of Burgundy that is Burgundy.—*Scribner's Monthly*.

RECOIL.—A correspondent thinks that recoil sometimes occurs in guns in an unaccountable way, from the fact that the powder chamber extends back of the nipple in a M. L. Also, that in a B. L., if the shells do not fit, when the gun is fired, additional recoil occurs. In other words, our correspondent is of the opinion that powder, when igniting toward the centre of the charge, causes exaggerated recoil.

A RECOIL PAD.—The use of a pad to slip over the butt of the stock is not only a method of preventing the shock of recoil, but is oftentimes used to save the stock of the gun. In old times, when muzzle-loaders were used, in charging a piece the natural position was to bring the butt to the ground. We have seen good sportsmen always place the butt of their gun on their foot when loading, in order to keep the stock in nice order. Mr. Charles L. Ritzmann's New Recoil Pad, made on the principle of an overshoe, is the best contrivance we have yet seen, and we have no hesitation in recommending it as an accessory to a sportsman's outfit. We can even understand how this pad can be advantageously used, when the stock of a gun does not exactly fit the shoulder. Mr. Ritzmann's place of business is 943 Broadway, where the new recoil pads may be seen.

LARGE AND SMALL BORES.—Mr. Editor: In your issue of Feb. 9 is a letter from your correspondent "Boone," in which he asks if it was myself or the lamented "Royal" that, in conjunction with yourself, advocated a 12 in preference to a 10-bore gun for ordinary field shooting. I reply that it was both myself and "Royal." True, I have been much abused for my views on this and other subjects in connection with guns, but I hold to them still, and for all, except market shooters, I predict a speedy return to the lighter guns, though to be sound they are a far greater test of the gunmakers' skill. Some months ago I received a kind letter from "Boone," but, owing to the fact that the signature was much blurred, I could only direct my answer to it by guess. Having never heard from him since then, I fear my answer was not received by him, and I take this opportunity of letting him know why it happened, if he did not receive my letter. I should be very glad to hear from him often. RECAPPER.

MORE CHILLED SHOT.—We beg to acknowledge the receipt of various samples of chilled shot, made by Mr. T. W. Sparks, the well known Philadelphia manufacturer. The shot is true in form and is quite hard.

IN DEFENCE OF HAMMERLESS GUNS.—Brooklyn, Jan. 18.—Editor Forest and Stream.—Your very interesting but slightly sarcastic correspondent Rupee is a little severe upon the improvement of Greener's gun, i. e., the hammerless. Does he not tangent from the idea when he claims greater quickness is the desired ultimatum? I am very heartily in favor of the gun, and yet hope to see one brought forth that will be cocked and discharged by a single motion, not because of quickness, but that it will be nearer to perfection. The Winchester rifle is my notion of a perfect arm, except that it should have the lock of the Peabody. Martini, Sharps Rifle Co., have become converted to the hammerless idea, and have placed upon the market a rifle with such an improvement. I have been a shooter for the past fourteen years, and have owned many fine guns, my first a Richard Hollis M. L. 14-bore, an A1 shooter, and the last a pin-fire Westley Richards, also second to none. My present fowling piece is of American manufacture, two pairs of barrels, 12 gauge cylinder and 10 choke, with all recent improvements, hammers, etc., and I prefer it to all the guns I have ever handled during my shooting experience, and when the hammerless stocks reaches my desire I shall certainly have one applied to my favorite. Why? because it is quicker? No, sir; but because the fewer the parts the nearer to perfection. Mr. Rupee ridicules the improvement without advancing any reason therefor, except that of mere quickness, though that of itself is a very strong argument in its favor. The U. S. Government has called upon the Magazine Rifle Co., to come forward with their arms for adoption for Army use, Sittling Bull's Poor Los having taught them that quickness is a commendable quality in an arm (Rupee's 900 cartridge spiral apparatus for the "Siek Man" may prove a Godsend). The hammerless gun will have many reasons in its favor; it will never have a broken or lost hammer to repair, the pulling of the trigger will not cause some shooters to blink as is now the case with many excellent shooters; in cleaning or oiling they will not be an obstruction as they now are, and when in the field you will never throw your gun to your shoulder and in vain endeavor to shoot a bird where you have been remiss in not putting up your hammers; in cover after woodcock you will not need to keep one hand upon your hammers to prevent entanglement with cat briars and brambles; in getting in or out of a wagon or boat need you fear that your hammers will get fast and be raised sufficient to cause a discharge, as has fatally been the case from time to time—Bogardus, who shot himself through the hip, for instance. I am personally acquainted with a gentleman who lost a son, a fine young man, who, when crossing a fence, allowed the hammer of his gun to catch against a rail, caused a discharge, sending the load into his head immediately below the left ear and passing out through the right temple; death was of course instantaneous. There have been more accidents from the raising and lowering of hammers than in any other way. With my old M. L. I had a habit of putting the caps upon the nipple and then dropping the hammers to press the caps home and render fire more sure. Upon several occasions I have discharged the gun in so doing. Give us the new improvement by all means, and as sportsmen we will test its merits. "The proof of the pudding is in the eating." Should the hammerless gun be a failure it will soon go the way of all things useless, but if successful it will soon go the way of all things welcome and its inventor with due appreciation, that we may encourage him and others to more ingenuity that will benefit us as sportsmen in particular and all mankind in general. MARQUE.

CHILLED SHOT.

EDITOR FOREST AND STREAM:

I have been much pleased to read the different ideas concerning chilled shot that have appeared in your columns, and your correspondent Knowlton, in your last issue, certainly gives us something to think about in the difference of weight between old fashioned and chilled shot. But still another thing concerning all shot has been puzzling me. You probably remember, Mr. Editor, the good old times, ten or twelve years ago, when every sportsman took his station in a pigeon trap-shoot, especially in England, 21 yards from the trap, or fired at the bird as he rose, with a No. 9 or 10 gauge gun and No. 6 shot. Every body shot

No. 6 in those days at pigeons from the trap. Now, in these days we have choked-bored guns and yet shoot No. 8 shot at pigeons from the trap. It chilled shot is brighter than old-fashioned shot, the larger pellets you use the longer the range. And what is the use or purpose of a choked-bored gun, if it be not to put a greater number of pellets of any given sized shot in a circle of thirty inches at 40 yards distance than a cylinder-bored gun will do, having at least equal penetration?

Now, if No. 6 was considered small enough to kill pigeons from the trap in years gone by, why should not No. 4 chilled shot (equalling about No. 5 old-fashioned shot) be used in choke-bored guns? You certainly obtain greater range by increased size of shot; or, as I have said, if No. 6 old-fashioned shot used to do the work in cylinder-bored guns, why not be consistent and use No. 4 chilled in choked-bored guns, obtaining two advantages—greater range, hence greater penetration? In firing at targets with a choke-bored gun (W. & C. Scott & Sons) at 40 yards with No. 7 chilled shot (equal to about No. 8 old-fashioned shot) I have noticed that the gun, No. 10 gauge, did not need the number of pellets placed in a circle of thirty inches, when loaded with 1½ oz., to kill game within that space. In other words, No. 5 chilled shot did the work apparently just as well, and of course the penetration and range were increased by the use of this latter size. In the use of No. 7 chilled many shot were superfluous, and by marking out pigeons on the target, some would contain as high as 24 pellets, many of which of course were needless and of decreased range and penetration to the weightier No. 5. If any one can give me a good reason why we should choke-bore guns to shoot close and then use smaller shot than in the old cylinder guns to kill game at and beyond 40 yards I should like to be enlightened. I can't but think that lads who alone rules in this matter, and that with larger shot even than has been used and choke-bored guns to keep it together, the range at which game can be killed should be greatly increased; but it will not be as long as we experiment in the direction of smaller shot neutralizing the action of the choke-bored gun. As chilled shot is brighter and, in my opinion, more killing than the other shot, it applies with more force to it than to the old fashioned shot. FUSIL.

DITTMAR AND BLACK POWDER MIXED.

WINCHESTER, Mass., Feb. 1, 1878.

EDITOR FOREST AND STREAM:

In your issue of Jan. 21, in reply to some question in regard to mixing Dittmar and black powder, you say, "Such a mixture is possible, provided a person is well acquainted with the character of each powder." About two years and a half ago I obtained a can of Dittmar, and commenced experimenting with it, acting upon the best information I could obtain. The results were very unsatisfactory, sometimes I would make a good target, at others the shot would fall short of the mark or fail to produce any decided execution. My experiments were mainly with brass shells, but, owing to the more thorough condensation, the paper shells worked better. I was told that I did not ram my powder hard enough. I loaded my next shell with 3½ drs. Dittmar and two good wads on top. In order to be sure that I rammed it hard enough, I took a mallet, and gave it three or four hard blows. There has always been a doubt in my mind as to the effect of this charge. I have a confused recollection, after firing it off, of putting my hand to the top of my head to make sure that it was still there. However, I am quite certain of one thing: I took the Dittmar and laid it away, and there it would have remained till this day, had it not been that soon after, while engaged in building the Lawrence fishway, I found it necessary to have some blasting done at the foot of it. The man I employed to do this work used a compound called Rendrock, the invention of which, I was told, belonged to Mr. Dittmar. This powder I found to be perfectly harmless and non-explosive, unless there was an exploder used with it. From my experience with both, I felt pretty sure that there was, to a certain extent, a similarity between these two powders, and to test this idea, the discarded can of Dittmar was again brought out, and from a series of experiments, which it is not necessary to detail here, I became perfectly satisfied that the Dittmar powder alone, as now made, could not be safely or successfully used by the mass of sportsmen without an exploder much heavier than the common percussion cap. As I had neither time nor tools to construct such a shell and cap, I availed myself of the next best thing within my reach. I made two measures, one to hold one-half drachm, the other two drachms. After clearing my shells and putting them into a form I use for loading them, I capped them, turned the form over, and with the small measure put one-half dr. fine (quick) black powder into each; then with the other measure, put in two drachms of Dittmar powder, in quality the same as that now marked B. I then, with a brass wire flattened at one end, mixed the two powders together in the shells, and over this put two strong wads in each, well pressed down upon the powder—giving a blow to each with the palm of my hand, equal to about five pounds in weight, and the wad well home; then put in the shot with a light wad on top.

The gun I use for ruffed grouse, quail and woodcock, is a 12 gauge—used thirty-six years as a muzzle-loader, but now changed to a breech-loader. The barrels are very thin, and only 22½ inches long. The whole gun weighs about six pounds. With the above charge of powder I use, in the early season, ¼ oz. No. 10 shot; in November and December, the same of No. 9. Some might object to so small a charge of shot, but I have found it very effective, having repeatedly killed ruffed grouse on the wing over sixty yards.

I have been thus particular in stating the amount and my manner of using this powder, so that any one who attempts to mix the two in any other way, or to use a larger charge in a light 12 gauge gun, does so on his own responsibility. The weight of charge here given, in my gun, is sufficient for anything that flies inside of fifty yards.

It takes one-third longer than in the ordinary way to load these shells, and the question naturally arises—"What, then, is to be gained by it?" I answer: "There is little or no recoil; the jar or concussion from the report is much less than from any powder I have ever used; there is no smoke to prevent seeing what has been done, or, if need be, to put in a second shot; it is easy to mark down the game, few, if any, wounded birds get away to die a lingering death; the gun does not foul, and between the explosion of the cap and the time the shot reaches the mark, is perceptibly less than with black powder."

I have done a lot of shooting for the last two years with this powder, and have found it very effective, and much more pleasant to use than any other; and would on no account be without it. E. A. BRACKETT.

A PLACE TO DIE.

Hon. Davy Crockett died in the Alamo; his grandson, Col. Robert Crockett, also chooses "A Place to Die."

NEAR TWYMAN'S STORE, SPOTTSYLVANIA CO., Va., Feb. 12, 1878.

EDITOR FOREST AND STREAM:

Pleasant were the feelings engendered by hearing of the weal and comfort of an old army acquaintance, the gallant Col. Robt. Crockett, of Ark., through your entertaining correspondent's ("Ouyon") story, "Perkins' Pilgrimage," in your issue of Jan. 31, 1878. I propose to tell your readers a story of Col. C. which occurred in 1861. The writer, then a resident of Western Texas, so soon as he learned that his native State, Virginia, had passed the ordinance of secession, at once returned to her, and connected himself with the batteries on the Potomac River at

Aquila Creek, reserving to himself the right to join a Texas Regiment when one should arrive. It was here that I first met Col.—then Capt.—Crockett, of Col. Jim Fagle's 1st Ark. Inf. I frequently met the Capt., and upon one occasion I called upon two young lady cousins in the town of Falmouth, who were about moving to Shreveport, La., to join their uncle and guardian's family, who had moved out to that place some months before. Their uncle, the Hon. Jnn Conway Moncreu, was then upon the staff of Gen'l. (Prince) Polignac, late C. S. A. Of course these ladies besieged me with all manner of questions with regard to the aforesaid town. Before I had time to answer, Capt. Bob Crockett was announced. I then told the ladies that "I only knew Shreveport slightly, but that Capt. C. knew all about it; and could tell them all they wished to know." Seven questions to the second from each lady at the same time were hurled at Crockett; but, like his Hon. grandfather, he was good game and equal to the occasion. The Capt. steadied himself and said: "Ladies, I know Shreveport well—man and boy I have known it long and truly, and I had rather die right there than any place upon earth," thus without a smile. "Oh Captain Crockett, what is the world to you mean? Why?" "Because," said Capt. C., "I think I could leave it with less regret than any other place."

Now if this should fall under the eye of the Col. (and if he is a subscriber of FOREST AND STREAM AND ROD AND GUN it will; and if he is not he is missing all the good things) let me advise him to get his grandfather's ride ready and back it with a "navy six," for he has got those Shreveport people to fight, while I, who make this story public, am safe signing myself, as I do respectfully, BIRD SHOT.

THE PAINE FEATHER FILLED GLASS BALL.—In our last issue, in answer to a correspondent, J. H. W., of Kansas, we made an error as to where the balls could be had. They can be obtained at all gun dealers throughout the country. Send for circular and price lists to the headquarters, Bohemian Glass Works, 214 Pearl street, New York.

HANDICAPPING GUNS.—In answer to correspondents in our last issue an error was made. The differences allowed as to calibres of guns is one-half of a yard, not a yard. If, then, a 10 and a 16 bore shoot, the 16 has (3) three yards given it. If we follow any rules, let us adopt, then, the English ones.

PIGEON MATCHES.

WISNER AND WOOD.—The match between Clint Wisner and Henry W. Wood, thirty birds each, ten at 21 yards, 80 yards boundary, and ten pairs at 18 yards, 100 yards boundary, came off at the Long Island Shooting Club Grounds last Thursday. The score was as follows:

Wisner.....	0	1	1	0	1	1	0	1	1	7
Wood.....	1	1	0	1	0	1	0	1	0	0
Wisner.....	10	10	10	10	10	10	10	10	11	12
Wood.....	10	10	10	10	10	10	10	10	10	10

After the match Messrs Broadway, Wisner, Gildersleeve, Wood, Durfee, Luckert and Wynn shot a sweepstakes at three birds each, 25 yards rise, 80 yards boundary, 11 and T traps. Mr. Broadway won first money. Messrs. Tucker, Gildersleeve, Broadway, Durfee, Heming and Wynn shot a sweepstakes at three birds each, which resulted in a tie by the first three named, who divided the money, and the two last named tied and divided second money.

MORRISTOWN VS. JERSEY CITY HEIGHTS.—The Jersey City Heights Gun Club entertained the members of the Morristown Gun Club at their shooting grounds on Wednesday, the 12th inst. The Morristown members partook of a solid collation at the club-room, in John Platt's Arcade Saloon, before being escorted to the grounds, and were in good condition for an afternoon's work. The attendance of spectators was very large, and a more substantial and gentlemanly gathering of sportsmen is very seldom seen, many gentlemen being prominent merchants, doctors, lawyers, insurance officers, Custom-house officials, etc. The occasion was also honored by the presence of the champion, Captain Bogardus, with his little son, whose unobtrusive manners are much admired. Of the grounds and the entertaining club, we can say that this young club is thoroughly organized, and have their shooting grounds surrounded by a high board fence, with a commodious clubhouse near the entrance, and an immense screen for catching the stray shot on the opposite side of the field. The three Bogardus' traps were set at full eighteen yards distance, and with wires running over a framework in such a manner that it was impossible for the shooter to tell which of the three would be pulled, making it as difficult as possible. The match was closely contested, as the following scores will show, although the shooting was not up to the average of most of the members. After the match, hearty cheers were given by the visiting club, and as heartily returned. Following is the score:

Jersey City Heights Gun Club.										
Wm Hughes.....	1	0	1	0	1	0	0	0	0	0
A Heritage.....	0	1	0	1	0	0	0	0	1	0
J J Toftoe.....	0	0	0	0	1	0	0	0	1	0
G B Eaton.....	1	0	0	0	1	0	1	0	0	0
J Harrison.....	0	1	1	0	1	1	1	0	0	0
T Henry.....	0	0	0	1	1	0	1	1	0	0
J B Burdett.....	1	0	1	1	1	0	1	1	0	0
F M Thomson.....	1	1	0	1	1	1	0	1	0	1

Morristown Gun Club.										
E M Quimby.....	1	0	1	0	1	1	1	1	0	0
J D Stewart.....	0	0	0	1	1	1	1	1	0	1
D B Fuller.....	0	1	1	0	0	0	1	1	1	0
E E Willis.....	0	0	0	0	0	1	0	0	0	0
G Athro.....	0	1	1	0	0	1	1	1	0	0
J Leek.....	0	0	0	1	1	0	0	0	1	1
J B Ayers.....	0	0	0	1	0	0	0	0	0	0
P E Cramer.....	0	0	0	1	0	0	1	1	0	1

PENNSYLVANIA—Roxbury, Feb. 13.—Match at ten birds each, 21 yards rise, 80 yards boundary, Rhode Island rules:

Daniel Karsner.....	1	1	1	1	1	1	1	1	1	10
Miles Johnson.....	1	1	1	0	1	1	1	1	1	9
Frank Klutz.....	0	1	1	1	1	1	1	1	1	9
William Greenwood.....	1	1	1	0	1	1	1	1	1	8
Richard Woods.....	0	1	1	1	1	1	1	1	1	8
Rodney Levering.....	1	0	0	1	1	1	1	1	1	7
Samuel Wilson.....	0	1	0	1	1	1	1	1	1	7
Thomas Cassell.....	1	1	1	0	1	1	1	1	0	6
Frank Whilans.....	0	1	1	0	1	1	1	1	0	6
William Wiggins.....	1	0	1	0	1	1	1	1	0	6

Second Match—Same conditions.

Miles Johnson.....	1	1	1	1	1	1	1	1	1	10
Daniel Karsner.....	1	1	1	1	1	1	1	1	1	10
Frank Klutz.....	1	1	1	1	1	1	1	1	1	10
Wm Greenwood.....	1	1	1	1	1	1	1	1	1	10

Ties divided first money.

LOUISVILLE GUN CLUB.—We append the score made by members of the Louisville (Ky.) Club at their last meeting,

FLIES, LINES, RODS, REELS, HOOKS AND MATERIAL.—Miss McBride's skill in fly tying has long been known to the angling fraternity. For neatness, finish and skill, the flies made by Miss McBride have but few equals. Having removed from Munford to New York city, this lady has now opened an establishment at 889 Broadway, where flies adapted to all seasons or localities may be found. Amateurs desirous of making their own flies can be supplied with all the materials necessary. The general fishing public can find a full selection of rods, reels, lines, with all the newest trolling baits.

 FOREST AND STREAM will be sent for fractions of a year as follows: Six months, \$2; three months, \$1. To clubs of two or more, \$3 per annum.

White.		Black.

In her present locality it is to be trusted that Miss McBride will not only retain her former extensive patronage, but will be able to secure a large portion of new business.

ANOTHER FINE SALMON PAINTING.—"After the Battle" is the title which Mr. Walter M. Brackett has given to a large salmon picture which he has recently painted for Allan Gilmore, Esq., of Ottawa, Canada. It has been on exhibition in Boston the past week, attracting crowds of visitors. It is the most pretentious work which the artist has yet undertaken, and is pronounced by the best critics to be a long way in advance of his former productions, which is high praise when we recall his masterly representation of "killing a salmon." The subject, a fresh-run 25-lb. fish, is safely landed upon a rocky shore, partly overgrown with weeds and grass; beside him lies the rod and reel. A foaming rapid and a still pool, from whose surface is reflected the ledge and forest of the opposite shore, with a bit of blue sky in the distance, make up the background. The fish, however, is the all-absorbing idea, and it is difficult to say which most challenges our admiration—the perfect symmetry of his form, or the endless variety of tints with which his coat of mail actually sparkles. The wonderful iridescence which constitutes one of the principal charms of a salmon fresh from the sea, is rendered with an artistic skill, which I venture to say has never been equalled. The absence of the gaff mark shows that he has been captured by a skillful angler; not a drop of blood mars the purity of his silvery side. Although Mr. Brackett has for years stood without a rival as a painter of game fish, yet this picture cannot fail to add greatly to his already enviable reputation.

TOWING EXTRAORDINARY—VERY MUCH LIKE A WHALE.—While the schooner John O. Cowell was fishing off the Banks of New Foundland, with her cable out some 200 fathoms, all of a sudden off went the schooner at racing speed. The astonished captain wondered what was up, when a whale blowed some 100 fathoms ahead. Along swept the schooner at the rate of twenty knots. "Hard larboard and starboard," was that intelligent captain's order, but broadside, too, the schooner swept on her way. At last, with a jerk, something parted, and on examination it was found that a kink in the cable had got round a whale's tail. Whether whales can be made useful in towing schooners has yet to be determined. The story dates from July 15th, and the New York Sun records the fact. We have long wanted some kind of economical traction for our State canals.

FISHING SNOODS.

January 20, 1878.

WHILE writing about collecting the cocoons of the *Atticus cecropia*, I was reminded of two letters lately published in the FOREST AND STREAM—one from Mr. Wm. Gray, of Iowa, the other from Dr. Richardson, of Toronto, Canada. Mr. Gray's interesting letter describes well the way of making snoods from the worm, and also describes some lengthy ones (30 inches long) in his possession. Now, as far as I know, there has been no improvement in the manufacture of this article from Mr. Gray's time until to-day. The fish tackle dealer offers us nothing in the way of "silk worm gut" beyond the length of 12 or 15 inches, "sure and sound."

Dr. Richardson, in his letter, mentions the *Atticus cecropia*, of Ohio, and proposes to cultivate it for the purpose of making long and stout fishing snoods. I can here inform the Doctor that they can be procured in this locality by the thousands, and are as easily bred and raised as white mice. They feed on the sassafras, the wild plum, and many other plants, but their choice is the button bush (*Cephalanthus occidentalis*). This bush grows in Upper Canada, and in Michigan as far north as parallel 43 deg. 50 min.

As this plant furnishes him his most acceptable food, I have no doubt he will be found wherever the button wood abounds. Several years ago Dr. T. Garlick propagated this moth in his house. He fed them mostly on the leaves of the plum tree, the currant bush and the snow-ball shrub. The doctor often informed me that he could make snoods from this caterpillar three feet long, and as strong at each end and throughout as the best gut in the present market is in its strongest parts. From my own experiments and what I had previously learned from Dr. Garlick, I am confident that a very superior snood for the fly fisher can be made from this source. And I also agree with Dr. Richardson that sufficient interest should be excited in this matter to induce some one to commence this industry. "It will not only pay, but it will be a great boon to fishermen."

In continuation I will say that the caterpillar of the *Atticus cecropia* is about three times the length and bulk of the common silk worm (*Bombyx mori*), from which the snoods of to-day are principally made. Also, wherever you find a marsh or a river side on the south side of Lake Erie producing the button bush, you may be sure to find the *Atticus cecropia* in abundance.

Dr. E. STERLING.

CALIFORNIA SALMON FISHING AND THE GAME LAWS.

SAN FRANCISCO, Feb. 16.

EDITOR FOREST AND STREAM:

Contrary to our expectations and most sanguine hopes, the young salmon, which, for these three years past, appeared in the winter season in our bay, and afforded good sport in bait fishing, have not yet arrived in any numbers. At present not more than two or three a day have been taken by eight or ten rods. Most of the few which have been taken are larger than usual, being about three or four pounds, whereas, in former years, they would average only about one pound. We are all at a loss to account for their scarcity this year. Their very small numbers cannot be altogether satisfactorily traced to the great destruction of young fish by the small and unlawful meshes of the nets used by the Italian and Chinese fishermen, because the let-up has been too sudden for that. The cause must be found elsewhere.

Fish, of course, change their feeding grounds, and are directed in

their movements by the places frequented by their prey. We may observe this uncertainty of the migrations and advent of fish of the salmon tribe, from the analogy in the case of other families of the same tribe. Two years ago our bay was full of the tom cods, and thousands upon thousands were taken with rod and reel. So with smelt, which, three or four years ago, were captured in about equal quantities with the tom cod. Now very few of either of these fish are to be found in our harbor.

If the destruction of small fish here should go on in the same ratio that it has for many years past, it is easy to see that our fisheries will be almost entirely destroyed. The State Fish Commissioners, sportsmen's clubs and a committee on the game laws of our Assembly at the Capitol, are now busy in devising and framing laws to remedy this disastrous evil of our fisheries; and we trust that this time, at any rate, something will be effected in earnestness and wisdom to enforce the law against all offenders. Differences of opinion as to the times and season for both fishing and shooting must necessarily exist and it will take time, patience and disinterested and unprejudiced judgment to arrive at just results, beneficial conclusions in the public interests, and a proper firmness and determination to carry out the laws when wisely agreed upon.

E. J. HOOPER.

Pachting and Boating.

HIGH WATER FOR THE WEEK.

—The sloop yacht *Adrie Voorhis*, *Seawanhaka Y. C.*, will be lengthened, re-rigged as a schooner and re-named.

—The steam yacht *Lurline* has been sold by Mr. Philip Phoenix to Mr. Pierre Lorillard, N. Y. Y. C.

BROOKLYN YACHT CLUB.—The annual regatta will take place June 18.

A SCHOONER IN A MARL BED.—The *Lumberton*, N. C., *Times* has this account of a schooner found in a strange place. Such freaks of the winds, waves and sands are occasionally discovered long after all clue to the time and circumstances of the catastrophe are destroyed:

"Some men, while digging marl in a swamp about eighteen miles northeast of Lumberton, N. C., near the Cape Fear River, found embedded, eight or ten feet below the surface of the earth, a schooner or vessel in its natural shape, sixty feet in length and forty in width. It was of the same consistency as the surrounding marl, and the nails or spikes with which it was put together were made of wrought iron. There were various kinds of bones and teeth around and near it."

—Ross has agreed to row Hanlon for \$1,000 a side, the contest to take place on the Kennebecasis River, St. John, N. B., June 20.

LOUISIANA STATE ROWING ASSOCIATION.—The State regatta will come off early in the season, and there is every prospect that the coming season will be an unusually interesting one.

New Publications.

WHITNEY'S FLORIDA PATHFINDER: Season 1878. New York, John P. Whitney, 66 John st. Price 25 cents.

The new edition of this reliable guide to Florida will be found to contain much information additional to that which has already made it so popular among Florida tourists. There are very full, and so far as we may judge, accurate schedules of routes, fares, etc., with a complete list of hotels and winter boarding-houses. The intending visitor will do well to consult the pages of the "Pathfinder," and the tourist will find it of material value.

HARVARD INDEX.—It is the custom of the students of nearly every one of our colleges to issue a student's catalogue which shall contain a full and reliable compendium of information not to be found in the regular college catalogue. The *Index* has a résumé of the of the athletic sports of the year, lists of college literary and social associations, and miscellaneous matter of more than transient value to the Harvard student.

THE AMERICAN BICYCLING JOURNAL, published at Boston, is intended to cater to the interests of the velocipede riders. The paper is filled with a variety of matters relating to this theme, and will doubtless find a limited circulation among the devotees of the swiftly revolving wheels. We doubt, however, if this sport is popular enough to support an organ.

We have received from T. B. Peterson & Co., Philadelphia, "The Devoted Bride," a novel, by St. George Tucker, of Virginia.

THE AMATEUR'S MANUAL; OR, Specific Mating of Thoroughbred Fowls. This little volume contains practical directions for the breeding of the thoroughbred varieties of fowls. The book is the result of the author's own experience, and will doubtless prove a valuable assistant in the breeding of choice poultry. Written and published by J. K. Felch, Natick, Mass.

The *Popular Science Monthly Supplement* is always interesting, for it contains the cream of what appears in the English journals. We can call attention only to two or three of the articles in the February number, but every thing between its covers is well worth reading. That article which will be found of greatest interest to the majority of our readers is entitled "Dog Poison in Man," by Henry W. Achard, M. D. This essay, which is reprinted from the *Contemporary Review*, discusses hydrophobia at some length, and in a manner somewhat unlike that employed by any recent writer on the subject with whom we are familiar. Dr. Achard gives some interesting statistics in reference to the disease in England, showing, among other things, that from 1850 to 1876 the annual deaths from hydrophobia in that country were one to each million of inhabitants. Other interesting points we have no space to introduce here.

The "Little Health of Ladies," by Francis Power Cobbe, is also from the *Contemporary Review*, and treats an important subject in what would seem to the average male intelligence a very sensible fashion.

How it may strike the female mind we dare not conjecture. "Little Health," it should perhaps be said, is here used as an equivalent of the French *petite-saute*.

This Supplement seems to be quite equal to former ones in its contents, and is very pleasant and instructive reading.

—The opening article in the *American Naturalist* for February is from the pen of Prof. E. D. Cope, and treats of a very interesting and little known group of extinct animals, the *Dolosauria*. The discoveries which have recently been made in the Rocky Mountain region of bed containing new and wonderful forms of this order are most important, and will, no doubt, before very long, furnish us with a great deal of information concerning this group, of which at present we know so little. Some questions appear to have arisen as to the age of the bed which yields the remains under discussion, for, while Prof. Cope declares them to be lower than ours, Prof. Marsh, as noted in a recent number of the *American Journal of Science*, announces their age to be in upper Jurassic. Dr. T. H. Streets contributes an interesting article on "The Discolored Waters of the Gulf of California," and Prof. J. E. Todd one on "Distribution of Timber and Origin of Prairies in Iowa;" but the most interesting paper in the present issue is one on the "United States Survey of the Territories," by Dr. F. V. Hayden. This, which is really a sort of advance report, gives us a very clear idea of the work accomplished by the survey during the past year, 1877. The splendid work done by this survey in the past and its superb character of its publications are a source of pride and pleasure to all scientific men in America, and it is extremely satisfactory to know that their past years' work has been very successful.

Recent literature contains notices of many important works lately issued, while General Notes contains a number of items of interest.

FABLES, by G. WASHINGTON JESOP, taken "Anywhere, anywhere out of the world," with illustrations by F. S. Church, New York. The World, 1878.

For the last year or more the brilliant articles of the New York *World* have been supplemented by a series of comic fables, which have been of the most clever character. That staid pomposity of *Jesop* and *La Fontaine* has been capably hit off, and fables, with morals of the most humorous kind, have furnished the numerous readers of the *World* with an endless source of amusement. Mr. Lanegan, the author of these clever bits of fun and satire, has a fund of quaint originality. There is a solemn farcicality about these fables which invariably produces honest merriment. All those old sayings which we are taught to believe, as inculcated by fables (rather because they were hammered persistently into us than for the reason that they were true), are purposely perverted and upser. In the fable of the hare and the tortoise, it is not the tortoise which wins, but the hare. In the fable of the crow and the fox, the fox insists on it, only after "Depositing the Cheese in a safe Place on the Limb of a Tree." "Thinking over fables, one wonders at the influence they once had in this world and the little effect they would produce now. Did the literary allegory find in *Jesop* and *La Fontaine* such readers that no one has ever attempted to do the like again? Still we return to these lessons, when grown in age, which have been imparted to us in our days of childhood, and unwittingly we use the fable. Mr. Lanegan, it is likely, may become the Cervantes of fables, writing them as did the great Spaniard, knight errantry. Mr. Church's illustrations are fully up in cleverness to the text, and both the author and artist have succeeded in making a little book, not a page of which can be read without a good, hearty laugh.

BITS AND BRACING REINS AND HORSES AND HARNESS, by Edward Fordham Flower. Cassell, Petter & Galpin, London, Paris and New York.

It is very certain that many persons inflict an unnecessary amount of cruelty on horses. There is some absurd idea that, in order to look finely, a horse should hold his head unnaturally high, should clasp at his bit, deck himself with foam, and that when at rest (?) his fore and hind legs should assume any other position than the natural one. We follow fashion in the harnessing of animals, just as we do in ourselves in accordance with the dictates of the tailor—only, that, while we may discard what is uncomfortable or hurtful to our health, the poor beast has no such power of expressing the suffering the harness maker puts them to. Now, once the best and most pliant of all men—John Wesley—learned his lessons on horsemanship. Wondering over the brown English laud, juggling along on his horse, Wesley mostly rode with book in hand, the bridle of his horse hanging unheeded for around the bridle's neck. "Why," asked John Wesley, "is it that my horse never stumbles?" Thinking over it, the great leader of Methodism came to the opinion that it was because "he rode his horse with a loose bridle." Mr. Flower, the author of the pamphlet under review, may be said to have been the first who, in England, directed attention to the cruelty caused by the bearing-rein and the exaggerated bits in common use. An occasional letter of Mr. Flower's, addressed to the *London Times* and to other leading journals in England, first awakened sympathy for the poor horses, so that, at present, the sympathy and cruelty of trampling every action of the horse by means of over-tight bearing-reins or terrible bits is looked on with increasing disfavor. Sir Arthur Helsh said something about bearing-reins and the people who used them, which is quite pertinent. Sir Arthur declared that when he saw an equipage where the horses were suffering from tight bearing-reins that the owner of such horses must be either unobservant of what he ought to observe, or very ignorant of what he ought to know, or pompous or cruel. . . . When I observe equipages where the irrational tight bearing rein is used I then look at the arms on the carriage, and I know who are the greatest fools in London in the upper classes." Apart from the cruelty of the use of the bearing rein, what many people do not know, is that it is the cause of disease in the horse. The leading English veterinary surgeon, Mr. Gill, asserts that the use of the bearing-rein induces "roaring, apoplexy, coma, megrims, inflammation and softening of the brain," and concludes by stating "I feel sure, those who continue to use this torturing instrument have no idea of the pain they are inflicting, otherwise they would abolish this unnecessary portion of the harness, consigning it to the realm of past absurdities." Now, people who have carriages, or own horses, when they do not drive themselves, ought to know what they are about. It is absurd to trust all matters relative to one's horses to the coachman alone. It is both a sin and shame that people do not become acquainted with the animals who labor for them. For just such people Mr. Flower has compiled his work, and we trust that not one of our readers who uses a horse, in harness or otherwise, for their pleasure or profit, will fail to read how they should rein in or bit their horses.

UPLAND GAME BIRDS AND WATER FOWL OF THE UNITED STATES, A. PAPER, JR. Published by Scribner, Armstrong & Co., New York, 1878.

The second part of this series has just been received by us, and, in point of perfection of illustration, is quite equal to the first numbers. The subjects chosen are precisely such as allow of the fullest artistic scope. The rarer brown woodcock, with its soft and dusky plumage, is contrasted with the daily-feathered mallard duck. There is a guileless innocence in the look of a woodcock, with its round, soft eye and dainty step, which Mr. Pope has most cleverly delineated. The artist sportsman seems to have the faculty of hitting off the precise individuality of each species in the ornithological family. Now, your mallard is a bold dashing bird, at least in looks, and flaunts his sleek, dapper

sides with his bits of gaudy color. We have had so much true pleasure in looking at these fine illustrations that we have thought it a pity to consign the prints to a portfolio, and have had them neatly framed. We will certainly have the whole of the pictures treated in the same way, and they will decorate the walls of our office. There is probably, not even excepting a museum of natural history, any place where criticism on the form and general appearance of game birds are more generally criticised than in the office of the FOREST AND STREAM AND RON ANN GUN. We have yet to hear of a single exception made as to the excellence of the design and color in the "Game Birds and Water Fowl of the United States."

VOYAGE OF THE PAPER CANOE.—We learn from Mr. N. H. Bishop that his forthcoming book will be issued next month from the Riverside Press. It is to be published by Lee & Shepard, of Boston. Those of our readers who followed Mr. Bishop's fortunes, as related in these columns at the time of his novel voyage, will find the narrative in its new form full of fresh interest.

FIELD, COVER AND TRAP SHOOTING, AND APPENDIX, by Capt. A. H. Bogardus.

Captain Bogardus' book is now in the binder's hands, and will be on sale by the 1st of March. It will be, in every sense, a practical book, and this second edition will contain a most valuable addition. In this Appendix will be found the later experience of the author; a full account of his trip to England, and matches shot in England, Ireland and Wales; his California experience and California quail shooting; full instructions on glass-ball shooting; how the novice may become proficient by practicing at glass balls; rules for glass-ball shooting; also rules governing the championship medal of America for glass-ball shooting; the official score of 5,000 ball match at Gilmore's Garden, Jan. 3, 1878; cuts showing position and manner of holding gun when at the score in glass ball or pigeon matches; a chapter on breeding and breaking dogs, by the well-known dog-breaker, Miles L. Johnson, of New Jersey.

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

A number of anonymous correspondents will understand why their queries are not answered, when they read the lines at the head of this column.

BERO, Red Bank.—Send address to this office. Have information for you.

H. B., Philadelphia.—The name of the maker was a good one thirty years ago.

N. R. L., Montreal.—What will reduce excessive fat from dogs? Ans. Exercise and low diet.

A. B., Manchester, N. H.—Dr. Lewis, author of the "American Sportsman," died some months ago.

C. F. G., Phila.—What will you charge me for the FOREST AND STREAM 1876 edition unbound? Ans. \$1.00.

B. Von K., Baltimore.—Captain Bogardus' book will be out on March 1. He can then furnish you with a copy.

T. S., Brooklyn.—It is very unusual to kill a Wilson's snipe so early as Feb. 6, the day you killed the one recorded.

A. B. S.—Can you furnish us with the address of a dealer in tortoiseshell? Ans. Kaldenberg, Fulton st., near Nassau.

C. D. K., Halifax, N. S.—The name of the canoe builder at Peterboro, Ontario, is Thomas Gordon, at Lakeside, Peterboro.

B. F. G., Boston.—For identification of birds consult "Key to American Birds." You will there find Latin and English names.

H., Huntingdon, Tenn.—What charge shall I use for glass-ball shooting, 12 gauge, choke? Ans. 4 drs. powder, 1½ oz. No. 8 shot.

"NEDLAM."—Will "Nedlam," who contributed "Trout Fishing in Maine," published in this paper last March, send us his address?

R. E. B., Pittsfield.—See account of cocker in to-day's issue. We do not know of any spaniel with what is generally understood as a rat tail.

D. J. Clark, N. Y.—Please inform us if Mr. Ira Paine has only one arm? Ans. He has two good arms. You are thinking of Ward, of Canada.

A. F., Homer, N. Y.—Could a dog over three or four years old be cured of distemper? Ans. More likely to recover at such an age than if younger.

W. S. B., Ridgeway, N. Y.—Where can I get shot-concentrators for a 12 bore? Ans. This is such an odd gauge that you could not get a concentrator.

C. A. B., Bangor.—I want a repeating rifle for deer. Would you recommend the Spencer? Ans. Spencer no longer made. Buy a Winchester, or an Evans. Cost from \$35 to \$50.

C. H. C., Broad St., Philadelphia.—Our rule is not to give a correspondent's name, unless at the pleasure of the correspondent. We have written to "Viator," however, for his consent.

H. M. P., Boston.—You write about a 22-inch barrel and a .63 cartridge. The shortness of the barrel, in conjunction with the size of the cartridge, makes a problem no fellow can answer. Give it up.

W. H. E., Bryant, Kansas.—We were in error as to Ray in regard to his making wire cartridges with blackshot. They are manufactured by Kay, and are for sale in the leading gun stores in New York.

J. C. W., Wheeling.—Where can Dudley's patent pocket cartridge loader be obtained, and what is the price? Ans. Almost any gun dealer. Send to Mr. Squires, No. 1 Cortland st. Price \$1.50 to \$2.00, according to finish.

A. J. S., Memphis.—What would be the proper name for a cross between a water spaniel bitch and a Gordon setter? Ans. He is not entitled to any special name as to breed, being a cross, or an inferior sort of mongrel.

J. A. D., Boston.—My Newfoundland dog is eighteen months old. He keeps thin. Is fed on scrap meat and Indian corn bread and milk. Good appetite. I keep him chained by day. What shall I do to strengthen him? Ans. Keep him chained at night and give him his freedom for the most part by day.

Lax, Baltimore.—The fly you require is a black hackle, furnished with English pheasant hackle, ribbed and tipped with tinsel. Tail, green feathers, dyed yellow and mixed with mallard. Wing, guinea feather. Hook, No. 3 or 4. Miss McBride, of No. 889 Broadway, New York, can furnish you.

H. S., Rosedale, N. Y.—1. Give me the names of some of the best makers of Express Rifles (with address). 2. Does the "Sportsman's Gazette" tell in what localities fur-bearing animals may be found? Ans. 1. Henry, of Edinburgh; Rigby, of Dublin, and all the leading English makers. 2. It does.

XAC, Richmond.—1. Has —, of London, any reputation as a gun-maker? 2. Where can I get Belmonte oil? or is this good for rust in gun barrels, or only a preventive? Ans. 1. Not well known. 2. Riggs is the maker. Most gunsmiths have it. Both a preventive and cure. Try Eaton's rust preventive. See advertisement.

E. R. B., Newark.—1. My D. L. gun, modified choke, loads badly. What will prevent it? 2. How shall I get the lead out? 3. Is the Newark Glass Ball Club in Newark? Since when was it formed? Ans. 1. Use chilled shot. 2. Eaton's rust preventive and lubricator with a scratch brush. 3. In Newark, N. J. At the close of last year.

N. D., Boston.—Can you give me the name of a reliable book giving good shooting and fishing resorts in New England? Ans. The best books are "Hallock's Fishing Tourist" and the "Sportsman's Gazetteer." You will also, by applying at the offices of the various New England railroads, procure guide books and excursion routes which are of value.

MUZZLE-LOADER, W. Philadelphia.—1. Have a double barrel muzzle-loader 20-inch barrels, 7 pounds, plain steel barrels. Do you think it would be safe to choke-bore the gun? 2. Give me the name of a book on taxidermy with cost. Ans. 1. With plain steel barrels would not advise choke-boring. Don't. 2. Brown's Taxidermist's Manual, price \$1.00.

G. H., Philadelphia.—The regulation size for a cocker is from twenty to twenty-five pounds for what is called in England the modern cocker. There are good dog prize-winners nearly thirty pounds. We incline to the idea of the judges that eighteen pounds is rather undersized, though we may inform you that twenty years ago fifteen pounds was an average.

E. H., Philadelphia.—Have a water spaniel four years old. Has never been sick before. A week ago he rolled in some ditch. I washed him under a hydrant, thoroughly scrubbing him. He shivered a good deal. Has been sleepy and sluggish. What shall I do? Ans. The dog probably took cold from the cold water played on him by the hose. Keep him housed and he will probably get all right in time.

T. C., Providence.—1. My pointer pup is five months old. Lately blotches of humor have come out on his body. Hair falls out; rather weak on his legs. Feed him on boiled Indian meal, milk and a little meat. What must I do? 2. Is the "Sportsman's Gazetteer" a bound volume? Ans. 1. Feed no meat for a month and rub in a little kerosene oil upon the parts affected. 2. A handsomely bound volume.

J. W., Clackamoth.—1. Have a Gordon setter bitch, 10 mos. old. I want to breed, but cannot afford the \$25 asked for use of a good Gordon setter. I am offered the services of a fine English setter for \$15. What would you do? 2. Give me the name of a book on the treatment of hunting dogs? Ans. 1. Better keep the breeds distinct, although the cross may be a very good one. 2. Stonehenge, Idstone, Hallock's "Gazetteer."

L. H., Rillsboro, Pa.—1. Where can I obtain chromes of game birds? 2. Where can I procure chimney spangles? 3. Are such dogs good for ruffed grouse and woodcock? Ans. 1. Currier & Ives, 117 Nassau st., N. Y. 2. We can recommend as breeder of good cocker spaniel M. P. McKoon, Franklin, Del. Co., Pa. 3. Better for woodcock generally than for ruffed grouse, though if carefully trained make good dogs for ruffed grouse.

GRASS, Philadelphia.—We have looked over the various seed catalogues and made inquiries as to where the seed of *Calamagrostis arenaria* may be procured, but have failed. We have no doubt, however, that Mr. A. Veitch, New Haven, Conn., the author of the article on his uses, etc., will have much pleasure in gathering our correspondent (whose note we have unfortunately mislaid) some seeds of it during the coming season.

B., Fort Hamilton.—Are the smelts of the Passaic and Raritan rivers the same as those caught in other waters? 2. Does the Columbian Society publish reports or journals, and if so, where can I obtain them? 3. Where is the "Natal Bulletin" published, and what is the yearly subscription? Ans. 1. Believed to be identical. 2. Write to the Secretary, Mr. J. O. Thurston, Sing Sing, N. Y. 3. Address R. Deane, Esq., Cambridge, Mass. \$2 per annum.

L. B. McC., Brownsville, Tenn.—1. What would be the load for general shooting in a 32-in., 14 bore, for snipe, woodcock and squirrel? 2. What do you think of — collars? 3. What do you think of Hazard's powder? 4. Where can I get a book on taxidermy, and price? Ans. 2½ to 3 drs. powder; 1½ oz. shot. If your gun is 7 to 7½ lbs. you can use the 3 drs. 2. Do not know about them. 3. An excellent powder. 4. Get Brown's "Taxidermist's Manual," price \$1.00.

M. C., Boston.—My setter dog, seven months old, has a running of the right eye. Seems healthy otherwise. Coat rather rough, bowels and accretions all right. Good appetite. Good kennel and plenty of ground to run on. Save his eye he is in fine rat order. Have bathed his eye in milk and water, but it is no good. Will you prescribe? Ans. Use a lather for the eye composed of two grains of sulphate of zinc to an oz. of water and apply three times a day. Your address attended to.

S. G. C., Boston.—1. Has the — rifle for '78 been proven, beyond a doubt, to be as good as that of '77? 2. If I buy one of the above from a gun dealer am I sure to get a true rifle as if I ordered it direct from the manufactory? 3. Is there more than one make of cartridge for the '78 rifle, and if so direct me which to get for target practice at 1,000 yards. Ans. 1. A question no fellow can answer. 2. Any respectable dealer will sell you a genuine rifle. 3. The U. M. C. Co., of Bridgeport.

F. H. O., Peoria.—1. Do you consider a — rifle, .33, as good as any of a different make? 2. Let me know which is the best. 3. Can I use a short cartridge for a rifle that chambers a long one? 4. Can I put a small charge in a long shell? 5. Which do you consider the best ball trap? Ans. 1. There are better. 2. Respectfully decline answering. 3. Not with good results. 4. Yes, by filling the shell over powder with dry sawdust or bone dust. Have seen good shooting done this way. 5. Respectfully decline answering.

F. H., Elizabethtown.—1. What is the best and most accurate breech-loading, .41 cal., rifle? 2. Is the — mid-range accurate from 100 to 600 yds.? 3. I can get one for \$31. Would you advise the purchase? 4. What is the difference between the sporting and Creedmoor stock? 5. Is the "Sportsman's Gazetteer" illustrated? Ans. 1. Either Sharps, Remington's, or Ballard's. 2. Wonderfully so. 3. Advise purchase if in good order. 4. The sporting stock is cut to fit into the shoulder, the Creedmoor is like the butt of a gun stock. 5. Not illustrated.

F. A. C., Northampton, Mass.—1. Do you think a — a good gun? 2. Do you think American or English guns the better? 3. Which is the best American gun? 4. Is — a good maker? 5. Do you think I ought to get a good B. L. for \$15? 6. Do you think that the — is a good single-barreled gun? 7. Where can I get the Mass. game laws? Ans. 1. The name you mention is put on all guns, and is no name at all. 2. and 3. Respectfully decline answering. 4. A very good maker. 5. Yes. 6. A very good gun. 7. Apply to your member of the Legislature.

AMATEUR, Portland.—1. Have a setter pup six weeks. Feed him on crackers and milk. Puppy does not seem satisfied. Is it good food, if not what shall I use? 2. At what age does distemper attack dogs? Are they more liable to die of worms than of distemper? 3. My puppy is kept in a warm kitchen. Is that the proper place? Would it be likely to give him distemper? Ans. 1. Crackers are too fine; give mush and milk. 2. From six months to one year. Not so liable. 3. Should be out of doors in the day time. Kitchen very good place at night. Will not have distemper at his age.

C. T., Meriden.—Have a setter dog and pointer bitch. They are kept together. On the bitch coming in heat she was separated from the dog for twenty days. One week afterward she was visited by a pointer. Would it be possible by associating with the setter that the puppies would be marked like the setter? The bitch never was visited by the pointer? Ans. It is not probable that association will have any effect in the mother you refer to, although physiologists are somewhat divided on this point. Jacob's little trick upon Laban in the matter of the ewes, as recorded in the Bible would seem to favor the idea of positive influence.

G. W. A., Philadelphia.—1. What is considered a good pattern at 40 yards, 30 inch circle, 4 drs. of powder, 1½ oz. No. 8 shot for a 10 bore gun? 2. Where can I get Captain Bogardus' rules for glass-ball shooting? 3. What action is the strongest on a breech-loader? Ans. 1. As a general rule with the calibre and charge you name divide the number of pellets by two and this is a good penetration. See our tables to prove pellets by two and this is a good penetration. In the second edition of Captain Bogardus' book to be published on the 1st of March. 3. Generally the old-fashioned double grip is thought to be the strongest, but there are many different opinions.

F. H. W., Elmira.—1. Is the — as good as any other American gun for the price? 2. Would a 12 bore, 28 or 30, be good for general shooting? 3. Would the above guns be suitable for hunting deer? 4. Is the opening of the front season the same in Pennsylvania as in New York? 5. Would a .55 cal. muzzle-loading rifle be better for deer hunting than a 12 bore — gun? Ans. 1. Yes. 2. See a general article on this subject in the F. AND S. AND R. AND G. of Feb. 7, on 108 and 128. 3. They are in the F. AND S. AND R. AND G. of April. 4. Depends on the character of the woods. 4. Both on the 1st of April. 5. Depends on the character of the country, and above all on the skill of the sportsman. Generally deer are more readily killed with buckshot at close quarters, but you can shoot at longer distances and, of course, more effectively with a rifle.

AN OLD SUBSCRIBER, Philadelphia.—A beagle resembles a small harrier in shape, but with larger body and shorter legs in proportion. The head must be wide and round (for head judges' points are fifteen); nose squarish; soft, full and drooping ears; not too much hair on him, and slight brush even at the end of the tail. A rough beagle varies somewhat, having a coarser coat, possibly from some terrier crossing. Both of these breeds—the old-fashioned and the rough—average about fourteen inches. The dwarf beagle is a delicate little fellow, following the trails of the larger breeds, though his height should not be much more than ten inches. Colors about the same as in foxhounds. Tail not fine in any of the breeds, and should be bushy at the end. Ears pendulous and not too close to the head.

DEBHAM.—1. Who advertises a dog collar, etc., in your paper at 7 cents? 2. What is the difference between a shepherd's dog and a colley? Ans. 1. Thomson & Son, 301 Broadway. Think their price is \$1. 2. The difference between the English sheep dog and the colley are plain. The sheep dog is built like a strong low greyhound, but covered with a woolly hair. Tail long and bushy. Mostly a peculiarity is that they have a double deer claw. They are of all colors. The colley has a thicker coat, with more body. Is stouter in form. Color mostly black and tan, with a little white. The true colley is said to have the outline form something like the dingo. A colley has mostly one or two deer-claws on the hind legs. We may add that some of the best breeds of the English sheep dogs are tallest. There is a certain forever-alert air, a liveliness in a colley which an English sheep dog does not have.

F. D. W., Auburn.—1. My left barrel (full choke) at 40 yds., with No. 4 shot, 1½ oz., and 5 drs. powder, puts 82 shot in a 39-in. circle. At 40 yds. with 1½ oz. No. 8 shot, not chilled, it puts 250 pellets in same circle. What kind of shooting is that? 2. How many pellets of common shot, No. 4, using 5 drs. Hazen's powder, at 50 yds., would you consider extra shooting? 3. How many No. 2's? 4. Will 30-in. barrels, as a rule, shoot as well as longer barrels—10 gauge? 5. What charge of powder would you advise for my gun? 6. What kind of target is 84 pellets at 60 yds., with 5 drs. powder and 1½ oz. No. 6 shot? Ans. 1. The target with the larger sized shot is very good, and that with the smaller shot not so good. 2. 100 to 110. 3. 60 to 65. 4. Not much difference, if any. The best makers build 30 and 32 inches. Matter of taste. 5. Think you use too much powder for pattern; try 4 drs. 6. It is a very long distance. You ought to have put over a hundred on the target.

J. H. P., Augusta, Maine.—1. Give me the correct size of hull's eyes for Creedmoor targets for off-hand shooting at 100 and 200 yards. 2. The rules and regulations published by you give a "third class target" for all distances up to and including 300 yards as having an eight inch bull's eye," while Dennison's Creedmoor target marked "100 yards practice" has only a four-inch bull's eye. Which is right? 3. Is there any book that gives any useful information about off-hand rifle shooting? 4. Is the practice of scoring by the Creedmoor system superior to actual measurement, or "stringing"? If so, why? 5. What is the best score on record of off-hand shooting at 100 yards, Creedmoor score? Ans. 1. For 100 yards, four inches diameter; for 200, eight inches. 2. According to the rules of the N. R. A. we are right. 3. Not any. 4. Not as good as the string system for accurate measurement, but adapted to military shooting. The only rational method is the system of rings used by the Germans. 5. Forty-seven. This has been made several times.

A. H. H., Nova Scotia.—Would otter and mink breed if confined in small enclosures? Do they breed more than once a year; if more, how often? How long do they carry their young? What is about the average number of young at a birth? Would it be necessary to have a stream of running water through the enclosures? Some two or three years ago I saw an article in an American paper concerning mink breeding, and stating that some persons in New England had gone into the business. Have you ever heard of such establishments? If so, how are they constructed? Can you recommend me a good work on the breeding or habits of fur-bearing animals? Ans. We are really very sorry that we have not the space in which to answer all your questions, but to do so we should have to issue an extra. Back numbers of FOREST AND STREAM contain what you want. See F. & S. Oct. 24, 1874, and July 2, 1874. Also consult Coues' "Fur Bearing Animals," and write to Fred. Mather, care this office. "Fur Bearing Animals," by Elliott Coues, U. S. A., is the book you want—"Miscellaneous Publications," No. VIII, published under the auspices of Hayden's Survey.

—A few gentlemen wishing to join a first-class shooting and fishing association can hear of a favorable opportunity by addressing GAMES, this office.—[Adv.]

NICHOLS & LEFEVER,

SYRACUSE, N. Y.,

MANUFACTURERS OF

Gunpowder.

THE HAZARD POWDER CO,
MANUFACTURERS OF
GUNPOWDER,

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. only.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6 1/2 lb. kegs. A fine grain, quick and clean, for bird and prairie shooting. Well adapted to shot-guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 6 (coarse). In 1 and 5 lb. canisters and 6 1/2 lb. kegs. Burns slowly and very clean shooting remarkably close and with great penetration. For bird, trout or water shooting, it ranks with other brands, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

UFFG, FFG, and "Sea Shooting" FG, in kegs of 25, 12 1/2, and 6 1/2 lbs, and cans of 5 lbs. - UFFG is also packed in 1 and 1/2 lb. canisters. Burns strong and moist. The UFFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard rifle powder of the country.

Superior Mining and Blasting Powder.

GOVERNMENT CANNON & MUSKET POWDER; ALSO, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents in every prominent city, or wholesale at our office.

FOR

DUCKS AND SNIPE.

Sportsmen's Goods.

BOSTON
SHOOTING SUIT.

Manufactured only by

G. W. SIMMONS & SON,
BOSTON, MASS.

THE BEST IN USE.

ONLY ONE QUALITY MADE AND THAT IS THE VERY BEST.

Flexible, Waterproof, Tan-Color, Duck. Each article—coat, trousers, vest and hat—has the name and manufacturers' address stamped upon it, and no suit is genuine without it bears this imprint.

The suit can be sent, securely packed, by mail to any part of the United States or Canada on receipt of \$1.25 above the price of the suit.

We make no discount except to the trade. The price of the suit complete is \$13.

The suit consists of coat, trousers, vest and choice of either cap with havelock, or hat.

The material is of the best quality of duck, waterproofed by a patent process. The color is that known as "dead grass shade."

The seams and pocket corners are copper riveted, and nothing is neglected to make the whole suit complete in every way.

This is what one of our best sportsmen says of it, writing from camp: "Miserable, drenching rain, pouring down in a perfect deluge, as if a second flood had come upon the earth, two portages to cross, and a swamp between them; that was the prospect before we reached our camping ground. Such a swamp, too; almost impassable, for where the ground was firm was an almost impenetrable thicket of thorns and what not, that looked as if it would tear you to pieces. Well, we got to our camp, and I must confess I was agreeably surprised on my arrival. Although I had been nearly eight hours under incessant rain, laboring and striving along under the adverse circumstances above mentioned, yet I found myself comparatively dry, and my clothes without a tear. For the benefit of our brother-sportsmen, let me advise one of Messrs. Simmons' (of Boston, Mass.) Waterproof Suits. Oh! what a relief it was to find one's tobacco was dry, and that one could light a pipe; that you could laugh at your miserable friend, who stood shivering and shaking as if he had the palsy; and then, next morning, oh! what fun it was to see him mending his clothes, while I had not a tear to complain of. Ventilation, also, that great bugbear of waterproof suits, is legislated for in the most ingenious manner. No sportsman should fail to supply himself with a suit which is at once cheap, practical, and will last a almost indefinite time."

Our Leather Jackets and Vests are the great wind protectors. They are made from soft, pliable black leather, flannel lined, and sell at \$9 and \$7.

Our Flexible Tan-Colored Waterproof Leather Coats and Breeches

are considered the finest things ever made. They sell at \$22 and \$15.

An illustrated circular, containing full description of each garment, with sample of the material from which made, will be sent free on application.

THE NEW IMPROVED AIR RIFLE.

Especially Adapted for Target Practice.

SPLENDID FOR SHOOTING SMALL GAME and touching up CATS OR DOGS.

Just the thing for Taxidermists to collect specimens. There is no report or danger attending its use, or any auxiliaries required to operate it. It can be loaded with ease and rapidly. It is extremely simple, and has no delicate parts to get out of order or wear out. For sale by the Trade generally. Sent upon receipt of price or C. O. D. SEND FOR CIRCULAR. H. M. QUACKENBUSH, Patentee and Mfr, Herkimer, N. Y.

Hart's Sportsman's Favorite Metallic Shells.
FOR BREECH-LOADING SHOT GUNS.

These Shells are easily loaded, and the caps easily extracted from inside. Head solid and much thicker than any shell now made, giving a solid seat for cone or snail, which prevents it from driving through or springing away, thereby causing misfires. The cone is made of nickel, and fastened solid in its place. Neither rusts nor corrodes fast, like movable snail made from steel. The Nickel cone also prevents misfire when a cap has been left on shell for a few days, which is liable to occur either in steel or iron. These Shells are finely finished, and made any length ordered, from 2 1/2 to 3 1/2 inches. Shells and Loaders and Descriptive Price-Lists can be obtained from all the leading Sportsmen's Houses throughout the country. HART & SLOANE, Newark, N. J.

FROM CAPTAIN BOGARDUS, CHAMPION WING-SHOT OF AMERICA. MESSRS. GEORGE E. HART & CO.—Gentlemen: The fifty Shells I received from you to-day suit me better than any I have ever used. They are stronger and better in every respect, and I shall use them in all my shooting hereafter. Yours truly, A. H. BOGARDUS.

W. W. Greener's Patent Wedge Fast, Hammerless Breech-Loader.

POULTRY WORLD—A splendidly illustrated monthly, \$1.25 a year. Send 10 cts for a specimen copy. Address FOULTRY WORLD, Hartford, Conn. Dec 6 1 yr Ex

THE SCIENCE OF LIFE, OR, SELF-PRESERVATION.—Two hundredth edition, revised and enlarged, just published. It is a standard medical work, the best in the English language, written by a physician of great experience, to whom was awarded a gold and jeweled medal by the National Medical Association. It contains beautiful and very expensive steel-plate engravings, and more than 50 valuable prescriptions for all forms of prevailing diseases, the result of many years of extensive and successful practice. 300 pages, bound in French cloth; price only \$1, sent by mail. The London Lancet says: "No person should be without this valuable book. The author is a noble benefactor." An illustrated sample sent to all on receipt of 6 cents for postage. Address Dr. W. H. PARKER, 4 Bulfinch street, Boston. The author may be consulted on all diseases requiring skill and experience.

"THE OOLOGIST,"

A MONTHLY JOURNAL DEVOTED EXCLUSIVELY TO BIRDS AND BIRDS' EGGS.

This magazine, the favorite of amateur ornithologists, is now in its third volume. It is replete with all that is new or recent in Ornithology and Oology, and publishes important papers on the rarities of our birds and eggs. It is just the periodical for those making collections of birds and eggs for scientific examination, as its columns are constantly furnishing descriptions of the eggs of new and rare species.

TERMS—Forty cents a year, in advance. Specimen copies and prospectuses only on receipt of stamp. Address,

S. L. WILLARD & CO., Oneida st., Utica, N. Y.

SCHUETZENFEST

The FOREST AND STREAM AND ROD AND GUN having given a gold medal for team shooting at the

SCHUETZENFEST

of the Sharpshooters' Union of the United States of North America, the Executive Committee of this Union takes pleasure in informing their American friends that they will make all arrangements for team shooting for this medal. The match will take place at the Schuetzen Park, Union Hill, on

Monday, Jan. 24, 1879,

at 11 A. M. Each team to consist of eight men. Entrance fee, \$15 per team. The team making the highest score to win the Forest and Stream and Rod and Gun Medal. The entrance fee money, after deducting cost of markers, will be divided among the teams, pro rata. All the members of each team must be on the same score, and must have been members of it for ninety days previous. The entrance fee is to be paid on or before June 10, 1878, to Mr. F. HARENBURG, Treasurer of the Sharpshooters' Union, No. 190 Greenwich street, N. Y. Any rifle club or shooting society of the United States will have the privilege of sending their teams without being members of the Union. Any communication directed to the secretary will be promptly replied to.

SEND FOR NEW CIRCULAR.

W. H. BAKER & CO., Armory, 20 Walton Street, Syracuse, New York.

IRA A. PAINE'S

FEATHER FILLED GLASS BALL.
PATENTED OCTOBER 23, 1877.

The "Standard" Ball.

The Bohemian Glass Works would respectfully call the attention of all dealers in Glass Balls to the fact that the Paine Patent Filled Ball is the STANDARD AND ONLY BALL MADE TO A SCALE, therefore we would respectfully caution the dealers against having in a stock of unsaleable articles for the Spring Trade, when you can purchase the Best Ball ever made at prices less than is charged for other inferior balls.

No other ball affords the PLEASURE of the Feather Filled Ball, and no other Ball is as beautifully made. It will break in every instance when hit by shot, and is admirably strong to prevent breakage either by transportation or falling on the grass.

Every ball is weighed and examined, then packed with the greatest care, in barrels of 300. Send for price list. Special inducements to the trade.

HEADQUARTERS BOHEMIAN GLASS WORKS, 214 Pearl Street, N. Y.

Bogardus' Patent Rough Glass Balls and Glass Ball Traps.

These Traps are the only ones that give satisfaction, as they are simple of construction, easily set, and not liable to get out of order, and they throw the ball in a manner that more closely resembles the flight of a bird than any other trap in the market. The Patent Rough Glass Balls are made of uniform weight and thickness, and have a corrugated surface that strengthens the ball for shipment on any part of the country, prevents the glancing of shot, and thereby insures the breaking of the ball when hit.

CAPTAIN BOGARDUS was the first to introduce the ROUGH BALL, and at a price far below the smooth ball at that time.

Balls and Trap can be ordered through all Gun Dealers. Liberal discount to the Trade.

Every ball will throw a ball in any direction from the shooter at the option of the puller, is now ready for the market. Price \$8.

Parties buying glass balls will receive score book for glass ball shooting in each barrel.

WOLF POINT—THE NORTHERN PLAINS—A FRIGHTENED NEGRO
—FORT UNION AND ITS HISTORY—"GOOD BYE."

WOLF POINT occupies little space in my notes and lingers loosely in my memory. It was the serene and luminous first hour of twilight when we came to a stop under the bluff, amid the yells of a hundred Indians, the swearing of the mate, the roar of escaping steam and the raising of clouds of dust consequent upon planting a dead mau; * all of which somewhat disturbed both the serenity and the luminosity of the evening. A gay and lively scene was to be witnessed from the hurricane deck, which was just level with the top of the bank. The plain was perfectly level and overgrown with brown stubble which lightened up in the distance, until the horizon was reached in a low range of bright hills, where the sunset rays still rested. Coming quite to the water's edge on the left hand was a grove of heavy timber quite as sharply defined as though the ax had trimmed its boundary straight; and all along it, on this side, were fields of corn, with stalks not over three feet high, that bore ears close to the ground, and other fields of fine-looking potatoes, etc. Half a mile back from the river a group of low buildings indicated the Agency. The whole foreground was soon filled with Indians. They came, like a flock of gay birds, racing their ponies—the poor little beasts carrying two or three apiece—at the top of their speed, each one decked out in his brightest and best, while the neglected squaws and children trudged along afoot. Many of them could talk English pretty well, and we had a good deal of sport with them, particularly one old fellow—some kind of a "chief"—whose face had a startling resemblance to the late Prof. Agassiz. Wolf Point is an agency for the Assiniboin. A part of the Sioux nation was also assigned to this post, but as the two tribes do not agree, the latter are to have a separate trading-post at Poplar Creek, a few miles below, to which point the Fort Peck equipments were then being removed. Both agencies, I understood, were controlled by the Rev. Dr. Bird in the interest of the Methodist Episcopal Church.

This evening my midnight pipe and meditations were not disturbed by demands for consolation. It is so very hot at mid-day that no comfort can be had anywhere, and it is only at early morning and evening that the deck was comfortable. My good friend Conrad at Fort Benton may enjoy the inward happiness of one great good action done in giving me a dozen bottles of St. Louis lager. I put them in the ice-chest and they lasted me to Bismarck. They were a great blessing.

When I got up in the morning we were many miles on our way. The whole country through which the river flowed was a level plain, with occasional heavy groves of timber of various sorts and broad, low bottoms of sweet grass. The sand-bars became more and more frequent, and wide wastes of old channel occurred every few miles, strewn with snags and drift-wood. Occasionally behind them would be a little swamp, and at such places ducks, geese and sand-hill cranes were always to be seen, but birds or animals otherwise were exceedingly rare. On one of these bars, now called Disaster Bend, just below Poplar Creek, the steamboat Chippeway was burned in 1861. It is said that the owners, the American Fur Company, were smuggling alcohol through to Fort Benton for the Indian trade, and one of the deck hands, in the act of stealing a drink, ignited the alcohol with the candle he was carrying. She was loaded with Indian annuity goods, etc., among the rest twenty-five kegs of powder. When the fire reached the powder the boat blew up, and "packages of merchandise were found three miles (!) from the disaster." Not far below, at the mouth of the Big Muddy, a considerable stream entering from the North, there used to be an important trading-post called Fort Stewart, or Fort Kipp. It was built on the

Missouri, but since then the channel has changed, and the site is now far inland.

Although the distance in a straight line was not great, the bends were so numerous that uninterrupted steaming failed to bring us to the mouth of the Yellowstone, and we spent a pleasant night in the shadow of a grove of mighty cottonwoods which crowned the bluff. An incident of this camp was the bringing aboard with the wood of a live rattlesnake. The rude Othello who had unconsciously carried it turned as pale as a darkey can turn, when he discovered his freight. It was the Missouri rattlesnake (*Crotalus conjunctus*), and looked much like the Massassauga, except that the colors were duller and the spots less sharply defined. The length, I should say, was not over three feet, and the body very slender. They are exceedingly common in this region.

The next morning (Wednesday) I was careful to be up early, so as not to miss seeing the mouth of the Yellowstone. I had been at its source, and now here was its mouth; if anything can be told by seeing both ends of a stream, I can be said to know this river. Compared with the broad Missouri, the branch looked much smaller than I anticipated. The banks were low and muddy, and the water was the same yellowish-brown as the larger stream, but the current swept along with a steady power which verified the river's reputation. It did not seem possible for steamboats as large as ours to have gone hundreds of miles up this tortuous, narrow water-course, but it has been done, and will continue to be. The Yellowstone can never vie with the Missouri, however, as a steamboat route to Montana, though the navigation of its lower portion may be a very important aid to civilization when the Northern Pacific Railway is pushed through to its banks, and sitting Bull is Christianized by the leaden Testaments of such missionaries as Crook and Miles. The district, being well watered, is verdant and beautiful. Along the river are strips of timber, and luxuriant grass lands stretch back to the barrenness of the distant hill tops, where the drought of the great plain is again supreme. In the angle of the two rivers a wide prairie lies, which is one vast bed of flowers, interspersed with pretty copses and thickets of wild rose.

For some time before reaching it we had caught glimpses of the most important point on the Missouri between Fort Benton and the outpost of civilization at Bismarck—Fort Union.

There was such a bustle of soldiery as we rounded up to the landing, so many citizens, Indians, carriages and freight teams, that the fort seemed a metropolis after our experience of adobe fortifications and wood-cutters' cabins. A cluster of store-houses and sheds at the landing seemed grand to our eyes, but beyond them could be seen the village and fort; houses with clap-boarded sides and shingle roofs, and—think of it!—green blinds. The larger of these pretentious domiciles enclosed a quadrangle, defended outwardly by a stockade, with corner towers; but outside were many small houses—dwellings of traders, laundresses, teamsters and others living at the post—until a considerable village was accumulated upon the level bluff. I wish I were able from observation to describe it more in detail, for Fort Union is a very interesting place.

This post and village, however, is not exactly the Fort Union which occupies such a prominent position in the annals of the Northwest. Old Fort Union was two miles farther up, and what there is left of it is now inhabited by Indians. This was the first fort built on the Upper Missouri. In the summer of 1829 Kenneth McKenzie, a trader from near where St. Paul now stands, came across with fifteen men, looking for a good place to establish a trading post for the American Fur Company, selected a site opposite the mouth of the Yellowstone, and built a stockade, 200 feet square, of logs, about 12 inches in diameter and 12 feet long, set perpendicularly, with two block-house bastions on diagonal corners of the stockade pierced with loop-holes. The dwelling-houses, warehouses, and store were built inside, of the same height as, but not joining, the stockade, leaving a space of about four feet between the walls of the buildings and the stockade. All the buildings were covered with earth, as a protection against fire by incendiary Indians. This was substantially the pattern of all the early forts; they were easily built, convenient, and good for defense. The object was to trade with the Assiniboin, a large tribe of Dakota Indians, ranging on the north side of the Missouri, from White Earth River to the mouth of Milk River, and northward into the British possessions. They were a peaceable, inoffensive people, armed with bows and arrows, living in lodges made of buffalo skins, and roving from place to place, according to the seasons of the year, occupying certain portions of their country in the summer, and during the winter remaining where they could be protected from the cold with plenty of wood. The Assiniboin call themselves Hohays or "fish netters." The Chippeways call them Assanary Bawus, or Stone Sioux, because, living on the wide prairie, they were, for want of fuel, obliged to cook their fish by warming the water with stones. So runs an old Jesuit narration. It is easy to explain this curious error on the part of the Chippeways—grating the truth of the Frenchman's account—by the fact that it was not want of fuel which caused them to boil their fish by putting hot stones in the water, but lack of vessels that would stand fire. Almost all savage tribes, before contact with the whites, did often cook their meat in this manner in water-tight baskets or troughs. As to the other assertion,

that "because wood was scarce and small with them, Nature had taught them to burn stones in place of it," it probably arose from war parties of the Chippeways—their hereditary enemies—watching at a distance on the naked prairie the Assiniboin gathering buffalo chips, supposing their foes were simply picking up stones, which by some magical power they were able to ignite.

St. Louis was the point from which traders brought their goods. They would start from there as soon as the ice went out with mackinaw boats, 50 feet long, 10 feet wide and 4 feet high, loaded with about 14 tons of merchandise to each boat, and a crew of about 12 men. Six months was expended in getting to Fort Union. In 1833, however, the steamboat Yellowstone succeeded in reaching this point with supplies. This was a decided triumph, and no more freight was tediously "cordelled" below the mouth of the Yellowstone. Farther than this progress was slow, so that it was not until about 1860 that Fort Benton was reached by steamer.

One great obstacle in the way of steamboating on the Upper Missouri was the difficulty of procuring experienced pilots. A Mexican and an Indian half breed were employed in the earlier voyages of the Yellowstone and Assiniboin, who, comprehending the advantage of being the only steamboat pilots possessed of a thorough knowledge of the river, exercised a kind of petty tyranny over the company, often stopping the boat or purposely running it aground to gain time for a game of cards or lazy slumber. It was not long, however, before enterprising American pilots possessed themselves of a full knowledge of the river and took the places of their two wretched predecessors. No trouble has since been experienced upon this score, and in view of the difficult navigation, the Missouri pilots conduct boats up and down the river with a safety and celerity that entitle them to an honorable prominence among their brethren of the craft everywhere. In the early days of Missouri navigation, snags and sawyers were far more abundant in the river than now, consequently no boat ever ventured to run by night. There was then an abundance of dry wood all along the river, and it is probably to the gradual thinning out by the woodcutters of these dead and fallen trees within the sweep of high water that the present diminished number of snags is to be attributed. Government snag-boats did good service in removing from the lower river these terrors of the steamboatman, but were never employed upon the Upper Missouri.

Kenneth McKenzie, the founder of Fort Union, was the pioneer trader of the Northwest. He was a native of the Highlands of Scotland, and when young came into the service of the Hudson Bay Company and was sent to Hudson's Bay. He remained there until 1820, when he quitted their employ, explored the country southward to Lake Winnipeg, then across through all the Red River region to Lake Superior, finally concluding to settle on the Upper Mississippi. In 1822—a long time ago for that region!—he went to New York, secured an outfit of Indian goods and returned to his chosen ground, where he remained until he became connected with the American Fur Company, went westward and established Fort Union in 1829. For ten years afterward he was in charge of all the Northwest fur trade. Then he resigned, went to St. Louis and engaged in business, until his death in 1857. His successor was Alexander Culbertson, who enlarged the field of operations as has already been indicated, and built Fort Benton. McKenzie was well fitted for his post by training and nature, and many stories are remembered of his adventures, hunting exploits, wars and diplomacy with the Indians and rule over his scarcely less treacherous and turbulent trappers. Catlin has immortalized him in his "North American Indians," a work by which he also has immortalized himself. He was a man of great generosity, courage and tact.

But, *tempus fugit!* When I get to talking about these old romantic fur-trading times—the knightly age of the West—I hardly know what to tell first or where to stop.

Two miles below, if you go by land across the neck of the peninsula, but nine miles around the bend by water, stands Fort Buford, another fine army settlement, the headquarters of this military district and the residence of General Hazen. The garrison consists of five companies of the 6th Infantry under Colonel More. It is as pretty and homelike as Fort Union, and appears to be even larger, being more scattered, and having a permanent village of Indian houses, or huts, near by. Between the two forts runs the boundary line between Montana and Dakota, and we are now in the latter Territory.

Here ends the "Upper Missouri," a thousand miles from the beginning, two thousand miles from the mouth of the mighty river. If I have given you any information or any pleasure in my drifting down its turbid, tawny current I am glad; if not, possibly a suggestion will linger in your mind prompting you to take the same voyage when next the restlessness of migration comes on and you are casting about for novel roads to travel. Try the Upper Missouri, above all, if weariness calls for recreation unattended by devouring excitement, or ill health requires gentle stimulus.

The Lake steamers or the railway will carry you from the East to Duluth, whence you can journey by rail to Bismarck. Thence a steamer will slowly work you up the Missouri. But a better way, unless you have no terror of the tedium of a month's voyage, is to go by the Union Pacific railway and stages to Montana, and then go down the river by steamboat from Fort Benton. And may you have the good fortune to strike the good old Benton and her hospitable officers!

Yule!

* Planting a "dead mau" has no reference to inhaling a cadaver, so to speak, but is simply burying a stick of timber in a trench, so as to form a fixture which a steamer can tie its hawser to in the absence of trees or posts.

Fish Culture.

REPORT OF THE COMMISSIONER OF FISHERIES OF MARYLAND.

THE fisheries of Maryland are perhaps of greater importance to that State than any similar interests in the United States. With the Chesapeake Bay and numerous rivers a very large proportion of her inhabitants gain their living by fishing. The depletion of her waters, caused by overfishing, having been apparent, no other State has paid greater attention to restocking her waters.

Maryland is fortunate in possessing as Fish Commissioner a gentleman who, to a very thorough acquaintance with the subject of fish culture; combines a mechanical skill which has facilitated the surmounting of a number of difficulties. The eggs of the shad, when artificially impregnated in order that they shall hatch, have given a great deal of trouble. Before the method employed in the hatching box invented by Mr. Seth Green it was thought almost impossible to bring the eggs of the shad to maturity. Fish culturists, sometimes, used to agitate the boxes containing shad eggs in order to keep the germs alive. In the sluggish waters of Maryland, where there are no currents, it was found impossible to use the Seth Green shad-hatching boxes, as some movement in the water was a *sine qua non* of success. Accordingly, Mr. Ferguson, quite equal to the emergency, devised a mechanical process which rendered him quite independent of currents. The invention consists in a series of vessels in which the spawn is placed combined with a mechanism that will impart motion to the vessels, thus creating the necessary current and change of water. The illustrations we give fully explain the mechanism. A A represent a series of cylindrical vessels made of sheet metal, which are slightly tapering. Each vessel is provided at its lower end with a bottom, B, of wire cloth, which is held in place by a metal band C. If necessary the top of the vessel is provided with a wire cloth, B', held by the band C', the latter being put within the vessel, while C is outside.

The vessel A has a handle, a, so that it can be suspended. (Fig. 4). In fig. 3 E is the hull of a boat or scow or pier in

each side of which are arranged a series of levers, D D, pivoted to the boat or pier, with their outer edges projecting a suitable distance beyond the sides of the same. The vessel A thus hung is so suspended that it is never more than two-thirds deep in the water. The levers to which the vessels are attached are operated by a series of concentrics, I I, set at various angles upon a continuously rotating shaft, G, connected to and rotating by a steam engine, or any motive power.

The vessels being cylindrical in form, presenting no angles or corners, can collect no sediment or matter deleterious to the life or development of the spawn. By this invention of Mr. Ferguson the hatching of the eggs of the shad can be carried on in still waters, or even in waters exposed to storms.

This invention of Mr. Ferguson of course seems very simple, but it has required a good deal of practical judgment and experience to perfect it. In the last report of the Commissioner mention was made of a peculiar apparatus consist-

ing of tanks in which the water circulated, when the power used for propelling the steamer served to keep the eggs which might be collected on board alive and in good order until carried to the hatching nurseries. Last spring on the Lookout,

a small steam yacht employed by the Commissioner, over 1,000,000 eggs were easily kept during fifteen hours until safely placed in the hatching apparatus.

Mr. Ferguson says "that in judging of the efficiency of the means to restock our waters with shad, we must not lose sight of the fact that there has been an alarming and steady decrease in the field of shad. * * * Surely, if the decrease can only be arrested, even if there is no marked increase for several years to come, the work of artificial propagation, as yet scarcely more than yet begun, should be prosecuted with the utmost energy."

In 1875, some 2,305,000 young shad were placed in the Patuxent River, and about half as many in the Chester River. Now fish culturists are pretty well satisfied that it is the male fish which arrive earliest in the season, though they do not penetrate far up the river. Mr. Ferguson, then, had the right to expect that the young male shad would put in an appearance last year in the Maryland waters. These anticipations were realized, for in April of last year, the testimony fur-

nished by fishermen was, "that the catch of buck shad had been larger than known for many years; in fact, that they had not taken as many male shad in forty years."

During the last two years an aggregate of 1,645,000 young of the California salmon have been hatched and planted in Maryland waters by the Commissioner. A very interesting series of experiments with the smelt taken from the Raritan have also been a subject of careful study. The report of the Commissioner—quite voluminous of the kind—is of a most interesting and novel character, and we particularly recommend the many carefully executed illustrations of the spermatozoa and ova of fishes.

AMERICAN FISH CULTURISTS' ASSOCIATION.—As we are going to press the seventh annual meeting of the association is taking place, the Hon. R. B. Roosevelt presiding. The attendance is unusually large, and consists of various fish commissioners of the States, and of the leading fish culturists in the United States and Canada. We shall be able in our next issue to give a detailed account of the meeting.

BROOK TROUT AT THE AQUARIUM.—The brook trout raised at the Aquarium, in the Ferguson jars, are thriving famously. The eggs were first placed in the hatching jars on January 2. Some 48,000 young trout are now swimming about in the most lively way. These trout are for stocking Mr. Percy Belmont's streams. Some 5,000 more fish are now being reared for Mr. Reiche. The whole process of hatching and rearing fish may be seen at the Aquarium.

STOCKING ESOPUS CREEK.—A SUPPLY OF FISHES COMING.—Seth Green, of the State Fishery Commission, at Rochester, has written to George B. Styles that he will, within a few days, send on a man with a requisite number of cans, to contain full one hundred fully-matured black bass, weighing between two and three pounds each, and the female to be filled with spawn. Much credit is due to Mr. Styles for his perseverance in the matter of stocking Esopus stream with these and other game fish.

THE POSSIBLE APPEARANCE OF SALMON IN THE MISSISSIPPI.—The Memphis *Avalanche* of a late date states that salmon have been caught in abundance near Memphis. As it is possible that the *Salmo gairdneri* may have grown somewhat in size since their introduction into the river, we await with a great deal of interest the confirmation of the above assertion. We only trust it may be true. If salmon are found in the Father of Waters it will be the triumph of American fish culture.

TROUT FARMS FOR SALE.—Two excellent opportunities offer through our columns to any persons wishing to engage in the culture of trout—one in this State and another in Wisconsin. We can furnish fullest particulars of the same at this office.

Natural History.

Correspondents in this and other departments of our paper will excuse us for curtailing their favors, as otherwise our limited space would prevent their publication. We take care to preserve the gist of all articles.

SECURE YOUR LIVE QUAIL AT ONCE.

RUTLAND, VT., Jan. 25, 1878.

EDITOR FOREST AND STREAM:

Having frequently seen letters of inquiry concerning live quail for stocking purposes, and as the chances for their procurement seem desperate, I would suggest that there is one way in which we of New England may have quail, and I believe it to be our only chance. The American quail cannot endure the rigor of our New England winters, at least in the northern portions of New England. This fact will necessitate the purchase of a new breeding stock each year. The migratory quail will, however, escape the danger of destruction by such causes. They are a fine game bird, breed enormously, and can be easily and cheaply procured. Mr. Geo. H. Owen, American consul at Messina, Sicily, will be happy to assist American sportsmen to procure them in the spring, through Mr. D. Bonano, of Messina, who is a large ship owner and broker, and will give timely notice of the date of shipment and expected time of arrival in New York. Orders should be made at once to make sure of the birds this season, and should be accompanied by the guarantee of a bank that Mr. Bonano's draft will be promptly honored. The cost cannot, of course, be accurately stated now. The birds imported by me last season cost about eighteen cents (18 cents) each, delivered here. Arrangements should be made at the Custom-house in New York, so that there may be no delay there. An affidavit that they are for breeding purposes and not for merchandise, will bring them in free of duty. I am well convinced that the migratory quail is to be the game bird of New England, and that at no distant day. An order is now on the way for more of them, to be turned down in this vicinity. The affidavit above alluded to can be placed in the hands of the express company which is to transport them from New York; the company will thus be enabled to pass them through the Custom-house without delay. The company will also pay the ship's charges, which will also include a small fee to the ship's steward for food, care, etc. So much for quail. On another subject I wish simply to say now that I am getting together facts and figures for an article on dog breaking and dog breakers, particularly the latter, to some of whom I propose to pay my respects. The article will, I hope, be of interest to gentlemen sportsmen having fine young dogs which they wish broken.

Yours,

M. G. EVERTS.

[Every sportsman must feel grateful to Judge Everts for the lively interest which he has taken in this matter, and we feel confident that there will be many, especially in New England, who will be only too glad to act upon the recommendations of the above note. The interest in this topic, however, is not confined to us of the East, but is manifested very generally throughout the country. In a recent issue of the *Chicago Field*, Ubique, of Winnebago City, Minn., gives some pleasant notes on the quail of the Old World, which, in this connection, are certainly worth reprinting. While it is not improbable that the birds introduced by Messrs. Everts and Hapgood may do well, it is certain that more general and widely-extended action must be taken before this species can become sufficiently abundant to be valuable to sportsmen. We desire, therefore, to encourage all who can devote time or money to the undertaking, to obtain and turn out at the earliest moment possible as many of these birds as may be practicable. The extract to which we have referred is as follows:]

"The American is the finest and best quail I have ever come across, but in view of the complaints of his scarcity, which are so constantly expressed in your columns, I believe it would be well to import foreign varieties of the same bird, even though they are not half his size. In India there are two varieties of quails, the 'lohar' and 'butair,' or the button and rain quail. The former are indigenous and breed in the country; the latter are a trifle larger than the native, and come into the country from the far north during the rainy season. Neither variety is more than half the size of the American quail, but they are wonderfully prolific and delicious eating. They breed and live in the tall grass of the open, and thirty to fifty brace a day is a very common bag of them in many localities. They are very easily caught and reared, and become quite tame; they are very pugnacious, and the natives keep them for fighting purposes, if they cannot afford rams or cocks. The Mediterranean quail is about half way in size between these and the American bird. They breed principally in Albania and migrate about October to Northern Africa, returning in the spring. At these times the whole air seems alive with countless flocks of quails and woodcocks. I have bought the latter in Malta for fewer cents than I should have to pay shillings in England at the time of their migration, while thousands of stragglers of both these kinds of birds drop on that island, and are too tired to escape even boys armed with sticks alone, and the market is, *pro tem.*, glutted. In Sicily the flights of quails are looked for as giving rise to one of the great industries of the island, and I have seen literally millions of them caught and caged in and about Messina, from whence they are shipped to London, Paris, St. Petersburg, and wherever the lover of a 'Salini de Cailles aux truffes' can be found. These are the birds that I would propose to have introduced to the States. When caught they are placed in shallow cages which contain from one to two hundred. They don't seem to care in the least about captivity, and will travel any distance. Their cost on the spot is not more than a few cents apiece, and a letter from any organization or individual to the American consul at Palermo, Messina or Malta, would ensure the sending over a shipload if required, or I would gladly arm any person or body corporate with a letter of introduction, which would secure the purchase and careful packing and forwarding of a consignment for this country."

[After the very full details given by Judge Everts, there is no good reason why we might not have a thousand or more of these birds turned out this spring at various points in this country. We hope soon to be able to report some action in this matter on the part of sportsmen in general.—ED.]

WINTERING QUAIL.

GREENWOOD LAKE, Orange Co., N. Y., Feb. 18.

EDITOR FOREST AND STREAM:

I read with much interest in your issue of Jan. 31 the communication of Mr. S. M. Eaton, of Watertown, Wis., upon the winter protection of quail, and I take great pleasure in contributing my own experience of the same subject. We have tried the experiment several times at Greenwood Lake of keeping quail over the winter in confinement, and our experience is that it is difficult to obtain an enclosure sufficiently close and secure to preserve birds from vermin, and which will, at the same time, allow them sunlight, fresh air and room enough for exercise. If the quail are kept too warm and close during the winter, the birds, when turned out in the spring, seem to have lost their energy and to have become dull and listless, staying just where they are put out, apparently expecting still to be fed, and making no effort for their own subsistence. From their sluggishness they become an easy prey to vermin after all the trouble taken for their preservation. For these reasons we prefer, in winters of ordinary severity in this climate, not to place the birds in confinement. When the hunts of the birds are found we place them in severe weather food for their support. If their chosen location is a favorable and well protected one this will be sufficient, but if it is a bleak, exposed situation, a few piles of old rails or wood, together with some brush and straw, should be loosely and openly piled together for their protection, and it will be found that if properly located and a little grain is occasionally scattered through these piles, the quail will habitually resort to them.

This winter a bevy of at least thirty quail are being fed and protected here, and so far are thriving and doing well. They come regularly to be fed, and are so tame as to show no alarm at the presence of the person feeding them. No restraint is placed upon the movements of these birds, but a careful watch is kept for cats, hawks, poachers and other vermin. The history of a part at least of this covey of quail is interesting. A pair of quail nested and bred in a swale known as the "Little Swamp" on the property of Mr. S. C., and on which he would allow no hunting. In the early fall the birds could be daily seen and heard in the swale, and became very tame and bold, frequently flying out to adjoining fences, and when approached running away rather than flying back to their cover. Unfortunately, one day in November, a party of boys got into the swale and shot several times at the birds and killed one at least before they were discovered and driven out. Complaint was made, and the whole party were arrested and fined for trespass, which has had such a salutary effect that the quail have since remained unmolested. Now comes the singular part of the matter. The original covey was only a dozen or fifteen birds, of which one at least is known to have been killed, while the present one now being cared for is three or four times as large, which suggests the idea that the establishment of shelters and feeding spots draws to these spots other coveys from the surrounding country, which, being well treated remain. Should this prove to be the fact it will much facilitate the winter protection of these birds, as a few quail placed and fed in any given spot as a nucleus will thus draw to them the stray, unprotected birds of the neighborhood. One great advantage of this feeding is that it saves all the trouble of trapping or otherwise catching the birds, to say nothing of the injury they often do themselves in their efforts to escape from the trap or from the enclosure when first put in it. Hoping some of your readers may try this plan and be successful with it,

I am very truly yours,

GREENWOOD.

THE BRONCHOS AND DOGS AT THE AQUARIUM.

If we are not hippic, still evidences of the docility and perfect training of animals are always most pleasant for us to tell about. At the Aquarium we must declare that the troupe of trained Broncho horses are perfect marvels. Now who would think, that into the much-maligned Broncho of the plains could be inculcated so much obedience? Our general impressions of these horses are, that they are coarse, scrubby brutes, with a talent for kicking, biting, squealing and kicking, induced by a paucity of food and a plethora of whippings. Here you see a troupe of ten handsome animals, which seem endowed with the sense of men. Think of a grand military drill, performed in a way which recalls the movement, the *tout ensemble* of a squad in a crack regiment. Without any flourishing of the whip, simply at the word of command, those Bronchos form into line, march by platoons, halt, and file by the right and left when ordered to do so. Every horse knows his name, and when called upon, marches to the front as would any other full private. Bravo and Bonito are twin steeds, who hide handkerchiefs in boxes and find them again. Perhaps the most comical thing possible is to see an intelligent collie going through an act of equestrianism. One amazing feat is, where the dog, with a graceful bound, lights on a little staging, while the horse continues on his course around the arena. It is the funniest thing imaginable to see the collie, when safe on the staging, wait for a moment, as if enjoying the applause, and then suddenly be all anxiety, lest he should miss his jump when the horse comes around again. He hangs forward on the staging all he can, looking for the coming horse under the platform, and just in the nick of time on he is again. Boys and girls see-saw, but do horses ever enjoy themselves that way? Yes, they do; at the Aquarium one horse tries it first on the plank, and having had a good bit of fun by himself, invites another horse to teeter with him, and away they go see-sawing until they make a perfect balance, and there they stand like statues in perfect equipoise. The neatest trick, and one which probably only a Broncho could perform, is for one of the twins to stand in the middle of the narrow plank, not more than two and a half feet wide, and absolutely pirouette on it, as would a ballet dancer. We are pretty sure that only a horse with Spanish blood in him could do that kind of a thing. Then there are goats—long-boned, ample-bearded patriarchs, the

most grave, respectable and solemn looking animals, who in a dignified manner mount their flying steeds, and the capricious caper and jump, and perform in a double act, just as if they liked it. It is a beautiful sight to see a Billy go careering around the ring with his beard floating in the wind. The big, handsome cream-colored horse Nettie, who comes in with head and tail all up in the air, is a glorious animal. Nettie jumps as if life depended upon it. First he looks at his jump and calculates exactly whether he shall spring over one or four or six horses. Having inspected the whole matter for himself, off he goes at a good round canter, and, with a bound, over he goes. Mr. Fryer, the trainer, less dogs under just as thorough subjection as his horses. Dogs dance and cut all kinds of stunts, and behave in the most elegant and accomplished way. One dog steals a collar from another dog and is judged on the spot. That kleptomaniac is condemned by a dog jury to sudden death; a slip-knot is put around his neck, then a terrier and a collie rig a scaffold, one dog jumps over the cross-beam with a rope in his mouth and enacts Jack Ketch. Of course it is a little yellor dog who is the thief, who, after a slight neck-stretching—a kind of canine lynch law—is let off again, under promise of never doing the like any more. One trick after another follows, the dogs being the performers. The concluding performance is a Mademoiselle Dockril act; a spaniel going through an act of high equestrianism on a bounding Newfoundland. It is in fact a dog circus, all composed of the most distinguished performers. We have no hesitation in declaring that the troupe of Bronchos are the most wonderful animals we ever saw, and with the dogs, the entertainment at the Aquarium is of the greatest excellence.

THE CHIMPANZEES AT THE AQUARIUM.—Poor Nip! when we saw him he lay moaning, wrapp'd up in his blanket. It was a pitiful sight. Every now and then the poor creature would toss his head about, as would an uneasy child. One languid paw lay outside of the cover, and occasionally the slender, delicate fingers would open and close. It was a pitiful sight to see! Sickness in an animal, when nothing can be done for it, excites the warmest sympathy. Nip, the young chimpanzee, died on Friday of acute rapid consumption, and Tuck, his sister, mourns his loss. During a long winter voyage Nip caught cold, and, as with chimpanzees and monkeys generally this disease is as swift as it is fatal, poor Nip was the victim. On Saturday, at the Aquarium, Drs. Hammond, J. R. Wood, Valentine, Mott, Little, Sayre, Bates, Darling, and Janeway, assisted by Dr. Spitzka, made Nip's post-mortem examination. The cause of death, as had been expected, was enteritis, with tuberculosis of the lungs. It was curious for the physiologists present to examine the brain of the deceased. The brain was found to have many convolutions, and to resemble strikingly that of a child. That portion of the brain which is supposed in human beings to give the power of speech, was found to be fairly developed. Dr. Spitzka remarked the resemblance between this brain and that of a person of feeble intellect. What seemed to strike those most familiar with the human brain, was that in this poor monkey's skull the higher intellectual mechanism predominated largely over those purely devoted to the automatic or reflex functions. It is to be hoped that the Neurological Society of New York will examine the brain most carefully. Tuck, the female chimpanzee, is disconsolate, and would break her poor heart if not for the care and affection her keeper bestows on her. If she had her own way she never would leave her attendant. It is a weird kind of look Tuck gives you when you take her delicately formed band, as she gazes at you gravely with her soft brown eyes. Nothing could separate her from her keeper. One hand she gives to the curious, but with the other she holds tight to her friend. In order to put her in her cage, she must be cajoled, by means of a bit of biscuit. When she is left alone she throws herself on the ground, and cries like a disconsolate child. Then repressing her grief as with an effort, she looks with longing eyes for her friend. Tuck is now left all alone in this world. How long she may be alive, no one can tell. Those who wish to see this curious specimen among the rarest of all monkeys, would do well to visit the Aquarium as speedily as possible.

A ZOOLOGICAL GARDEN FOR NEW YORK.—Professor Albert S. Beckmore presented last week to the Board of Apportionment the plan for the establishment of a Zoological Garden in Central Park. The proposition is conceived on a most liberal basis. It is not to be at the cost of the city, and the request was made that the Board only approve of the bill to be presented to the Legislature. The following statement embodies the leading features of the Zoological Garden:

First—Capital to be not less than \$200,000, to be disbursed during the first three years.

Second—Admission: Sundays free; Saturdays free to the pupils of the public schools when visiting in a body under the care of their teachers—one day, fifty cents; other days, twenty-five cents.

Third—Receipts to be applied, first, to maintenance; second, to interest at 7 per cent. on stock and bonds paid for; third, the surplus, if any, to be devoted to purchase of more animals, the improvement of the grounds, or reduction of admission.

Fourth—The city is not to be at any expense, either for the construction or maintenance of said gardens, except furnishing policemen to preserve order.

Fifth—The city authorities to have the right to investigate the accounts of the corporation.

We trust our legislators and the general public will fully endorse and support Professor Beckmore's plans. Both Philadelphia and Cincinnati have their zoological gardens, due to

private enterprise, and both of them are wonderfully successful. New York, with its large population, should be able to support a zoological garden, which ought to be in time the rival of the one in London.

CINCINNATI'S GRIZZLY CUBS.—In one of Mr. Langgan's imitable *World Fables*, an elderly elephant, touched with compassion for the pitiable plight of a motherless partridge nestling, and thinking to fill that mother's place, herself sits down upon the nest. It was perhaps a like internal impulse that led the huge grizzly bear in the Cincinnati Gardens to shield her cub from the cold by an equally fatal act of devotion. We have received the post mortem of the cub, which was as follows:

Male—Weight, 1 lb. 3 oz.; length of body from tip of nose to tip of tail, 11½ inches, from upper edge of scapula to sole of foot, 8½ inches; girth of body behind fore-leg, 7 inches. Body apparently healthy and well nourished; much bruised, with coagulum around the head of femur, and in the thoracic cavity; the lungs filled with coagulated blood, sank in water; the heads of five ribs separated as vertebral articulation; skull broken at occipital suture; color of hair or bristles white, darker on the back; nose and lips flesh-tinted.

Female—Weight, 1 lb. 1 oz.; bruises on back, neck, top and side of head; thoracic cavity containing coagulated blood. Considering the large size of the adult grizzly bear, which weighs about eight hundred pounds, and, compared with the embryonic human (who sometimes weighs thirteen pounds at birth), these young are very small and present many interesting features. It is hard to realize in them the terrible *Ursus horribilis*, whose tremendous strength is proverbial, and whose appearance creates consternation in the "Digger camp," though the well-developed claws on these infants at birth give a premonition of what would follow.

C. D.

DEER SHEDDING THEIR HORNS.—The interesting article under this head which recently appeared in these columns from the pens of Hon. J. D. Caton and Penobscot has called forth from our friend Everett Smith, of Portland, Me., the following experience in regard to the wapiti (*Cervus canadensis*). The incident is remarkable, for the horns of this species are usually hard and bare of velvet by Sept. 1. Mr. Smith writes:

"Visiting the beautiful zoological garden at Hamburg, I was attracted by the motions of a doe wapiti as he stood striking the ground repeatedly with his fore-feet, throwing the earth into the air. As I approached the enclosure, which was surrounded by a strong iron fence of bars and netting, the deer made a rush at me, striking the fence with great force, and repeating his charge again and again. His horns were well developed, but not yet fully hardened, and the velvet hung in shreds from the bloody points, which I had good opportunity to closely examine, as he once thrust them through the netting so as to get caught and held for a while. This was in the month of October.

EVERETT SMITH.

Portland, Me., Jan. 28, 1878.

BRANT IN MINNESOTA.—Evidence that the true brant frequently occurs away from the seaboard continues to accumulate. Our correspondent, Mr. D. F. Stacey, writing from Albert Lea, Minn., says:

"I have seen in a late issue of your paper that some one is questioning the occurrence of the true brant away from salt water. We frequently kill them here. The Canada goose is very common here; next comes the brant (*Branta bernicla*), then the snow goose, white-fronted goose and Hutchins' goose. (I name them in the order of their number.) Such gentlemen as Mr. Fred Jones, Mr. Leggett, C. F. Frame and Col. Sam A. Hatch, all of New York, and Mr. Thos. H. Palmer, of Stonington, Conn., can testify as to the occurrence of the true brant in the Minnesota."

AN ALBINO THRUSH.—A very curious specimen of an albino thrush, the *Turdus pallasi*, has been shown to us. The bird was killed by Mr. W. H. Sanford near Stamford, Conn., last year. As is well known, the natural color of this thrush—called the hermit thrush—is, under part white, with buff tints, olive shades, and breast and sides marked with distinct dusky spots.

LATE AND EARLY BIRDS.—Our correspondent, "S. E. B.," who writes to us from Oneida, N. Y., under date Jan. 26, says:

"Can you account for English snipe remaining in this section through the winter? The mercury has marked 13 deg. below zero; still in swampy places they are yet to be found. Hawks are yet with us, as are also the robins, occasionally found."

It is certainly very unusual to find snipe so late, and especially when it is so very cold.

Another friend—"Memoir"—writing from Medford, Mass., announces that the song sparrows are put in full song on Monday, Jan. 21. "Observer," a Long Island correspondent, relates his experience as follows:

"On Long Island, on Jan. 18, I noticed robins in large numbers, and also a few bluebirds. On Jan. 21 and ever since, we have had on a drained pond bed, 12 to 15 killdeer (snipe), and yesterday I was within fifteen feet of an English snipe. How is this for rushing the season? Yours, OBSERVER."

TWO NEW SPECIES OF FISHES.—We beg to acknowledge from Prof. G. Brown Goode, a preliminary catalogue of the reptiles, fishes and septocordians of the Bermudas, and from G. Brown Goode and Tarleton H. Bean the descriptions of two fish recently discovered by the United States Fish Commission, called the *Macrurus bairdii* and *Lycodes vertilli*.

PTARMIGANS.—We acknowledge the receipt of a pair of beautiful Canadian ptarmigans in winter plumage from Dr. R. A. Alloway, of Montreal. The ptarmigans are a species of grouse common to high latitudes, whose plumage varies with the seasons. In summer they are mottled, with dark brown, and tawny and white, but in winter they are pure white, excepting two black feathers in centre of the tail. The doctor, we learn, has some fifty specimens in skin, ready to be wired and mounted.

Woodland, Farm and Garden.

THIS DEPARTMENT IS EDITED BY W. J. DAVIDSON, SR., N. Y. HORTICULTURAL SOCIETY.

THE VEGETABLE GARDEN.

DURING a spare hour or two we have amused ourselves reading over the various seedsmen's catalogues for the year, and, notwithstanding our experience of over twenty-five years, we really feel bewildered over the great variety of seeds offered. To the amateur, the names and sorts must be puzzling indeed, and, while not discouraging the testing of the many new and perhaps good things described, we now propose to give a list of those best suited for general purposes, as well as for the garden of limited extent. We here draw on Mr. Peter Henderson's tests in his trial ground, as well as on our own observations during the past season. Taking a catalogue at random as a guide, Conover's Colossal Asparagus takes the lead, and a fine variety it is. In Bush Beans, Early Valentine is best for the general crop, though Early Rachel is a desirable variety and a few days earlier. The Black Wax Bean, though yellow in color, and consequently rather unsightly on the table, is solid, stringless and of excellent flavor, and is gaining in favor rapidly. Refugee is a late variety, and on account of its thick flesh is largely used for pickling. Of Pole Beans, the large Lima still holds its own, and is the most delicious bean grown. In Beets, the early Bassano, closely followed by the deep red Egyptian Blood-Turnip, are best for early crops, while the Long Blood Beet is the best for fall and winter use. A few Brussels Sprouts should be grown in every garden; this is the most delicious of all the cabbage-tribe, especially after it has caught the first frost, and it is not nearly so much appreciated as it ought to be. For an early cabbage, the Wakefield still stands pre-eminent, though we understand the Early Summer is only a week or so later and double the size and weight. Winningstadt Flat Dutch and Drumhead Savoy follow for fall and winter use, with a few Blood-red Cabbages for pickling. Cauliflower, in a well-regulated kitchen garden, is indispensable; and we find the Erfurt early dwarf one of the best for early use. In fall, our markets are full of splendid heads of Cauliflower from the southern part of Long Island, probably a good stock of Walchern or Early London; Veitch's Autumn Giant is much praised in England for late crops, but our experience with it has been too limited to test it thoroughly. If carrots are required—and where are they not—take the French Short Horn or Early Horn for early use, and the improved Long Orange for the main crop. Many buy their Celery plants in preference to being at the trouble of raising them, and they may generally rely on getting a good solid Celery if they do so. Turner's Incomparable Dwarf is perhaps the best in cultivation, though many prefer the Boston Market, which, from its branching habit, is of little use for the New York market. The so-called Mammoth Giant, etc., sorts are hollow, stringy and worthless in this climate. Early Sweet Corn is always in demand, and he who can get his corn in a week ahead of his neighbor is a happy man indeed. The Minnesota is the earliest "decently large" sweet corn we know of, and for general crop, notwithstanding fine names, keep to a good stock of the old eight-rowed as the sweetest and most toothsome; for a late variety nothing beats Stowell's Evergreen. As for Cucumbers we will leave them to the Onions; any variety is good enough for us, but for pickling try the Early Cluster.

The New York Improved Egg Plant is good, while Henderson says the black Pekin is the best flavored; and in Lettuces grow "All the year round," and Simpson for spring and summer use, and Boston Market for winter. Melons, when just off the ice, are admired by all in the sultry days of August and September. For an early sort take the white Japanese, and no variety can surpass the Nutmeg for a general crop. See that they are not grown too near your Cucumbers or Squashes. The Red Wethersfield Onion is the Onion for the people, and the seed is now exported to England in large quantities. Yellow Danvers and the New Queen (white) are also desirable, though the former is the best keeper. Some five years ago we waded through an interminable lot of Peas on trial at Chiswick (London), and after all the varieties described in the report, we found our old favorite (under half a dozen names, however), Dan O'Rourke, at the head of the list for earliness and productiveness. Champion, of England, for general crop is not yet excelled, notwithstanding the many claimants for public favor; while for dwarf sorts, Little Gem and Blue Peter divide the honors equally. To those who are fond of Salads, Radishes, especially early in the season, are always welcome. A cosy, warm corner is the place, and the Scarlet Turnip, or new Scarlet Olive-shaped, or French Breakfast, the varieties to give satisfaction. For later use the long Scarlet, white and black Spanish are in order for those who desire them.

Spinach—We find that the Savoy-leaved is by far the best, giving nearly twice the weight of crop on the same space. It is somewhat singular that the great value of this variety seems to have been overlooked by the market gardeners of New York, and they have only recently woken up to it on seeing it sent in by the growers from Norfolk, Va., and other Southern points.

—Henderson, in *American Agriculturist*.
Tomatoes are a vexed question. One of the best we have seen was exhibited at a meeting of the New York Horticultural Society last fall, called "Compendia's Favorite." It was early, solid and of excellent flavor. Canada Victor, Arlington,

New York Market, etc., are all good, but for the general crop stick to the "Trophy." Last, but not least, comes the Turnip. The strap-leaved varieties are best for general purposes, while the flat Dutch is preferable for early use. Yellow Globe and Orange Jelly are excellent for winter use—juicy and tender, while in Ruta Bagas grow the purple top, "American" in preference to any other.

TENNESSEE LIVE STOCK AND POULTRY.—The Stock Breeders' Association of Tennessee held their meeting at Nashville on the 19th of February. Our correspondent writes:

Several interesting papers were read by some of the members, notably the one upon sheep raising and the cultivation of grapes. This association is composed of the most respectable farmers in the State, and has had the effect of drawing a great many purchasers of stock here for one is sure, in buying from any one of them, of getting what he bargains for. Any false representation of pedigree, or any unfair dealing, if made known, is immediately taken cognizance of by the Association, and the offender expelled from the society and his name published. Much interest is being manifested in the coming spring meeting of the Blood Horse Association of this State. A large number of horses are expected from the South and Kentucky, besides a number already here being gotten ready to take part in the different events.

The Poultry Breeders Association of Tennessee are now holding their First Annual Poultry Show. A large number of fowls of all the well-known breeds are on exhibition, and some of them are very fine specimens. The principal takers of prizes have been V. L. Kirkman, Esq., S. G. Woods, and W. T. Johns, Secretary of the society. They have also on exhibition turkeys, geese, ducks, pigeons, rabbits and cats. I noticed two remarkable hybrids, which are worthy of attention. One is said to be a cross of a chicken and duck. Its form, short legs, high breast and waddling motion are very like the duck, but the plumage, shape of head, with its topknot, resembles the Poland fowl. The other is a cross between the buff Cochon China and the Guinea fowl; in this as in the former, both species are apparent. The shape and motions are very like the Guinea fowl, but the plumage and color that of the Cochon China.

Nashville, Feb. 21.

J. D. H.

The Kennel.

TO CORRESPONDENTS.—Those desiring me to prescribe for their dogs will please take note of and describe the following points in each animal:

1. Age.
2. Food and medicine given.
3. Appearance of the eye; of the coat; of the tongue and lips.
4. Any changes in the appearance of the body, as bloating, drawing in of the flanks, etc.
5. Breathing, the number of respirations per minute, and whether labored or not.
6. Condition of the bowels and secretions of the kidneys, color, etc.
7. Appetite; regular, variable, etc.
8. Temperature of the body as indicated by the bulb of the thermometer when placed between the body and the foreleg.
9. Give position of kennel and surroundings, outlook, contiguity to other buildings, and the uses of the latter. Also give any peculiarities of temperament, movements, etc., that may be noticed, gas of suffering, etc.

FIXTURES FOR 1878—BENCH SHOWS.

Boston Kennel Club Show, Boston, Mass., March 26, 27, 28 and 29. Dr. E. J. Forster, Secretary.
Baltimore Kennel Club's Show, Baltimore, Md., April 23, 24, 25 and 26. L. R. Cascard, Secretary.
The Westminster Kennel Club (New York) Bench Show, Gilmore's Garden, May 16, 17, 18 and 19. Dr. W. Seward Webb, Secretary.

(FROM OUR SPECIAL CORRESPONDENT.)

THE ST. LOUIS BENCH SHOW.

St. Louis, Feb. 23, 1878.

EDITOR FOREST AND STREAM:

In spite of wet weather and muddy streets the St. Louis Bench Show, which opened on Tuesday morning and closed this evening, has been a grand success so far as patronage and enthusiasm are concerned. The interior of the mammoth rink, elaborately decorated with flowers and evergreens, presented an attractive sight to the thousands of visitors who daily gathered to see the dogs. The northern and western sides of the structure were devoted to sportsmen's goods; the southern section of the apartment was given up to performing dogs. Specimens of the taxidermist's art were numerous, a deer in the clutches of a panther being especially noteworthy. Among the prominent visitors from abroad who arrived among the first were Col. J. G. Skinner, of the FOREST AND STREAM AND ROD AND GUN; J. Addison Smith, of Baltimore; Captain J. A. Foster, of Virginia; L. H. Smith, of Strathroy; Arnold Burges, of Michigan; Gen. Morgan, of St. Paul; Edmund Orgill, of Brooklyn; Young Nicholls, of Syracuse; Gen. Rowett, of Carlinville, Ill.; Holabird, of Indiana; Gen. Churchill, of Little Rock; Mr. L. C. Bruce, of New York; Dr. Rowe, of the *Chicago Field*; Griffith, of Butler, Ill.; Patterson, of Florescent, and Donohue, of Lasalle. Later came Francis Leisler, of New York; Hayes, of Hastings, Minn.; Higgins, of Delaware; Dew, of Columbus, O.; Waddell, of Kansas City; Griffith, of Butler, Ill.; Jesse Sherwood, of Edina; W. J. Farrar, of Toledo, and a host of others. The Baltimore delegation brought thirty-three dogs through in a special car, all reaching here in good order. The representatives of the Westminster Kennel Club did not get here until Tuesday morning, but had better luck than the English entries which reached here Wednesday night, terribly used up. After many annoying delays on the ocean and in New York, Mr. Scott reached here Wednesday morning to find that his dogs were still twelve hours behind him, owing to the carelessness of the express company. The irate gentleman accuses railway and custom house officials of being very unaccommodating. The Executive Committee of the Association postponed the judging in classes in which the English dogs were entered until Wednesday morning, but were unable to wait any longer; an arrangement, however, being made by which Mr. Scott had the right to contest the ribbons held by the rivals of his kennel. Somewhat of a shadow was

over the show on the death of the New York dachshund Devil, an animal highly prized by its owner Mr. Leisler, of New York. The show was formally opened on Tuesday night by Col. J. O. Broadhead who made an excellent speech, and that morning the judging began, Mr. John Davidson making the awards for setters and pointers, Col. J. G. Skinner for hounds and Dr. L. H. Twaddell for spaniels, Chesapeake, terriers, etc. The native Irish setter class was one of the first disposed of, and Elcho's get swept all before them—every one of the winners, with a single exception, being got by the famous old dog. Race, Juno, Guy and Dora were the principal victors. In the Irish water spaniel class sire and son met, and Mike the champion, had to cede the blue ribbon to his offspring King of the River and rest content with second place. Lulu, the far famed deer hound, had a walk over for the first prize. The visiting dachshunds Nellie and Pink, referred to in the judge's note as by far the best but too large, were beaten by Seelye and Scotycel II, owned in St. Louis. Col. Skinner decided that no Dandie Dinmonts, St. Bernards, nor Newfoundlanders were exhibited, and consequently no prizes were awarded in those classes. A pleasant feature on the first day was the presentation to Superintendent Lincoln by Dr. Rowe, on behalf of the association, with a splendid gold medal. On it was a dog's head, and around the rim "Presented by Mrs. St. Louis friends."

On Wednesday afternoon the awards were made in the champion classes, Gladstone, winner of the puppy stakes at the Nashville field trials, carrying off the money prize in class 1 from such renowned dogs as Lincoln, Druid, Duke, Royal Duke, Ratler, Lark and seven others. This superb young son of Dan and Petrel made the big heart of his owner, Bryson, glad by his success. In the same class Burges secured first with Queen Mab, Frost and Queen being her principal rivals. In the Irish class Elcho won as was generally anticipated, although closely pressed by his promising son, Berkley. Many regrets were expressed at Rufus not being entered, Dr. Jarvis having sent the champion out expressly to meet his Michigan opponent, Loo II., again secured the blue ribbon as the champion bitch, being immeasurably superior to the other entries, barring Fire Fly and Bridget, who were very highly commended. Jesse Sherwood's Rupert maintained his reputation as the Champion Gordon; Farrar's Fan carrying off the first prize for bitches in this class and also in class 10, but the next day she had to yield the honors to Scott's Floss. Mr. John Davidson had a more than usually onerous duty devolve upon him in deciding the pointer championship, for which there were twenty-three entries, and it is a compliment to him that his decision is unanimously approved by owners of the defeated aspirants. Sensation was to the fore, while the Birmingham winner Sleaford and Stoddard's Brandy, a former St. Louis winner, secured very high commendation. Gillespie's famous Fan, as usual, secured the blue ribbon in this class. Of the smaller sized pointers Orgill's Flake and Waddell's Jessie secured the ribbons.

The English dogs brought out by Mr. T. H. Scott, of York-shire, eleven in all, including one belonging to a friend, did not arrive until a late hour on Wednesday night. They were all sadly out of condition, and consequently but five were exhibited. Pound, a black and white English setter, 2 yrs. and 4 mos., was pitted against the champion Gladstone, but could not reverse the decision. In the imported class Pound was again pitted against Gladstone, Druid and Royal Duke, but again failed to reverse the awards, being highly commended, however. Pound is by Prince out of Prudence, and has carried off the blue ribbon at Tavistock and Camberwell in England. Mr. Scott had better luck in the Gordon setter classes. As the best bitch, Farrar's three prize winner, Fan, Nettie and Nell, contested with Scott's Nell and Floss, and the latter was declared the first prize winner; Fan, second; Nettie, third. In class 3 also Floss conquered Fan, thus being declared the champion Gordon bitch. The winner is 2½ years old, by Rock out of Hadzi II. She took first at Briggs, first and cup at Selby, and second at Kendall. In Scott's lot was Bow, a fine pointer, 3 yrs., liver and white ticked, by Bony out of Luna, who captured the first prize at Exeter and second at Islington. Since entered for competition here Bow took first and an extra cup in Westmoreland field trial, beating the Birmingham winner Behul; when shown on Thursday he did not compare with Sensation, and ranked fourth as against Sterling's Sleaford and Lindsay's Viscount.

Thursday was a field day for the St. Louis Kennel Club, Elcho and Leo, Irish companions, sweeping everything before them. Elcho's handsome son Berkley led off by winning the first prize in class 8, imported Irish setter dogs, Stoddard's Bob taking second, and Berkley's kennel companion, Sting II., third; in the same class bitches, first and second prizes went to Biddy and Duck, owned by the St. Louis Club, while Firefly, the get of Rufus, had to rest content with third. Elcho, shown with Berkley and Race, secured the Irish setter stud dog prize, Burges' Rufus and Fowler's Ranger being his opponents. In the same class brood bitches, Loo II., with Berkley and Loo III., the latter an extremely promising pup, 2 mos. old, defeated Griffith's Fau II., Walker's Fanny Fern, Smith's Bridget and Kramer's Nelly. With Loo II., Duck, Sting II., Berkley and Biddy in St. Louis club also won the prize for the best kennel of Irish setters. Smith's Leicester defeated Burges' Rob Roy, his most formidable competitor in the English setter stud dog class; while Demuth, of Iowa, secured the prize for brood bitches with Pickles. The best kennel of English setters was shown by Smith, of Strathroy, including the renowned Leicester, Paris, Bronto, Pearl and

Dart. Arnold Burges lodged a protest against Bronte, and the association telegraphed immediately to Mr. Charles Murray, the eminent London banker, former owner of Bronte, who replied by cable, disclaiming any interest in the dog, so the protest fell through. By the way Burges has borne his reverses in a manly manner. He had great hopes of winning the championship with Druid, but when the decision in favor of Gladstone was announced he admitted its justness. W. J. Farrar, of Toledo, swept the board with his Gordons, Rapp and Fan, winning firsts as best stud dog and brood bitch, and Rapp, Dash and their companions taking first for the best kennel.

Probably the most exciting time in the awarding-ring during the whole progress of the show was, when a decision had to be given on pointer stud dogs and their get, and the bitches with their progeny. In the former, there were Beck's Andy, Orgill's Flake, Sherwood's Sancho, the great Sensation, and others. It was soon seen that the merit lay between Flake and Sensation. Rose and Ruby, out of Lilly, first at Baltimore, appeared as the get of Flake; Sefton and Oytie, out of Lilly, already awarded first prizes, as the get of Sensation. Both gets having the same mother, the turning-point rested on the father's strain of blood, and the scale tilted over to the side of the aristocratic New Yorker, the Westminster Club securing another well-deserved victory. When it came to the brood bitches with two of their progeny, Lilly, with Sefton and Oytie, were given the prize. For the best kennel of imported or native pointers, not less than five, Mr. Orgill was the winner, with Flake, Ruby, Rose, Belle and Rush. Against these cracks, the Westminster Club showed Sensation, Till, Daisy, Eileen, Whisky, Regalia, Duchess, George McKee, Lula, Gertie and Flake II. Mr. Orgill also scored the first in small pointer special on Flake—his Ruby got second in the small pointer bitch class; Flake and Ruby received first for the best brace, and Rush and Rose the second. Mr. John W. Munson, the popular Secretary, had the unexpected pleasure of seeing his brown and white two-year-old pointer bitch Queen get second prize in class 11, Lindsay's Dolly taking first (beating Pride, the great winner, and Mr. Orgill's Romp). An offer of \$300 for Queen was refused; the St. Louis Kennel Club, however, disposing of Thornton for just twice that amount to Mr. W. B. Shattuc, of Cincinnati.

Of the English entries, it should be stated that Mr. Scott allowed the fox terriers, Vick and Lottery, to stand a decision of the judge as against Mr. Walton's Tricksey and Trap. The judge considered the latter the best, at which Scott felt somewhat sore, their ears having been tampered with to make a better pendant. "In England," says Scott, "such mutilation would cause the dogs to be thrown out."

A nice point as to whether the progeny of a dog imported *in utero* can be considered a native, or whether the dog itself, being imported *in utero*, is to be considered the same as if whelped on the other side of the Atlantic, came up on the pedigree of Prince Peg, a splendid animal entered in the English setter class by E. C. Waller, of Chicago. The question was, whether Peg, having been imported *in utero*, her progeny should not be classed as "natives," and the decision of the Association is, that a dog imported *in utero* is the same as a dog whelped in Europe, basing it on the principles applied in breeding cattle and horses; therefore, to all intents and purposes, such a dog is imported, and consequently ineligible, according to the kennel club rules, in the native class.

Sleaford gained a victory over Lindsay's Viscount in the pointer class, first and second prizes being awarded them.

St. Louis won 21 first prizes, 13 second, and 4 third, 12 of which were taken by the St. Louis Kennel Club; Farrar, of Toledo, scored six firsts and one second.

At the last moment, the management determined to keep the show open one day longer; but it is closed at last, and the main features of the week have been given above.

S.

ENTRIES AT THE ST. LOUIS BENCH SHOW.

[Continued from page 40.]

CLASS 12—Pointer Dogs Under 55 Pounds.

O P Budd, 612 Olive street, St. Louis; Quail, black, 3 yrs; Othello, Duna, bred by Sir Charles Morgan.
Thos H Burt, Jefferson City, Mo; Dick, orange and white, 20 mos old, from imported doz and bitch by Gen. Shelby.
Oliver Labadie, 1,423 Spruce street, St. Louis; Dash, liver and white, 6 yrs; not for sale.
John M Marshall, 809 Tayon avenue, St. Louis; Horace Greeley, liver and white, 2 yrs. Tom, liver and white, 1 yr and 3 mos; \$25.
C P Ellerbo, 515 Olive street, St. Louis; Dan, lemon and white, 2 yrs; not for sale.
Jesse Sherwood, Edina, Mo; Sancho, liver and white, 5 yrs; Don, Juno; \$250.
H Menown, St. Louis; Jeff, liver, 11 mos; Mike, Kate.
Westminster Kennel Club, New York; Flake II, lemon and white, 1 yr and 10 mos; Flake, Lilly.
Baltimore Kennel Club, Baltimore; Sefton, lemon and white, 1 yr; Sensation, Lilly; not for sale. Black Prince, black, 16 mos; Ranger, Fan.
A C Waddell, Kansas City; Keno, liver, 2 yrs.
Isaac Weighell, Rochester, N Y; Jim.
W F Irwin, Topeka, Kansas; Drop, Jr, liver, 14 mos; Phil, Beauty; exhibition only; \$60.

CLASS 13—Pointer Bitches Under 50 Pounds Weight.

Francis Coyle, 1,210 Broadway, St. Louis; Fly, liver and white, 3 yrs; not for sale.
Edmund Orgill, Brooklyn, N Y; Rose, lemon and white, 1 yr and 9 mos; Flake, Lilly. Ruby, lemon and white, 1 yr and 9 mos; Flake, Lilly. Belle, lemon and white, 1 yr and 9 mos; Flake, Lilly.
Charles Stratbridge, 716 South Fifth street, St. Louis; Fanny, black and white, 4 yrs; not for sale.
John M Marshall, 809 Tayon avenue, St. Louis; Mary's Kitten, liver and white, 5 yrs.
Jesse Sherwood, Edina, Mo; Dream, black, white and tan, 3 yrs; Phil, Belle; \$150. Jule, red, 2½ yrs; Ben, Belle; \$125.

Louis W Schriever, St. Louis; Nellie Gordon, liver, 4 yrs.
H Menown, St. Louis; Flora, liver, 11 mos; imported stock. Belle, black, 1 yr; Dan, Lord Gerdou's stock; \$100.
Benton Blackstone, Decatur, Ill; Queen, black, 18 mos; Pete, Nellie; \$100.
E C Sterling, St. Louis; Clytie, lemon and white, 1 yr; Sensation, Lilly; not for sale.
John Krumholz, 1,505 Carondelet avenue, St. Louis; Dora, liver and white, 2 yrs; not for sale.
G A Storr, Canton, Mo; Lola, white and liver, 32 months; Snow, Zula.

Westminster Kennel Club, N Y; Duchess, lemon and white, 1 yr; Sensation, Whiskey.
Baltimore Kennel Club, Baltimore; Lilly, lemon and white, 4 yrs; Sam, Lilly.
Isaac Weighell, Rochester, N Y; Lolo, lemon and white.

Class 43—1st, \$10, Fanny, H Pathoff, Elksville, St Louis county. 2d, \$5, Toby.

Class 44—1st, \$10, Nellie, Mrs Josephine Snell, St. Louis. 2d, \$5, Zip.

Class 45—1st, \$15, Jack, Geo M Wright, St. Louis. 2d, \$10, Fan, J H Whitman, Chicago.

Class 50—1st, \$10, Victoria, W P H Turner, St. Louis.

Class 51—1st, \$10, Daisy, C E Ross.

Class 52—1st, \$10, Jim, 167½ lbs, O P Fay, Carrollton, Ill. Lion, 154½ lbs.

Class 53—1st, \$10, Dot, 3 lbs.

Class 54—1st, \$10, Lion, A D Stahl, Leffingwell areone.

SPECIAL CLASSES.

Class 55—A fine W W Greener breech-loading shot-gun, value, \$350, Don and May, Theodore Morford, Newton, N. J.

Class 56—A double-barrelled Parker shot-gun, value, \$115, Druid and Queen Mab, Arnold Burges, Hillsdale, Mich.

Class 57—A Nicholls & Lefever double-barrelled shot-gun, value, \$200, Berkley and Loo II, St Louis Kennel Club.

Class 58—A Remington double-barrelled shot-gun, value, \$100, Rapp and Fan, W T Farrar, Toledo, O.

Class 59—A \$100 double-barrelled Greener Gun, Flake and Ruby, Edmund Orgill, Brooklyn, N. Y. 2d, a \$50 hunting suit, Jack and Dan, G P Elberby, St. Louis. V h c, Viscount and Dolly, R M Landay, Scranton, Pa; Sensation and Till, Westminster Kennel Club; Fan and Flirt, A G Waddell, Kansas City; Native (formerly Jake) and Champion Belle, Columbus Kennel Club, Ohio. H c, Flake and Daisy, Westminster Kennel Club; Sefton and Black Prince, Baltimore Kennel Club.

Class 60—A \$75 silver tea service, Sensation, Westminster Kennel Club.

Class 61—A \$50 silver plate, Sensation, Westminster Kennel Club.

Class 62—Sporting scene painted in oil, Lilly, Baltimore Kennel Club.

Class 63—\$25 silver cup, Jack, E C Waller, Chicago.

Class 64—\$50 silver plate, Leicester, L H Smith, Strathroy, Ont.

Class 65—\$40 worth of shells and powder, Pearl, L H Smith, Strathroy, Ont.

Class 66—\$50 silver wine stand, Elcho, Dr Wm Jarvis, Claremont, New Hampshire.

Class 67—\$40 English Gun, Loo II, St Louis Kennel Club.

Class 68—\$75 clock, Elcho, Dr Wm Jarvis, Claremont, New Hampshire.

Class 69—\$100 gold watch, Gladstone, F H Bryson, Memphis, Tenn.
 Class 70—\$40 silver wine stand, W J Farrar, Toledo, O.
 Class 71—\$20 worth of sporting books; \$25 shooting suit, Fan, W J Farrar, Toledo, O.
 Class 72—\$25 silver cup, Fleish, D T Widgeon, Decatur Ill.
 Class 73—\$25 shooting suit, Red Rival, Abline Kennel Club, Chicago.
 Class 74—Handsome silver cup, Mike, Big Point K C, Chatham, Cot.
 Class 75—1st, silver cup, Molly, J D Alcott, Chicago. 2d, silver cup, Jack, E C Sterburg, St Louis.
 Class 76—1st, rubber suit complete, Bozo, J L Beck, Chester-town, Md.
 Class 77—Silver cup, Rany, Charles Rowlett, Carlinville, Ill.
 Class 78—Set of Frank Forrester's works, Tray and Sweetheart, Charles L Hunt, Normandy, St Louis county.
 Class 79—\$25, Billy, J D Olcott, Milwaukee.
 Class 80—1st, Toby, W F Johnstone.
 Class 81—1st, Nellie, black and tan, 1 yr.
 Class 82—\$10 sterling divided between Berkley, St Louis Kennel Club; Royal Duke, G B Classon, Milwaukee, and Floss, J H Whitman, Chicago.
 Class 83—1st, Whitford, A G Fleishbein, Belleville, Ill.
 Class 84—1st, Jack, R C Waller, Chicago.
 Class 85—\$50 silver vase, Gladstone, F H Bryson, Memphis.
 Class 86—\$50 silver cup, Imperi, Jesse Sherwood, Edina, Mo.
 Class 87—Scott English double Express rifle, Major and Malo, J P Schulte, St Louis. 2d, Tray and Sweetheart, Class L Hunt, Normandy. 3d, True Boy and Spot, R P Patterson, Florissant, Mo.
 Class 92—Old game-piece, Berkley and Loo II, St Louis Kennel Club.

[The V h o. very highly commended: H o, highly commended.]

SPORTSMEN'S GOODS.

Class 1—For the best breech-loading shot-gun, of any maker, convenience and strength of action and general workmanship considered, a handsome gold medal, suitably engraved, value, \$25; Nichols & Lefevre, Syracuse, N. Y.
 Class 2—For the best breech-loading, double-barreled shot-gun of American make, same consideration as in Class 1, a handsome gold medal, suitably engraved, value, \$25; Nichols & Lefevre, Syracuse, N. Y.
 Class 3—For the best breech-loading, double-barreled shot-gun of any maker, same consideration, not to cost more than \$250 at retail, a handsome silver medal, suitably engraved, value, \$20; H Foley & Co, St Louis.
 Class 4—For the best breech-loading, double-barreled shot-gun of any maker, same consideration, not to cost more than \$150 at retail, a handsome silver medal, suitably engraved, value, \$20; Brown & Hilder, St Louis.
 Class 5—For the best breech-loading, double-barreled shot-gun, any maker, same consideration, not to cost more than \$100 at retail, a handsome silver medal, suitably engraved, value, \$20; W Road & Sons, Boston.
 Class 6—For the best breech-loading, double-barreled shot-gun of any maker, same consideration, not to cost more than \$50 at retail, a handsome silver medal, suitably engraved, value, \$10; American Arms Company, Boston.
 Class 7—For the best target rifle of any maker, same consideration, a handsome silver medal, suitably engraved, value, \$20; Brown & Hilder, St Louis.
 Class 8—For the best sporting rifle of any maker, same consideration, a handsome silver medal, suitably engraved, value, \$20; Simmons Hardware Company, St Louis.
 Class 9—For the best sporting suit (coat, pants, vest and hat or cap), convenience and quality of goods considered, a handsome silver medal, suitably engraved, value, \$10. Won by Brown & Hilder for G W Simmons & Sons, of Boston.
 Class 10—For the best shooting suit, not to cost more than \$25, a handsome silver medal, suitably engraved, value, \$10. Won by W Holabird, Valparaiso, Ind.
 Class 11—For the best hunting boat, convenience, strength and lightness considered, a handsome silver medal, suitably engraved, value, \$10. Won by Brown & Hilder for Thompson & Son, New York.
 Class 12—For the best fishing boat, convenience, strength and lightness considered, a handsome silver medal, suitably engraved, value, \$10; N S Chouteau, St Louis; Osgood & Chapin, Michigan, highly commended.
 Class 13—None exhibited.
 Class 14—For the best display of fishing tackle, a silver medal, suitably engraved, value, \$10; Brown & Hilder.
 Class 15—For the best fishing rod for general use, strength, lightness and workmanship considered, a handsome silver medal, suitably engraved, value, \$10; Conroy, Bissett & Malleon, New York.
 Class 16—For the best specimen of taxidermist's work, a silver medal, suitably engraved, value, \$10; K A Turtle, Chicago.
 Class 17—For the best display of taxidermist's work, birds and animals, a silver medal, suitably engraved, value, \$10; Randolph Borchardt, St Louis.
 Class 18—For the best general display of firearms, including sportsmen's goods of all kinds, a gold medal, suitably engraved, value, \$25; Brown & Hilder, St Louis.
 Class 19—For the best general display of firearms a gold medal, suitably engraved, value, \$25. Won by the Simmons Hardware Company.

EXHIBITION OF SPORTSMEN'S GOODS AT THE ST. LOUIS BENCH SHOW.—Our well-known friends, Messrs. Conroy, Bissett & Malleon, exhibited their rods, lines and various angling implements at St. Louis, and had a first award judged them.

G. W. SIMMONS & SON IN ST. LOUIS.—This firm, celebrated for their outfits for sportsmen, sent a choice selection of their goods to the St. Louis Bench Show, and have taken a first prize.

MASSACHUSETTS KENNEL CLUB.—ADDITIONAL PRIZES.—Boston, Feb. 25.—The following additional donations have been made to the special prize list for the Boston Bench Show:

Class R—For the best pair, dog and bitch, of Irish Setters, imported or native, to be owned by exhibitor; portrait heads of the winning pair, to be painted and presented by F. W. Rogers, Esq., Boston, Mass., value, \$100.
 Class S—For best English Setter, dog or bitch, either native or imported, that has the best and handsomest head; a portrait head of the winner, to be painted and presented by F. W. Rogers, Esq., Boston, Mass., value, \$75.
 Class T—For the best setter of any breed, dog or bitch, in the show, a silver cup, presented and manufactured by Messrs. Shreve, Crump & Low, Boston, value, \$225.
 Class U—For the best field spaniel, dog or bitch, either clumber or cocker; Baird's History of North American Birds, by S. F. Baird, T. M. Brewer and R. Ridgway, illustrated by sixty-four beautifully colored plates and 593 woodcuts, 3 vols., presented by Messrs. Little, Brown & Co., Boston, Mass., value \$45.
 Class V—For the best brace of beagles in the show; a handsomely mounted stag's head, presented by Arthur J. Colburn, Esq., Boston, Mass., value, \$25.

Messrs. Parker Bros., Meriden, Conn., have written that they will send, as a special prize, a fine gun of their manufacture, valued at \$300. Class not yet decided upon.
 JOHN FOTTLER, JR., Sec'y Exhibition Com.

THE NEW YORK DOG SHOW.—Breeders of dogs are already beginning to forecast for the coming bench show next May. We are pleased to learn from Mr. S. B. Dilley, of Lake City, Minnesota, that he intends to be there. A great many fanciers will be delighted to inspect his ranger-pointer stock.

GORDONS NOT TRUE TO COLOR.

Boston, Feb. 15, 1878.

EDITOR FOREST AND STREAM:

The following quotation from Istone may be of interest to your correspondent G., of this ilk, who in your issue of Feb. 14th asked with regard to red as a color for a Gordon:

"The breed was originated by the Gordon family fifty years ago or more, and it is time some fresh blood were infused into the race. It must be setter blood, of course; and, I fancy, the Duke of Gordon saw the necessity of a cross, and used it. I believe that he adopted the Irish setter cross; for, in almost every litter, provided it descends from his kennel, there are a brace or more of red setters. These have the peculiarity of being almost white until they moult their setter coat, when they take the brilliant mahogany red, and follow the form, and have the panther-like, noiseless gallop of the Irish setter."

This fact was strikingly illustrated to a litter out of a bitch of my own, who I had served by a very fine Gordon of the true Kent Ruby, etc., stock. Two of the bitch pups were, at the time of birth, not perhaps "almost white," but of a bright buff color, and I was much astonished on seeing them after they had been in the trainer's hands, and full grown, of a fine rich red. They both, by the way, are said by their respective breakers to be as good dogs as they ever handled. One has latterly had a litter of ten, by Copeland's "Shot," (late Jerome's) every one of which is a perfectly marked black and tan. I also know of another case in which a black and tan bitch, thought from "Istone" himself, threw one, if not two, red pups. There is one point, however, with regard to this color, and that is, although they may be, and are, just as good in the field as any, on the bench they would be shut out from the black and tan classes, and have to be entered in the open English or native class.

A USEFUL AND INGENUOUS TOOL.—Our friend S. B. Dilly Esq., of Lake City, Minnesota, well known as the breeder of the Ranger stock of pointers, has had the kindness to send us a very pretty combination pocket instrument, which we are delighted to possess. He calls it a "Do-funny," and has applied for a patent. In general appearance it resembles a metal dog-whistle with ring attached, three inches in length; but an examination of its mechanism discloses a shell-extractor, a screw-driver, a wrench and a cork-screw, all useful implements to a sportsman on a gunning excursion. It is so compact and simple that anybody who sees it will desire to possess one. We do not know whether they are yet on the market or if not, they ought to be. It seems to us that there's money in it for the patentee.

AN ANCIENT AND HONORABLE STRAIN.—Wm. G. Buell, Esq., of East Hampton, Conn., informs us that after having shot over one strain of dogs for the last thirty years, he had the misfortune recently to lose the last of the race, a fine pointer bitch, which died on the 30th Jan. Such a record is rare.

WHO OWNS THIS DOO?—La Porte City, Iowa, Feb. 23.—Yesterday, while in conversation with a friend, he told me of a fine slut which some of the "boys" stole at the Hampton field trials last September. As I would be grateful for any information as to the whereabouts of my dog, and thinking to aid brother sportsmen, I send this to you, that, if possible, the owner may come into possession of his own.

WAT. E. DANIEL.

—An enterprising Adrian youth went out rabbit hunting with a ferret and a dog. At the first burrow he came to the ferret ran in and killed the rabbit, the dog dug in and killed the ferret, and the boy dug in and killed the dog, then started home, satisfied in his mind that rabbit hunting with a ferret and dog is one of the craziest delusions of the age.—Western Exchange.

PURCHASE.—A few days ago I received from Thomas Erwin, Esq., of Ballymena, Ireland, the Irish setter bitch "Quail II." She is by "Blenheim" out of "Quail," and is own sister to Skidmore's Champion "Grouse." Her dam, "Quail," is sister to Dr. Stoege's celebrated "Dash," winner of fourteen silver cups, besides other prizes. "Quail II." was sired by Mr. Erwin's grand young dog "Red Gauntlet," and has whelped a splendid litter of eight puppies, all deep red. "Red Gauntlet" is by Champion "Basto," out of "Ruhly," and is brother to "Redmore," winner of first Belfast, 1877, first and extra first at Newtownards, 1877, and second at Alexandra Palace, Dec. 14, 1877, his sire, "Basto," being third at same time and place. Mr. Erwin considers "Red Gauntlet" superior to both of these. EDWARD LOHMAN.

PURCHASED.—Mr. Miller Ketchum, of Westport, Conn., has purchased of Messrs. Fisher & Bickerton (Empire State Kennel, Brooklyn, N. Y.) the red Irish setter dog Royal Duke, out of their Belle by Hamilton Thompson's Champion Duke.

TENNESSEE.—Columbia County, Feb. 20.—Mr. E. Irwin's pointer bitch, Kate, died on the 15th inst. after whelping five dogs and five bitches. She was quite old, and at one time champion pointer bitch of the State.

—Mr. Obaffin's imported Scotch terrier bitch, Patsey, died on the 17th inst. with lung fever. Mr. Obaffin was fortunate enough to secure two of her progeny.

NAMES CLAIMED.—I claim the name of "Zip" for my liver and white cocker spaniel pup out of Mr. M. P. McKoon's "Bess" and "Capt." I take great pleasure in expressing my appreciation of Mr. McKoon's entire kennel.

Dr. JRA WILCOX.

Mr. Peleg S. Hacket, of the Kendrick House, Wareham, Mass., claims the name Cora for a pure white slut ten months old, and Jason for a white dog pup four months old, both out of his thoroughbred white English setter slint Gip, by his white English thoroughbred dog Sam.

—I claim the name of Mickey Free for my Gildersleeve setter pup, by Horace Smith's Dash, out of De Russy's Fanny. J. W. HOWELL.

BOAT AND YACHT BUILDING.—11th Paper.

By NAUTICUS.

ELEMENTS OF YACHTS.

(By one of those blunders which occasionally occur in well regulated newspaper offices, as on the best commanded yachts, this paper appears out of its place. It should have preceded the article published Jan. 31st, which is a continuation of the same subject.—Ed.)

In designing a yacht, many things have to be taken into consideration, such as length, breadth, depth, form of midship section, service required, etc. We will first examine the proportions of length, breadth and depth, and their relation to one another; these terms now, and in the following remarks—unless the contrary is specified—relating to the dimensions of the load water-line. Compared with English practice, the American builder gives great breadth of beam and light draught to his yachts. The English builder depends for stability on much ballast, placed low down; the American, more on the form of vessel. Which is the best practice is an open question. As regards speed, there is little to choose between the two systems. The advantages of great breadth of beam are, superior stability from form, requiring less ballast, small draught of water, large deck room, smaller inclination with wind abeam, and ease and lightness at sea; among the disadvantages are increased rolling, increased direct resistance, blunter water-lines, and a large amount of immersed surface resistance. The chief advantages of the narrow, deep yacht, is the ability to sail nearer the wind and to run further in stays.

A fair average proportion of width to length is, for sloops, one-third; for schooners, one-fourth. The vertical depth from the load-line to keel depends on the form and area of the midship section, which leads to its consideration. The form of the midship section governs the shape of all the other sections, more or less. The stability of the vessel, direct resistance, resistance due to immersed area, and lateral resistance, are all largely dependent on the form and area of the midship section. In the best English yachts the area of the midship section varies but little from the average of one-tenth of the area of the load water-line, and the average ratio of the area of the midship section to its circumscribing parallelogram, is six-tenths. The greatest breadth of beam may be at the load water-line, or it may be above it; if above the load water-line, it adds to the stability of the vessel when inclined; if at the load water-line, the immersed water-line, when the vessel is at an inclination, will be nearer the form of the load-line. Another consideration is width of floor. If the mid section is too fine at the keel, the floor will necessarily be very narrow; otherwise a fine section at the keel is desirable.

Another consideration, and a very important one, is the area of the immersed surface of the vessel; this is dependent on the shape of the midship section. From Beaufoy's experiments it has been ascertained that the friction on the immersed surface of a vessel increases nearly as the square of the velocity, and that for a velocity of four miles per hour, the friction is twelve one hundredths of a pound per square foot of immersed surface; at seven miles per hour the friction would be thirty-three one hundredths of a pound per square foot. It will readily be seen that the shortest line possible, enclosing the required area, so placed as to give the greatest stability, will give the minimum amount of surface for friction. The greatest stability due to form is found in a flat floor, and the greatest lateral resistance in deep narrow vessels. It will be seen that some elements are directly opposed to others, and the problem before the yacht designer is to reconcile one to another, so as to obtain the maximum of good and the minimum of evil. The midship section is placed at from one-half to three-fifths of the length of the load water-line, measuring from the stem. The stem may be upright or "rake," according to the designer's fancy; it makes but little difference, unless the rake is "excessive," in which case the "pitching" is increased. It is customary to round off the "foot" of the stem, as it enables the vessel to "stay" quicker; it also reduces the area of lateral resistance; this, however, can be made up by an extra depth of keel. The stern post should be upright, or nearly so, the excessive rake formerly given answering no good purpose, except to give a small keel measurement.

The principal objections to excessive rake of stern post is the large reduction of the area of lateral resistance and the position of the center of lateral resistance, which is brought too far forward. The draught of water forward and aft is, or should be, regulated by the position of the center of gravity of the displacement. Make the center of lateral resistance to coincide, or nearly so, with the center of gravity of the displacement. In modern vessels this is more or less about the middle of the load water-line, giving an excess of draught at the stern, called the "drag." The area of the vertical longitudinal section immersed, or, in other words, of the lateral resistance, varies greatly; in some yachts it is equal to the area of the load water-line, in others, half that amount, or even less; the maximum amount is found in narrow, deep yachts; the minimum in those of great breadth of beam; the average is about seven-tenths of the area of the load water-line. The keel may be straight or curved on its lower edge, technically called a rocker keel. Rocker keels will obey the helm as promptly as cent-

beard boats. If a centre-board is used care must be taken that its centre of lateral resistance coincides with the centre of lateral resistance of the vessel. A simple method of finding these centres is given in the paper on modelling, etc. The height of deck above the load line at midships should be such that when the vessel is inclined at an angle of fifteen degrees the water will not come on deck. This for a minimum height; the maximum is reached with an inclination of twenty degrees. If the deck is made higher than this the top side will be too heavy. Sheer is largely a matter of fancy with the old bluff-bowed yachts. A large amount of sheer forward was necessary to prevent water washing over on deck; but with the fine bows used at the present time sheer might be dispensed with entirely. Still, a handsome sheer is one of the main features in the fine appearance of a yacht. A moderate amount of sheer at the stern is valuable, as it allows a better shape to be given to the inclined water line.

The area of the load-water line, in proportion to its circumscribing parallelogram, is, in the best known examples, about seven-tenths. The best shape for the load-water line is a problem that has given rise to theories and experiments innumerable. Thirty or more years ago the entry was made short and the run long; at the present time the entry is made long and the run short, giving a full after body. I will not presume to give any definite rule for form, but advise the amateur to follow successful precedents. The problem seems to be to enclose the required area with the shortest possible line that will give a good entry and run to the vessel. The entry of most yachts is very good, the greatest trouble generally being with the run, especially if the stern is wide and low. Great care must be taken to avoid a full round water-line at the stern, otherwise a large amount of water will be continually dragging along on the lee quarter, ruinous to speed and detrimental to the helm. The inclined water line is the water line formed when the vessel inclines from the vertical. It is of the greatest importance that special care should be taken to give it a good form, as the inclined water line is practically the real load-water line, the vessel never standing upright unless there is no wind. The form of the inclined water line should be as near as possible like that of the load-line. Two points especially demand attention. First, to so form the inclined water line at the bow of the vessel that the wave that forms on the lee bow, when working to windward, will be brought as far back as possible, thus lessening its detrimental effect on progressive motion, and its tendency to turn the bow of the vessel to windward; secondly, to so shape the sections at the stern of the boat that the inclined water line will be, as near as possible, formed like the load-water line, the only way to do which is to narrow the deck at the stern, and give as much sheer at the stern as possible, without making the top side clumsy and ungainly. The effect of an inclined water line, too full and round at the stern, is to drag a large wave on the lee quarter, destroying the helm, which must be put far over to counteract the effect of the following wave, which has a tendency to make the vessel fall off from the wind—in other words, a "lee helm." In more pronounced cases of "dipsical" inclined water line, the deformity is positively dangerous, as, if hard pressed by a sudden "squall," the vessel refuses to obey the helm at all, and if the wind is only strong enough a capsize is certain. The bad working and slowness of many yachts is traceable to this fault alone. The centre of gravity of the displacement; that is, the centre of gravity of the mass of water displaced by the vessel, should be at or near the midship section. The centre of gravity of the whole vessel, including spars, ballast, etc., is found in the same vertical as the centre of gravity of the displacement; that is, when the vessel is upright. When the vessel inclines, the centre of gravity changes with every degree of inclination. Calculations of the stability of a vessel are complex, and not of any practical value, as it is an impossibility to calculate the centre of gravity. The designer must be careful that his vessel has sufficient stability from form and ballast, which is best done by comparison with successful yachts. Sheathing the immersed part of the hull, apart from its value as a protection from worms and foulness, has some influence on the speed, the friction being three-tenths less than smooth-painted wood. The size of rudder is very variable, cat rig boats requiring larger ones than others.

Boston Yacht Club.—The Boston Yacht Club will probably adopt a programme for the coming season, which will include two fixed regattas—one in June and the other in Aug. or Sept. The source of pleasure for the benefit of the non-yachtsmen will be a sail down the harbor in the afternoon on board the large yachts, and a sociable or hop in the evening at the club house. This is to be repeated once a month during the season. As most of the owners heard from place their vessels at the hands of the committee, quite a carnival is in store for them that do not have the opportunity to get a sniff of the blue.

New York Yacht Club.—This club held their annual dinner at Delmonico's last Tuesday evening.

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

A number of anonymous correspondents will understand why their queries are not answered, when they read the lines at the head of this column.

Amateur, Hebron, Wis.—Can you tell me how I can color canvas goods, that known as "dead grass" shade? Ans. Use a decoction of slacks of butterfat or black walnut, and set with alum.

M. P., Almonte, Can.—We respectfully decline answering.

Val, Columbia, Tenn.—We should be pleased to have the description if possible.

W. V., I have \$75 to put into a gun, what kind of a gun would you buy? Answer respectfully declined.

Friendster, Paris Game Club, Ontario.—We take great pleasure in sending you the forms you require.

E. N., Westfield, Kings Co., N. B.—Have sent book and entry for Massachusetts Kennel Bench Show as requested.

HOMER, G. R. B.—Your communication is suited to our columns, but we cannot use it without your full name and address.

L. P. C., Dea Moines.—How does the — compare with the guns of the same price made in England? Ans. Most favorably.

W. M., Danbury, Conn.—There is a law in Connecticut prohibiting the use of ferrets in hunting. Their employment is certainly unsportsmanlike.

A. J. J., N. Y.—Which is the better dog for shooting in the mountains—a setter or pointer? Ans. Probably the setter, on account of heavier coat.

A. Stamford.—I use for shooting glass balls with a 12-bore, 7 lb. Parker gun, 3½ drs. powder and 1½ oz. No. 8 shot. Is it enough? Ans. Just a proper charge.

J. P. B., West Boylston, Mass.—Is there much or any danger to settlers in Western Virginia and East Tenn. from venomous snakes? Ans. Less than in most places.

G. H. A., Albany.—The guns made by — compare most favorably with those of the best makers. At the price you mention, \$100, you would get an excellent gun.

A. D. K., Newton, Kansas.—We could give no special book. Read "The Dog," by Danks, Hutchinson & Mayhew, Stonehenge, Youatt, Edstone, Hallowell's "Gazetteer."

W. E. F., Cambridge.—What will prevent my pointer from shedding his hair? He has plenty of exercise. Ans. Grooming and exercise are the best methods of cure.

G. P., Norwalk, Conn.—Will quail breed in confinement? Ans. We have never heard of any successful breedings of quail in confinement. See an article on wintering quail in this issue.

M. M. B.—Want a Creedmoor rifle, what kind shall I use? 2. What kinds of rifles were used at the long-range match? Ans. 1. Toss up between a Sharps and a Remington. 2. Both kinds.

W. H.—At what age is it possible for a dog to produce issue? Ans. The age must vary in individual dogs, just as it does in every other species. The average age is probably about one year.

C. E., N. Y.—Is there any or goose shooting to be had on Cobb's Island, Chesapeake Bay, and is this the season? Ans. Depends upon the weather entirely. If cold and stormy there will be shooting.

A. A. J., N. Y.—1. Do you know a maker of hair-trigger rifles by the name of Atkinson? 2. Which are the better for mountain sporting, pointers or setters? Ans. 1. Do not know of such a maker. 2. Prefer setters.

W. R. R., Boston.—Will this mild winter have any effect on the spring duck shooting, and will I get any duck shooting about Hyannis about April 15th? Ans. Yes, it will spoil the shooting. Rough weather will bring the birds.

O. T., Paris, Ont.—Do not know the name of the maker. The target you send is a remarkably good one as to pattern, but it is impossible for us to judge of penetration from the kind of paper used. Would be glad to hear from your club.

W. B. E., Brooklyn.—Please inform me where I can purchase a paper for covering a boat to be used for Florida waters, and also if it is serviceable? Ans. Probably from Waters & Sons, Troy, New York. They make paper boats. Paper boats are very serviceable.

G. B. N., from Lairobe, Pa. can find one cock California quail at Thomas' bird fancier, Liberty st., above Fayette, Baltimore, Md., for sale. He had a pair; then died after laying 6 eggs last year, fine specimen, in good health.—R. E. McClellan, Port Deposit, Md.

C. E. L., St. Paul, Minn.—At how low a price could I get a good, reliable breech-loading shot-gun? Ans. All the way from \$35 to \$60. Mr. Squires will sell you a new English top-lever, rebounding locks, muzzle-loader, Damascus barrels, patent forehand, pistol grip, for \$60.

T. E., Hoboken.—Have a dashhound three years old. Two years ago she had a litter of five. The last time she was in heat was in July, but she was not visited. I want to breed from her again, but she will not come in heat. Ans. Keep her in the company of a dog of the opposite sex.

Wine Snort, Jeffersonville.—1. How much choke is required to do the best or closest shooting? 2. How far does a choke-bore begin from the muzzle? 3. Does the bore decrease at the muzzle, and is it a cylinder for a certain distance? Ans. 1. A full choke. 2. About four inches. 3. It is.

Memoir, Medford, Mass.—What is a good, substantial material to pitch a birch-bark canoe for Massachusetts waters? Ans. The Indiana use common spruce gum, which they apply with a burning brand. A mixture of gum and rosin is best; but ordinary pitch is excellent, but more apt to crack and split off.

J. M., Meriden, Conn.—1. Will you give me Livingston Stone's address? 2. Where can I get trout eggs taken from the Adirondack lakes? 3. Where can I get eggs of the land-locked salmon? Ans. 1. Mr. Livingston Stone's address is Charlestown, N. H. 2. & 3. Address B. Fraeburg, Ludlow, McKean Co., Pa.

H. H. D., Ronnifont, N. Y.—Can a wolf run faster on slippery ice than the fastest skater can skate in a straightaway course for a distance of five miles? Ans. The best testimony we can give is the oft-told story which we read thirty years ago, of a skater who was chased for miles, and only eluded his pursuers by sharp turns, thus gaining time.

Subscriber, Montreal.—Would you oblige me with the address of some reliable dog fancier from whom I can obtain a pure-bred water spaniel pup? Ans. We do not care to make ourselves responsible by vouching for any one, but can safely recommend Mr. S. J. Bestor, of Hartford, Conn. M. P. McKoon, of Franklin, Delaware county, N. Y., has also a good reputation.

W. H., New York.—My pup, 3 to 4 mos. old, has fits. They seem to cause him great pain. Spasms last ten to twenty minutes. Dog being fed on meat and refuses any other feed. What shall I do? Ans. You never should feed so young a dog on meat entirely. Stop that at once, feeding in toto for a while and he will probably have no fits. A little starving will bring him to his senses and a mixed diet.

Jack, Williamsport, Pa.—Could you give me a good recipe for waterproofing canvas and other goods? Ans. Dissolve one-half pound sugar of lead and one-half pound powdered alum in a bucket of rain water; pour off into another vessel, and sleep your canvas in it, letting it soak thoroughly. If the quantity is not sufficient, increase in same proportion. Bang the article up to dry, but do not wring it.

S. D., Boston.—My setter dog is two years old. Has an irritation of the skin on the flanks. Is constantly licking his hind legs with his tongue, until the hair is coming off. Good appetite, cool nose, and is fed on meat and meal mixed. Have been using carbolic soap. What must I do? Ans. The dog has mange, probably from feeding too much meat. Try application of kerosene twice a day for a week, and feed no meat.

C. A. is shooting at glass balls. Every ball that is not broken is looked at by the judges. They discover one ball with a very small hole broken in it. They did not observe any glass flying in the air at the time the shot was fired. Might not this have been broken by falling on some hard substance, or, in fact, been broken when placed in trap? How would you score such a ball? Ans. Would give it as a hit ball, in favor of the shooter.

C. A. D., Melrose, Mass.—Have a split nose pointer with a wart on his left ear. How can I get it off? Has a bad mark on his tail. It is getting crooked at the tip. What shall I do? What shall I do? Ans. Use caustic potash carefully for the wart. If the tail was originally

good the crook may arise from inflammation, the result of whipping in the brush, in which case rest will cure it. If originally crooked amputation is the best cure.

W. P. H., Green Bay, Wis.—1. Can you send me the next 17 numbers of Volme 8, and for how much? 2. Do you keep blinders for Foxes and Sticks, if so how much? 3. Is the tan on a Gordon setter's throat and muzzle generally as bright as on legs and other parts? Ans. 1. We can, cost \$1.30. 2. We do, cost \$1.50. 3. A shade brighter; none, because it is not quite as heavy in texture, but the difference in a tree, bred Gordon is but very slight.

J. J. M., Johnstown, Pa.—1. Please give me the name of a reliable house in New York which purchases green furs? 2. What is the best remedy for my Scotch terrier dog, which got badly bit to-day in the fore leg, neck and thigh by some other dog? He cannot stand up at present. Ans. 1. C. G. Gunther's Sons, 134 Fifth avenue. 2. Wash and bathe carefully; use dressing or a solution of weak carbolic acid and water, and bandage nicely. Feed moderately, and, of course, keep him quiet.

W. J. W., Red Bank, Clarion Co., Pa.—Have a setter bitch pup from fine Maryland stock. Pup has worms. He is six months old. Passed a worm yesterday twelve inches long; vomits considerably; nose dry, flow shall I administer the area nut, and where can I get it? Ans. Seed for area nut powder, 60 grains, and direct to be divided into two doses, each dose to be followed by a dose of castor oil, five or six hours after. Give on successive days. Write to W. Holberton & Co., 117 Fulton street, and they can furnish you.

E. L., Cambridge.—Whom shall I address to get the best information about the "Laramie Plains" as a grazing country? Also, do you think that as good or better than some other parts of the West? Would it not be much better for a young man to work for a while with some old hand in the business first? Ans. Laramie Plains is a fine grazing region. If you feel disposed, you may address Editor *Daily News*, Denver, Colorado. There are equally good grazing districts in Colorado, New Mexico and Texas. By all means serve an apprenticeship if possible. See editorial column this week.

J. P. M., Philadelphia.—1. How is same money to be divided under the Bogardus rules? The two highest shot off for first money, and the defeated one claimed second money. Have a B. L. gun, 10 gauge; barrels are stamped with a winged bullet; the locks are unmarked. What do you know of the maker, and whose make is it? Ans. 1. The men who tied on the highest score should shoot for first money only. Second money goes to the man who made the next best score. The defeated one in the shoot off receives nothing but honor. 2. The trade mark is the well-known one of Webley. The name on the lock we do not know.

T. H. W., St. Johns, Newfoundland.—1. Has there ever been anything about the game of Newfoundland written in your paper? If so, could I obtain the number it is in? 2. Have a young setter bitch with pups. Have been told that pups of first litter will not make good hunting dogs, is it so? 3. Would like to get a few hints on dog breaking, where could I obtain them? Ans. 1. The information which has been printed in *FOREST AND STREAM* on the game of Newfoundland is quite voluminous, and it is contained in a dozen numbers of our paper, which we can furnish. 2. First litter is as good as any, provided the parents are mature. 3. Hallowell's "Sportsman's Gazetteer," price \$3.

W. A. F., Washington, D. C.—1. Is Humboldt Bay, California, healthy and suitable for one consumptively inclined? 2. Are the seasons regular, and can farming be successfully engaged in? 3. Are the winters severe, and is there much snow? 4. About what would it cost to reach Eureka, starting say from New York? 5. Is that section subject to cold, chilly fogs? Ans. We can say, generally on testimony of the most reliable kind, that all the conditions of climate, scenery, flora and fauna, timber, etc., are the most favorable imaginable. Steamers run very frequently from San Francisco to Eureka, which is 300 miles north; and mails are regular. No fogs, no snow, no mosquitoes; game and fish in greatest variety.

N. P. D., Montreal.—1. A friend of mine in Manitoba has some buffalo cows in calf by common bulls. Will it be possible to further cross their offspring? If so, which would be best—to cross the half-breed female with the common male, or half-breed male with female of common stock? 2. What time do gold fish spawn? How shall we preserve the spawn, as the fish eat it? Ans. 1. Col. Dodge, in his "Pictorial of the Great West," says: "The buffalo and domestic cattle will cross successfully only when the buffalo cow is the mother of the male. The domestic cow will receive the attentions of the buffalo bull, but invariably dies, being unable to bring forth the calf." 2. Gold fish spawn from middle of May to June. Feed them sufficiently with worms, meal fish, or wafer, so that they will not be hungry enough to eat the spawn.

B. W., San Francisco.—1. How many grains of lead should be used with 70 grains of powder in a Ballard Pacific Sporting Rifle, .41 cal. 7. 3. What would be the best material to make a good indicator with? 3. If a ride should be shot straight up into the air, would the bullet come down as fast as it went up, or faster? 4. Have a young dog, a cross between a setter and a Newfoundland. He has an enlargement of the knees in his front legs. What is the disease, and how shall I cure it? Ans. 1. A ball of 333 grains. 2. Clear tallow, 4 parts; beeswax, 1 part; melt them together. 3. Will answer this later with fuller details, as it is an interesting question. 4. Hard to tell from your brief description whether it is an enlargement or a swelling at the joint. A cross between a setter and a Newfoundland must be N. G. Rub the joint with any good liniment.

INEXPERIENCE, Newark.—Your description is most lucid, and not a bit too long. We have no doubt but that it is a W. & C. Scott gun. Questions. 1. With a 40 bore W. & C. Scott gun what charge should I use? 2. What would be the heaviest limit of charge? 3. Why must I use two pink wads, and why pink wads? 4. Do you know anything about the guns — sells at auction? Does he sell good, reliable guns? Could I get a reliable gun at their private sale? If my gun is a Scott gun, by sending them the number could I get a certificate of the test trial? Ans. 1. 4 drs. 2. 5 drs. is about a limit of necessity, but the gun would stand more—uselessly, however. 3. Because one wad would blow out. Pink wads are lubricants. 4. Do not think — sells good guns at auction; at private sale, perhaps, yes. General advice is, Don't. 5. The makers would send you the whole history of the gun.

DISTEMPER, Butler Co.—Have a fine bitch, 18 months old, dying with distemper. It commenced with an attack of the lungs. Gave her nitrate of soda and she was at that relieved. Have tried hyposulphate of soda. This, with beef tea for food, somewhat brought her around at first. Gave her quinine, when she seemed to get stiff in the joints. She has continued to develop paralysis. Now her hind quarters are so paralyzed that she cannot stand. She eats still, and shows some sensibility when touched in her hind quarters. Eyes are clear and glaze. What shall I do? Ans. Your early treatment was fairly judicious. Such cases are not unusual, nor are they always fatal, though your case seems to be a bad one. Give at once a dose of castor oil, as the bowels may be clogged. If the medicine works, feed a little, and give the dog quinine and nux vomica—of the former two grains twice a day for three days; of the nux vomica not over ¼ of a grain. Nux vomica requires watching. Should you see nervous disturbances, diminish the nux. Give for a week. Write us again.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INDOLENT IN MAN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company.

-AT-

No. 111 (old No. 108) FULTON STREET, NEW YORK.

(Post Office Box 2332.)

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Twenty-five per cent. off for Clubs of Three or more.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

* Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, FEBRUARY 28, 1878.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous contributions will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost. NO PERSON WHATSOEVER is authorized to collect money for us unless he can show authentic credentials from one of the undersigned. We have no Philadelphia agent.

Trade supplied by American News Company.

DER WAIDMANN AND DER JAGDZEITUNG.—In our last issue we inadvertently stated that Fr. Von Ivernois was editor of *Der Waidmann*, of Prussia. We should have said of *Der Jagdzeitung*. Formerly he was the editor of *Der Waidmann*, but that popular journal is now in charge of Schmedeberg.

A RARE BIT OF FUN.—The chiefs, lieutenants, and understrappers of the FOREST AND STREAM were somewhat disconcerted last Saturday by the arrival of a large box at the office. It was late in the afternoon and the weather warm, and as the box had a sort of musty odor, as if it had come from foreign parts and been a good while from home, it was determined to open it before it got dark. It was a dry-goods box, and as the top was pried off, a board at a time, the odor became stronger and more defined, suggestive of a furrier's garret in summer time. In fact it had a sort of Indian smell; kind of like a bale of buffalo robes. Presently something of a dirty gray color came in sight—and at once it became obvious that the box contained gray rabbits, or, more properly speaking, hares, the *Lepus canadensis*. Nay, more, it was filled with them. The boys lifted them out by the hind legs, two at a time, until they lifted out 90—ninety rabbits! They piled them up on the floor, and they made a stack higher than the table. It was something like the stack of black cats we read of, only the color was different. Well, they were a fair lot, in fair condition; just ripe for being jugged (our English readers know what jugged here is). So many gray rabbits we never saw before—not in our office. A little perplexity arose in the case. We remembered having received a postal card advising us to look out for hares—"about this time"—although it was not quite March yet. (You've all heard of March hares?) As we often receive little presents of game—a brace of ducks, or a dozen of quail or the like of that—it did not surprise us that rabbits should have been sent by way of a change; but we hardly expected so large a consignment. The problem

was, the intention of the donor. Did he gauge his gift by our supposed appetites, by our capacity, or by the number of employees in the office? There was little time for conjecture or consideration. The weather was warm, and the next day was Sunday. Something had to be done at once—active measures must be taken. We counted noses all around, and allotted a pair of rabbits (hares) to each person. This disposed of twelve. Seventy-eight remained. Then we summoned the printers, and they reduced the pile to sixty-two. Fourteen men began to pile out of the office with fourteen pairs of hares. Pedestrians in the street stopped and stared in wonderment at the long procession. They observed that it was fur to the end of it. Some of them intimated that there was a sort of distribution for the poor going on, and proposed to take a hand in. Meanwhile a note was dispatched in haste to the Astor House, tendering the balance of the lot to proprietor Dam, but he didn't accept worth a Dam; that is, he declined it. Then a tender was made to the driver of the Astor House coaches. There were ten drivers. They took. A cab was at once driven down to the office, and loaded with twenty more pairs, and yet the pile which remained seemed little reduced. What was only a quandary at first, became a dilemma. As a last resort, a messenger was hurried off to Knapp & Van Nostrand, of Washington Market, who were persuaded to take the balance of the lot.

In conclusion, if any more of our correspondents wish to inquire where to find good rabbit hunting, we will inform them that these came from Maine, where we presume there are a few more left of the same sort.

THE GRASSHOPPER NO LONGER A BURDEN.

While the advent of the grasshopper is regarded with dread in almost all parts of the West, there is one section and people in that land which await the coming of the predacious hosts with eagerness, based upon the hope of existence. To the farmers and ranchmen a grasshopper season means starvation; to the people we speak of it brings plenty and abundant stores of food. In Northwestern Idaho, and along the eastern boundary of Washington Territory, upon the Lewis Fork of the Columbia River, roam the Nez Perces Indians; not Chief Joseph's band, but another branch of the same great nation, who differ from their warlike brothers who have lately given Uncle Sam so much trouble in several important points, and in none more conspicuously than in that of hunting. The particular tribe of Nez Perces who occupy the region referred to seem to be cut off from all other Indians by their peculiar and almost disgusting method of obtaining food, from which they have derived their distinguishing name of Diggers.

In certain parts of South America, in Brazil and Patagonia, there are races of men known as Diggers, so called because they live upon roots and wild herbs which they dig from the earth; but the name, as applied to the Indians of the Northwest, arises from an entirely different custom.

These Nez Perces of the Lewis Fork country live upon grasshoppers. Grasshoppers raw, stewed and fried in summer; grasshoppers dried and made into soup in the autumn; grasshoppers ground and baked into bread or cakes in the winter; and too often, from a lack of provisions, grasshopper memories in the spring, until the warming sun brings again their winged game to save them from starvation.

But it is not their habit of eating the grasshopper, but their mode of capture, which has given them their name. Early in June, the Indians select some open prairie well covered with grass, and dig a trench, half a mile in length, some six feet wide and three deep. Along one side of this they collect great heaps of dry grass, mesquite and sage bush branches, and having arranged their trap, they await the coming of their victims. As soon as the insects arrive, covering the entire country in countless swarms, the Indians, with their horses, post themselves upon the prairie some thirty rods apart, parallel with, but upon the opposite side of the ditch from the dried brush, and a mile or more distant therefrom. Then tying lariats or long hide ropes between their ponies, one end to one and the other end to another, and allowing the slack to trail along the ground between them, they slowly ride toward the trench.

The grasshoppers, slowly and with short flights, are driven before them, until, as they advance, the air becomes black with the flying cloud, and the long ditch is reached. Millions of the insect spring into it, millions more follow—the hole is full; then up rush the squaws of the band, who have been waiting near; they seize the brush and dry wood and throw it upon the struggling mass, preventing escape; at either end fire is set, and as the hot flames run crackling to meet each other the grasshoppers are roasted to death.

The Indians then empty the ditch, eat such portion of their strange food as they desire, grind other portions of it between great stones, and pack it as meal or flour in huckskin bags for winter use; and, waiting a day or two, until the prairie is again covered with the insect army, repeat the operation. This goes on through all the summer season until the chill blasts of autumn drive the Indians to the mountains and kill the grasshopper host; and it is from such a strange custom that this tribe of Nez Perces are to-day known as Diggers.

F. E. HAMILTON.

FOREST AND STREAM will be sent for fractions of a year as follows: Six months, \$2; three months, \$1. To clubs of two or more, \$3 per annum.

(FROM OUR SPECIAL TEXAS CORRESPONDENT.)

ON THE BUFFALO RUN IN TEXAS.

THIRD LETTER.

FORT GRIFFIN, TEXAS, Oct. 3, 1877.

I have adhered closely to the projected line of the Texas and Pacific Railway for the past 130 miles, and I have followed it out for forty beyond here.

Mr. B. M. Collins, of Tiverton, England, one of the largest and most successful sheepmen in Australia during times gone by, was one of my companions, and he tells me that in the United States there is nothing nearly equal for sheep raising purposes to this portion of the country. When it is so well known that even an Australian fool understands more about sheep than does any wise man east or west of the most flourishing and go-ahead British Colony, the statement of an Anglo-Australian capitalist like Mr. Collins on this subject, carries to my mind more conviction than would that of any number of, perhaps, other than South African experts on the matter; so I shall not give any reasons why Northwest Texas must become the home of the sheep. Why it has not become so is perhaps more worth studying. A land that will carry us flocks all the year round without artificial food or shelter, where grass is good, water fairly abundant, Indians, so far as Fort Griffin, non est, and where water frontages can be purchased at from \$1 to \$3 per acre, and these forever must command enormous ranges belted, I cannot understand why the broad road to fortune, so difficult to find, and which appears open here, is not availed of more extensively.

There are sheep—and very healthy, happy-looking ones—about here, but they are in small flocks, and have risen to their present number—averaging one to two thousand in flocks—from almost literally nothing perhaps twenty sheep, perhaps a hundred. When the Texas-Pacific reaches here it will be a good deal too late to begin on sheep, especially if a few men—as Mr. B. M. Collins told me he thought of doing—put \$100,000 into this business, which sum here would start, on the present free ranges, nearly a quarter of a million of Mexican ewes, which though they would probably only shear one pound on an average each the first year, would, and do, transmit to their descendants, and by pure Merinos, the capability to average at least four pounds of wool afterwards. I will act as private secretary, gratuitously, for twelve months to any one who proves my statements, as above, impractical, impracticable, or in any way visionary.

But at present I want to bring my readers with me on a regular outing, a range over the wide, unoccupied plains of Western Texas. I want to introduce western garrison life and Indians and buffalo and antelope to the readers of FOREST AND STREAM as I saw them; so I shall pass along the Texas and Pacific Road that is to be, having given the strongest hint I can as to what is best to do at present along it, and enter the little town of Fort Griffin, whither the fame of this paper had somehow preceded me; for in no other manner can I account for an invitation which was at once sent to my hotel—The Southern—to the effect that Captain Lee, 10th Cavalry, and Dr. Caldwell, U. S. A., were waiting dinner for me at the post. I went there, and, save to hunt game or statistics, have never since left it.

Three Englishmen, with introductions from Gen. Ord, had been given an unoccupied house. Indian Jim, their scout, was there also. We had five U. S. A. officers in barracks, and the breezy height on which is situated Fort Griffin, resounded with many a tale of blood and field from the English headquarters, whither we nightly repaired en masse. The nearly-tamed Tonkawas—friendly Indians—first attracted us. Many of the braves—enlisted (scout) soldiers—had a camp here; and a gallant British officer, one of our party, not very fairly fleeced by the squaws, who sold him the most amazingly worthless Indian works of art (?) at the most amazingly fabulous prices; but we could not stop him, and only trust that the British army appropriations will prove equal to the strain thus put on them.

The Tonkawas wear their old embroidered blankets, but in addition the braves affect an old military jacket, or at least a neckpiece of military buttons; and one dinky belle we saw wearing a dress made out of an old star and stripes—a regular comic picture type of Columbia.

"Now we must get on to the buffalo," we one night remarked to Captain Lee, who commands the post.

"Oh," he said, "my men have to be scouting all the time westward, so I will give you an escort."

And he did. Eight well set up men, a better set-up Sergeant, by name Valentine—name that so pleasantly recalls cupid and kisses and February 14. Besides these, we had a Tonkawa, christened Johnson, and his squaw, not christened, whom we called Mrs. Johnson; a mighty big wagon drawn by six mules, made up our cavalcade, which Mr. B. M. Collins said "looked rather too much like a Lord Mayor's show to be business-like;" but Mr. Collins was wrong, and he proved it by his deeds. On thorough partially broken country we advanced for two days, a country bounding with the soft and nutritious curly and running Mesquite—a sheep's paradise—and which only the buffalo hunter has traversed in the wake of a scouting party of soldiers, or of a Texas-Pacific surveying party. We near Flat Mountain—I, with very sore eyes, sticking to the wagon, Collins and his party ranging away to the south—when Sergeant Valentine cries "Halt," and points out to me eighty buffaloes on the trail ahead of us (we stuck all through Col. McKinsey's trail). The buffaloes were fat and quiet, and only half a mile off. I am rather too heavy for continuous fast riding, so, borrowing the stoutest horse in the troop, I waited behind a knoll while two of the men rode off to head the herd. They did head them, but the wrong way, and when I next saw them they were three miles off. But now the Fates fought against the poor *Bison americanus*, for he rushed into the arms of the Britisher, Collins cut off his retreat and headed him back, and the now terrified herd, in the words of Homer, which Pope renders thus:

"Pour along like a fire that sweeps the whole earth before it."

The gallop sway from me had partially tired the animals, and Collins, a graceful rider and a mere feather-weight, rode them down rapidly, his Smith & Wesson dealing destruction right and left. He rarely killed right off, but his mortally wounded victim staggered, fell, and was polished off by the pursuing trouper who endeavored but in vain to head the plucky little Australian capitalist. Five monsters and a well-grown calf marked his victorious path. The tide of war did not roll my way, but from a commanding hill I, as your war correspondent, chronicled the fray. Two efforts, indeed, I made to urge my Pegasus to abandon his line of strict neutrality, but not he hated the buffalo with a mortal aversion, and, for the moment, had the brine belonged to me instead of to the War Department, his days would have been numbered. The scattered hands have now departed from our sight, but visions of broiled hump, buffalo tongue—that delicious morsel—and buffalo heart, doated before our hungry eyes, so we asked Sergeant Valentine to march the men over the field of battle, and again, to quote Pope's Homer,

"—They strip the smoking hide,
The beast they quarter and the joints divide."

Having eaten a late but delicious repast, we quaff in our military tent the juice of the Bourbon grape of Kentucky (that sounds quite classical, yet conveys my hidden meaning), and, later on, we dream that the Texas-Pacific train is running over us, which, so far as our camping ground is concerned, may soon come true. S. NORTON TOWNSEND.

GAME PROTECTION.

NEW YORK MOOSE.—Every one knows that portions of this State once abounded in moose; and most people are aware that the last of the race disappeared many years ago from its limits. For this reason the introduction of a bill into the Legislature by Senator Wagstaff for the "protection and preservation of moose in the State of New York" has created some excitement. Now let us state here that Col. Wagstaff knows very well what he is about, and that there is little occasion for so much laughter around the board. Those who have examined our advertising columns within the past few weeks may have noticed a call for live moose. The demand has come from parties who are endeavoring to restock certain localities in the Adirondacks with this noble animal; and we take pleasure in informing the scoffers and the credulous that they have succeeded (through our own instrumentality, in great part,) in obtaining male and female stock, and that in a few weeks it cannot be asserted with truth that there are no moose in New York State. Now, without some law in regard to the killing of moose, nothing would stand in the way of their all being destroyed in a single season. Precautionary measures are necessary and most important, and Senator Wagstaff is not only to be commended for his foresight but is entitled to the *amende honorable* of every man who has made his proposition a subject of ridicule. From an initial stock of a half dozen pairs of moose we should have 30 animals the second year; 40 the third year; 80 the fourth year; 120 the fifth year; and 240 the sixth year. Moose produce one calf at a birth the first year, and afterward two. In the course of six or seven years, hunting might be permitted, with a limit to the number killed by each gun, as is now done in Nova Scotia, after a three years' total prohibition.

LONG LAKE GAME CLUB.—Long Lake, N. Y., Jan. 19.—A club numbering forty-two members was organized here Jan. 19, for the protection of game and the prosecution of all offenders within the limit of the town. This embraces the region which has for a long time been considered the best hunting and fishing grounds in the Adirondacks. We congratulate the citizens of Long Lake on their action and wish for them success in this much needed movement. The officers of the club are: C. B. Hammer, Pres.; R. Cary, Vice-Pres.; C. W. Blanchard, Sec.; A. A. S. Haumer, Treas.; R. Shaw, Prosecuting Attorney.

SAGINAW (MICH.) GAME PROTECTION CLUB.—The following officers have been elected: Pres., A. H. Mershon; Vice-Pres., C. B. Headley; Sec. and Treas., J. B. Peter; Ex. Com., A. H. Mershon, Joshua Tutbill and Wm. J. Loveland. Several honorary or corresponding members, elected in localities in Northern Michigan, where similar clubs do not exist, will co-operate with the Saginaw Club in requiring observance of the game laws. Our club has a membership of over fifty, including some of our most prominent citizens, and with a splendid set of working officers we are doing our level best for the perpetuation of game and fish and insectivorous birds. *Qui Vive.*

The Rifle.

THE FOREST AND STREAM AND ROD AND GUN TOURNAMENT

For the Short-Range Championship

And three team medals, which will be awarded to the teams making the first, second and third best scores. Other prizes will be offered also, to take place at Conlin's shooting gallery. Open to teams from any organized rifle club.

Conditions.—Teams—Each team shall consist of ten men. The teams participating must be composed of members of the various clubs which they represent. **Rifles.**—Limited to ten pounds in weight; minimum pull of trigger, three pounds; 22-100 cal. Teams can furnish their own rifles and ammunition, or use those at the gallery, as they may desire. **Number of Shots.**—Ten by each competitor. **Scoring.**—Two shots will be allowed each competitor. **Position.**—Off-hand. **Targets.**—200-yards targets, according to the regulations of the N. R. A., reduced in proportion to the range at the gallery. **Practice.**—No practice allowed on the day of the match. **Entrance Fee.**—Five dollars to be paid at the office of the FOREST AND STREAM AND ROD AND GUN, No. 111 Fulton street, N. Y. All teams desiring to compete must be entered ten days before the time the match is announced to take place. The match to be governed by the rules of the N. R. A. relating to teams. Captains of the competing teams shall meet one week before the commencement of the match, make all preliminary arrangements, choose referees, and decide in what order their respective teams shall shoot. The referees shall elect an umpire, whose decision in all cases shall be final.

The match will commence on Monday, March 11.

BALLARD RIFLE.—Messrs. Schoverling & Daly have presented as a prize for the FOREST AND STREAM AND ROD AND GUN match, to be shot at Conlin's Gallery on March 11, a very superior Ballard rifle. We are pleased to state that this contest is now assuming shape, and we believe that fully a dozen teams selected from our leading rifle clubs will participate in the match.

SCHUETZENFEST.

The FOREST AND STREAM AND ROD AND GUN takes great pleasure in announcing to its numerous German friends throughout the United States, that on the occasion of the

SCHUETZENFEST,

which will take place on June 24, 1878, we will present to a winning team, to consist of ten men, a handsome gold medal, which we are now having made especially for this occasion. The entrance fee will be \$15 for each team. After deducting cost of markers, etc., the remaining money will be divided among the various competing teams. The entrance fees are

to be paid on or before June 10th to Mr. F. Harenburg, Treasurer of the Sharpshooters' Union, No. 190 Greenwich street, New York. The match will take place at the Schutzen Park, Union Hill. Any communication directed to the President of the Association, Captain George Acry, or to the Corresponding Secretary, J. H. Behrens, Esq., No. 37 Bowery, New York, in regard to the rifle contests to be shot at the schutzenfest, will receive immediate attention.

It is to be hoped that American clubs will participate in this leading event, as it will demonstrate quite as thoroughly as any match we know of the proficiency of riflemen at 200 yards. We will shortly give full details in regard to the method of shooting in use by the German sharpshooters.

NICK ON THE CENTENNIAL TROPHY IN FRANCE.

SOME of our riflemen are seemingly very anxious to sustain the honor of our country in matters of marksmanship on foreign fields. They are anxious to rush off at even the intimation of a possible challenge, and above all they are not averse to the risks and the exertion of a pleasant foreign jaunt. To this there can be no objection. It is very proper that we should let the whole world know our desire and feel our ability to sustain for what seems an indefinite period the title we have won to the championship laurels in this as in other fields of exertion. But not only do these gentlemen propose to go abroad, but they intimate that it would be a proper and fitting occasion to send the Centennial Trophy about Europe begging for an owner. There have been complications, misunderstandings and misapprehensions enough about that blessed bauble without stirring up a fresh stock of explanatory correspondence by a flagrant violation of its condition in this manner proposed. After all the time and trouble, printers' ink and postage, which have been squandered in making the typical Britisher understand that an Irishman and a Scotchman might shoot as such without thereby threatening the stability of the British Empire, it does seem a tempting of fate to evoke a new incursion of hornets about our rifle managers' ears.

The language of the conditions is plain as can be, and says: "Such trophy to be shot for in each subsequent year, upon the same terms, in the country of the team holding it, at such time and place as said team or a majority thereof shall prescribe." The language of "each subsequent year" has been already subjected to an interpretation by the founders of the prize or their representatives, the Directors of the N. R. A.; but, touching the question of place, it has been wisely thought to let well enough alone, and until something more potent in the way of reason shall be offered than the mere desire of a half dozen or less to enjoy a European trip, it is simply absurd to think of any change. Even if the conditions were not so unequivocal on that point, the action of the team the other day would seem to fix the matter beyond dispute; and with the programme of this year's shoot already out, with the words, "To be shot for in the United States of America in September, 1878," nothing further would seem to be called for in the way of comment; but once let the project of a French trip fit before our young riflemen's eyes and he forgets everything but the grasping of the present gratification.

Opinion is luckily not so unanimous on the point as to raise any immediate danger of a foolish step, as one member of the existing American team characteristically expressed himself: "I don't see why we should trail the tail of our coat all over Europe begging people to step on it. If anybody wants that brass eagle on a stick they know how they can come and get it, or at any rate come to try to get it; but I can't see any use in throwing it at them. We'll lose it soon enough, and then will be time enough to dust about and see to coaxing it home again; then, and not till then will we have anything to go to Europe for, if the trophy goes there, or anywhere else it may wander to. Of course, we all understand that it belongs here as a matter of course, and must remain here until won, and when anybody or bodies make up his or their mind to carry it off, why we have no objection, provided they show the better score." This looks like a bit of brag, but there is a spice of hold-fast in it, too; and it is a proper view of the subject to have, for one who, like a team man, is merely acting in the capacity of a trustee on behalf of American riflemen. Aside from all feelings of mere pride, there is a sensible matter-of-fact view to be taken of the case. Is it at all likely that any such favor would be shown an American team by any foreign power under similar circumstances? Recall the visit of the team of 1875 to Wimbledon, and the negotiations growing out of the proposition to have the American team shoot side by side with the other teams in the contest for the Elcho shield, not as a prize-taking team, but merely in the way of an exhibition, and for the purpose of comparison. As a matter of historical fact, our eight at that time and place were weak, very shaky in their tail-end men; but fearing that the prestige of their time-honored trophy might be dimmed, the offer of a place for our squad, first made from their side, was respectfully withdrawn. Is our centennial trophy such a mere insignificant affair that it should be hawked about in the manner suggested by a contemporary journal? Compared with the Elcho shield, the one is a local badge of supremacy, the other an emblem of international superiority. In upholding our claim to the possession of the Palma, we have whipped and routed the very cream of the Elcho Shield champions. The scores bear us out in comparison, so far superior are our figures. In fact, the more it is considered, the more ridiculous appears the proposition to lug the trophy to France or anywhere else in search of an owner. A dignified respect for the rules of the match, which on this point do not appear to be at all unreasonable, will retain for us that respect which our previous victories have impressed upon the foreign mind, and to abate one jot or tittle can only open the door in the future to unforeseen blunders and complications.

And yet, not for a moment would I be understood as discouraging the sending of an American team to Paris, provided such a representation can be sent without detriment to our home interests. There is much to be gained by an exhibit of our proficiency in rifle practice in connection with the Paris Exposition; but business before pleasure holds here as elsewhere. Our first care should be to see to it that we are at home ready to receive any who may come to carry off the Centennial trophy. The call in connection with that contest has gone forth, and until the 1st of June, the limit of time for

entries, the question of going to Paris or elsewhere must remain in abeyance. Further, something more official than contradictory and indefinite news dispatches per cable must be received before any action whatever can be taken. No information on which any action can be based has yet been received by the N. R. A. of America, or by the riflemen of this country; and, until such documents arrive, it would be very unbusiness-like to take even the first step.

There is enough to be done at home to occupy all our time. Enough has been done at home and abroad to satisfy any reasonable craving our men may have for the sweet fruits of victory. Everything now is lovely and serene in the rifle horizon, and we of all can best afford to await what the fates have in store for us, without going abroad to stir up strife even of a friendly sort.

NICK.

FIRING SUBMERGED RIFLES.

SOME VERY NEW AND CURIOUS RESULTS.

General Uebatus, the well known Austrian Ordnance Officer, whose peculiar construction of cannon has attracted such marked attention, has been making some novel experiments with fire-arms. It became a question with the Austrian officer to study the effects of firing rifles under water, the whole arm being submerged. A brief account of these experiments were published by General Uebatus some time ago. We were fortunate enough to be present this week at some initial experiments, made by Lieutenant Count Kolowrat, of the Austrian army, and Dr. H. A. Mott, Jr. A large tank having been built, this receptacle was filled with water to a depth of some five feet. The arms used were the .53 cal. Springfield, the .50 U. S., and the .43 Spanish model rifles, furnished by the Messrs. Remington. The arm was held in a wooden rest, submerged some three feet, then loaded with the ordinary shell, and fired at a piece of pine board, some three feet long, six inches wide, by about one inch thick.

Now, if a person fairly versed in the science of projectiles were asked, "How far will a rifle, loaded with the usual charge of powder, send its ball under water?" the answer would probably be of the vaguest character. The resistance such a non-compressible medium as water presents to the flight of the ball is of the most remarkable character. It would hardly be believed that about four feet under water is pretty nearly a limit of penetration for a rifle ball; a difference of only a few inches more or less as to the target, whether it be moved nearer or further from the muzzle of the piece, affects the penetration. In General Uebatus' experiments the Austrian Werndl rifle did not throw the ball so as to penetrate at a distance of four feet nine inches when fired under water. The limit of penetration arrived at as to distance was 3.28 feet from the arm. In the experiments we witnessed in company with A. Alford, Esq., a ball from a .53 cal. Remington, capable of penetration at a mile, did not perforate the piece of pine board at four feet distance from the muzzle of the rifle, while with the .50 cal., at the same distance, the ball was embedded. The .43 cal. made but a slight impression. At five feet, with the heaviest charge, no effect was visible on the target. About three feet ten inches seemed to be, on an average, the absolute range for penetration from the arms used. Of course these experiments fully established those made by General Uebatus. The wonderful thing about all this is, that an inch makes a difference, in some cases, as to whether there is penetration or not. Now, it may be asked, "What is the use of experiments made by firing rifles under water?" The answer may be expressed as follows: "When the facts of firing submerged arms are studied, and the exact action a dense medium may have on the flight of projectiles is better understood, range and penetration may be arrived at with the greatest precision." It is the intention of Count Kolowrat, in conjunction with Dr. Mott, to make a series of the most careful experiments tending to this end. It is not impossible, then, to advance the idea as a result from these studies, that in the future, when an arm is to be tested, instead of firing it in the air it will be fired under water. Long-ranges for testing rifles will be supplanted by water tanks. Of course the density of the fluid, the barometrical pressures, and the temperature, and the depth at which the arm is placed will be carefully studied. We shall watch these experiments with submerged arms with great interest, trusting soon to give our readers the many novel facts likely to be eliminated.

PENETRATION BY AN EXPRESS RIFLE

EDITOR FOREST AND STREAM:

I have read in your paper occasional communications in regard to the Express rifle, but very little about the Express rifle or its penetration. As I have a double Express rifle, .45 calibre, made by Alexander Henry, of Edinburgh, which I have used, and as the results vary from those which I read in F. AND S. in regard to penetration, I have made some experiments with shells that were loaded two years last October. These shells were not loaded for any trial, but for hunting. I made three shots, with the following results, at a pine block: The first went through a 14-inch block, struck another and glanced off; the second struck a knot and stopped after penetrating eight inches; the third went so near a knot that it turned its course and penetrated 11½ inches.

I send by express the block split, showing the bullet and the timber which it penetrated. I also send some bullets shot into a snowbank after going through a pasteboard target. Will some of our scientific men tell us why the Express bullet expands and flies to pieces when shot into a very soft substance, while it retains its form nearly as well as a solid bullet when shot into a hard substance? Sportsmen need not doubt the power of the Express rifle to break bones and tear the flesh into fragments. I have made respectable shooting at 500 yards, though not intended for that use.

Since making the above shots I have read a communication from "Viator," which I fully endorse as far as my experience

goes. Not having the pleasure of hunting large game, I will step back into the shade and say to "Viator," "You are on the right trail. You never need fear a grizzly if you do your duty as well as the little Express bullet will do its own part when backed by a good charge of powder."

Track of Express Bullet in Block of Pine Wood—Penetration, 11 1/4 ins.

The Express rifle, with which I made the shots into the block and snow-drift, is a combined arm which I ordered, intending to take a trip through the West, similar to the trip taken by the editor of the *FOREST AND STREAM* AND ROD AND GUN, only on a smaller scale. The arm is of the following weight and dimensions: Double rifle; weight, 10 lbs., 4 ozs.; .45 calibre; 23-inch Damascus barrels; charge, 110 grains Curtis & Harvey powder No. 6; weight of bullet, 350 grains. One set of sights is used for both barrels, and I can see no difference in their shooting at long or short distances, with no moving of sights except the elevation necessary for the distance you wish to shoot. Remove the rifle barrels and put into the same stock a pair of 28-in., 12-gauge Damascus shot-barrels, and you have a shot-gun weighing 7 lbs., 1 1/2 ozs., which ought to please any gentleman that has an eye for a gun; all packed into a box fitted to receive each part and tool necessary for the care of the gun and ammunition. The distance from the block was fifty feet; distance when the bullets were shot into the snow, 40 yards. I sent you the block with the bullet in it that you might see that it was an Express bullet, as some might doubt my statement.

A. G. MANN.

Yours, etc.,
[Our correspondent's communication will be found quite interesting, especially as it indorses the views of many of our friends. The principles of the Express rifle and the plan of the projectile have been already fully discussed in our columns. The only questionable point of difference we find with those who speak of the merits of the Express rifle is in regard to its having a flatter trajectory than any other rifle. We are inclined to think that the back sights have an extra elevation. As to the force, penetration and destructive qualities of the bullet, there can be no possible doubts.]

STRAIGHTENING OUT A GREAT DEAL OF CROOKEDNESS.

RECOIL AND UPSET OF BULLETS.

DUBLIN, Feb. 9, 1878.

EDITOR *FOREST AND STREAM*:

Some of your correspondents are much astray on these points. I will give Mr. Ferris, "Venator" and Mr. Knapp the following nuts to crack:

Why does a rifle bullet not leave the barrel in the same direction the axis of bore had when the trigger was pulled? That it does not is easily proved, and the true answer is, Because the barrel is displaced by the motion called "recoil" before the bullet escapes from the muzzle.

Why does a double-barrelled rifle, in which the barrels are put together with bores exactly parallel, not shoot its bullets in parallel lines? Ans.—Because the recoil moves each barrel before the bullet escapes from the muzzle, and, moreover, moves them into diverging lines, owing to the resistance of inertia and of the shoulder not acting in a line with either, but being directed to a point midway between them.

Mr. Ferris is right about upset of bullets, which takes place at the breech, and is almost wholly due to the resistance which the inertia of the bullet opposes to the impact of the explosion.

"Venator" is wrong about muzzle-loading long-range rifles. Their best performance is not attained with a tight bullet started into the grooves, but with one which slips down easily and is just sufficiently upset to follow the rifling when the charge is fired.

JOHN RIGBY.

DR. CARVER'S WONDERFUL SHOOTING.

In response to certain inquiries put by us to Dr. W. F. Carver, the famous California shot, he has sent us the following reply. We have to thank Dr. Carver for a half dollar and a five-cent piece, shot through and through by a rifle ball as evidences of his skill. Silver will be more plentiful than ever after the passage of the Bland silver bill, and we may in the future expect many such favors, we suppose:

SAN FRANCISCO, Cal., Feb. 19, 1878.

EDITOR *FOREST AND STREAM*:

The last match I shot was in San Jose. I shot with a Winchester repeating rifle, calibre 44-100, model of 1873. The match was to break 225 glass balls out of 300. I broke 233 out of 281 shots, having nineteen balls to spare. The balls were thrown from twenty to fifty feet high, the pitcher standing fifteen yards distant.

At my match in Oakland I shot with a Ballard rifle; calibre, 22-100; weight, 9 1/2 lbs; the balls thrown at eight yards distance, the pitcher throwing them from fifteen to fifty feet high. I broke 237 out of 300. I shoot with three guns of different manufacture. I can do the same shooting with any kind of a rifle, from a Hawkin's muzzle-loader to a Creedmoor target rifle; the rifle does not make any difference. I have made a match to shoot on the 22d of this month for five hundred dollars, to break 750 balls out of 1,000, I to shoot any distance I choose. I leave here for the East on the 15th of April next. Inclosed I send you a five-cent piece and a half-dollar, which were thrown in the air and shot with a Ballard, .22 cal. The five-cent piece is the only one I ever found. They are so light that the bullet drives them a long distance.

WM. F. CARVER.

We are just in receipt of a letter from our special correspondent in San Francisco, who writes us: "I have just

seen Dr. Carver shoot a match with a rifle. There is no humbug about his shooting. He can hit a ten-cent piece almost every time when it is thrown in the air." The latest feat of Dr. Carver was at Oakland, Feb. 22, when he, with a rifle, broke 835 glass balls out of 1,000, tossed from a point twenty feet distant. The time, including all stoppages, was three hours and three minutes.

SOME QUESTIONS TO VIATOR.—Would "Viator" kindly tell us more about the "Express Rifle," and particularly of its trajectory up to 200 yards—how much the ball falls from the axis of the bore or rifle barrel at different distances, say at 50, 100, 150 and 200 yards, when the charge of 136 grains of powder is used in the .45 cal. rifles; also, how to manage lubrication with such heavy charges? I find that with only 90 grains when fired in a dry atmosphere that a powder crust forms in front of the shell sufficient, from one discharge, to spoil all accuracy of succeeding shots if not cleaned from the barrel every time.

J. N. B.

DRILL CONTEST.—*Charleston, S. C., Feb. 22.*—Washington's Day was celebrated here with the greatest enthusiasm and zeal; all of our military and rifle clubs were out on parade, and were received by Gov. Hampton, Generals W. H. F. Lee, Bradley T. Johnson, J. R. Trimble, and many other distinguished guests. One of the chief features of the day was a "Prize Drill" between four of our crack clubs—the Palmetto Guards, Sumter Guards, Charleston Riflemen, and Montgomery Guards. Each company was represented by a squad of twelve men. The judges chosen were Lieuts. Adams, Hill and Galbraith, of the Fifth Artillery, U. S. A. Each squad was put through a list of exercises furnished by the judges. Each of the three judges made his individual estimate of the mark due each movement, the highest being three, and the descent being by tenths down to one-tenth. The drilling was not up to what was expected, but the four squads were so evenly matched that it made the contest intensely exciting. At the conclusion of the drill, the three judges compared their different estimates and marks, and announced the following result: Palmetto Guards, 115.8-10; Sumter Guards, 114.2-10; Charleston Riflemen, 114; Montgomery Guards, 112.7-10.

YENOTS.

BURLINGTON (VT.) RIFLE CLUB.—The following officers have been elected for the ensuing year: President, W. W. Henry; Vice-President, Chas. P. Frissell; Secretary, A. B. Witherell; Treasurer, M. E. Montgomery. Board of Directors—Gen. J. L. Barstow, M. L. Kelsey, H. G. Boardman, J. D. Wilkinson, W. E. Whitney, A. B. Witherell, D. Barnes. Range Committee—M. L. Kelsey, E. F. Downer, Jos. T. Beach. The club are shooting long-range matches on the ice this winter.

AMATEUR RIFLE CLUB.—At a meeting of this leading club, held on Saturday, plans for the matches in which the members were to be engaged were discussed. Mr. A. Alford, member of the Executive Committee, offered a \$150 rifle as a prize to be shot for at 1,000, 1,100 and 1,200. The reason for including the additional 100 and 200 yards is either to get an increased range at Creedmoor, or to have the New Jersey Rifle Association to form their new range to include such additional distances. Some objections having been made to the 1,100 and 1,200-yard match, a committee was formed to prepare a plan for a series of short-range matches.

NEW CREEDMOOR RULES.—At a meeting of the Directors of the N. R. A., held on the 20th, the regulations of former years governing matches were generally adopted with some additions and modifications. In section 1, of article 3, "Ammunition furnished by the State," was eliminated. A new clause was inserted which reads as follows: "Any competitor who shall fire in a name other than his own, or who shall fire twice for the same prize, unless permitted by the conditions of the competition to do so; or who shall be guilty of any conduct considered by the Board of Directors or the Executive Committee as discreditable; or who shall, in National Guard matches, use any other ammunition than that issued to him on the ground, or in any way tamper with that so issued; or who shall be guilty of falsifying his score, or being accessory thereto, shall, upon the occurrence being proved to the satisfaction of the Board of Directors or the Executive Committee, forfeit all his entrance fees; be forever disqualified from competing at any time upon the range of the association, and shall not be entitled to have any prize won by him at the time of meeting awarded to him." Instead of allowing riflemen to "warm up" their guns by firing indiscriminately into the ground, they will shoot into "blowing-off" pits. "Any person firing on the wrong target will be fined \$1 or debarred from further competition, or both, in the discretion of the executive officer. Any competitor who shall neglect to wear his badge conspicuously during any competition shall have his score disallowed." The committee then rose, and the board adopted the rules as a whole. The Messrs. D. Appleton & Co. have offered a copy of their Encyclopedia for competition at 200 and 300 yards; seven shots at each range; open to all comers, the trophy to be allotted to the competitor winning it twice. Messrs. Tiffany & Co. sent a communication requesting permission to exhibit the Centennial Trophy at the Paris Exposition. The communication was referred to the American team.

NEW YORK SCHUTZEN CORPS.—The annual complimentary calico hop of the New York Schutzen Corps was held at Germania Assembly Rooms on Tuesday evening, 26th inst., and was one of the most pleasant occasions that we have attended in many years. The large hall was handsomely decorated with flags and banniers, and over the orchestra a line of gas jets in a semi-circle, bearing the words, "N. Y. Schutzen Corps," and "Capt. George Aery" in large gold letters underneath, and from the balcony at the other end of the hall were suspended the large silk flag of the Schutzen Corps, with the American and English flags on either side. The hall was opened with music by Wannemachers's full band, ushering the following corps and invited guests into the hall: Reniocher Schutzenhund, Major Matt; Deutscher Landwehr Verein, Capt. Wunder; Bohemian Schutzen, Capt. F. J. Wokal; New York City Schutzen Corps, Capt. John F. Gerdes; after which there was a general promenade and dancing begun in earnest.

TWENTY-THIRD REGIMENT.—The Drill of the Left Wing and the supplementary Hop took place at the Armory in Brooklyn on Tuesday night. Dress parade and inspection by Col. Rodney C. Ward, commanding the regiment. When we say that the military movements were executed with that ex-

celle which invariably elicits applause, and that there was the usual crush of crinoline and aggregation of grace and beauty which attend these popular assemblies, we have expressed ourselves as fully and truthfully as the case admits of. There are to be two more socials this spring.

YORKVILLE RIFLE CLUB, Feb. 16.—The following scores were made at the sixth competition for the champion badge at 100 yards, at Washington Park, on Washington's Birthday, Feb. 22, 1878:

J. R. Grohman.....	4 4 3 4 5 4 4 5 4 4 5 5 5 3-01
G. Kelz.....	5 0 3 4 5 4 4 4 4 4 4 4 4 4-00
W. W. Dodge.....	3 5 4 4 4 4 4 3 4 4 4 4 4 4-57
G. See.....	3 2 3 4 4 4 2 1 3 5 4 3 4 4-65
J. J. Kelly.....	4 4 0 2 8 4 4 3 4 4 4 4 5 4-61
A. S. Brown.....	3 3 3 3 6 4 0 4 4 4 4 5 0 4-58
J. R. Smith.....	W

At the gallery, 1,581 Third avenue; competition for the *FOREST AND STREAM* AND ROD AND GUN team, 100 feet, .22 cal. rifle, Creedmoor target reduced, etc.; Feb. 19:

J. R. Grohman.....	5 4 5 5 5 5 5 5 5 5-4
G. Kelz.....	Proteste!; not decided.
G. See.....	4 4 1 5 3 5 5 5 5 5-43
M. Rattey.....	5 3 4 4 4 3 5 5 5 5-63
J. R. Smith.....	5 4 5 4 5 2 2 5 4 4-40
A. Smart.....	5 6 3 8 8 5 0 4 3 2-33

Weekly shoot, Feb. 22; same conditions.

G. See.....	5 4 5 4 5 4 5 4 5 4-45
G. Kelz.....	4 4 4 4 4 5 4 5 5-18
M. Rattey.....	4 3 4 4 4 3 5 4 5-43
J. J. Kelly.....	5 4 4 5 4 4 4 4 4-42
J. R. Grohman.....	4 5 4 5 4 4 4 4 4-42
J. R. Smith.....	5 6 4 4 4 4 4 4 4-49
F. Mc Morrow.....	3 5 4 4 4 4 4 4 4-49
J. O. Hanft.....	4 4 4 4 4 4 4 4 4-49
A. Smart.....	4 3 4 4 4 4 4 4 4-49
W. W. Dodge.....	4 4 4 4 3 4 4 4 4-49

Next Tuesday decides whether we will enter a team in the *FOREST AND STREAM* AND ROD AND GUN match; I think we will.

REMARKABLE SCORES.—*Waco, Feb. 10, 1878.*—Rifle shooting match which took place at Lane's Gallery on Feb. 13, 10 shots, possible 50 points. The following scores were made:

E. Early.....	5 5 5 5 5 5 5 5 5 5-50
S. Garland.....	4 5 5 5 5 5 5 5 5 5-49
W. T. Lane.....	5 5 5 5 5 5 5 5 5 5-49
C. C. McCulloch.....	4 5 5 5 5 5 5 5 5 5-48
C. M. Downs.....	5 5 5 5 5 5 5 5 5 5-48
J. Pierce.....	5 4 5 5 4 5 5 5 4 5-49
W. Brooks.....	5 5 5 5 5 5 5 5 4 5-49

These scores were made at 100 feet; bull's-eye, three-quarters of an inch in diameter. If any other seven men can beat this I would like to hear from them.

Yours truly,

W. T. LANE.

TOLEDO RIFLE TEAM.—The Toledo team are making preparations for the coming season. We understand that \$10,000 will be expended toward fitting up a range.

AN EXPRESS RIFLE.—Messrs. Schuyler, Hartley & Graham have just received an Express double rifle, made by E. M. Reilly & Co., of London, of heavy calibre. The rifle has twist barrels, back-action locks, rebounding hammers, double grip, pistol grip, 12 bore, 26-inch barrels, and weighs 11 lbs. The charge is 3 1/2 drachms of Curtis & Harvey's powder (No. 4 grain) for a conical ball weighing 2 ozs., and 4 drachms for spherical ball weighing 1 1/2 oz. It is an arm which would soon master the toughest grizzly. We suppose it is to be used for buffalo. This rifle was made to order for a gentleman in Brooklyn.

SPLIT BAMBOO RODS.

To our customers and the public:—In reply to the damaging reports which have been circulated respecting the quality of our split bamboo rods, by "dealers" who are unable to compete with us at our reduced prices, we have issued a circular which we shall be pleased to mail to any address, proving the falsity of their assertions.

CONROY, BISSETT & MALLESON,
Manufacturers, 65 Fulton Street, N. Y.

Game Bag and Gun.

GAME IN SEASON IN MARCH.

Hares, brown and gray. Wild duck, geese, brant, etc.

FOR FLORIDA.

Deer, Wild Turkey, Woodcock, Quail, Snipe, Ducks and Wild Fowl.

"Bay birds" generally, including various species of plover, sand piper, snipe, curlew, oyster-catcher, surf birds, phalaropes, avocets, etc., coming under the group *Limicola*, or Shore Birds.

RETAIL PRICES, POULTRY AND GAME.—*Game*—Pinnated grouse, per pair, \$1.75; canvas back ducks, \$2.50 to \$3; red head, \$1.50 to \$2; mallard ducks, \$1; black do, 80 cts.; wildgeon do, 70 cts.; broad hill do, 50 cts.; wild geese, per piece, 75 cts. to \$1; wild turkeys, per pound, 15 to 18 cts.; rabbits, per pair, 40 cts.; squirrels, 15 cts; hares, 30 to 50 cts.; quail, per dozen, \$3.50 to \$4.00; wild pigeons, flights, \$1.50; do stall fed, \$2; Philadelphia squabs, \$4.

Poultry.—Philadelphia and Bucks County dry picked chickens, per pound, 15 to 20 cts.; do fowls, 14 to 15 cts.; do turkeys, 14 to 18 cts.; do ducks, 20 to 22 cts.; do geese, 15 to 18 cts.; State and Western chickens, 12 to 15 cts.; do turkeys, 12 to 15 cts.; do fowls, 16 to 18 cts.; do ducks, 15 to 18 cts.; geese, 10 to 13 cts.; capons, 24 to 28 cts., slips, 22 to 24 cts.; spring chickens, per pair, \$1.50.

NEW YORK.—*Canton, St. Lawrence Co., Feb. 18.*—Hiram Hutchins, a well-known hunter and guide, living in the town of Canton, about a week since, killed, near Jock Pond, in the township of Colton, a panther, measuring about 7 feet 6 inches from tip to tip. The cat had, a day or two before, killed a

deer, and after eating nearly all of it—not at one meal, of course—but before the track was found by Mr. Hutchins, who was in that vicinity on a fishing trip, the panther had retired to the large top of a fallen hemlock, from which he was started and treed by the dog after a sharp race of a quarter of a mile. A bullet through the brain settled him. This is the first one killed or seen in this vicinity for a number of years.

Kingston, Feb. 20.—Hard times here now for the rabbits; the foxes and weasels are playing sad havoc with them along the base of the Shawangunk Mountains. A number of white weasels have been noticed. James Pine, the veteran fox hunter of Marlborough, shot a fine cross-barred fox on Monday, the 18th. Sam Penny, of Marlborough, while hunting one day last week, shot a silver-grey fox west of that village. A number of others have been captured by other parties.

OUR HARRY.

Big Fox.—A red fox was killed at Hornellsville, N. Y., last week, which measured 4 feet 8½ inches from tip of nose to end of tail.

NEW INLET AT SHINNECOK BAY.—A Good Ground, L. I., correspondent writes that a new inlet to Shinnecock Bay was opened Feb. 19. This will lower the bay, which will then furnish fine red head and broad bill shooting. The prospects are for better duck shooting this year than for several previous seasons.

PENNSYLVANIA.—A correspondent writes from Gettysburg of the sport there:

"We generally have good quail shooting, and ruffed grouse are quite abundant within six or eight miles of town. A woodcock killed Dec. 27, 1877. Was that not unusually late?" C.

GREENVILLE SPORTSMAN'S CLUB.—The officers for the ensuing year are: Pres., Wm. McDowell; Vice-Pres., J. H. Phillips; Sec., M. Hargood Brooks; Treas., C. R. Beatty.

A LARGE EAGLE.—On the 24th ult., L. B. Cushman, editor of the North East (Pa.) Sun, shot a gray eagle on the beach of Lake Erie that measured seven feet six inches from tip to tip. The bird is now in the hands of a taxidermist, and will soon grace the Sun sanctum. This is supposed to be one of the largest eagles ever shot in the United States.

TENNESSEE—Columbia, Feb. 20.—A long and delightful season of bird shooting came to an end on the 14th. Sportsmen are now amusing themselves and tapering off by knocking over rabbits and toppling out squirrels. A party of three gentlemen were out on the 19th, and bagged fifteen rabbits, which places them at the head of rabbit score. No good bags of squirrels taken yet.

Nashville, Feb. 21.—Game bereabouts, particularly of the smaller kinds, has been very plentiful this season. Quail (commonly called partridge throughout the South) have been very abundant, good bags having been made within sight of the city. A number of deer have been brought to market, but they came from a distance. A few wild turkeys are still to be found in some parts of the country. Rabbits have been so numerous that in some sections "battues" have been gotten up to rid the country of them.

SOUTH CAROLINA—Charleston, Feb. 23.—Very little hunting has been done the last ten days, and have heard of only a few small bags of partridges and five turkey brought on. Weather has been quite rainy and warm, driving the ducks, which were in large quantities a short time since, further North.

YENOTS.

TEXAS—Galveston, Feb. 17.—Ducks are getting somewhat wild, but jacksnipe are found in great numbers on the mainland. A party of twenty killed over two hundred a few days since in a day's hunting.

C. C.

ILLINOIS—Lebanon, Feb. 17.—Ducks and geese have begun their spring migration. Expect good shooting in a few days. A Wilson snipe straggler was killed here Jan. 26. Snipe, as a rule, never appear here before March 1.

W. L. J.

WILD PIGEONS—Lebanon, Ill., Feb. 17.—Wild pigeons have, for the last few weeks, been quite abundant in the Kaskaskia River bottom, twenty miles south of this city. Are now plenty here, and have for two days been passing southward.

W. L. J.

A PRAIRIE WOLF CHASE.—The farmers of Harris Prairie, Ind., have been much troubled for three years past by the depredations upon their flocks of a huge gray wolf. The wolf was often seen, but was so sly that hunters seldom got a shot at her. Twice her litters were captured, but she escaped, and her inroads on the flocks in that vicinity have aggregated a loss to the farmers of over \$1,000. She has been known to kill six or eight sheep in one night, and had become such a terror in the neighborhood that some of the farmers sold their flocks. Two weeks ago a party started on the chase, agreeing to keep up the hunt until she was captured. The pursuit lasted six days, when she was tracked into a clump of woods, surrounded by the entire force, and finally brought down. She was found to be 3½ feet in height, and over 6 feet long.

Iowa—Mason City, Feb. 18.—The prospects are for a fine supply of pinnated grouse here during the coming season. A great quantity of birds here this winter.

T.

NOTED HUNTERS OF MONTANA.—Our stated correspondent, Mr. L. F. Whitman, of Detroit, has kindly sent us the following characteristic letter from Charles Kimball, of that city, who is now in Montana. Kimball is one of the popular athletes and sportsmen of Detroit, a member of the senior six crew of the Excelsior Boat Club, and other organizations. His letter is written to his father, and is dated Half-Creek Station, December, 1877:

"* * * The ranchmen have all quit work and holed up for the winter, although it is the handsomest weather you ever saw. I am writing with the door open, like Mrs. Frazer, and if my window was not nailed in, I would have it open also. It consists of a single pane of glass stuck in a loop-hole. I have been out on a hunt for the last month with three of the oldest and best hunters in the Rocky Mountains. I will give you a description of them on the dime-novel scale.

"I will commence with Warren Craig, the champion shot

of the Rocky Mountains. He stands six feet four in his uccasius, and I should judge about forty years of age. He carries a double-barrel rifle that weighs sixteen pounds, a hunting ax, and a knife and belt, besides ammunition. The whole lot would make a load for a pack-mule. He will climb the highest mountain, and never ceases walking from sunrise till sunset. He kills as much game as all the hunters put together in the Territory. He never stops hunting except to change camp. He thinks a heap of me, and has given me a Winchester rifle that shoots sixteen times without reloading; also a dog; and old Harvey, his partner, lets me have a horse as long as I want one, to ride and pack my game on. They want me to go north with them to the Cypress Mountains and run buffalo this winter, but everybody advises me not to. They tell me that the country is full of hostile Indians, and that Craig and Harvey have to fight their way in and out every time they go and come, and I have decided not to go, as I don't care to go bareheaded the rest of my life, and I am not particularly fond of them any way (they are too clean).

"But to continue my description. Next in rank comes Jno. Harvey, alias Grisley, the greatest bear hunter in the world. He hunts nothing else, but shoots everything in shape of an animal that crosses his trail, not excluding Uncle Sam's pets, as he calls the Indians. He is a trifle less than six feet, almost as broad as he is long, and will tackle a wounded bear or panther with a knife as soon as I would a cat. He is sixty years of age, and as supple and spry as an athlete of twenty. He speaks the language of four different tribes. His name is a terror to every Indian, horse-thief and road-agent in the country. He says that if Uncle Sam will give him permission, he will pick twenty men in Montana and take a contract to rid the country of every Indian in it; but he says he won't except the Indian agents that are appointed by the Government, for he says they are the men who make the trouble. He not only told me that, but tried to persuade the Governor of the Territory to write Congress to that effect. He says that West Point graduates and men brought up in the States can't follow Indians in the brush. He is also a great liar, thrower, and has been known to catch a wolf on the run from a horse. He knows where all the best quartz beds are, and tells me when I make enough money to open one he will show it to me as rich as Montana affords. As for his part, that ain't what he is after. He says he has enough to keep him while he lives, and to take a trip to the States too, if he gets foolish enough to want to get sick and die in a hurry. He is all scars, from his head to his feet, and one shoulder pretty badly chewed up. I can't see that it hinders him from eating any, for he will eat as much meat as any hound pup you ever saw.

"I will conclude with Bill Thurston, or Montana Bill, as he is familiarly called—almost as tall as Craig, straight as an arrow, and full fifty years of age. He does not hunt a great deal now, because his eyes trouble him a little, but he says 'If they wait till I get through squinting and find the bead I am sure death to them.' He generally amuses himself by packing in the game and hauling it to town, for which he receives half. They say he is one of the men that helped hang the road-agents that troubled the first settlers of Montana in '61, '62 and '63. These are the kind of men that I have been hunting and associating with for the last month. They have not only enabled me to get a winter's meat for myself and Ben, but with what I have sold have bought flour, bacon, sugar, tea, coffee, dried fruit, potatoes—winter's stock. You may judge for yourself the amount of game I have killed when venison and elk bring only two and a half cents per pound, and skins from two bits to a dollar and a half each. I think I told you in a letter prior to this that the boys have, with the exception of Ben and Glover, gone in the sheep business together. They have rented a ranch about five miles from where I am now stopping. I have taken up my quarters on the Prickley Pear River, the next rancho to Ben's sheep rancho, and he is here the most of his time, and as you know he is a great hand to fish, I never want for trout, which abound here in great numbers. CHARLES KIMBALL."

CALIFORNIA.—As an indication of the importance of the sporting interest in the State, the San Francisco Chronicle notes that a single firm in that city have sold, the present season, 6,000 sacks of shot.

AMENDE HONORABLE.—The following letter, which we cheerfully publish, will sufficiently explain itself:

DANVILLE, P. Q., Canada, Feb. 25, 1878.

EDITOR FOREST AND STREAM:

I see by the last FOREST AND STREAM that you have got me down as violating our game laws. By referring to my last, you will see that I shot the cariboo on Jan. 28—not Feb. 8th. Please see to this, as I am one of the last persons that will be found violating our game laws. Our close season for deer and cariboo is from Feb. 1 to Sept. 1.

Yours truly, J. C. STOCKWELL.

THE FOREST AND STREAM AND ROD AND GUN SPORTSMAN'S TRUNK.—Messrs. Holberton & Co., of this city, exhibited at the St. Louis Bench Show, among other sportsmen's goods, a very serviceable solid sole leather trunk and gun case combined, large enough to hold 200 shells with complete outfit, including the gun. We notice that some of the St. Louis papers speak of this as the Turf, Field and Farm gun case, but it was named the FOREST AND STREAM'S Sportsman's Trunk, and should be so called.

NEW APPARATUS FOR TESTING PATTERN AND PENETRATION OF SHOT GUNS.—Mr. H. C. Squires, of No. 1 Courtland st., has exhibited to us a capital invention, by the use of which a great deal of the trouble and expense in making gun trials can be overcome. Any one who has undertaken a gun trial is aware of the cost of paper targets, and the consequent time necessary to count the sheets of paper in order to get at the penetration. Mr. J. P. O'Neil's invention consists of a single sheet of paper target of the ordinary size, laid off in squares, so that the pattern can be readily counted. The bull's-eye has back of it a box some three feet long supported on legs. In the frame work of this box slats are cut, into which pieces of straw-board can be placed at intervals of about a half inch. The whole is supported on wooden legs. Now the method of determining the penetration is exceedingly simple. Each separate piece of eard-board, 10x10 inches square, as it is traversed by the shot determines the penetration. At a glance the particular sheet of card-board which has been shot through can be seen. Instead of carrying into the field a lot of targets, a small package of these card-boards will enable the person

experimenting to understand exactly what the penetration of his gun is. We consider Mr. O'Neil's invention an admirable one, as it does away with former cumbersome methods of getting at penetration. Persons desirous of seeing this new apparatus will do well to call on Mr. Squires. There are many gentlemen owning guns who are utterly ignorant of what charge of powder they should use. By the use of Mr. O'Neil's contrivance a few easy experiments can satisfy them fully as to the best method of loading in order to determine the power of their guns as to pattern and penetration.

THE EXACT MEASURES OF CALIBRES.—It may interest our readers to know what are the exact measurements of the various gauges of guns most in use. We give the measurements to the thousandth of an inch: Calibres, 8, .860 of an inch; do. 10, .793 do.; do. 12, .750 do.; do. 14, .715 do.; do. 16, .685 do.; do. 20, .637 do.

SPRING AND SUMMER SHOOTING.

HARTFORD, Conn., Feb. 14, 1878.

EDITOR FOREST AND STREAM:

I heartily approve of the suggestion of "Shot," made in a communication to your paper under date of Jan. 20th, upon the subject of Spring and Summer Shooting. He alludes to the great diminution of snipe and ducks perceptible in each returning winter. The cause of the diminution of the first named bird, we apprehend, is not what Shot attributes it to, though in all probability spring shooting is in a measure responsible for it. Recently an account was given in your paper of a gentleman living near New Orleans who had killed in thirty hours' shooting, 1,900 snipe, more than twice as many, we apprehend, than have been killed in any spring for ten years in the whole State of Connecticut. It is this desire to make the largest "bag" in a given time that is playing havoc with the game birds North and South, in the East and in the West. The slaughter is not confined to snipe, but extends to woodcock, prairie chicken and ducks. In a recent number of your paper I saw an account of a boy near New Orleans who had killed 84 woodcock in a single day's shooting.

I am considered a good fair shot, and average ten days' shooting each fall. Have shot for the last ten years, and feel well paid for a day's tramp if I can bring to bag two brace of these birds. The fact is, the desire to make a great bag in those sections of country where our migratory birds are found in such numbers, is gradually, indeed I may say rapidly, making it almost impossible to make any bag at all in sections of the country less favored in this matter of game than some of the Southern States.

Prairie chickens in the Western States are becoming with each year less numerous. This cause is very evident; sportsmen vie with each other in bagging the greatest number in a given day. The character of the ground in which these birds are found—an open country—makes the bird an easy target, and it is no uncommon occurrence for a medium shot to kill fifty in a day. Surely what pleasure can there be in shooting where such results are so easily accomplished.

Again, I apprehend that when such large numbers of birds are killed they are too frequently wasted. A few years ago the writer saw in a freight car in the depot of the Dubuque and Sioux City road, at Dubuque, an immense stack of prairie chickens, which were being shipped in that form to Chicago. The weather was warm, it being the latter part of August, and it is quite probable that when the birds reached Chicago they were entirely spoiled.

Killing a very large number of birds in a given time must take away the real pleasure. What gives zest to shooting is not to kill the greatest number of birds in a given day, but to do the work skillfully. I sincerely hope that our sporting friends will be satisfied with smaller bags, and thereby let the birds multiply, so that years of sporting may be had by ourselves and those that come after us. SMALL BAG.

CHILLED SHOT—Jacksonville, Ill., Feb. 11.—Editor Forest and Stream: I notice in your issue of Feb. 7th, a communication from H. W. Knowlton, which, to my mind, is very sensible. I have not used the Tatham chilled shot, but I intend to, if its killing power is greater than the soft shot. I have used the English chilled shot in the field, and I came to the conclusion last season that its killing power was no greater than the soft, or, in other words, I could not do any better shooting with it or get more game than I could with the soft shot. The fact of chilled shot giving better penetration at a paper pad at forty yards, is no proof to me that its killing power is greater on game. There are sportsmen who contend that soft shot will give better penetration at a paper pad with common powder, it giving less velocity than the higher brands of powder. The shot, on striking the paper pad, is not flattened to that extent as to prevent its penetrating. But who will contend that common powder has greater killing power at forty yards than the best brands? My experience is, the better the powder I use the more game I get, killing it at longer distances. What I would like to see is a practical test of the killing powers of the chilled and soft shot on birds at various distances, all things being equal as far as possible. GEORGE HAYDEN.

CHILLED VS. SOFT SHOT.

NEW ROCHELLE, N. Y., Feb. 8, 1878.

EDITOR FOREST AND STREAM AND ROD AND GUN:

I notice the recent experiments reported by you in your paper of Jan. 31, made with eight different shot-guns, for the purpose of testing soft and chilled shot in penetration, the targeting being only secondary. Each were No. 16's, owned by different gentlemen, and loaded with 4 drs. powder and 1½ oz. shot by measure, not weight. Each gun fired but one round, and the one barrel of chilled and the other of common soft shot. In this trial preference is given to chilled over soft shot.

In carefully looking over the report, I am free to say there appears to be some advantage in the use of chilled over soft shot. Yet this gain appears to be much less than I could have hoped and anticipated. It will be seen that two of the eight guns gave a much better target with the soft than with the chilled shot, and one other nearly tied. That of the whole number of pellets thrown in the sixteen loads, 6,144, the aggregate gain in the targets of the chilled over the soft was but two per cent.—a gain, to be sure, but so small as to leave it possible that the result may be reversed hereafter. Yet I do not believe they will; still, I am not fully satisfied with this trial as to targeting, and I believe the public will be highly pleased to see these trials pushed to their end. The penetration seemed to be, so far as the experiments went, in favor of chilled shot, but I think several other trials should be made to set this subject at rest, and especially at two or more distances—say forty

and sixty yards—with the same charges, also with different sized shot. Experiments thus made may lead to opposite results. Indeed, I could point out why they should do so. But I pass this by.

We say to Mr. Tatham that all sportsmen desire to use the best shot manufactured, and that if he can possibly improve his already most excellent shot, we will most heartily rejoice with him, but we first require to know beyond a doubt that he has improved upon them. Should he succeed in so doing, he will certainly win by it. We say in behalf of our sportsmen, please go on, Mr. Tatham, with your trials, and give us the best shot in the world. We watch your experiments with the deepest interest, and with an eagle eye.

As pertinent here, I beg to relate what a gentleman has recently written me in regard to targets. He says he had a very strong shooting gun, and engaged another to be made, but would receive it only in case it shot as strong as the one he owned. He received it, and, on trial, found it much wanting in penetration. He was about to return it to the maker as a failure, when, on thought, he recalled the fact that the shot he found in the target made by it were considerably more flattened than those of his favorite gun. He had used for a target an old pamphlet nailed compact to the board. He now thought to use the English mode of targeting—to hang the sheets of paper by one corner of the book in order that they should hang loosely together, but not compactly. He now tested his guns again, when the penetration was completely reversed, and his favorite gun bested. The new gun, having the greatest power in fact, had smashed her shot to the first trial, and thus could not penetrate deeply, while the more round shot of the other went on. This experiment shows how opposite results may arise in practice, even from the kind of target used.

You will see in your last issue what Mr. Knowlton has to say about the trial. If, as he says, the soft shot used were of different brands and mixed, then I think his point is well taken. Such a trial will not give full satisfaction. You will also observe he claims that more powder should have been used with the soft than with the chilled shot; and this for the reason that the loads of soft shot were twenty-seven grains heavier than the chilled. Here I would disagree with him. It is effect and utility in shot, alone, that we are here seeking for. That kind which, with equal means, gives the best results is certainly entitled to win. This great end obtained, we stick a pin here. We next pass to the powder, and then to the gun; and, by the same order of trials, find out which kinds of these give us with equal means the best results; then, and not till then, will our problem in shot-gun practice be solved. Persistent and impartial trials are conducive to this end. Again, I desire to present a point for reflection to Mr. Knowlton as well as to your numerous readers generally.

Question—Since penetration varies with the weight of the pellets into their velocities, may not Mr. K. be wrong in presuming that the heavier soft pellets into their velocities should not give equal or more penetration than the lighter chilled pellets into their velocities? Just so. This is a deduction of mine. And further: hence the obvious necessity of trials at different distances with the same charges of powder and shot, and of varying the shot (in size, at least), also.*

MAJ. H. W. MERRILL.

* The size of the charge used was well selected and proportionate to the gauges of guns (see Haddock's "Gazetteer," page 533).

PIGEON MATCHES.

SCORES OF MATCHES.—To insure insertion in current issues of our paper, scores should be sent so as to reach us on Tuesday.

CONNECTICUT—*Stamford*.—Clark's Hill Gun Club, Feb. 22. A S Henderson.....1 1 1 1 1 1 0 1 0-8
Dr. Parker Pepp.....0 0 1 1 1 1 1 0 0 1-6

Second match:

Mr Norton.....1 1 1 0 0 1 1-5 Harry Pitt.....1 1 1 1 1 0-6

Next Day—Match on the grounds of the Clark Hill Gun Club between A. H. Smith and S. W. Smith:

A H Smith.....25 yds.....1 1 1 1 1 1 0 1 0-8
S W Smith.....21 yds.....0 0 1 1 1 1 0 0 1-6

Match between H. W. Pitt and F. K. Grair:

H W Pitt.....19 yds.....1 1 1 1 1 1 0-6
F K Grair.....25 yds.....1 1 0 0 1 1-5

Riverton, Feb. 22.—Riverton Shooting Club; 21 yards, ground trap; score:

Ellison.....0 1 0 1 1 1 1 0 1 1-10
R H Wells.....1 0 1 0 1 1 1 1 0 0 1-6
R Roberts.....1 0 1 0 1 0 1 0 0 0 1-6
R Wells, Jr.....0 1 0 1 0 0 1 0 0 1 0-6
Nelson.....0 0 0 0 0 0 1 1 0 0 0-3
Reinhard.....0 0 0 0 0 0 1 0 0 0 0-1

BAY RIDGE VS. NEW UTRECHT LANE.—*Bay Ridge, L. I., Feb. 16.* Score:

Bay Ridge.
Otto Helmgke.....1 1 1 0 1 1 1 0 1-8
Samuel Duryea.....1 1 1 1 1 1 1 1 1-10
Walter E Hope.....0 1 0 1 1 0 1 1 1-7
Frank W Kent.....1 1 0 1 1 1 1 1 1-9
Geo G Hope.....1 1 1 0 1 1 1 1 0-8
Peter S Bogart.....1 1 1 1 1 1 1 0 1-9-61

New Utrecht Lane.

G P Cowenhoven.....0 1 0 0 1 1 0 0 1-6
J Hanson Skidmore.....1 0 1 0 1 1 1 1 1-8
Jerry Lott.....0 1 1 1 1 1 1 1 1-9
P Ræwball.....1 0 1 1 0 0 1 1 1-7
Peter Moutier.....1 1 1 1 1 1 1 1 1-7
John Cowenhoven.....1 1 1 1 1 0 1 0 1-8-47

Sweepstakes; three balls, miss and out:

Peter Moutier.....1 1-3 S Duryea.....1 1-3
P Ræwball.....1 0 0-1 Geo H Hope.....1 1-3
Wm V Bora.....1 0-2 Otto Helmgke.....1 1-3
P S Bogart.....1 0-2 J Skidmore.....1 0 1-2

In shoot off, Duryea and Hope broke 13 each and divided money.

MAMARONECK, N. Y.—Shooting by members of the Dear Gun Club and the Mamaroneck Gun Club, Feb. 22. Five birds each, \$5 entries; \$25 1st prize, \$10 2d, \$5 3d.

H D Polhemus.....1 1 1 1 1-5 Alex Taylor, Jr.....0 1 1 0 W
C J Osborn.....1 1 1 0-4 Geo H Schuyler.....1 0 1 1-4
W Murphy.....0 1 0 1 W L Bright.....1 0 1 0 W
Ben West.....0 1 0 1-3 Edgar Murphy.....1 0 0 W

H D Polhemus won 1st prize; C J Osborn shot off a tie with Mr Schuyler; Osborn won 2d money and Schuyler 3d.

The match between the Deal and Mamaroneck clubs for \$300, was withdrawn. During the afternoon many sweeps on glass balls were shot, and both clubs very handsomely entertained by Mr. Taylor.

DETROIT—Match at Hamtramck Park, Feb. 18, between Del Shannon and James Minton, of the Pacific Gun Club. Score:

Sheldon.....1 0 1 1 1 1 1 1 1-9
Minton.....1 1 0 1 0 1 1 1 1-9

AUDUBON GUN CLUB.—*Buffalo, Feb. 22.* Score:

James Frank In, Jr.....1 1 1 1 1 1 1 0 1-9

—Neill, of the *Danbury News*, is writing an interesting serial story for that paper entitled, "The Shadow of a Suame." Good for Neill, the brilliant chess player.

—Capt. MacKenzie is off on a trip to Auburn and Buffalo, and, as an amusement, is defeating all coopers as far as heard from. Send him to Paris, eh?

—At chess, to play an useless move of harmful consequence will prove; A skillful player without design Shifts not a soldier on his line. Your time is short—try to foresee With speed what the event may be Of every move; but first attend Where you can best your king defend. Place him in a well-guarded square, The most remote from hostile snare; And, above all, this rule make—Be not in too much haste to take. With heedful eye your men survey, And with slow hand push out their way. Your head suggests a scheme—look round, Perhaps a better may be found.

—Owing to professional engagements, we are unable to answer the questions submitted us, but shall soon do so by mail or in our next issue.

NOTICE TO SPORTSMEN.—Having received so many communications asking us for information in regard to our six-section bamboo trout, bass, grise and salmon rods, we have prepared a circular on the subject, which we shall take pleasure in forwarding to any address. We keep our hand all grades, the prices of which range from \$15 to \$150. We put our stamp only on the best, in order to protect our customers and our reputation, for we are unwilling to sell a poor rod with a false enamel (made by burning and staining to imitate the genuine article) without letting our customers know just what they are getting. P. O. Box 1,294.—[Adv.] ABBEY & IMBRI, 33 Maiden-Lane.

Sea and River Fishing.

FISH IN SEASON IN MARCH.

SOUTHERN WATERS.

Pompano *Trachynotus carolinus*, Grouper, *Epinephelus nigratus*, Drum (two species), Family *Scia*—Trout (black bass), *Centropomus niger*, Kingfish, *Menticirrhus nebulosus*, Striped Bass, or Rockfish, *Morone saxatilis*, Sea Bass, *Sciaenops ocellatus*, Lineatus, Sheepshead, *Archosargus probatocephalus*, Black Bass, *Micropogonias undulatus*, Souppier, *Lutjanus caxius*, M. nigricans.

FISH IN MARKET.—RETAIL PRICES.—Striped bass, 20 to 25 cents; smelts, 15; green do., 15; bluefish, 15; frozen salmon 35; mackerel, 15 to 25; Southern shad, 50 cents to \$1; white perch, 15; Spanish mackerel, 35; green turtle, 18; terrapin, \$18 per doz.; halibut, 15; haddock, 8; codfish, 8 to 10; blackfish, 15; flounders, 10; sea bass, 15; eels, 18; lobsters, 10; sheepheads, 25; scallops, \$1.50 per gallon; soft clams, 80 to 60 per 100; whitefish, 15; pickerel, 15; salmon trout, 18; black bass, 18; hard crabs, \$2.50 per 100; frost fish, 6; Newfoundland herring, 6; turbot, 25; sun fish, 10; yellow perch, 10; yellow pike, 10; ciscoes, 10; American turbot, from Fortune Bay, N. S. (the nearest approach to the European turbot), 20.

THE TROUT LAW IN NEW YORK STATE.—Sec. 20. No person shall kill or expose for sale, or have in his or her possession, after the same has been killed, any speckled trout, save only from the first day of April to the first day of September, under a penalty not exceeding twenty-five dollars for each fish. (Amended Ch. 411, Laws of 1877.)

MASSACHUSETTS.—*New Bedford*, Feb. 20.—Pickerel fishing in the ponds is good. Several fine ones were taken in Great Quitticus pond, the first I ever heard of being taken through the ice.

MOVEMENTS OF THE FISHING FLEET.—The fishing arrivals for the week include nine from Fortune Bay, returning in ballast, and bringing the Newfoundland herring season practically to a close. The business has been a failure, owing to the combination of the Newfoundland fishermen to prevent fishing by American vessels, and the masters of the several vessels estimate their loss at five thousand dollars per schooner, for which sums a claim for indemnity will be made through the treasury authorities at Washington. The Bank fleets are making unusually long trips for the season, and the light call for fresh fish, and ample supply, keep prices below figures affording profitable returns. The number of arrivals the past week has been six, and the receipts 100,000 lbs. halibut. The

fleet report very rough weather. The Georges and La Have fisheries are moderately successful; the number of arrivals for the week has been eight, and the receipts 275,000 lbs. codfish and 8,000 lbs. halibut.—*Cape Ann Advertiser*, Feb. 23.

A PLEASANT RESORT FOR ANGLERS IN CONNECTICUT.—At East Hampton, a half mile from the depot of the New York and Boston Air Line Railroad, and three miles from the Connecticut River, Mr. Wm. G. Buell, a gentleman sixty-three years of age, keeps a modest country hotel, which is much resorted to by anglers in summer. It stands on the border of a lake of 900 acres, which is well stocked with bass and other pond fish, and the State Fish Commissioners have placed 15,000 land-stocked salmon in the tributary streams within the past two years. Some of these have been captured which measured eight inches in length, so that there seems a fair probability that these fish will soon afford good sport to the angler. Sometimes fifty bass are taken in a day, varying in weight from $\frac{1}{2}$ to 4 $\frac{1}{2}$ pounds. A pretty island of ten acres, in the centre of the lake, affords a pleasant picnic ground.

PENNSYLVANIA.—*Williamsport*, Feb. 19.—Last June our party spent two weeks fishing at Ralston, and took twenty-three dozen as fine trout as can be found in mountain waters. The average weight was two pounds and three quarters (2 $\frac{3}{4}$ lbs.), the small ones, of course, we returned to the water. The streams in the vicinity of Ralston, are all fine for fly-fishing. There are many grand pools at the foot of miniature cascades, just the places for evening fishing. Our third day out was a remarkably fine one. At one of these pools, about four rods from camp, at the first cast I landed a two-pounder. At the foot of the cascade I took one which weighed a fraction over three (3) pounds. The sport here and the scenery is truly grand. Should any of our sportsmen come here they will find fine accommodations at the Ralston House, kept by Mr. Myers. Fine sport can be had within half a mile of the hotel.

JACK.

TENNESSEE.—*Nashville*, Feb.—Anglers have to go to the streams in other parts of the State for their sport, the Cumberland river and its tributaries, within many miles of this city, being entirely monopolized by the pot fishermen who, with nets and set lines, have virtually destroyed the legitimate sport with the rod. They keep the market pretty well supplied with such fish as the buffalo, drum cat-fish, and an occasional sturgeon, but at the cost of the sportsman's amusement. Very little attention has as yet been paid to fish culture in this vicinity, although some few persons have commenced it.

Columbia Feb. 20.—Bait weather and high waters make trout (bass) fishing impossible. Buffalo and drum are caught out of the river, weighing from four to eight pounds each.

VAL.

GRAYLING GROUNDS IN MICHIGAN.—Dr. T. M. Furman, of Walton, Mich. (on the line of the Grand Rapids and Indiana Railroad), mentions what is known as the "Holy Land," on the Manistee River, as one of the best grayling grounds in the State. It is situated some thirty miles from Walton, and comprises about six miles of the river interspersed by islands and bars, with deep holes in the bed of the stream. These holes, he tells us, literally swarm with these attractive game fish. Last August the writer, in company with A. D. Leavenworth and C. M. Conant, three in a boat, took 453 fish on the first day's fishing, which weighed 300 pounds. The net result of two days' work was 600 pounds of grayling, not including a supply given away to a camp of twenty men. Not the least achievement of the party was the shooting of a bear while swimming the streams, which weighed 410 pounds, dressed. The Manistee is mainly a rapid, foaming river, interspersed with pools of still water.

CALIFORNIA.—The first four shad of the season brought \$10 each in San Francisco.

AMERICAN OYSTERS FOR EUROPE.—Between October 22, 1877, and Feb. 15, 1878, there were shipped from New York to Europe 22,823 barrels, 722 boxes, and 4,016 cases of oysters at prices ranging from \$5.50 to \$7 per barrel.

BLACK BASS FISHING IN CANADA.

A Stratford correspondent, who visited the little town of Loring, which is sixty miles from Ottawa, on the south side of the Ottawa river, writes that he found there rare sport with the black bass:

The spot selected for the camp was what is known as the Flat Rock, one mile and a half up the range river. The point was reached by canoe, carriage being necessary at the rapids. The new railroad built upon the north shore of the river runs within a few yards of the fishing grounds. The river here has rocky banks, and is of no great width, but is so hemmed in that it runs more like a sluice than a river. There are no falls properly so-called, but the whole river is a continuation of tremendous rapids, which dash through the rock gullies, forming the bed of the river. The scenery along the river is grand, some of it majestic, and the best time to see it is in the spring or late in fall, when all the autumn tints are on the leaves. The river rises in the Laurentian mountains and flows for its whole distance through the gullies and canyons of these hills. It is deep, cold and clear, and the home of many species of the finny tribe, but more especially of the black bass. The sport is good at almost any time during the summer months. The bass bite well, and are most of them of large size. The sport is excellent, and the fish game to the last. As long as they keep in the pool of still water, they are not difficult to handle; but if, as frequently happens, they shoot out into the swift stream, it takes patience, perseverance and good caution to recover the fish, or even the tackle intact.

AL SAUBLE.

KENTUCKY NOTIONS ABOUT BASS FISHING.

THE MEER REEL AND THE PROPER BASS ROD.

EDITOR FOREST AND STREAM:

In your issue of the 17th inst. Mr. Geo. A. Shufeldt, in his article on "The Bass Rod," takes issue with Mr. Hallock in his commendation of the Kentucky, Frankfort, or Meer reel, in "Gazetteer," in casting for

bass, and proclaims his abandonment of it, and returns to the double multiplier, because of the "exasperating confusion" of line which he encountered in casting with a Meer.

Now, after the treat of reading the "Gazetteer" we have a little to criticize, least of all the recommendation of what we esteem in our class per gram! In recommendation and praise of that reel for the manufacturer's sake, as absolute strangers to us as are the natives who accompanied Stanley in his late explorations. Aside from a natural State pride our acquaintance with and partiality to the Meer reel prompt a fraternal remonstrance against Mr. S.'s condemnation of it because of the prejudice and because of that duty every sportsman owes his brethren to promulgate a "good thing discovered."

Every caption containing the word "bass" catches a Kentucky sportsman's eye, and the article is almost certainly first read, for the black anglers' specialties; nor have we yet met one who doesn't unhesitatingly declare himself as profusely grateful to Meer for the invention of his reel as was Sancho Panza to the man who invented sleep.

Brother Shufeldt pays a merited tribute to its "superiority of workmanship and finish," but condemns its rapidity of action because of the "exasperating confusion" in which he frequently found his line after casting for bass. It will puzzle a stranger to conjecture the kind of reel angling in which Bro. S. finds that "perfect" of the Meer reel which he announces, as casting is a necessary feature of the use of a reel and that "confusion" of line is sure to occur in casting for other varieties as for the bass. It certainly would not confine its use to trolling!

If we could find any objection to the Meer reel it would be that in reeling in a fish the rapidity of action is likely to tear the hook from a "slender tenner," or so enlarge the puncture—if in a lip—made by the hook, that a guinea fellow gaining an inch or two of line can easily fling himself loose. As Bro. S. commends the multiplication of a Meer in reeling in a fish we conclude him an expert in the manipulation of his game and are the more surprised that he is not equally skillful in casting.

We can sympathize with him in the confusion, or fouling of the line to a careless, or an awkward cast from a Meer reel, for we have spent more than one impatient half hour in the "reconstruction" of our line as the reward of an effort to put our minnow a little beyond the limit of an accomplished companion; but a few such penalties stimulated us to that practice which generally insures control of our tackle with delight in the possession of a Frankfort reel, which is comparable only with that of the boy with his first whistle. Since we discarded grass hares and adopted braided linen and silk it is rarely our misfortune to entangle the line, and if it occurs the fault is ours, not that of the reel.

We are by no means an expert in the use of a reel, but by practice have acquired that command of our Meeks which enables us to easily cast a minnow much further than we are inclined to strike unless satisfied that the game has forged the bait and when the emergency arises to place the same minnow much beyond the point we can reach with our excellent New York balance reel, all things being equal. We feel a sore that if Brother S. will practice with a Meer reel, with the click and the rather tempered, or control the spool with his thumb he will soon acquire a control of his tackle which will surprise him that he could ever have thought a balance reel "a thing of joy."

As to bass rods we of this section discard the joint rods and rig in Japanese and bamboo canes—usually nine, occasionally ten and twelve feet—and inconvenience ourselves to carry them far or near, if we find it inconvenient, which is rarely the case. When the travel is by rail we would not exchange our solid rod for the loose exquisite split bamboo with which we could be tempted.

Bass fishing will soon "be ripe," and if Brother Shufeldt will skip over to Stamford from 1st to 10th of May we'll guarantee him a cordial welcome and entertainment, and while affording him some black and green bass angling which "lays in the shail," the cream of lake angling, convince him of the superiority of a Meer reel to anything of which a line was ever cast to a bass in Kentucky waters. KENTUCKIAN.

FISHING NOTES FROM EAST FLORIDA.

HALIFAX INLET, Feb. 17, 1878.

The uncertainty which prevails, while fishing in these waters, whether your next fish will weigh one pound or forty, makes the sport interesting.

A few days ago, while fishing for sheepshead with crab bait (this species here averages about four pounds) a boy, about twelve years of age, who was with me, hooked a bass which weighed forty pounds, on a hand line. The fish was nearly as big as the boy, but being a skillful fisherman, he played it till its strength was exhausted, and secured it. This is the heaviest bass as yet taken here this winter. The boy is a Pacetti, coming of a race of anglers.

Yesterday I went out for whiting, which are numerous in these waters, but of small size, say about eight ounces on an average. I took a light rod and line line, such as I use at the North as bait tackle for brook trout, when the whiting much resembles in his way of hitting and play when hooked. I had taken about a dozen, when a heavy fish struck me, and went off with irresistible force. After about fifteen minutes' play, it proved to be a drum, and too big for my landing net. Unfortunately, I had left my gaff on shore, so we had to run to the bank, towing the drum astern, and there we landed it on the sniveling sand bank. It weighed eleven pounds, and emitted the hollow sound from which it takes its name, for some time after it was on shore.

The lowlands are flooded, and the black bass scatter all over the swamps and are not easily found. Some of the salt water species are driven out of the bays and sounds by the volume of fresh water, such as the black fish and croakers. The red snapper, sheepshead, drum, salt water trout and whiting run up the river into water nearly or quite fresh, and there take bait as freely as in the salt water. The freshness of the water, or the coldness of it, keeps the sharks, sawfish and rays, out-side; for these delicate monsters cannot bear the cold, and are frequently killed by the fall of a few degrees of temperature. Their absence is a boon to fishermen, for in warm weather they become a great nuisance, from their abundance and voracity. On the other hand the floods of fresh water kill the oysters and the long eels—the latter a very delicate and savory mollusk peculiar to these coasts, called by the Minorcan of St. Augustine, Laugerouli.

S. C. C.

THE HUBER TRAP.—This trap has certain peculiarities of make which call the attention of gentlemen who desire an excellent apparatus for throwing glass balls. The springs are of double-coiled steel-wire, and are not only light, but wonderfully powerful and enduring. The manufacturers guarantee any of their traps for six months. The range of the balls thrown from the Huber trap can be so arranged as to throw them at varying speeds and distances. A ball may be sent 140 feet, at an elevation of twenty-five or thirty feet, or a driving bird can be initiated with the ball, the rise not being over seven feet. The trap is well and solidly built on an oak frame, and thoroughly secured and bolted. It can be easily turned in any direction, and may be packed for shipment in a small compass. The growing popularity of this trap is the best criterion of its merits.—[Adv.]

—A few gentlemen wishing to join a first-class shooting and fishing association can hear of a favorable opportunity by addressing Gams, this office.—[Adv.]

A LAY SERMON FOR STUDENTS.—This is from an Oxford lecture recently given by John Ruskin. They are words of truth not only for the English University men, but for students the world over:

"First cultivate all your personal powers, not competitively, but patiently and usefully. You have no business to read in the long vacation. Come here to make scholars of yourselves, and go to the mountains or the sea to make men of yourselves. Give at least a month in each year to rough sailor's work and sea fishing. Don't lounge and flirt on the beach, but make yourselves good seamen. Then, on the mountains, go and help the shepherd at his work, the woodmen at theirs, and learn to know the hills by night and day. If you are staying in level country, learn to plow, and whatever else you can that is useful. Then, here in Oxford, read to the utmost of your power, and practice singing, fencing, wrestling and riding. No rifle practice, and no racing—boat or other. Leave the river quiet for the naturalist, the angler, and the weary student like me. You may think all these matters of no consequence to your studies of art and divinity; and that I am merely crotchety and absurd. Well, that is the way the devil deceives you. It is not the sins which we feel sinful by which he catches us; but apparently healthy ones—those which nevertheless waste the time, harden the heart, concentrate the passions on mean objects, and prevent the course of gentle and fruitful thoughts."

SNAKES AND SENTIMENT.—The New York *World* recalls an amusing incident in the life of Agassiz. It has just the least flavor of a "snake story" about it, but we give it as we find it:

Mr. Agassiz, it will be remembered, married a second time after he established himself in this country. The honeymoon had hardly expired when some enthusiastic correspondent in Florida sent him a box containing six rare and dangerous snakes of a variety he had long desired to see and study. Enchanted with his prize, and mindful of the difference of temperature between the Gulf of Mexico and Massachusetts Bay, Mr. Agassiz carefully took the box up to his bed-chamber and put it comfortably away in a closet. The next morning, when Mrs. Agassiz arose and hastily put one of her feet into a slipper by the bedside she was horrified to find it in contact with something of a deathly coldness and dampness. She instantly withdrew her foot and nearly fell into spasms on seeing it followed out of the slipper by an odious little green snake, which curled and coiled and hissed in the most satanic style. "Agassiz! Agassiz!" she screamed. The professor sprang up in the bed startled, and rubbing his eyes. "Agassiz," she continued, "get up! here is a snake in my slipper!" "A snake in your slipper! A snake in your slipper!" exclaimed her affectionate consort in unfeigned dismay; "only a snake in your slipper? Where under heaven are the other five?"

Tiffany & Co., Silversmiths, Jewellers, and Importers, have always a large stock of silver articles for prizes for shooting, yachting, racing and other sports, and on request they prepare special designs for similar purposes. Their **TIMING WATCHES** are guaranteed for accuracy, and are now very generally used for sporting and scientific requirements. **TIFFANY & CO.** are also the agents in America for Messrs. **PATEK, PHILIPPE & CO.**, of Geneva, of whose celebrated watches they have a full line. Their stock of Diamonds and other Precious Stones, General Jewelry, Artistic Bronzes and Pottery, Electro-Plate and Sterling Silverware for Household use, fine Stationery and Bric-a-brac, is the largest in the world, and the public are invited to visit their establishment without feeling the slightest obligation to purchase.

HIGHEST HONORS

AT THE
 Centennial World's Fair, 1876

SHONINGER ORGAN

PRONOUNCED UNANIMOUSLY AS THE

Best Instruments.

Their comparative excellence is recognized by the Judges in their Report, from which the following is an extract:

"The **B. SHONINGER ORGAN CO.** exhibit as the best instruments at a price rendering them possible to a large class of purchasers, having a combination of Reeds and Bells, producing novel and pleasing effects, containing many desirable improvements, will stand longer in dry or damp climate, less liable to get out of order, all the boards being made three-ply, put together so it is impossible for them to either shrink, swell or split." **THE ONLY ORGANS AWARDED THIS HONOR.**

There are 50,000 of our Instruments in this and the European countries in use, and they are so made that they will keep in tune, and stand any climate. They contain a magnificent Chime of Bells, tuned in perfect harmony with the Reeds, producing wonderful effects. The Music Rack, when tuned forward, will make a splendid writing desk, with our Book Closets and Swinging Lamp or Flower Brackets, with a fine stool boxed free with each Organ, makes the **SHONINGER ORGANS** the most substantial, convenient and perfect Organ.

BY CHARLES HALLOCK,

EDITOR OF "FOREST AND STREAM;" AUTHOR OF THE
 "FISHING TOURIST," "CAMP LIFE IN FLORIDA," ETC

NEW YORK:

"FOREST AND STREAM" PUBLISHING COMPANY.

The book is a complete manual for sportsmen: It gives every sportsmanlike method for capturing every known game animal, bird and fish in North America.

It designates the proper charges for guns for each kind of game, the various kinds of decoys and blinds, and baits and tackle for the fish.

It gives over 4,000 localities where game and fish may be found, specifies the game found in each locality, the hotel accommodation, and the best route to get there. (The preparation of this Directory was in itself a work of great magnitude.)

It gives the scientific name and specific characteristics of each species it describes, with the *habitat* and breeding season of each—a most valuable contribution to science.

It describes 291 varieties of edible fish alone, that may be taken with the hook; 80 varieties of ducks; 50 varieties of snipe or waders, and two different methods of shooting each.

Its instructions for capturing large game are very minute, and the chapters on woodcraft, outditching and camping have been pronounced by "El Cazador," of Los Angeles, California, to be simply complete.

Every kind of dog used for sport is designated, and his points for bench judgments fully given. The chapters relating to selection, breeding, rearing, breaking, care and diseases, comprise a seventh part of the volume. There are 71 prescriptions and recipes given under the revision of the best modern canine therapeutists.

It is in itself the most concise, accurate, instructive, sensible and comprehensive work ever written upon the dog and his diseases. Any physician can administer the prescriptions with perfect confidence in their safety and efficacy.

It contains very useful recipes and remedies for wounds, bites, poisons, illnesses, and emergencies of all kinds; for cleaning, repairing, and preserving every implement used for sport; for selection and use of every kind of boat employed by sportsmen; a reference list of several hundred books in request by sportsmen, and a directory where to buy outfitting goods.

It instructs in taxidermy, and tells how to preserve and mount specimens of animals, birds and fish.

TATHAM'S IMPROVED CHILLED SHOT.

American Standard Diameters.

(RED LABEL.)

Gives greater penetration and better pattern than ordinary shot, by reason of retaining its shape under concussion and impact, soft shot being jammed out of shape while leaving the gun. Equally well adapted to choke-bored, modified chokes and cylinders.

Our chilled shot will be found free from shrinkage, more spherical, more uniform in size heavier and of brighter and cleaner finish than any other. SEND FOR CIRCULAR.

TATHAM & BROS., 82 Beekman St., NEW YORK.

Also manufacturers of PATENT FINISH, AMERICAN STANDARD DROP SHOT, and CGM-PRESSED BUCK SHOT, more uniform than the ordinary moulded shot.

Light Machines for Pony

The great success of these machines

is unprecedented, and it may be con-

fidently affirmed that no article has

ever more clearly proved its superi-

ority for the quantity and quality of

its work than this. It is made in

several sizes, and can be fitted up

with steam or wind power, in addition

to those above mentioned.

Patented March 30, 1875.

Gunpowder.

THE HAZARD POWDER CO., MANUFACTURERS OF GUNPOWDER,

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. only.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 5 lb. kegs. A fine grain, quick and clean, for midland prairie shooting. Well adapted to shot-guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 6 (coarse). In 1 and 5 lb. canisters and 10 lb. kegs. Burns slowly and very clean. Shooting remarkably close and with great penetration. For field, forest or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

Nos. 1, FFG, and "Sea Shooting" FG, in kegs of 25, 12½, and 6½ lbs. and cans of 5 lbs. 1 FFG is also packed in 1 and 5 lb. canisters. Burns strong and moist. The FFG and FFD are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard rifle powder of the country.

Superior Mining and Blasting Powder.
GOVERNMENT CANNON & MUSKET POWDER;
ALSO, SPECIAL GRADES FOR EXPORT, OF
ANY REQUIRED GRAIN OR PROOF, MANU-
FACTURED TO ORDER.

The above can be had of dealers, or of the Com-
pany's Agents in every prominent city, or wholesale
at our office,
59 WALL STREET, NEW YORK.

Lafin & Rand Powder Co.

No. 26 MURRAY ST., N. Y.

Sole Proprietors and Manufacturers of

Orange Lightning Powder.

No. 1 to 7, strongest and cleanest made, in sealed 1 lb. canisters. Higher numbers specially are recommended for breech-loading guns.

Orange Ducking Powder,

For water-fowl, strong and clean. No. 1 to 5 in metal kegs, 5½ lbs. each, and canisters of 1 and 5 lbs. each.

Orange Rifle Powder.

The best for rifles and all ordinary purposes. Sizes, FG, FFD and FFG, the last being the finest. Packed in wood and metal kegs of 25 lbs., 12½ lbs. and 6½ lbs., and in canisters of 1 lb. and ½ lb.

All of the above give high velocities and less
residue than any other brands made, and are re-
commended and used by Capt. A. H. BOGARDUS,
the "Champion Wing-shot of the World."
BLASTING POWDER and ELECTRICAL BLAST-
ING APPARATUS, MINING POWDER
of all kinds on hand and made to order.
Safety Fuse, Frictional and
Platinum Fuses.

Pamphlets, showing sizes of the grain by wood
cut, sent free on application to the above address.

Sportsmen's Goods.

BOSTON SHOOTING SUIT.

Manufactured only by

G. W. SIMMONS & SON,
BOSTON, MA.

THE BEST IN USE.

ONLY ONE QUALITY MADE AND THAT IS THE
VERY BEST.

Each article—coat, trousers, vest and hat—
have the name and manufacturer's address
stamped upon it, and no suit is genuine without
it bears this imprint.

The suit can be sent, securely packed, by mail
to any part of the United States or Canada on
receipt of \$1.25 above the price of the suit.

We make no discount except to the trade. We
make but one quality, and that is the VERY BEST.
The price of the suit complete is \$13.

The suit consists of coat, trousers, vest, and
choice of either cap with havelock, or hat.

The material is of the best quality of duck,
waterproofed by a patent process. The color is
that known as "dead grass shade."

The seams and pocket corners are riveted, and
nothing is neglected to make the whole suit com-
plete in every way.

OUR PATENT DECOYS

have entirely superseded the old-fashioned cum-
bersome, wooden decoys. The birds are hollow,
and six of them occupy about the space of one
wooden decoy. The Duck Decoy of all kinds
are \$12 per dozen; geese, \$3 each; yellow leg,
\$1.25 per dozen; black breast plover, \$3.75 per
dozen; red breast plover, \$3.75 per dozen;
goose plover, \$3.75 per dozen; turnstone,
chicken plover, etc., \$3.75 per dozen; sandpipers,
\$3.00 per dozen. We are now making standing
geese for field shooting.

THE HUNTER'S TENT

is made of tan-colored duck; light, easily trans-
ported. Size, 7 ft. by 8 ft. Price, \$10 complete,
made on the umbrella principle, folding into a
neat roll 3 feet long.

In the judges' report at Philadelphia they were
commended for excellence in every part. Very
novel and practicable; adapted to all out-of-door
purposes where lawn, beach, hunters and camp
tents are used; quick folding; all sides strongly
fortified; enables them to stand against wind
and rain. Rev. F. B. Savage, of Albany, N. Y.,
who camps out in Florida in winter, and the
Adirondacks in summer, writes this about the
tents:

ALBANY, July 31, 1877.

SIRS—I have just returned from a three-weeks'
camping expedition in the Adirondacks, and have
had the three tents bought of you put to the severest
tests of exposure both as to wind and storm, and I
do most unhesitatingly say they are the most com-
plete thing of the kind I ever used.

1st. They are easily put up or taken down.

2d. They are perfectly waterproof.

3d. They are a good height and all the room is
available.

Our party asked for no better. They were admired
by all who saw them, and one party insisted on buy-
ing one of ours that was to spare. Rev. Dr. Duryea,
of Brooklyn, and the Rev. Dr. Irwin, of Troy, both
indorse what I say about your tent. With kind re-
gards, yours truly,
F. B. SAVAGE.

Tan-Colored Leather Pliable
Waterproof Suits.

Shooting Coats, Jackets, Breeches, Vests and
Hats at following prices: Coats, \$22; Breeches
\$15; Jackets, \$13; Vests, \$12. These form the
most elegant shooting equipment known. They
are indestructible.

A recent notice in the FOREST AND STREAM,
from a correspondent, says:

Whenever a sportsman, or even one who does not
claim the distinction, finds a really good and useful
article, it is no more than fair that he should let
others have the benefit of his knowledge. For this
reason we would call attention to the Tan-colored
Leather Shooting or Fishing Suits, made by G. W.
SIMMONS & SON, of Boston, Mass., the manu-
facturers of the famous "Boston Shooting Suit."

I saw these goods advertised in your paper, and
wrote to the parties for samples. I found the ma-
terial as soft and pliable as a piece of kid. I tested
it by soaking in water twelve hours, and found it as
nearly waterproof as one could desire, and after dry-
ing was as pliable as before. I had not stiffened
in the least. I have since then received a full suit—
coat, vest and breeches—ordered by letter from
measure taken by myself.

The goods are splendidly made, well lined with
fannel; in fact I do not see how they can be im-
proved.

My friends are unanimous in their verdict that D.
W. Simmons & Son's leather goods cannot be ex-
celled in quality or beaten in price.

For every kind of sportsmen's goods address

G. W. SIMMONS & SON.

Oak Hall, Boston, Mass.

THE NEW IMPROVED AIR RIFLE.

Especially Adapted for Target Practice.

SPLENDID FOR SHOOTING SMALL GAME and touching up
CATS OR DOGS.

Just the thing for Taxidermists to collect specimens. There is no report or dan-
ger attending its use, or any auxiliaries required to operate it. It can be loaded with
ease and rapidity. It is extremely simple, and has no delicate parts to get out of order or wear
out. For sale by the Trade generally. Sent upon receipt of price or C. O. D.

SEND FOR CIRCULAR.

H. M. QUACKENBUSH, Patentee and Mfr, Herkimer, N. Y.

Hart's Sportsman's Favorite Metallic Shells. FOR BREECH-LOADING SHOT GUNS.

These Shells are easily loaded, and the caps easily extracted from inside.
Head solid and much thicker than any shell now made, giving a solid seat for cone or anvil, which prevents
it from driving through or springing away, thereby causing miss-fires. The Cone is made of nickel, and fast-
tenet solid in its place. Neither rusts nor corrodes fast, like movable any made from steel. The Nickel
Cone also prevents miss-fire when a cap has been left on shell for a few days, which is liable to occur either
in steel or iron. These Shells are finely finished, and made any length ordered, from 2½ to 3½ inches.

Shells and Loaders and Descriptive Price-Lists can be obtained from all the leading Sportsmen's houses
throughout the country.
FROM CAPTAIN BOGARDUS, CHAMPION WING-SHOT OF AMERICA.

MESSRS. DEOROE E. HART & Co.—Gentlemen: The fifty Shells I received from you to-day suit me better
than any I have ever used. They are stronger and better in every respect, and I shall use them in all my
shooting hereafter.

Yours truly, A. H. BOGARDUS.

W. W. Greener's Patent Wedge Fast, Hammer- less Breech-Loader.

THE GUN OF THE FUTURE.

Address,

ST. MARY'S WORKS, Birmingham and 68 Haymarket, London.

It has already made its mark in Great Britain
The self-cocking is effected by the raising of the
breech ends of the barrel for loading, and works
smoothly and without requiring much force to open
the gun and cock the locks. There is a safety bolt
at the side which answers for half-cock. The
mechanism of this action is exceedingly strong
and simple, and is better suited for hard work than
any other gun in use.

W. W. GREENER winner of the great London
Gun Trials of 1876 and 1877, beating 121 guns by all
the best makers of London, Birmingham, Edin-
burgh and Dublin.

These guns are warranted to kill game at 100
yards. Read W. W. GREENER'S book on Choke-
Bore Guns and How to Load, published by Messrs.
Cassell, Potter & Dalpin, New York.

CHEAPER than the CHEAPEST.

THE

'Smoker's Companion' CIGAR LIGHTER.

This lighter has just been introduced, and is pro-
nounced by all who have seen it to be the most
convenient, simplest and most complete novelty
ever offered to the public.

It is a handsomely decorated; is no way complicated, and the adjoin-
ing cut is a fac-simile in dimension, rendering it all that could be desired for
a pocket article.

There is no possibility of the "Smoker's Companion" getting out of order
and its ignition is never-failing.

Descriptive Circular, with directions, accompanies every lighter. Sample,
with 100 extra lights, sent prepaid, on receipt of 40 cents (postage stamps
taken).

**THE SCIENCE OF LIFE, OR, SELF-PRE-
SERVATION.**—Two hundredth edition, revised and
enlarged, just published. It is a standard medical
work, the best in the English language, written by a
physician of great experience, to whom was awarded
a gold and jeweled medal by the National Medical
Association. It contains beautiful and very ex-
pensive steel-plate engravings, and more than 50 valuable
prescriptions for all forms of prevailing diseases, the
result of many years of extensive and successful
practice. 800 pages, bound in French cloth; price only
\$1, sent by mail. The London Lancet says: "No per-
son should be without this valuable book. The author
is a noble benefactor." An illustrated sample sent
to all on receipt of 6 cents for postage. Address Dr.
W. H. Parker, 4 Bulfinch street, Boston. The author
may be consulted on all diseases requiring skill and
experience.

"THE OOLOGIST,"

A MONTHLY JOURNAL DEVOTED EXCLUS-
SIVELY TO BIRDS AND BIRDS' EGGS.

This magazine, the favorite of amateur ornitholo-
gists, is now in its third volume. It is ripe with
all that is new or recent in Ornithology and Oology,
and publishes important papers on the rarer of our
birds and eggs. It is just the periodical for those
making collections of birds and eggs for scientific
examination, as its columns are constantly furnish-
ing descriptions of the eggs of new and rare species.

SCHUETZENFEST

The FOREST AND STREAM and ROD AND GUN having given a gold medal for team shooting at the

SCHUETZENFEST

of the Sharpshooters' Union of the United States of North America, the Executive Committee of this Union takes pleasure in informing their American friends that they will make all arrangements for team shooting for this medal. The match will take place at the Schuetzen Park, Union Hill, on

Monday, June 24, 1878,

at 11 A. M. Each team to consist of eight men. Entrance fee, \$15 per team. The team making the highest score to win the Forest and Stream and Rod and Gun Medal. The entrance fee money, after the deducting cost of markers, will be divided among the teams, pro rata. All the members of such teams must be of the same society, and must have been members of it for ninety days previous. The entrance fee is to be paid on or before June 10, 1878, to Mr. P. HARENBUCH, Treasurer of the Sharpshooters' Union, No. 130 Greenwich street, N. Y. Any rifle club or shooting society of the United States will have the privilege of sending their teams without being members of the Union. Any communication directed to the secretary will be promptly replied to. GEO. AERY, President.

IRA A. PAINE'S
FEATHER FILLED GLASS BALL.
PATENTED OCTOBER 23, 1877.

The "Standard" Ball.

The Bohemian Glass Works would respectfully call the attention of all dealers in Glass Balls to the fact that the Paine Patent Filled Ball is the STANDARD AND ONLY BALL MADE TO A SCALE, therefore we would respectfully caution the dealers against laying in a stock of unsaleable articles for the Spring Trade, when you can purchase the Best Ball ever made at prices less than is charged for other inferior balls. No other ball affords the PLEASURE of the Feather Filled Ball, and no other Ball is as beautifully made. It will break in every instance when hit by shot, and is sufficiently strong to prevent breakage either by transportation or falling on the grass.

Every ball is weighed and examined, then packed with the greatest care, in barrels of 200. Send for price list. Special inducements to the trade.

HEADQUARTERS BOHEMIAN GLASS WORKS, 214 Pearl Street, N. Y.

Bogardus' Patent Rough Glass Balls
and Glass Ball Traps.

These Traps are the only ones that give satisfaction, as they are simple of construction, easily set, and not liable to get out of order, and they throw the ball in a manner that more closely resembles the flight of a bird than any other trap in the market. The Patent Rough Glass Balls are made of uniform weight and thickness, and have a corrugated surface that strengthens the ball for shipment to any part of the country, prevents the glancing of shot, and thereby insures the breaking of the ball when hit. CAPTAIN BOGARDUS was the first to introduce the ROUGH BALL, and at a price far below the smooth ball at that time.

Balls and Trap can be ordered through all Gun Dealers. Liberal discount to the Trade. MY IMPROVED TRAP (warranted), which will throw a ball in any direction from the shooter at the option of the puller, is now ready for the market. Price \$8.

Parties buying glass balls will receive score book for glass ball shooting in each barrel.

HEADQUARTERS FOR BALLS, HAGGERTY BROS., 10 Platt Street,
 FOR TRAPS, HART & SLOAN, Newark, N. J.

Second and enlarged edition of "Field, Cover and Trap Shooting," containing instructions for Glass Ball Shooting, will be ready Feb. 1. Price \$2, by mail, postage paid. Address, Capt. A. H. BOGARDUS, International Hotel, N. Y. Dec 6/7

TO CANADA.*

Selected.

I LOVE the land that gave me birth,
Tho' cold her north wind blows;
I love her ice-bound winter lakes;
I claim a kinship to the dakes
That form her virgin snows.

I've roved in many a southern clime
Where orange blossoms wave;
Where broad bananas fan the air;
Where flourishes the citron isle,
Beside the azure wave.

I've lain within the myrtle's shade;
Beneath the waving palm;
Amid the oleander's groves,
Where summer perfume ever roves,
With many a fragrant balm.

I've pulled the luscious, fragrant pine,
And culled pomegranates fair—
The sugar apple of the South,—
And dates—those conquerors of the drouth,—
And cherimoyas rare.

I've seen beneath the crystal wave,
The coral insect's home,
Bright flowers that with the rainbow vie,
And beauteous shells that scattered lie
Beneath the ocean's foam.

I've watched the molten tropic's sun
Go down beneath the sea—
Where Chimborazo cleaves the sky,
Abaze with many a sunset dye
Reflected on our tea.

I've watched the ponderous sport of whales,
In another seas at play;
I've watched the Chilian condor's flight
To tow ring crag, where first the light
Proclaims the dawning day.

I've seen the lightning flash from eyes
Where midnight shadows lie;
When Spain's proud daughters met my view
With locks that mock the raven's hue,
Whose plumes cleave the sky.

Bermada's daughters, too, I've seen,
Whose beauties Moore has sung;
And Friendship's warm right hand I've met—
I feel the tingling pulses yet—
From strangers roved among.

But ever turns my heart to thee,
My bright Canadian home;
And dearer grow thy broad blue lakes,
Thy silvery streams, thy woodland brakes,
With every step I roam.

The proud magnolia's bloom I love;
The myrtle's perfumed shades;
But, oh! how dear above them all,
A single crimson leaf let fall
By Huron's maple glades.

By Huron's sounding shores I've left
My dearest friends on earth;
May God's own mantle from above
Unfold them and the land I love,
The land that gave me birth.

R. S.

* This poem was written nine years ago and published in a Bermudian paper by a young lawyer of Goderich, who was compelled by ill health to leave his native land for the more genial climate of those islands. We know not if he recovered his strength and yet lives; but, if not, surely these simple yet touching lines will prove a sufficient memorial to his departed genius.

For Forest and Stream and Rod and Gun.

The Richardson Lakes in Winter.

OUR party consisted of Messrs. P. Adams Ames, one of the proprietors of Camp Whitney, H. P. De Graf, of New York, and myself. One Thursday morning early in December we left Andover for the lakes. Our team consisted of three horses and a bob-sled, driven by Charlie Cushman, who was bound to see us on our way. Milton Cutting, one of the oldest and most experienced of the Andover guides, had been sent ahead to find out the condition of the ice. The lake road was in fair condition, and we reached the Arm about noon.

Here we met Milton, who reported that he had been up the lake a mile, and that there was ice as far as he could see. We congratulated ourselves on our good luck, and after luncheon drove out on the ice. It cracked considerably when the horses began to trot, it being not over four or five inches thick. But, proceeding carefully, Charlie drove up about a mile and a quarter, just beyond Bailey's Point, and there left us. A little way beyond the ice was thinner, and although safe for foot travel, was dangerous for a team. We had a couple of hand-sleds, and upon these we loaded our traps and pushed valiantly forward, two men to a sled, while the guide went before, ax in hand, trying the ice. Reaching the foot of Spirit Island, we found that beyond it the lake was open from shore to shore, and that there was no farther progress without a boat, unless we made a cache of our things and took to the woods where we would have the roughest kind of traveling. It was determined to return to the Arm and stop over night in the camp there, a small frame shanty, but vastly superior to a brush camp. We left the things we did not need on the shore of the lake, and in a blinding storm, made our way back to the camp. Luckily for us the store of wood that I kept for the steamer was piled up within a few rods of the camp, and we had the guide bring us in a generous supply.

A true sportsman is always a philosopher, and we made the best of the situation. The most that troubled us was the rapidly fading daylight, for the prospect was that we would eat our supper in the dark. But even this little difficulty was removed; for Ames suddenly started to his feet with the air of a man who means business, and commenced exploring the hidden recesses of his traveling bag. Now, that bag was a peculiar one—almost equal to Aladdin's lamp, and its supplies were apparently inexhaustible. After turning over the few thousand things it contained, he at last produced a wax taper about four inches long. He told us that he had bought the candle some fifteen years before in Europe. It had been in his bag ever since, and had traveled thousands of miles with him. A dozen times he had been tempted to throw it away, but some good genius had prevented. And now the time had come for its use. After traveling half around the world, it was doomed to be burned in a little hut in the wilds of Maine, to furnish light for our first supper in the woods, proving beyond a doubt how much better it is to save a useful article than consign it to wanton destruction.

The candle gave up the ghost early in the evening, a gentle hint for us to retire, and each one of us crawled into a bunk, and lay, not upon a bed of down, but down upon a bed of limbs about the size of average cord wood. We covered ourselves with our overcoats, and told Milton his life was forfeit if the fire went out during the night.

The wind had now blown a hurricane, and found its way into camp through numerous cracks and crevices, chilling us through and through. With the earliest dawn we sent Milton to Andover to have Cushman bring on more supplies and blankets. After he had gone we divided what was left of the provisions into four equal parts, each one taking his share. We had really come down to an allowance.

The wind storm continued all day, and it was so rough that we stopped in camp and kept warm. It was quarter of seven before we heard the welcome sound of the sleigh-bells, and it being dark as a pocket in camp, the first article we called for was candles! and several were lit at once. Then followed oysters, beefsteak, bread, coffee, tea, milk, sugar, etc., and we soon sat down to supper. In the morning, everything being ready for a fresh start, we rode down and found that the lake, which was open the day before, was now frozen over. We packed upon the two hand-sleds all they could carry, and sent two men ahead to try the ice, while the others followed behind with the sleds. I offered to draw one and Milton took the other, while Whitney and Ames went ahead with the ax, sounding the ice. In this order we left Spirit Island, keeping near the eastern shore of the lake, and creeping carefully along on our mocassins, as the ice was very thin.

It was a beautiful morning, clear, frosty, sparkling, and was perfectly calm, with the thermometer only two degrees below zero. The scene before us was magnificent; the glassy surface of the lake, the snow-covered mountains, the dark firs on the hill-side, the gnarled and twisted cedars by the shore, and even the huge boulders on the points, all combining to make the picture. As we neared Hard Scramble we found the ice growing thinner and thinner, but it was wonderfully tough and elastic, bearing us up, although it cracked in every direction as we passed along, sometimes buckling an inch more under us, and I expected every moment to go through. It was as clear as crystal, and being only three quarters of an inch thick we could look through it as one would a window-pane, and see every grain of sand, every pebble, and every weed with the utmost distinctness.

Reaching the point we found the ice broken up a little near the shore, and we had to take to the rocks. We fastened long lines to the sleds, and then with poles pushed them farther out on the lake, where the ice still remained whole. Crawling along the ice-covered rocks that formed the line of the shore, I dragged the sleds, while the guide kept them out with the pole. It was slow work, but we stuck to it and made about half a mile above Hard Scramble, where we took to the ice again. We went on for half a mile further, and then

were brought to a standstill by a ripping, crashing and cracking that sounded like salvos of artillery.

Looking in the direction of the sound we beheld a singular sight. The ice at the eastern shore had commenced bulging up, and arose to the height of a foot or more above the water, forming a reef that in a few moments had extended entirely across the lake. We stood and watched it as it was hove up, snapping, cracking and breaking, rumbling and thundering, until at last it settled back to the level of the field ice, leaving an open channel from shore to shore some twenty feet in width. A half a mile above we noticed a second open channel, also extending the entire distance across the lake, and beyond that another that reached about half-way across. Between the lower and upper channels, a distance of about a mile, the ice had also broken away from the shore, leaving an open passage all the way some twenty feet in width.

Here was a dilemma, the firm ice being too far from the shore to drag the sleds upon, even with the aid of our lines and poles, while the shore for the next mile above us was lined with huge boulders, fallen trees, and a debris of broken ice and driftwood. To drag the sleds loaded over such obstructions was simply impossible, while if we unloaded and carried the things along the shore to the firm ice, a mile or more beyond, there would not be the slightest possibility of reaching camp that night, as we should be obliged to make several trips if we undertook a portage. I thought best, therefore, to cache the traps where we were, and after doing this in the best manner possible we took lunch, had a smoke, and proceeded on our way.

About three-quarters of a mile below the Narrows we reached old ice, several inches in thickness, and across this we pursued our way with increased speed. The snow on the ice was soft, and had drifted to a depth of nearly a foot in some places, making the walking very hard. When we reached Metallic Point I was surprised to find the upper lake frozen over, with the exception of a little strip extending from the mouth of the river to the half-way point, and reaching into the lake about a mile.

The exercise in the morning of putting the sleds around rocky points and broken ice, combined with the long tramp, had begun to tell upon me, and I walked considerably slower than I had in the early part of the day. I longed earnestly for a sight of the camp, and finally I saw its hospitable roof looming up before us, the smoke curling gracefully from the chimney.

In a few moments more I was welcomed by my fellow voyagers, and was soon resting before the large open fireplace in the sitting-room exchanging our adventures. They had both broken through the ice, and had reached camp in a soaked condition. About six o'clock we sat down to one of Captain Cole's excellent dinners, and after dinner, around the huge fire-place in which mammoth four-foot logs were merrily blazing, sending out snapping embers on the hearth, we enjoyed our cigars and pipes, recounted the incidents of the day, and laid our plans for the future.

Camp Whitney, which I consider a model camp in every sense of the word, occupies a lovely site on the eastern shore of Lake Molechuckamunk, near the mouth of Mosquito Brook, in the immediate vicinity of excellent fishing grounds. It fronts the lake and sits about eight rods from the shore. The whole upper part of the lake is visible, with its winding and irregular shores.

The house overlooks Observatory and Aziscohos, two mountains of remarkably symmetry at the head of the lake, forming a barrier between it and the Magalloway River. Observatory is a sugar-loaf peak, rising to a height of some 4,000 feet above the sea, and is heavily wooded to the top. On the northeast it sweeps down to the Upper Richardson Pond. Aziscohos, which is several hundred feet higher than its neighbor, lies a little southwest of it, and has two peaks about a mile apart, with quite a depression between them. It is a grand old landmark, visible from almost any part of the lake region, and overlooking the whole of this section of the country. Several persons who have made the ascent of both mountains, declare that it commands a finer view than Mount Washington. Eastward it descends toward the lake, while on the west its base is washed by the wild and turbulent Magalloway. Through and beyond the valley, between Aziscohos and Observatory, several smaller mountains appear, Bennett and Emery's Misery attaining the most prominence.

Opposite the camp, on the western shore, a range of wooded hills, of no mean pretensions as to height, sweep away to the south. Southwest the view is enhanced by two little islets—Ship Island, so called from three old pines that grow upon it, suggesting the masts of a vessel, and Half-Moon Island, crescent shape in form. South one can scan the lake to the Narrows, where the silvery waters disappear, lost in the emerald green of the forest. Beyond the foot hills the greater part of the White Mountain range appears walling against the sky; Washington, Jefferson, and Adams being easily distinguished from the other peaks—sharp, clear, and well defined. From our piazza with an ordinary glass the buildings upon the summit of Mount Washington may be distinctly seen, and in some of the extraordinary clear days of last June they were visible to the naked eye, although forty miles distant, an indication of the wonderful rarity of the atmosphere.

Camp Whitney is thirty by fifty feet on the ground, two stories and a half in height, and covered with a pitch roof. An eight-foot wide piazza, with its sloping roof, extends the

dent announced that the subjects intended to be considered would be taken up under four heads, as follows: Section 1, Methods in Fish-Culture, etc., Mr. S. Green, Mr. B. B. Porter, Mr. S. Wilmot. Section 2, Fishery Laws and Fish-Ways, Mr. O. B. Everts, Mr. L. Stone, Mr. T. B. Ferguson. Section 3, Natural History, etc., Mr. J. W. Milner, Mr. F. Mather, Mr. C. Hallock. Section 4, Fisheries, Mr. E. G. Blackford, Mr. B. Phillips, Mr. M. C. Edmunds. In the absence of Mr. B. B. Porter, who was in California, the Secretary read a paper on trout culture, written by Mr. Porter. This paper led to a lively discussion, Mr. Seth Green stating that the average of fish raised by new and improved processes was much larger than the result of Mr. Porter's experience gave. "How to Pack Salmon Eggs," by Livingston Stone, was then read. A recess having been taken, some discussion took place as to the method known as the "Russian Method of Impregnation," and priority of discovery was claimed for Mr. Seth Green. Mr. F. Mather then explained, in response to Mr. Livingston Stone's paper, the difficulties encountered by him in transplanting salmon eggs to Europe. Telegrams were received during the afternoon accounting for the absence of Messrs. Whiteher and Wilmot, the Canadian Fish Commissioners, there being a heavy freshet on the rivers of the Dominion, which threatened to carry away the hatching establishments. Prof. G. Brown Goode read a paper on the migration of fish in opposition to certain theories advanced by Mr. Hinde. Mr. H.'s views have been presented to the Halifax Fishery Commission, and have perhaps somewhat influenced the decision adverse to American interests. Mr. F. Mather followed with an interesting paper on feeding fish in confinement. Prof. Spencer F. Baird then addressed the convention at length on the necessity of perfecting some plan for arriving at the quantity of sea and fresh water fish, more especially the former, caught on our shores. The U. S. Commissioner declared that this country was at a disadvantage because such a classification had not been made. And at the late fishery convention held in the Provinces, that as the Canadians had such tables of the catch of fish, and the U. S. had not any, we had been placed very much in disadvantage. The Commissioner urged that the Association should use their best efforts to have at least the fish trade of New York correctly estimated. The President, Mr. Roosevelt, in a spirited speech invited the co-operation of the wholesale fish dealers in New York to this end. Mr. Coup, of the Aquarium, where the meeting had been held last year, tendered an invitation to the members of the Association, which was accepted with thanks. A nomination committee having been formed the meeting adjourned to assemble next next day at 10½ o'clock.

SECOND DAY—(Meeting of Feb. 28).

With a larger attendance than the day before, at 11 o'clock the President opened the meeting. The Secretary proposed the following changes in the constitution: That the title of the Association be changed from Fish Culturists to Fish Cultural, and that seven members be made an executive committee in lieu of three. These amendments were adopted. On the report of the nominating committee the following officers were elected for the ensuing year: Robert B. Roosevelt, President; George Shepherd Page, Vice-President; Barnet Phillips, Secretary; Eugene G. Blackford, Treasurer; Executive Committee—H. J. Reeder, F. Mather, J. W. Milner, W. F. Whiteher, Seth Green and H. D. McGovern. These officers are the same as last year, with the additions made to the executive committee. The same gentlemen for the four sections who were chosen for 1878 were selected to report at the ensuing meeting in 1879. Mr. Eugene G. Blackford, the Treasurer of the Association, read an exceedingly interesting and practical paper entitled "The Peculiar Features of the Fish Market," treating of shad, trout and salmon. Mr. Blackford strongly advocated the passage of a law to give the shad and other fish a chance of escape for only a single day in the week during the open season. Mr. Campbell, Mr. Green and many others advocated this as a legislative measure. Prof. Milner read a paper on shad hatching, bringing before the meeting the new method of shad hatching invented by Mr. T. B. Ferguson. This brought forward a discussion, in which Mr. Seth Green advocated the hatching box named after him as having a priority of mention. Mr. Roosevelt, the President, then presented a paper on eels, which was followed by statistical memoranda giving the number of pounds of fish of various kinds caught in the United States, prepared by Prof. Goode. Two thousand one hundred and eighty-eight vessels, with a tonnage of 80,000 tons, are employed in the United States. A resolution was offered and carried thanking Profs. Milner and Goode for the valuable character of the papers offered by them, and also a resolution expressing the thanks of the Association to the Fishmongers Association for the use of their rooms, and "that in the absence of authoritative provision for the purpose, the Fishmongers Association be earnestly requested to take such steps as may assist in the publication of an annual report of such fish or marine products used for food as may pass through their hands." The meeting then adjourned until the regular day in Feb., 1879.

A REQUEST FROM THE UNITED STATES COMMISSIONER OF FISH AND FISHERIES.—It frequently happens that this journal has reports sent to it, or gleaned from the press, notices of fish, such as shad and salmon, purporting to have been caught in waters of the United States, where such fish had never been found before. We have always paid great attention to such announcements, trusting to be able to be among the first to determine what the fish were, and to make more widely known

the labors and successes of our Fish Commissioners. Lately, to take a case in point, a paragraph, taken from a Western paper, contained the statement that salmon had been captured in quantity in the Mississippi River. We immediately telegraphed and wrote to Memphis in regard to this salmon, but have not as yet been in receipt of any reliable information. It is exactly for just such cases of well-known fish found in out of the way places, that the Honorable Spencer F. Baird, the U. S. Commissioner of Fish and Fisheries, has sent to us a communication, which we trust will be widely read.

The country at large derives so much advantage from the labors of the Smithsonian Institution, that we have no reason to suppose that the general public will not make a hearty response to Professor Baird's request;

EDITOR FOREST AND STREAM AND ROD AND GUN:

I have seen several notices in the Western and Southern papers during the present spring, of the capture of adult fish, such as the shad and salmon among others—shad at Vicksburg and salmon at Memphis—presumed to have been those planted by the United States Fish Commission in previous years.

I take this occasion to invoke the assistance of your widely distributed journal, in requesting information on this subject from all who may have it at their command, as it is very desirable to follow up the history of the fish that we have introduced, and to know exactly the dates and places of their occurrence, the size to which they have attained, etc. It is especially desirable to know the period during which the fish are taken at any one station, how they were captured—in what number and of what weight. I shall be especially thankful, also, for a good average specimen from each locality where observed, to be transmitted by express, either packed in ice or preserved in alcohol, and addressed to the Smithsonian Institution, Washington.

For shipment in ice each fish should be wrapped in cotton cloth and packed in a box, with ice of about the size of the fish, and about an equal quantity of sawdust.

SPENCER F. BAIRD, Commissioner.

Washington, March 4, 1878.

WOODWARD'S AQUARIUM AND FISH CULTURE IN CALIFORNIA.

A correspondent, who was a fish culturist, describes a model aquarium in San Francisco, which will not be regarded with less interest because it has already been mentioned in our columns:

SAN FRANCISCO, Cal., Feb. 5, 1878.

Of course every one who visits San Francisco goes to see Woodward's Gardens, an establishment that cannot have an equal in the U. S., except on this coast. The aquarium amused me more than any other department. It is not as large as the New York aquarium, but is a perfect gem as far as it goes, and produces a feeling as you pass the curvilinear entrance of going beneath the waters of the deep to admire the inhabitants thereof in their own home. It is this impression, caused by the manner in which the aquarium is constructed, that makes it more enjoyable to visitors than it could possibly be if it were in an ordinary building. There was one tank of very fine specimens of the vegetable-eating carp, which on one or two occasions have brought as high as one dollar per pound in market. Six dollars was offered for a shad of four pounds weight a day or two since, I think the first ever offered in market on this coast. That shad would never have brought as much had been kept at home. The other day I visited the State hatching-house of California with Fish Commissioner H. G. Parker and wife, of Carson, Nevada, which at present is located about three miles from San Leandro, Alameda Co. I believe this is not intended as a permanent location. Probably no State has taken more interest in the propagation of fish for stocking its waters than California, when commissioners are the right men in the right place. At the present time they have in their hatching-house about thirty thousand whitefish. All these were saved of a shipment of 300,000 from Michigan—200,000 for California and 100,000 for the State of Nevada. They have fifty thousand land-locked salmon from Maine, and 125,000 brook trout eggs and fish from the Eastern States. There were three or four thousand McCloud River trout five months old that would measure from two to eight inches long, all from the same lot of eggs. There were a few carp, six months old, that would weigh a pound apiece, and some not so large; they vary in size, but not so much as the trout do. The Sportsman's Club of California have 200,000 McCloud River salmon, three months old, for the purpose of stocking Lake Merced. Prof. J. G. Woodbury, Superintendent of the State hatching-house, has charge of them, assisted by Mr. Fitzpatrick, who informed me that the rais were fishing them out rather lively, which, by the way, puts me in mind of a rat that once infested my hatching-house, and by careful watching I learned his method. He sat upon his haunches on the edge of a receiving box full of fry about an inch long; by reaching down with one paw he would stir the water and the fish would collect at the spot there, then by a dextrous movement with both paws he would catch one and quietly eat him, then go through the same operation again. A trap placed at his fishing-post soon relieved me of this poacher. Yours truly, B. B. PORTER.

Natural History.

HERPETOLOGY OF DAKOTA AND MONTANA.—We have received, through the courtesy of Dr. H. C. Yarrow, a valuable paper, entitled "Notes on the Herpetology of Dakota and Montana," by Drs. Elliott Coues and H. C. Yarrow. These notes are extracted from the bulletin of Dr. Hayden's geological and geographical survey of the Territories, Vol. IV., No. 1, and are of special interest, as treating of a region from which few collections in this department of science have yet been brought.

The material upon which the present article is based consists of the collections secured by Dr. Coues in 1873-'4, while serving as naturalist of the U. S. Northern Boundary Commission. The list includes five Chelonians, sixteen Ophidians, three Lacertilians and five Amphibians. A new snake—*Eutania radix toiningsi*—Coues and Yarrow, dedicated to Major Twining of the engineers, is described.

The paper to which we refer is one of no little importance, and as it is by no means purely technical essay, will interest

a large class of non-scientific readers. Considerable matter of popular interest has been introduced, and this matter is, much of it, entirely new. Besides the paper already mentioned, the pamphlet contains two short articles by Dr. Coues; one of them on Consolidation in the Hoofs of the Virginia Deer, and the other on a Breed of Solid-Hoofed Hogs, apparently established in Texas.

THE MOLLUSCA OF NOVA SCOTIA.—Through the kindness of its author, Mr. J. Matthew Jones, F. L. S., we have been favored with a copy of his List of the Mollusca of Nova Scotia (*Cephalopoda* and *Tunicata* not included). This list, which is corrected to 1877, represents the present state of our knowledge on this subject, and is thus of great value to the working conchologist. The FOREST AND STREAM has often been indebted to Mr. Jones for interesting information relating to marine shells, and we have just received from him, at Halifax, N. S., the following note, for which he has our thanks. Mr. Jones writes:

"Having received the contents of the craw of a Rocky Mountain golden-eye (*Bucephala islandica*, Bd.) for identification, from Dr. Bernard Gilpin, President of the Nova Scotian Institute of Natural Sciences, and thinking that the result may interest some of your readers, I beg to state that the whole consisted of littoral molluscs, as follows: *Littorina palliata*, Gd., 221 specimens, adult and young; *L. tenebrosa*, Gd., 2 specimens, young; *Purpuratopilius*, Lam., 3 specimens, young; *Lacuna sineta*, Gd., 1 specimen.

IN A DUCK'S GIZZARD.—We have received from a correspondent in Ohio something which, at first sight, looks like a piece of abraded crystal, but on examination by a lapidary, it has been found to be a bit of glass. Its weight is 3.3-16 carats. All the sharp corners of the glass had been rounded off. It is a question whether this attrition is due to the sand in which the piece of glass might have been found or to the action of the duck's gizzard. The gizzard of a bird is endowed with wonderful muscular power, and the gastric juices may have worked on the silicate. It is quite a well known fact that spurious antiques are manufactured by taking a newly-made carnelian, having figures engraved on it, and then making a turkey swallow it. In this way that peculiar look of age—that fine minute point polish, which early incised Greek gems possess, is produced. As to the presence of the glass where the wild ducks are found, that is easy enough to be understood. There was some thirsty sportsman in that neighborhood, who, when his flask was empty, broke it. Hence the glass in the duck's gizzard. We are really sorry that it is only glass, and wish, for our correspondent's sake, that it had been a diamond, or an aquamarine. We produce the letter of our correspondent:

ATTICA, Ohio, Feb. 28, 1878.

EDITOR FOREST AND STREAM AND ROD AND GUN:

I find enclosed a curious little stone which was taken from the gizzard of a red-head duck one year ago. The duck was shot on the New Haven marsh in Huron County, Ohio, by myself. Please inform me what sort of stone it is.

BIRDS OF THE GARDEN AND ORCHARD.—At a meeting of the Middletown (Conn.) Scientific Association, held Feb. 12, 1878, Mr. John H. Sage read a very interesting paper under the above title. Mr. Sage confined himself altogether to the consideration of those species which he had observed in his own orchard and garden, a small plot of ground in the most thickly settled part of Portland, Conn. Even in this limited area, however, the careful observer has been enabled to note no less than seventy-two species, or nearly one-third of those birds known to inhabit the State.

Mr. Sage is well-known to the ornithologists of Connecticut as one of the most reliable observers of that State, and he has contributed, in connection with one other gentleman, very considerable additions to our knowledge of the habits of New England birds.

BIRDS HATCHED IN FEBRUARY.—The Burlington (Vt.) *Free Press*, 11th ult., says: "As workmen were cutting logs for E. N. Colton, on the 6th of February, on a flat piece of timber land on the top of the mountain that divides the head waters of the so-called mill-brook and Lee River, they felled a spruce tree, and three young birds, with pin feathers just starting, probably about eight or ten days old, fell from their nest, some thirty or forty feet from the ground. They were taken and cared for, but their fall proved too much for them. The parent birds were nearly as large as the common blue-birds; the female was of a grayish color, and the male bird had a reddish breast, with dark wings. The question arises, have we migratory birds that visit us and breed and rear their young in winter?"

They were crossbills (*Loxia curvirostra*) of course, and the occurrence of their nests in winter is nothing very surprising. Mr. Boardman has found them breeding in winter in the vicinity of Eastport, Me.

WHAT ARE PURE BRED ELK.—Joggins Mines, N. S., Jan. 15.—Editor Forest and Stream and Rod and Gun: In answer to your correspondent's query as to what I meant by "nearly pure bred elk," I should say that here in Cumberland county, and I presume in other counties where moose resort, we have two different kinds of moose—the highland moose, or elk, and the swamp moose, or true moose; names given them by the hunters, who have little or no knowledge of natural history. They may be merely local; I simply use the name as they do here. The distinction I have noticed here between the two kinds is: the former is short legged, dark skin (nearly black), short, fine-shaped head, and the long black bell or deer lip, from twelve to sixteen inches long; the horns have more prongs, rough and round, and very little palm. The latter long legged, light gray (nearly brindle), long, coarse shaped head, large mouth, while the bell, if any, is not over three inches long; the antlers with few prongs and very broad in the

palm. Many will say that the color of skin, shape of head, horns, and the preponderance or absence of the bell or dewlap, is due to age. This I know is not correct. As to color of skin, or the bell, it may be: it is certainly regarding size of antlers. As I write, I have four specimens of the family to judge from of my own shooting, and the points I give are correct. Three, the "long legs," without bell, only three inches, and one "short leg" (Elk), with the bell fifteen inches long from throat.

ELK.

[It is safe to say that the different names referred to by our correspondent are merely local, and that there is but one species of moose found in this country. We should have been disposed to attribute the differences which he mentions to age. We would refer "Elk" to early ages of the FOREST AND STREAM for a discussion of these points. Vol. II., p. 117.—Ed.]

—The Mount Holly *Mirror* relates that "a citizen of Belvidere, N.J., picked up a dead woodpecker in the street a few days since, and to its bill was fastened a small strip of wood, which, upon examination, was found to have caused the death. The bird had evidently struck the wood with considerable force, thereby embedding its bill to quite a depth, or in other words suffocated."

THE BIG BUCK.—Warrensburgh, N. Y., Feb. 5.—*Editor Forest and Stream*: I noticed in the FOREST AND STREAM of Jan. 31 an article from "Leather Stocking" where he speaks of the largest red deer on record, weighing only 250 lbs. before dressing. I killed two deer last November that were guessed to weigh 400 lbs. on the hoof, but actually weighed when dressed, and after hanging in the woods five or six days, 250 and 300 pounds respectively. The buck that weighed 300 pounds, and also the other, had splendid antlers, the large buck having five pikes on each horn, the distance across the horns between the pikes being 23½ inches. I gave them to a friend, who has had them mounted, and they may be seen any time by calling on J. L. Russell, Troy, N. Y. This deer was said to be the largest ever killed in the Adirondacks. One man who was with me and had hunted for forty years in the North Woods, said he shot several that dressed 250 to 260 pounds each. If "Leather Stocking" wants to have sworn statements in regard to the above I can give him the names of several persons in this place who saw the deer weighed. As every one was anxious to see the "big" deer and to see him weighed, I have plenty of witnesses. I have hunted for years and always called a buck that would weigh when dressed 180 to 200 pounds a large one, and a doe a good one when she would turn the scale at 115 to 125 pounds. I have also had deer domesticated, and have one buck at present. Last year had four.

A. H. THOMAS.

[The weight of these two hucks far exceeds anything that we have ever heard of in the decl line. Can any of our correspondents match it?—ED.]

WHAT ANIMAL KILLS AND EATS A FOX?—*Clinton, Conn., Feb. 21.*—While hunting this morning with a party, one of our number found a dead she fox with its head and fore-leg eaten off, and although quite a search was made, no trace of the missing members were found. Upon skinning the remainder it appeared healthy and free from old wounds. When found we judged it had not been dead more than twelve hours. Now, as none of our old fox-hunters ever heard of the like before, any information on the subject would be gladly received by the CLINTON FOX-HUNTERS.

[Or course, we can only suggest possibilities, but under the circumstances we should be disposed to attribute the deed to a hungry wild cat (*Lynx rufus*) a species which, though not common at present, is sometimes killed in Connecticut. We can think of no other wild animal large enough to master a ox.—ED.]

THE EUROPEAN STARLING.

QUEBEC, Canada, Feb. 1, 1878.

EDITOR FOREST AND STREAM AND ROD AND GUN:

With reference to the query of "N. A. T.," from Houston, Tex., relative to starlings, any person from the North of Europe can answer all his questions satisfactorily. The European starling breeds in stony places, such as quarries, houses, and may be considered an inhabitant of a city. His principal food is worms, and when the ground is frozen hard, he lives in marshy places or frequents the banks of rivers. He will not come to food such as grain or bread, though he will eat the seed of rushes. He is a digger, as you may notice from the form of his bill. I imported, a few years ago, about twenty starlings in the spring of the year, and turned them loose (in the month of May). They flew up in the air, and I have not seen them since. In England starlings are very numerous and are always considered the friend of the farmer. They are easily caught with bird-lime, but, as they generally go in dense flocks, they are difficult to approach.

Your correspondent, however, need not be afraid of the English sparrow. The reputation of driving away other birds is not his character in Europe. In Canada the northern shrike or butcher bird destroys the poor sparrow mercilessly. The sparrow-hawk also does so in Europe. I imagine a sparrow fights a sparrow, and that he will get the worst of it if he attacks a bigger bird. At any rate, an English sparrow will keep a garden clear of all butterflies and their worms. The mocking bird is a thrush, and so strongly resembles the Northern shrike that any cute, well educated New York sparrow would give him a wide berth. The house sparrow, however, is now an American bird, migrating rapidly from town to town, and probably receiving more hospitality and better treatment at the hands of man than any other bird on this continent; and as he is sure to visit Honston, "N. A. T.," may as well have his services at once as wait a few years and then see the sparrow immigrant come enpluvied.

The startling birds twice a year, and had better be imported in the spring. I would order two or three hundred birds, to be shipped in lots of twenty-five birds per package, and have them turned out on arrival. A startling fight, bites, screams, and is a very pugnacious bird when handled. He is also tough and hard to shoot, and can carry a deal of shot. As the meat is bitter he is not considered good eating—about as good as crow. Yours, W. R. ROPER.

—St. Louis has a pair of bush kangaroos from Australia. There is also a little baby kangaroo which is occasionally seen peeping from its cradle—the marsupial sac in which it lies—and where it will remain until old enough to care for itself.

HABITS OF THE RUFFED GROUSE

WHITE COUNTY, Jan., 1878.

THE prairie chicken (*Cupidonia cupido*), when he has concluded to commence business in the spring, opens his shop on a prairie knoll, and advertises it by blowing his horn that those who wish his wares may know where to find him. When he has a customer he docks his beak to please, sets every feather on end, droops his wings, inflates his pouch, spreads his tail, draws down his head, and swirls around, as much as to say, "This is just the place, and I am the fellow you are looking for."

When *Bonasa umbellus* has made up his mind for business, he does

about the same, as near as his surroundings will admit. As his field is limited, he mounts any object that is raised from the ground, and otherwise suitably located—most frequently a fallen tree—then he lets his customers know that he is ready, by beating his drum. This manner of letting the hens know where to find them each kind of grouse keeps us all through the breeding season.

I have seen the hen prairie fowl fly quite a mile, and drop down in the midst of half a dozen cocks who were waiting, when each cock would turn himself into a "king" prairie chicken. I have seen the female ruffed grouse come to the drumming or the cock as sly as a fox, and only advance during the noise, then stop as still as a stump. Between the drumming the cock would stretch up his neck and waver if she was ever coming, though he did not yet know she was there. As soon as the cock saw her he would almost tumble off the log, and instantly turn himself into a "king" partridge, just as "Penobscot" described. The cock would strut around the hen with his wings down, exactly like the pinnated grouse, make dives at her, run against her; and, if she didn't care so awful much about him just at that time, he would drum once or twice for her, and, between the drumming, he would ask her what she thought about it.

The cock pheasant your correspondent "Zadoc" saw through the roots of the fallen tree, undoubtedly was looking as much for some of his kind as for an enemy. The sac your other correspondent speaks of under the wing, I think he must be mistaken about.

The ruffed grouse do not pair. The very nature of the noise they make during the breeding time explains their domestic relations. Plain and ruffed grouse are alike in their habits of choice and number of wives, all the works on ornithology to the contrary notwithstanding. If there is any difference between them I think the latter denizen of the woods has not as good morals as he of the prairie. *Bonasa* does not have command enough of himself, and would like to begin his love-making at wrong seasons, which drives the hens off to themselves during the warm days of our Indian summer, as I have often found them.

Several persons through your columns say that they have shot female birds in the act of drumming, which is the most remarkable thing I ever heard about this much misunderstood bird. It is possible that they killed a hen who had come to the trysting place while the cock had just stepped down to visit some other hen who was there, but I doubt if a hen grouse ever attempted to drum. MONON.

SHAKOPEE, Minnesota, Jan. 24, 1878.

MR. EDITOR: Slow at first, but faster and faster did those little wings strike the air—not the old rotten log he was sitting on—until the noise sounded exactly the same as that of a bird of the same species just taking wing. Has it ever occurred to you that a drumming pheasant keeps a firm hold of the log he is drumming on—have never seen a pheasant drum on a rock—and that the sound produced by a bird "taking wing," and the last evolution of a "drumming one" are one and the same? In the one instance he clings to the log, thereby preventing an upward motion of the body; in the other he springs in the air, and the same motion of his wings gives the first velocity to his body, after which an occasional flap of the wing keeps him in the air, and the whirling sound so deafening in a deep ravine or heavy timber ceases.

Till wager, that upon recalling your pheasant hunt at Blakely on the line of the St. and P. and S. C. R. R. last fall, only a couple of miles from my first domicile in this State, you will coincide with my view as to what produces the sound of a drumming pheasant. Many a night when happening to be awake I have heard the pheasants drum near my cabin, and presently the rooster would crow, heralding the coming of the morn; also on rainy days I have noticed the drumming and crowing, or crowing and drumming. Now, is there any one prepared to dispute that the motive for drumming or crowing are alike in the two birds?

Has any one ever listened to one drumming pheasant challenging another drummer? Closer and closer they come, louder and louder seems the noise, and finally the leaves and feathers alike fly in profusion and give evidence of the mortal combat; and in this state they are entirely oblivious to all surroundings, and will not take wing unless a dog becomes the third party to the combat. When not interfered with until the battle waxes hot, the observer can pick them up, the same as a pair of fighting cocks on a dunghill. This is an actual fact, and I have done it! I have been a close observer of the habits of this bird since my settlement in the Big Woods, then as now the very paradise and home of the bird in question; have watched them in all seasons and stages of their age, have tried in vain to domesticate them, when with the prairie chicken I was entirely successful, and am therefore entirely confident in giving my views.

Neither the pheasant nor wild duck will thrive or live long in confinement, no matter whether hatched from the egg by domestic fowl or caught while young; and on the other hand, the prairie chicken and wild goose will live and thrive in the barnyard any way you raise them. B.

NEW YORK, January 21, 1878.

EDITOR FOREST AND STREAM:

Your correspondent, "R. T. M.," says that Connecticut ruffed grouse seldom alight on a tree at the end of their flight. This is entirely contrary to my observation of the habit of the bird in this respect. I have never hunted them except in Connecticut, and have found that in heavily timbered localities where hemlock trees abound, the bird when flushed is almost certain to take to the hemlocks for refuge; and it certainly could not adopt a surer means of securing itself from further disturbance by hunter or dog, though occasionally a dog will "whud" a tree bird and show by his actions a comprehension of the situation. I have never, however, been able to discover the bird under these circumstances until it took itself off with the usual loud advertisement of departure.

Have seen ruffed grouse when flushed by the dog only, and apparently unaware of the sportsman's presence, bounce up into the trees directly overhead; and when hunting with a companion have on a number of occasions observed birds flushed by him come over my way and settle among hemlock branches within killing range of my position. Being one of the number who believes in "killing 'em when you can," I generally shoot at the spot where I saw them go in, or if standing at an angle with their line of flight, make a guess at their probable position near the stem of the tree, and blaze away. In the seclusion where I do my shooting we have been congratulating ourselves on the large quantity of hen birds left over to raise chickens for next fall's sport. But if it is a fact that plumage really goes for nothing in determining sex among ruffed grouse we shall be obliged to modify our anticipations in that respect, and look deeper for the "true inwardness" of the specimens which the next season offers us.

YANKEE.

OLEAN, N. Y., Jan., 1875.

EDITOR FOREST AND STREAM AND HOD AND GUN:

In regard to its drumming, I have seen the performance many times, and it appears to me that the bird strikes nothing with its wings, except that they may strike together on the back. But I do not think it absolutely necessary for them to strike anything to produce the sound, unless it is to suddenly arrest the motion, for the noise is not much, if any, louder than he makes when he is pushed, and the wings strike nothing but air; and is very similar, except in its gradual increasing rapidity in the case of drumming.

I agree with other correspondents in the rapidity of its flight, and in its tenacity of life, as the following incident will show: A few years since, while still hunting deer, I saw a ruffed grouse sitting on a log about fifteen rods away, and drew up and fired at him, when he immediately flew beyond the range of my vision. On examining the spot where he stood I found a quantity of feathers, and taking the direction of his flight found him at a distance of thirty or forty rods from where I shot him, stretched out upon the snow, dead. The ball (from a Smith & Wesson breech-loader, cal. 44) had passed directly through his body, a little back and below the wings.

I think, however, that your correspondent, S. E. Barnham, who says that after shooting one in the neck, so that his head lopped down upon his breast, puts it on rather thick when he says that the bird ran nearly twenty rods after being shot, if he means that the bird's neck was dislocated. I have practiced shooting ruffed grouse for several years with a rifle, and have, during that time, killed probably from one to two hundred by shooting the head or neck, and I never saw but one so killed that did anything more than "fly about like a hen with her head cut off." The exception which I make is in the case of one that was standing upon a log, at some ten or twelve rods distance from me. After firing at him the second time, he deliberately walked along the log a short distance and disappeared on the opposite side. I carefully approached to get another shot, and when near the log heard him in the leaves a short distance off, and after a careful examination found him spread out on the leaves, dead. An examination showed that the ball had just touched his neck, removing a piece of skin about as large as a wheat kernel, and opening the artery a little below the head, and he had died to death without apparently knowing he was hurt.

Your correspondent, "R. T. M.," of New Haven, Conn., wishes to know if the ruffed grouse in Western New York commonly alights on trees when flushed. I can assure him that they very seldom do so in this vicinity, unless put up by a dog, and then they are as likely to alight on the ground as on a tree. At least that is according to my experience, and I have had considerable, having hunted a good deal for the last twelve years, and all of that time with a rifle, without dog until the last season, from Sept. 1 to Dec. 31, 1877, when I hunted over a cocker spaniel, with shot-gun, killing fifty.

M. A. B.

POUGHKEEPSIE, January 25, 1878.

EDITOR FOREST AND STREAM:

In answer to the question propounded in your paper of 24th, by "R. T. N.," as to the partridge of Western New York alighting on a tree at the end of its flight, while the Connecticut bird seldom does so, I remark that many years' practice in shooting those birds in both States has brought the fact often to my notice, but I have never heard it seconded for.

PHILIP C. ROBERTS.

LOSS OF LIFE IN INDIA CAUSED BY WILD ANIMALS.—Sir J. Fayer asserts that in 1875 no less than 20,805 human beings and 46,805 head of cattle were killed in India by elephants, tigers, alligators, buffaloes, boars and snakes. Snakes alone caused the death of 17,070 persons. It is proposed to establish a sort of department, having a responsible chief and subordinate officers, the duty of which shall be confined to abating the loss of life by wild animals. It seems that the Hindoos have a religious prejudice against killing snakes.

Woodland, Farm and Garden.

THIS DEPARTMENT IS EDITED BY W. J. DAVIDSON, SEC. N. Y. HORTICULTURAL SOCIETY.

ROSES.

AS the spring advances the thoughtful amateur looks up those notes on the best roses he saw last season, and, taking the various rose catalogues, he looks carefully over them to see from whom, and at what price, his selected sorts can be procured. In doing so he is bewildered with the number of sorts offered in one catalogue that are not mentioned in another, and not being able to get the varieties he requires from one or even two growers, he is apt to give up the whole business in disgust. There are many, also, of such a restless disposition, that, not content with adding to their collection from time to time such varieties as have been tried and found valuable, they rush into an auction sale and buy anything with a high-sounding title, or glowing description of its colors and merits, more especially if it have "*Une grande nouveauté*," or "*forme des plus parfaites*" attached, only to be once more disappointed, and swear in their wrath they will never do so again. A few hints on what we have found the best of the new varieties of Roses of the last few years may be acceptable. First of all, the border or bed roses in which the roses are to be planted should, if possible, be of a good fresh loam, with plenty of well decayed manure thoroughly incorporated with it. The colors should be arranged so as to harmonize when in blossom, the general effect taking the lead of individual preference. A good plan is to plant at intervals over the bed, some of the stronger varieties to grow as pillar roses, thus breaking up the uniformity and adding touch to the beauty of the whole when in bloom. Among the new roses of late years great gain has been made both in size, color and fragrance, La France, delicate silvery rose color and Louis Van Houtte, dark crimson, being the most fragrant, and Paul Neron, pink, the largest varieties known. Baroness Rothschild is a beautiful light pink cupped variety, something in the way of the splendid old summer rose Coupe de Hebe. Capt. Christy is a fine delicate flesh color with deeper shaded centre. Comtesse de Seny, pale rose, with carmine centre, and Marquis de Castellane, a rich pink, very large and fine. Louis Van Houtte, independent of its rich fragrance, is one of the best dark crimson roses grown, though it is closely followed by Annie Wood, an English seedling of fine color and a free grower. Mad. Lacharme, a seedling from Jules Margottin and Mad. Noman are good additions to the list of whites, being both of fine shape and free growth. Mad. Alfred de Rougemont is also a good white rose, blooming all summer, and Marquis de Mortemort, white shaded rose in the style of Caroline de Sansal, or Souvenir de Malmaison is the best in its class. All these are quite distinct from the older sorts, and give a pleasing variety in color and texture. In addition to the above we would mention a few of the very best of the older varieties, selected not only for shape, color and fragrance, but for freeness of growth and good habit and constitution.

Pink and Rose Color: Emelie Hansburg, Mlle. Bonnair, Elie Morel, Mad. Therese Levet, Jules Margottin and Countess of Oxford. Red and Crimson: Vicomte Vigier, Devienne L'Amey, Pierre Notting, Sir W. Gull, Horace Vernet, Charles Lawson, Prince Humbert, Camille Bernardin, Xavier Olibo and General Jacqueminot. In white colors we know of nothing better than those already named. The well known pure white summer variety, Mad. Plantier, should be grown in every garden, and for pillars some of the older strong growing varieties, such as Baron Prevost, Mad. Trotter, Mrs. Elliott, Caroline de Sansal, John Hopper, Louis Odier, Gen. Jacqueminot, George the Fourth, etc., can be selected; while for a really beautiful moss rose nothing can surpass the old English moss and its lovely mate the Crested Provence.

JAPAN LILIES.

On fertilizing Japan Lilies, O. M. Hovey, of Boston, gives his experience in an English periodical. It seems to differ in some points from Mr. Parker's and Mr. Hanson's experience (page 37), and will doubtless be of much interest to many of our readers, as all the information we can get together on this interesting subject will afford some guide to those who may desire to extend and increase the variety of these beautiful plants.

"My first experiments of any extent were commenced in 1846, when I had some two dozen fine plants in pots, grown for that purpose, many of them being seven feet high. I then fertilized speciosum with superbum, candidum, s. alium, and chalcidonicum; punctatum with speciosum, suranthesum, superbum, and chalcidonicum; alium with speciosum, and some others. Three years is the usual time for the seedlings to bloom; and, as they rarely make their appearance until the second year, it was in 1850 that they produced flowers. By this time (three years) many of the labels, without corresponding with the above crosses, had rotted off, and were unfortunately lost. However, suffice it to say, that to us, who watched them with a florist's eye, every one appeared to differ. In some, the petals were much reflexed; in others, they were narrow; some were rosy, others very deeply covered; some of the spots or papillae were small, others large; some of the spots crimson, others almost black. The worst among them were better than the old speciosum; but I found my list too long, and the distinctions too fine, except to those who could—like the true tulip fancier—readily distinguish minute differences; and, after cultivating them for three or four years, I selected the best nine, and named them as follows: Melpomene, Terpsichore, Erato, Urania, Polyhymnia, Olio, Thalia, Calliope, and Euterpe—names under which they were subsequently distributed throughout the United States. I soon ascertained that there was a vast difference in the character of the bulbs; some of the latter were increased with great difficulty, and when in later years I had hundreds of bulbs of Melpomene, I only had a dozen or so of Euterpe. They would not make offsets, either above or around the old root; but, from want of time, I did not find the opportunity of ascertaining and recording which crosses were affected in this way. I continued my experiments in succeeding years, in the way of cross-breeding, but kept no record of them. I only know that some crossed with longiflorum and others, completely ruined the shape of many of the flowers. Among all my seedlings there is not a pure white, although alium was fertilized with speciosum, and, as is generally supposed, the female parent has a prevailing influence on the progeny. There was not even a pink spotted one like punctatum, as one would have supposed there would have been. Some years subsequently, I raised several whites, and one long, large flower, quite distinct, but it accidentally got thrown out of the pot when in a dormant state. I also raised a very distinct variety, with flowers about half-way in size between those of chalcidonicum and speciosum, with stems more densely clothed with leaves, and the petals bluish-white, with pale lilac-rose spots. This I named "Eva." It increases slowly, and is still rare in collections, but it is a beautiful variety. As regards improvement, I do not expect much from the yellow and red kinds crossed with each other. If, however, a handsome lemon, or buff, or buff-spotted could be produced, it would be an acquisition. The red and yellow are strong; but it is only the clear and delicate white grounds that are desirable. All may be crossed with speciosum and auratum, by which the size may be increased.

THE VARIATION OF LEAVES.—The variation of leaves occurs so commonly that we do not often inquire into the cause of it. To the physiologist, however, the question of the origin of variegation is of considerable importance, and it certainly is not less so to the horticulturist, whether pleasure or profit be the main end of his endeavors. The normal coloring of leaves, whatever it may be, does not come directly into the consideration. A plant may produce red, purple, bronze, or blue leaves, and they may be as proper to it—that is to say, as natural and necessary—as any of the tints of green that more commonly prevail in leaf coloring. By "variegation" must always be understood abnormal coloring, the most common forms of it being bands, blotches, edgings, and splashes of creamy white, or olive grey, or yellow, of several shades more or less intermixed with the normal green common to the plant when it is not variegated. The variations of variegations are endless, but there appears to be a common cause for them all, that cause, whatever it may be, operating in a variety of ways, so that in one case it results in white, gray, or creamy colored variegation; and in another case in amber, gold, yellow, or even deep orange colored variegation; the self-same species of plant being, perhaps, the subject of its diverse operations. The ivies, hollies, and Japanese euonymus afford examples familiar to all, and are admirably adapted as material for the study of the subject. A vague application of the term "disease" is commonly accepted as explaining the cause of variegation. Notions that pass current in the world are more often sound than otherwise, and there is very much to be said in behalf of the explanation. Still it remains to determine the nature of the disease, and, if possible, give it a name. In one view of the case we may be disposed to regard it as a kind of chlorosis, and in another as unmistakable etiolation. Usually it causes, or is accompanied, or is followed by a diminution of the vigor of the plant, but some variegated plants grow as freely as others of the same species that are not variegated, and, generally speaking, the vigor diminishes in proportion to the degree of etiolation, so that a growth purely white cannot be propagated, and soon passes away. That the variegated portion of a leaf has less vigor than the green part is suggested by the often wrinkled appearance of it, the result of a more rapid growth of the green centre than the variegated margin. This suggests that the defective assimilation, the result of debility, is the primary cause of variegation, a view of the

case largely supported by the experience of cultivators, who have often produced variegation by starving a plant, and effaced variegation by liberally feeding it.—*The Gardener's Magazine.*

A BEAUTIFUL HOUSEHOLD PLANT.—The Calla Lily, roots of which may be procured of any florist, is one of our finest plants for house growing when properly treated. The best method we have tried is to procure an earthen jar—suitably decorated on the outside, if desired, by painting or pasting on of frieze or flower pictures, or by a paper open-work covering. In this place rich mould some five or six inches deep, and in this set the calla plant. Now put on the top of this mould a layer of clean, coarse sand about two inches deep, and on top of this some small pebbles. Then fill the jar with water, and replace as evaporated, so as to always have the water several inches deep above the pebbles. Place in a warm and sunny window, and the plant will throw up large, luxuriant leaves, to be followed by the magnificent bloom. What is still better, the flower stalks will be sent up in a succession so as to afford a nearly continuous series of flowers. A few windows introduced into the water will usually thrive without further care, and afford a pleasing study.—*Scientific Farmer.*

GONE TO NO LIKEWISE IN SHEEP.—Rabelais tells a story about Panurge's sheep; how one sheep in the flock led the whole of them. The *Boston Commercial Bulletin* tells a story how a leading merchant of Boston was dissatisfied with his son because he had G. T. T. to raise sheep. "I shall send my secretary after him to bring him back." But after waiting a six months the secretary never returned at all. The fact leaked out that the secretary, a most trusty and far-sighted man, had become so fully satisfied with the business of sheep-raising that he remained in Texas, joining his patron's son in the management of a sheep and cattle ranch.

—To kill worms in soil containing house plants, slice potatoes thinly, and lay on the soil. In a few hours the worms will accumulate on the slices on the side next the soil, when they may be carefully removed and plunged in boiling water and the process repeated.

POISON FOR VERMIN.—A California State university professor has been poisoning the troublesome squirrels, which are a great pest there, with bisulphide of carbon. This fluid is obtained by burning charcoal in vapor of sulphur; and when poured out evaporates rapidly and forms a vapor heavier than the air, and which consequently is forced down into the ground. When poured into the mouth of a hole it is forced down, thus strangling everything which inhales it. The roots of plants may be destroyed in the same way.

The Kennel.

TO CORRESPONDENTS.—Those desiring us to prescribe for their dogs will please take note of and describe the following points in each animal:

1. Age. 2. Food and medicine given. 3. Appearance of the eye; of the coat; of the tongue and lips. 4. Any changes in the appearance of the body, as bloating, drawing in of the flanks, etc. 5. Breathing, the number of respirations per minute, and whether labored or not. 6. Condition of the bowels and secretions of the kidneys, color, etc. 7. Appetite; regular, variable, etc. 8. Temperature of the body as indicated by the bulb of the thermometer when placed between the body and the foreleg. 9. Give position of kennel and surroundings, outlook, contiguity to other buildings, and the uses of the latter. Also give any peculiarities of temperament, movements, etc., that may be noticed, as of suffering, etc.

FIXTURES FOR 1878—BENCH SHOWS.

Boston Kennel Club Show, Boston, Mass., March 26, 27, 28 and 29. Dr. E. J. Forster, Secretary.

Baltimore Kennel Club's Show, Baltimore, Md., April 23, 24, 25 and 26. L. R. Casard, Secretary.

The Westminster Kennel Club (New York) Bench Show, Gilmore's Garden, May 16, 17, 18 and 19. Dr. W. Seward Webb, Secretary.

For Forest and Stream and Rod and Gun.

ACROSS COUNTRY AFTER THE HOUNDS.

SATURDAY morning, March 17, 1877, was the most beautiful for the chase that huntsman ever witnessed. Its temperature was mild; the dew full and heavy; the sky cloudless; the sun bright; the atmosphere still and spring-like. We were up and ready for the sport by early dawn, and had scarcely breakfasted before up rode a couple of fair Dianas, splendidly equipped, and splendidly mounted: one rode an imported Warminster, the other an Exchequer—two finer animals never before engaged in such sport. A brunette and blonde, just emerging from sweet sixteen, were the graceful and faultless riders, taking more delight in sporting over the hills than ever Darian maid. Their escort was superbly mounted on a lineal descendant of imported Fly-by-Night, and the famed hunter, Lord Elgin, gracefully preceded in advance. Just as the sun arose we moved off and made for the grounds most even and best adapted to the sport for female enjoyment. We rode several miles before we struck, when at last Brodnax and Lance gave mouth. The trail was cold, too cold to be followed by united efforts, and each dog breasted wide in earnest search for it. We patiently followed the hounds, and after a while the trail improved, leading us to the Roanoke, four miles from Gaston, and the whole pack closing in, after a mile's beautiful working, off they burst with an electric vim, extending to our fair riders. I stood still for a moment to witness the leaping of a fence close by. It was approached in advance by the graceful brunette, and cleared by her horse without hitch or pause; closely followed her blonde companion, whose horse had partaken too freely of the excitement, had become rather hard to manage, leaped at an adjoining pannel in fine style, slightly disconcerting the rider. She soon, however, recovered, and dashed up to her fair companion, taking position by her, and flying with her through an open field of half mile breadth. This space was between

the two thickets, in which the fox alternately sought safety. When he was closely pressed in his efforts to run a stretch, he would return to one or other of these thickets, and stealthily creep out. The chase was continued for ten minutes, with repeated doublings, in a circumference of half a mile, when the fox at last made a desperate effort to run a stretch. He took the public road, in full view of the pack, and held on well for some distance. The pack had, however, taken the heels and bottom of the fox, and he fell a sacrifice to his own self-reliance upon both. Our fair companions unluckily followed my suggestion at this juncture, and remained on the opposite side of the swamp, taking position to witness the fox repeat his runs across the open field to the other thicket. They were, however, soon up, and with cheeks reddened by the sport and tongues loosened by its excitement, they, in huntsman-like style, each described the chase, and related every personal incident. While thus merrily recounting them, one of the party rode up to us and informed us that five dogs had gone down the road after another fox. We soon discovered that the peerless Vanity was of the number of five of our best runners. We would have gone in search of them but for our convictions that as it was a gray the sport had ended. Our conjectures were right, for they soon caught up with us, giving evidence of a successful result, which we afterward learned was the case.

I presume that Col. Skinner examined the kennel of Gen. W. H. Jackson, at Bellemead, Tenn., when there last fall. If so, he had a good opportunity of seeing in it several Byron hounds, sent to the General from this section. Velocipedes, Gen. Starke sent him; and I, Leader, full brother of the peerless Vanity. Though fine and well trained fox hounds, they were not the speediest of our packs. T. G. S.
Gaston, N. C.

RED AS A USEFUL COLOR FOR SETTERS.

THE courteous criticism by Mr. Justus von Lengerke, of my letter to the FOREST AND STREAM, on the "Colors of Setters and Pointers," leads me to express my views a little more fully in regard to the reasons why red is a practically useful color for setters, and in some instances highly preferable to any other. In considering the manner in which color contributes to or militates against the usefulness of dogs in the field, it appears evident that no one color is superior to all the others in all respects. One's taste for any particular color is very apt to be influenced by the attachment he has or may have had for a dog of that color. I own to an especial penchant for orange and white, the colors of old "Cora," a setter that has been my companion and helpmate in many a day's sport during the last dozen years.

And when shooting over a thoroughbred Gordon setter I have thought that no colors could be more beautiful than the rich black trimmed with tan, with the chest white. In fact, having had so much sport shooting over dogs of various colors, I like them all.

Leaving aside the matter of taste, let us confine ourselves to the subject of usefulness. As a general rule, it may be true that "no good dog is of a bad color," but there are many exceptions to this rule. As, for instance, white would be a bad color for a duck retriever, no matter how good the dog might be in other respects.

Red has been disparaged as less useful than other colors, because not so showy in the field, and little has been said as a refutation of the charge, although the high favor in which the color is held is a silent one. All those owning dogs of this color have probably learned by experience that they are not sacrificing any of their sport by the gratification of their taste in this respect. The special instances of this color lacking some of the advantages of others are more than counterbalanced by the many instances where it excels in usefulness by contributing more to the day's sport, if the dogs are used as the majority of setters in this country are for all sorts of work incidental to shooting different varieties of game. I appreciate the advantages of a solid white color in cover; yet, when cock-shooting here in Maine, I would put a bell on a dog of any color, for the covers are, as a rule, very dense, and even a white dog could not be seen far away. For snipe shooting, white would be for me the worst color, for the very reason that it is so showy, and could indeed be seen a half mile away in a snipe meadow, not only by the sportsman, but by all the birds in the vicinity, whether snipe, ducks, plovers, curlews, hawks or herons.

Mr. Von Lengerke says that for a snipe dog he prefers one that "is not afraid to range off half a mile under certain circumstances," and asks "How would you see a dog at such a distance on meadows, full with yellowish brown reeds, etc.?" I trust that I never shall see a dog of mine hunting "such a distance" from me when on the meadows. Most dogs are not afraid to range off a great deal further than their masters desire. Under ordinary conditions, two hundred yards each side of my route is as far as I should wish the dogs to range; and if this extent of ground is hunted over at all thoroughly, I can leisurely keep up with the fastest of them. In open shooting, I seldom have any difficulty in seeing a dog of any color as far away as I care to have him hunt, and yet I do not think that my method of working dogs in the open could be called "close hunting."

There are exceptional occasions for allowing a dog to range beyond the limits specified, particularly when "chicken" shooting, but I should never wish the limit extended to a half mile, most especially when following the dogs afoot on a snipe meadow. Now, let us see in what way the red dog may be preferable when snipe shooting.

For this purpose I consider the color an eminently practical one, for the same reason that Mr. Von Lengerke considers it the worst of all. And that is, because less showy. I have no difficulty in seeing dogs of this color, although I might were they a half mile away; but I never intentionally allow them to range off so far when on the meadows. Easily seen by the sportsman at any reasonable distance, instead of being a showily contrasting color, it is one that, in a measure, assimilates with that of the surrounding landscape and gives less alarm to any observant game. And even when noticed by game, a red dog seems to give less alarm than one of any other color, which I believe to be in a great measure owing to its resemblance to the colors of wild animals, and notably the red foxes.

A red dog seems a positive attraction to waterfowl, and, impelled by curiosity or some peculiar fascination, they will

swim toward the dog, if no man or other suspicious object is to be seen. In some localities I have found sportsmen who would not care to kill plovers or any such inferior game when snipe-shooting, nor even exert themselves for a shot at ducks. But from Maine to Maryland, along the coast, game is nowhere to be found in such great abundance as to cause a sportsman, when snipe-shooting, to be indifferent to the opportunity for a shot at ducks, "bay snipe," plovers, etc., whereby he may add much to the sport and bag of the day. This fact is especially appreciated by those who shoot over the much frequented grounds near any city, where a thorough knowledge of the locality, good dogs and straight powder are needed to insure good sport. At such places the birds are generally too much hunted to become fat and lazy, and to obtain much shooting one must needs devote attention to every sort of game met with. As an illustration, I will give the result of a day's shooting over a brace of red setters on such grounds.

The birds were wild, and all killed were at long range. The few snipe found were on closely cut marsh, where the cover was sparse and they would hardly lie to the dogs. Well, besides the eight snipe bagged, there were twelve "grass-birds" (pectoral sandpipers), which were flushed and shot singly, affording quite as difficult shots as the snipe, and they are nearly equal to the latter delicious birds when served at the table. Several marsh-hawks, so destructive to our game birds, were hunting over the same grounds, and seeing one skimming over the marsh toward me, I dropped the dogs by signal and concealed myself in a ditch. The hawk did not notice the dogs until passing close over one of them, when it rose abruptly in the air, but kept on its course, and immediately after fell to my shot. After this I had a shot at some ducks, whose presence was betrayed to me by one of the dogs. I was walking parallel to a stream and a hundred yards from it, when one of the dogs came to a full stop on its bank. The attitude and waving stern told me that something of especial interest had been found. I immediately dropped the other dog, and walking to the stream, flushed five dusky ducks, near enough to drop one with No. 9 shot, the dog having been standing in full view of them while I was approaching. I do not doubt that the first sight of a dog of another color, even at a greater distance, would have instantly put the ducks to flight. Then there were bagged seven sora rails, three bitterns and a woodcock.

The soras do not appear to be much alarmed by a dog of any color, nor even by man. In fact, one of these rails was taken alive and is now living in an aviary. I had just killed a brace of snipe, and made one of the dogs remain where he dropped to allow the other, a young bitch, to retrieve the birds, this being her first season in the field. One bird was brought in, and while searching where the other fell, she seemed greatly excited over what I supposed to be the crippled snipe running. Encouraging her to fetch, she soon brought to me a live sora, held tenderly by the wing, and entirely uninjured. Had I hunted with white dogs on that day I believe that I should not have obtained more than one-fourth the number of shots that I did. The cock was shot in an alder cover thick enough to render even a white dog invisible at twenty yards distance, and it mattered little then what color the dogs were. In such a place I depend more upon my ears than my eyes to inform me of the presence of the sought-for game. This day was one of many spent on similar grounds, where the sport to be obtained does not depend entirely, although it may chiefly, upon such game as the dogs will point. Even when going to the shores or marshes, especially for "bay-snipe" or plover shooting, I like to be accompanied by one of my dogs, which often proves very useful in retrieving birds from the water or inaccessible places, if in no other way.

Yet many a sportsman will not take his dog on such an excursion, lest the game be frightened by the conspicuous color of the animal. On many occasions, besides, when shooting over dogs, have I had occasion to be glad that I had a red one to take with me as a useful companion, when a black or white one would have been left at home. Of course, setters are not generally considered as retrievers, although in this country retrieving is considered an indispensable part of their education; and when collecting I have used one of my setters to retrieve all sorts of birds, from ducks and gulls to the puffins and little "sea-pigeons" or black guillemots, although I would not make a practice of sending a setter from surf-beaten ledges into icy northern waters. And the same dog will retrieve a warbler from a swamp or a partridge from a briar-grown ditch equally well. All the arguments in advocacy of the idea that retrieving injures a dog's nose, I regard as purely theoretical. Of course, this last-mentioned instance of the advantage of having a dog of a color that is not too showy is a special case, for few sportsmen devote any time to the study of ornithology, and few ornithologists use dogs when collecting, and I state it merely as an additional practical purpose for which the red color is preferable to me. At one time my constant companion in field and forest was a pointer whose predominant color was white, but I find that all birds seem less alarmed by a red dog than by one that is mostly white, whether game birds or other sorts.

In speaking of shooting in cover, Mr. Von Lengerke says that a white dog "would need no bell to tell his whereabouts." This would depend upon the nature of the cover, the good and bad qualities of the dog, and his training. The remark would apply to an open cover and a well-broken dog that could always be kept under control and made to hunt as closely as desired. It is only for special work, such as shooting in cover, that I should ever consider white a color desirable for its usefulness. And the advantages of the color in one respect are greatly overbalanced by its disadvantages in various respects. While the white may be useful in color, I believe the red is more so for all sorts of shooting, and preferable to all others on the marshes. Perhaps I ought to white-wash this statement, or the dogs, for those sportsmen whose power of vision is imperfect. As I keep dogs for use and not for ornament, I would never suffer any sacrifice of field qualities in breeding for any desired color, nor is this necessary in obtaining that most desirable combination—usefulness and beauty. At least I have not found it so. An animal whose beauty is owing to high breeding, and by beauty I mean not only color, but also form, texture of coat, etc., will, if well-bred, prove to be the one that will afford the most pleasure to its master. EVERETT SMITH.

BLUE SETTERS.—Mr. Ethan Allen takes me to task for stating that blue is a color unknown to either setters or pointers, except in name, and asserts, if I understand him aright, that he can show me "a blue, white and tan setter," which is "not a black roan, but indigo blue." If any of this dog's progeny are of a lighter shade I should like to obtain a brace that are sky-blue. I am perfectly familiar with the bluish reflections to be seen on the black coat of a Gordon setter, but does Mr.

Allen seriously mean to say that he has a setter, the natural color of whose coat is actually blue? EVERETT SMITH.

COLOR OF DOG AND SIZE OF GUN.—Backed by thirty years' experience with dog and gun, I offer my opinion on two points discussed in your journal. The color of setters and pointers is very much more than a matter of taste. I have too often been afflicted by walking around a field, searching for a lost dog of one of those dingy colors, standing motionless and invisible on his point alongside of some bunch of weeds the same color as himself, not to look at the matter of color from a utilitarian point of view. A black dog is the easiest of all to see; a clean black and white next. An entire white at a distance, in some light, is difficult to see when motionless. Those grizzled fellows called "beltons" are the worst of all.

On the question of the best size and weight of a gun for general shooting, there appears to me to be no great difference between 10 and 12-bore. Either, to be most effective, should shoot, with safety and without recoil, $\frac{1}{2}$ drs. of powder; and it will be difficult to make it do this lighter than 8 lbs. Some years ago I had a gun made by Clarke & Snider, of Baltimore, for general utility, and which I believe to be unsurpassed for such shooting. I gave the following order: Barrels, of very best English twist (the best material ever yet used); gauge, 10 bore; length of barrels, 30 inches; weight, 8 $\frac{1}{2}$ pounds. Here is the kind of shooting I sometimes get: A day in December last—First shot, a mallard, killed dead 50 yds.; second, a ruffed grouse with each barrel at 45 and 60 yds.; third, a wild turkey at 70 yds.; fourth, a blue wing at 95 to 100 yds. (and killed dead). Charge, $\frac{1}{2}$ drs. powder, 1 $\frac{1}{2}$ oz. No. 4 shot. Then changing to 3 drs. of powder and 1 $\frac{1}{2}$ oz. No. 6 shot, killed eight quail, and on my return, a ruffed grouse; missed four shots. I think a 6 lb. 16-bore can't be made to do that sort of work. M. G. E.

Blacksburg, Va., Feb. 22, 1878.

Discussions as to colors of dogs, we think, depend very much on the idiosyncracies of people's tastes. Color in a dog may, however, mean a good deal as to breed. Still the question of colors can never be decided. We do not suppose that a black dog or a white one would suit all the eyes of sportsmen any more than would a red one. It is strange to know how many people are affected with what is called Daltonism. To certain eyes a red dog is not red, and even some people, as may be seen in this journal, never have seen a cerulean colored dog, otherwise called a Blue Belton.

EIGHT LUNELY LITTLE DOGS.—One might try long and not write a more pathetic paragraph than the one which appeared in last week's *Sun*, which was as follows: "There was a little strip of a mourning band over the cage of the eight performing dogs in the Museum at 23 Bowery. A card said that the dogs would not perform because their mistress, Mme. Benjamin, is dead. The dogs whined and were restless. Mme. Benjamin was once a celebrated danseuse. While performing, her dress took fire, and she was disfigured for life. Being unable to obtain employment, she, with wonderful patience, trained her dogs. Mme. Benjamin was buried by the employees in the Museum."

A PUNCTUAL DOG.—There is a dog in this city which appears to be gifted with sufficient intelligence or reasoning power to enable him to tell the time of day and night, but how he does it is something that is past finding out. The dog is the property of a saloon keeper on one of our principal streets, and is a very common looking animal, being a pretty fair specimen of the typical "yaller dog." He loafs about the saloon from the time his master goes on watch (5 P. M.) until 8 o'clock, when he invariably pushes open the door and goes home. This I have seen him do a number of times, yet I have never thought to notice whether he looks at the clock or not. What is remarkable about it is the fact that he never misses going precisely at 8 o'clock—not two minutes before or after the hand touches the exact spot. This he does regularly, night after night, and it matters not what may be engaging his attention at the time, this "yaller dog" is never seduced into staying beyond his regular time. Persons who frequent the saloon positively assert that the dog does look at the clock, and that his departure is governed entirely by the position of the hands of that instrument.

Perhaps some one who has studied the natures of these intelligent brutes will rise and explain by what probable method that dog learns when the hour of eight has arrived. I might add that the clock does not strike. AMIGO.

Sacramento, Cal., Feb. 9.

PASSENGERS AND DOGS FOR BOSTON BY THE FALL RIVER LINE.—For the benefit of those of your readers who may wish to attend the coming Bench Show in Boston this month, I beg to say that this line will sell tickets to Boston and return at \$5 for the round trip. No charge will be made for dogs to be exhibited. GEO. L. CONNOR, Gen. Passenger Agent.

FINE DOGS FOR BOSTON.—Mr. P. H. Morris will exhibit at the Boston Bench Show the flower of his kennel. Lark, the champion; the field trial Czar, by Champion Lester, out of Champion Petro; Sultan, by Champion Lester, out of the pure Laverack Peeress, and Idy, by Champion Rob Ruy, out of Mr. Whittman's Mell.

BALTIMORE BENCH SHOW.—Premium list of the Bench Show to be held at the Masonic Temple, April 23, 24, 25, 26, under the auspices of the Baltimore Kennel Club:

DIVISION 1—SPORTING DOGS, CHAMPION CLASS.

Class 1—English Setters—Imported and Native—For the best dog, \$50; for best bitch, \$50.

Class 2—Irish Setters—Imported and Native—For best dog, \$50; for best bitch, \$50.

Class 3—Gordon Setters—Imported and Native—For best dog, \$50; for best bitch, \$50.

Class 4—Pointers—Imported and Native—For best dog, \$50; for best bitch, \$50.

OPEN CLASSES.

No dog or bitch is qualified to compete in classes 5, 6, 7, 8, 9, 10 and 11 that has ever won a first prize at Chicago, Baltimore, New York, St. Louis or Boston Shows.

Class 5—English Setters—Imported, or their progeny—For best dog, \$30; for second best dog, \$20; for best bitch, \$30; for

second best bitch, \$20; for best dog puppy under 12 months of age, \$15; for best bitch puppy under 12 months of age, \$15.

Class 6—English Setters—Native—For best dog, \$30; for second best dog, \$20; for best bitch, \$30; for second best bitch, \$20; for best dog puppy under 12 months of age, \$15; for best bitch puppy under 12 months of age, \$15.

Class 7—Irish Setters—Imported or their progeny—For best dog, \$30; for second best dog, \$20; for best bitch, \$30; for second best bitch, \$20; for best dog puppy under 12 months of age, \$15; for best bitch puppy under 12 months of age, \$15.

Class 8—Irish Setters—Native—For best dog, \$30; for second best dog, \$20; for best bitch, \$30; for second best bitch, \$20; for best dog puppy under 12 months of age, \$15; for best bitch puppy under 12 months of age, \$15.

Class 9—Gordon Setters, black and tan or black, white and tan—Imported and Native—For best dog, \$30; for second best dog, \$20; for best bitch, \$30; for second best bitch, \$20; for best dog puppy under 12 months of age, \$15; for best bitch puppy under 12 months of age, \$15.

Class 10—Pointers, large—Imported and Native—Dogs 55 lbs. and upward, bitches 50 lbs. and upward—For best dog, \$30; for second best dog, \$20; for best bitch, \$30; for second best bitch, \$20.

Class 11—Pointers, small—Imported and Native—Dogs under 55 lbs., bitches under 50 lbs.—For best dog, \$30; for second best dog, \$20; for best bitch, \$30; for second best bitch, \$20.

Class 12—Pointer Puppies—For best dog puppy under 12 months of age, \$15; for best bitch puppy under 12 months of age, \$15.

Class 13—Chesapeake Bay Dogs—For best dog, \$25; for second best dog, \$15; for best bitch, \$25; for second best bitch, \$15; for best dog puppy under 12 months of age, \$10; for best bitch puppy under 12 months of age, \$10.

Class 14—Irish Water Spaniels—For best dog or bitch, \$20; for second best, \$10.

Class 15—Retrieving Spaniels, other than pure Irish—For best dog or bitch, \$20; for second best, \$10.

Class 16—Clumber Spaniels—For best dog or bitch, \$20; for second best, \$10.

Class 17—Cocker Spaniels—For best dog or bitch, \$20; for second best, \$10.

A CANOE CRUISE THROUGH LONG ISLAND SOUND.

[The writer would be pleased to correspond with any canoeists, and to answer any inquiries from any one interested in canoeing. Letters may be addressed to "Jersey Blue," at this office.]

One pleasant morning in last August we launched our boat on one of the rivers running into Staten Island Sound, for a cruise through Long Island Sound. Our craft was of the Nautilus model of canoe, 14 feet long, 23 inches wide, and 9½ inches deep amidships, carrying mainsail, foresail and jib, and weighing, all loaded, 139 lbs., divided as follows: Boat and rigging, 80 lbs.; camp outfit, 15; provisions,

25; clothes, 13. In the bow we carried a frying-pan, coffee-pot, kettle, etc., aft of which was a tin box containing sugar, coffee, rice, etc., on top of which lay a woolen blanket. On the sides of the well were strapped a rubber blanket and apron, an oil-skin coat and a rubber cap, and aft of these were hung two tin pockets, one holding lunch for the day, and the other guide book, tide tables, yacht signals, postal cards, cord wire, white lead tacks, knife, etc. Aft of the well were stowed a canvas bag of clothes, a bag of ship-bread and other articles, while a tin tray, hung under the after deck, kept our books secure and dry. A bottle of ink, a pen and tooth-brush, completed our outfit. Thus equipped we started off, and, after stopping a little further down for a final good-bye, the Captain waved his hat to the man at the wheel, fixed both feet against the foot-board, and the crew with a cheer settled down to a slow, steady sweep, which soon left our friends behind, and we were fairly started on our voyage, alone in (to us) unknown waters. Paddling on through the Kills and past Staten Island, then across the upper Bay, we reached Governor's Island at 3:30 p. m., where we stopped to take in all sail, in order to have a clear view through the crowded East River; then pulling into the Buttermilk Channel we felt the full force of the ebb tide. Paddling on with difficulty we passed under the bridge without striking top-masts, and after two hours were only at the Navy Yard. Here we stopped alongside the Monongahela, talking with the officers and men who were all idling at the vessel's side, the day's work being just over. At slack water we started on, and soon the stars came out, and it was very quiet on the river. Off Tenth street we hailed a canoe, which proved to be the "Bessy," of the N. Y. Canoe Club, with the Commodore on board. After comparing notes we separated, and, continuing our way leisurely, enjoying the summer twilight, reached Hallett's Point at 8:30, where we waited for flood tide until 9:30, when, the moon being up, we started on through Hell Gate. The passage was most beautiful and exciting; all alone in our light boat, not a vessel in sight, under the bright moonlight, and the water boiling and seething like an immense caldron as we shot through on the top of the flood tide. Then came a hunt for a camping ground. Landing on Riker's and Berran's islands, both proved so muddy we could not get the boat ashore, and not until 11 o'clock did we find a safe harbor at Bowery Bay. Securing the boat and spreading our blankets near—too tired to get supper—we were soon asleep, in spite of many mosquitoes, the only time they troubled us on the cruise. Rising before daylight we took a hasty breakfast, and pulling on, passing the Sound steamers just coming in, made Whitestone, where we stopped to report our yacht, and to get news of the race of yesterday between Courtney and Riley; then taking in fresh water we ran under main and fore before a light breeze, keeping near the north shore; now running in some harbor, then among islands, then off to hail some yacht, or stopping to chat with a fisher, until about five o'clock, when a thunder storm came up suddenly, making us seek shelter on Long Neck Point, the handsome residence of Mr. Colander. Landing near his boat-house we soon had all snug under hatches, and the storm being soon over but the Sound rough, we obtained permission to stay over night in the boat-house. Moving in we went to housekeeping, and spread our supper on a bench; then, after posting our log, we sat for some time watching the rainbow, reaching from shore to shore, and the Sound still covered with white caps, until at dark we turned in on the floor. After a good sleep we had a swim before breakfast, then off at seven we found the wind ahead. Paddling on we stopped at Cedar Point and took dinner with a picnic party we met there; then we ran into Blackrock Harbor, past Bridgeport and on to Stratford Light, where we sighted the first porpoises we had seen (very near the boat); then on across the mouth of the Housatonic, until at dusk we struck a rocky shore, along which we groped for two hours before finding a landing at Merwin's Point. Next morning we pulled on past Savin Rock, and at 11 o'clock we reached Yale's boat-house. To describe the house and navy would take too long, but both deserve mention. While here a Yale man came in in an Adirondack boat, who left New York shortly after us, just returning from a trip to the Adirondacks. We compared notes and examined each other's boats; then, after a bath and some repairs to our toilet, our crew started for a cruise ashore for several days. Returning to New Haven Monday morning we found a stiff breeze off shore and a chop sea. Running out of the harbor under foresail, with peak lowered, we raised mainsail off Five mile Point, and ran all day before a stiff breeze and high sea, until at night we landed on Cornfield Point, at a deserted fishing camp. Next morning it was blowing hard, with rough water. An hour's sail brought us to Saybrook Light, where a breakwater of rip-rap runs out for some distance. Not knowing the locality we kept close in shore, expecting to find a passage back of the Light, but finding none we had to beat out around the breakwater. A little way out we felt the full force of wind and tide; the waves ran higher than the mast-head, and the situation soon became critical. We could make no headway against the wind, and were drifting on the rocks. Once we were in the trough, beam on, but letting fly both sheets we seized the paddle and got her head on just as two large waves broke over her. Rolling down on us they struck the crew full in the breast, drenching them and nearly swamping the boat, while the foresail, flapping in the wind, tied the sheet in knots, which cut the face and eyes like a whip, nearly blinding us for the time. We were now near the end of the breakwater, and there were openings among the rocks at intervals. Making for one of these, about as long as the boat, but with one rock a foot above water in the centre, we hoped to jump out and lift the boat over before she was stove; but before we could land a wave struck us underneath, lifting us over all obstacles and dropping us gently in still water to leeward. It all passed so quickly that the danger was over before we fairly realized it; but looking at where we had passed we felt how near our boat had been to destruction. Pulling rapidly ashore we were met by the keeper and some persons on the beach who had been watching us, and after bailing out the boat and securing her we were soon seated near the light-house fire, drying out and enjoying our second breakfast. The wind continued to rise, and the breakers rolled in over the bar in a most inviting manner, but we had had enough of the perils of the deep for that day.

After a stroll through Saybrook, we spent the afternoon in putting things in order and in washing our wardrobe. We spent the evening reading Tom Sawyer in the light-house parlor, and slept there all night. During the night the wind subsided, and in the morning it was clear, with light wind and smooth water. Paddling and sailing alternately, we passed New London and Stonington and made Watch Hill at 5 p. m. We made our first landing in the surf here, and though it was

very light we shipped some water, and after getting ashore found we could have landed on the west side in still water, at the very door of the boat-house. The light-keeper, Captain Crandall (an old Arctic whaler, and looking like Neptune himself, with his long gray beard), was soon on hand, attended by his six blooming daughters, and he helped us to carry our boat to the life-saving station erected by the Seamen's Aid Society, and there, surrounded by relics of the ill-fated Metis, we heard from Captain Jored the story of her loss in a summer storm five years before on this spot. Going up among the hotels we procured a file of New York papers and settled down to read and listen to a hand playing our old college songs. After spending the evening with some friends we spread our blankets under the lee of a surf-boat on the beach, and with the wind northeast and the promise of a rainy day, we went to sleep to dream of the Metis. The next morning we were awakened by a lobster fisher coming down to his boat. Taking an early leave of Captain Jored (who gave us a life-preserver from the Metis, which made an excellent seat) we hoped to make the thirty-two miles to Newport by night; but though the day was fine and the Atlantic smooth, with only a gentle roll, we had wind and tide dead against us. Three hours' paddling brought us only nine miles; and, finding the wind rising, we put into a small creek connecting a pond inland with the ocean, thinking to rest awhile. Here is a small settlement called Inonochoutaug, consisting of about twenty frame cottages, called "camps," occupied in the summer by people from the surrounding country who come to enjoy the bathing, which is very good. We landed near a "camp" occupied by three fishers, expecting to start on soon; but, the wind rising, the owner of the "camp," Captain Peckham, told us we were in for a "norther," and would have to stay some days. Then, seeing we were a stranger there, he kindly offered us a room in the camp, and with his help, placing the boat in safety, we moved our traps and provisions, and were soon established by the fire helping to get dinner. Soon it began to rain, and being short of reading matter, and knowing no one, we were very lonely, but every one was very kind and hospitable, and soon we were completely at home. When the storm was over and we were reconciled to what at first seemed like imprisonment, we began to appreciate the beauties of Inonochoutaug. It being time for the equinoctial, we decided to go no further east, and it was not without regret that after five days we turned our back on Inonochoutaug and started west again. The day was perfect, no wind, the ocean smooth as a mill-pond, and just cloudy enough to break the heat of the sun. Starting at 6:50 a. m. at slack water, we paddled back past Watch Hill and Stonington, making the twenty-five miles to New London by 12:30. Lifting our craft aboard a propeller, we went for a stroll around the quaint old town, returning on board about 4 o'clock. About 6 we left the dock, passing a number of yachts coming in as we went out. After playing cribbage for a while, we sat up until late in the pilot-house, turning in on the messroom floor until 5. When we rose we were off the Stepping Stones and two hours' run brought us through the gate and up to Pier 38 East River, where we launched at 7:30 on the last of the ebb. Our provisions were nearly gone, but we had enough for breakfast and lunch, and hoped to make home early in the afternoon, so we did not wait for fresh supplies, but pulled around to Jersey City where we hailed some friends on a passing ferryboat, and then started for the Kills against wind and tide. Looking for our breakfast we found it spoiled by salt water, accidentally, and had to go without until (after three hours' hard work against a chop sea, the pest of canoeists) we made New Brighton at 12, completely exhausted. A rest and a visit to a baker's soon revived us, and we pursued our way, with the tide against us at every turn, until after a hard and tiresome day's work we made port at 3:30 p. m., and, housing the boat, we reached home soon after, in the concluding words of our log, "dirty, dead broke, tired, and mess-chest empty, but happy." Wherever we went our boat excited curiosity, and we never stopped long before a number of people came to "see the little boat from beyond York," Jersey being a *terra incognita* to many. No matter how small, old, and battered a boat a man might be in, he would invariably caution us to keep "very close in shore in that thr." The first inquiry on landing was, "What yer come from in that thr?" and when told, the answer often was an incredulous "Naw yer didn't;" but we met with a kind reception everywhere, and polite answer to our questions, the only rudeness shown us being by Brooklyn boys, who stoned us from a dock where we took shelter. We have learned several precautions from experience, each being impressed on our mind through some discomfort caused by neglect of it, and we give them for the benefit of other canoeists. Never start for even a day's paddle without provisions, fresh water, blankets and reading matter, for with them you can pass the time almost anywhere, and you may be caught in a storm and have to take shelter where you can obtain neither. Always keep the arms and feet protected from the sun when wet with salt water, as the combined effect of the two is very painful. If possible, find a camping place before sunset, or you may have to grope your way for miles in the dark, when tired, along some rocky shore or mudflat. Always carry your paddle where you can use it instantly in case of accident, and have sheets and halyards coiled down out of the way, and the apron so secured that you can free yourself from the boat instantly. Always look out for the tide when camping, or you may be high and dry in the morning, or driven from your bed at night. We had to travel all day without a backboard, on a previous cruise, the tide rising and carrying it off at night. A good map is necessary, but clumsy and expensive. We trace ours in portions a foot square on tracing cloth, and carry them in easy reach, while the original map is wrapped in oilcloth and stowed forward to be consulted on shore. We also carried a table of distances written out from the map, which was very convenient. If our lug should aid but one to the number of canoeists we shall be well repaid, and we hope all our readers who try it may enjoy it as much as we do, and, if storm-bound, may find us safe a haven and as pleasant friends as we did at Inonochoutaug. JERSEY BLUE.

CHICAGO BARREL CLUB.—The officers for the ensuing year are: Pres., Wm. A. Angell; Vice Pres., T. S. Faintleroy; Treas., F. L. Stevens; Sec., Leonard E. Rehold; Capt., L. D. Powers; Coun., Wm. W. Young; Lieut. Com., Chas. S. Gardner; Ensign, Fred. Swift; Board of Managers: Chas. S. Gardner, E. F. Orsini, P. B. Hamilton, Henry Tift, L. D. Powers.

—The Electric Boat and Athletic Club, of New York, at their annual meeting, elected the following officers: Pres., Jos. C. Vetter (re-elected); Vice Pres., Magnus Winter; Treas., P. R. Eppelsheimer; Rec. Sec., John W. Lewerth; Fin. Sec., Louis Siebert; Trustees, Rudolph Bollman, John Finkel; Superintendent, George Hartwig.

CALIFORNIA.—San Francisco, Feb. 12, 1878.—A match for four-oared boats has been arranged between the Ariel and California. The crews of the Ariel, of this city, to take place at 1 p. m. on the 24th inst. The crews selected are as follows: Ariel.—A. Rodgers (stroke), L. Stevenson (bow), K. Flanders and F. Smith. California.—Tom Grossman (stroke), J. Harrington (bow), J. Roman and J. Winters.

—Bell's Life says that probably neither Higgins nor Trickett will visit America this summer.

—The Boston Y. M. C. A. gymnasium has a rowing crew of six.

—Mr. Eugene Smart, of Dover, N. H., is building a new steam propeller yacht, 52 feet long and 14 feet beam, which will accommodate one hundred persons in the cabin. It is to take the place of the yacht sold last year by him to Messrs. O. & C. Laighton, of the Appledore and Oceanic Houses at the Shoals, and is expected to be ready to be launched about the middle of March. She is to be finely appointed in all respects, and will be a first-class boat in every way. Mr. J. H. Dyer, of Portland, Me., is the builder.

26—B-B3	26—Kt-R4	54—Q-R3 ch	54—R-K2
27—P-B4	27—P-B4	55—Q-B3 ch	55—B-Kt2
28—B-Q5	28—K-R2 (c)	56—K-B7 and Black resigns.	

NOTES.

- A bizarre defence, which has nothing but novelty to recommend it.
- Black's eccentricities end here. They cost him his Q for a R and B, and he now sets to work most skillfully to retrieve himself. His play is remarkably good and careful. His defence is a model of its kind.
- Although having the superior force, White has a very difficult game. If Kt-Q2 or B-Q3, Black can effectively reply with Kt-Kt5. The text move is the result of careful calculation, and is a fortunate resource, for if Black takes B White plays Kt-Q Kt5 menacing Kt the P ch, or Q-Kt4 attacking both Kts. The play on both sides now becomes animated and interesting.
- If 22— —, 22—B-Kt4 P; 23—R-Q Kt, 23—P-Q Kt3; 24—P-Q R5, and wins.
- Mr. Randell has beautifully deployed his forces for defence. Every point is guarded.
- White being unable to make an impression, performs the perilous military manoeuvre of a change of front in presence of the enemy.
- If Kt-Kt4 White retakes covering with B-K Bt R then checks.
- Good. If Q-Kt4 Black mates in two moves.
- Enticing Black to force an exchange of R's by R-Q Kt3, because after Q had taken R-Qt, White's position would be improved. If 39—Q Kt4 B, Black would turn the tables by R-Q5 ch. Black's reply is ingenious, but it leaves one vulnerable point, which White now steps by step proceeds to assail. The end game is most instructive, especially as the defence is best under the circumstances.
- If R-Q, White R-Kt4 and then plays Q-Kt4 ch, winning off-hand.
- If 63— —, 63—P-Kt4; 54—Q-Kt3 ch, 54—K-Kt3; 55—R-B6 ch, 55—K-B2; 56—Q-Kt3 B ch, and wins.
- Time, two and a half hours.

15—S-Kt4 S	15—P-Kt4 S		

Drawn game.

NOTES.

- An unusual move, but a good one, we think.
- Much preferable is S—P-Q5, blocking up the Black King's side for a long time. His reply by S—Kt-R4 would have been harmless: S—P-Q5, S—Kt-R4; 9—B-Kt5, 9—B-Q2; 10—Q-B3, with the better game.
- Why not 11—Q-Q5?
- Well played. Black now gets the advantage and ought to keep it.
- A mistake. The King will be wanted as a fighting-piece, and should have gone at once to K4.
- Better have played P-K B3.
- Up to this stage the game was played by telegraph; the conclusion is by postal card.

SPLIT BAMBOO RODS.

To our customers and the public:—In reply to the damaging reports which have been circulated respecting the quality of our split bamboo rods, by "dealers" who are unable to compete with us at our reduced prices, we have issued a circular which we shall be pleased to mail to any address, proving the falsity of their assertions.

M. nigricans.

FISH IN MARKET.—RETAIL PRICES.—Owing to the stormy weather fish are scarce and prices naturally advanced. Striped bass, 18 to 25 cents; smelts, 18; bluefish, 15; frozen salmon 35; green do., \$1.50; mackerel, 25; Southern shad, 50 to 90 cents; white perch, 15; Spanish mackerel, 35; green turtle, 18; terrapin, \$24 per doz.; halibut, 18; haddock, 8; codfish, 6 to 8; blackfish, 15; flounders, 6 to 8; sea bass, 15; cels, 18; lobsters, 10; sheepsheads, 25; scallops, \$1.50 per gallon; soft clams, 30 to 60 per 100; whitefish, 18; pickerel, 15; salmon trout, 15; frost fish, 6; Newfoundland herring, 6; turbot, 20; red snapper, 18.

MOVEMENTS OF THE FISHING FLEET.—The number of fishing arrivals the past week has been 14. The Bank arrivals numbered 4. The number of Georges arrivals for the past week has been 5, bringing about 225,000 lbs. round codfish and 5,000 lbs. halibut. The arrivals will soon be more numerous, and good fares may be expected to be the rule for a few weeks to come. The receipts of herring for the past week have been 3 cargoes pickled and 2 cargoes frozen from Grand Menan. One of the latter vessels belonged to the Newfoundland fleet, and failing to secure a cargo at Fortune Bay, proceeded to the Bay of Fundy, where the catch has been unusually large.—*Cape Ann Advertiser*, March 1.

MENHADEN VS. WHALE.—As Professor G. Brown Goode showed to the members of the American Fishcultural Association that it was the menhaden which supplied the oil used in large quantities in the United States in lieu of the whale, some statistics taken from New Bedford may be of interest. With sperm oil at \$1.03, and right oil at 50 or 60 cents, any margin of profit is impossible. If it was not for the whalebone the business would be entirely abandoned. The tendency seems to be at present to keep vessels nearer home, thus reducing the cost of expeditions, and securing more rapid sales. Therefore the Arctic fishing has been much diminished. In 1856 some 196 whalers sought the Western Pacific and Sooloo Sea; to-day not more than 20 vessels chase the whale in Arctic zone. It looks as if, considering the immense losses met at the Northern and Southern Poles, whaling in the ice will be, before long, virtually abandoned. If, then, the small menhaden takes the place of the huge whale, why should we complain? Possibly we shall make an artificial whalebone some of these fine days. We are pretty near it now.

NEW YORK.—Danville, Feb. 25.—Pickerel fishing through the ice at Honeoye Lake is now the pastime, and fishermen for miles around are flocking thither. This lake is in Ontario county, about twenty miles from Danville. No less than one hundred and fifty men have been on the ice fishing every day for the last month. The catch has been enormous, a ton a day being a light estimate, and yet there seems to be no diminution in the quantity and appetite of the fish. In fact it has developed into quite an industry, and sleigh loads are being sold out here and in neighboring towns at eight cents a pound. There are some doubts as to the legality of taking pickerel at this season of the year from Honeoye. But fishermen have taken the benefit of the doubt, and are turning it to good account. There is no fear of molestation from people living in the vicinity of the lake, even though it be proven against the law to

fish there, for, owing to the shallowness and warmth of the water, the pickerel breed in such vast quantities that, it is claimed, the lake becomes overstocked, and during the summer, unless thinned out by catching, thousands of fish die, are washed upon the beach, decay and emit an intolerable stench perceptible miles away. That the fish die in great numbers oftentimes I know from personal observation. But whether it is owing to the causes claimed by the inhabitants, I am not enough of an ichthyologist to determine. H. W. De L.

TENNESSEE.—Columbia, March 2.—River in fine condition for fishing; mullets and suckers being taken in quantities. Trout (bass) are wary, and few caught. Some fine Reelfoot Lake trout in market. VAL.

MICHIGAN.—Belding, March 1.—Asa Fuller, of Belding, Ionia county, returned from Crooked Lake last week, with twenty-two of the finny tribe, ten of which averaged 10 pounds apiece; and one weighed 17 pounds.

OHIO.—A Youngstown correspondent writes of a pleasant fishing excursion on the Mahoning River, where the pike trolling affords plenty of amusement for the angler. A fish measuring three feet in length fell to his lot, while his companion, after a stubborn combat, safely landed one of twenty-six and a half pounds weight. Two more, equally plucky, completed the string for the day.

THE ORVIS ROD BY MAIL.—According to the decision of the Acting Assistant Postmaster General, packages of first or third class matter, of four pounds, are to be considered as mailable matter, irrespective of the shape of mail bags. Mr. Charles F. Orvis' rods come under this provision. Postage, then, on the Orvis rods is 35 cents for his Nos. 1, 2, 5, 6 and 7 rod; 40 cents for his No. 3, and 55 cents for the No. 4. Mr. Orvis is then prepared to send his rods in wood cases through the mails.

MR. KILBOURNE'S PICTURES.—The walls of the room where the fish cultural meeting was held were graced by pictures of fish painted by Mr. S. A. Kilbourne. A striped bass and a land-locked salmon were exceedingly well executed, not only truthful in a scientific way, but painted with great strength and power of coloring. Mr. Kilbourne is the special artist in fish, devoting his time and talent to these special subjects.

ANGLING IN MASSACHUSETTS.

TAUNTON, Feb. 6, 1878.

EDITOR FOREST AND STREAM AND ROD AND GUN:

During the past three months I have carefully noted what your correspondent "Splasher" and others have said about bass fishing. Perhaps you would like the account of my experience. The method invented by "O'Verins" is practiced about here with success and also in New Hampshire.

In Bristol and Plymouth counties, Mass., there are a vast number of little trout streams and small ponds almost unknown to metropolitan anglers which, with a little perseverance, would yield immense numbers of fish. Natives of the latter county assure me that it contains 865 fish-producing ponds. About eleven miles east of this city are situated the Middleboro ponds, the largest group of fresh-water lakelets in this State. They are connected by brooks, the three principal being Assawampsett, Quitticus and Long, which eventually empty into the Taunton River. They were early stocked with white perch and with black bass in 1865 or 1866 in consequence of an accident to a shipment intended for some other waters.

One morning last summer I received an invitation to go a fishing, and at four A. M. was awakened, and in half an hour three of us were on the road eastward for our fishing ground.

The view approaching the pond is charming. As you pass over the brow of a hill you look down upon a little lake about three miles long and half as wide with densely wooded shores in part, and here and there a high bluff. Along the shores are neat, comfortable farm houses and country residences. We set sail with an easterly breeze and made our way to the southeasterly end of the pond to a brook where bait was sure to be found. A better habitation for black bass I never beheld; well wooded banks, rocky shore and bottom and good clean water. We landed on a sandy beach where we stripped and drew the mosquito net set for young herrings. On our left was a long point on which was a little cabin and a skillfully-constructed billed, where the owner of the boat told us he had great sport in winter shooting wild fowl. Last season he bagged seven wild geese in one morning.

The sun came out very hot and the wind died away and left us in a dead calm for the rest of the day. We had poor luck with the fish, and I will not state how few we brought home, but the purpose of my visit was accomplished. I became convinced that there were plenty of bass and perch in the grounds, and resolved to return to the places which our reconnaissance showed us to be good on a favorable day.

Accordingly, at about two P. M., a few days later, we started again for a somewhat nearer pond and were gladdened by success. We carried as bait the common garden worms and added a lot of small minnows on arrival at the outlet. I had fished this pond before and taken twenty-one bass in an afternoon and fell short of the supply, but was to learn a lesson about white perch that was as amusing as instructive.

The gentlemen with me all carried rods about twelve feet long, with about the same length of line, and a stout perch book with sinker and bob. No reels. I had the best of bass rods, with reel and sinker and artificial minnows and spoons. In short the best Bradford Anthony's tackle. While the rest walked off along the shore I volunteered with a companion to hunt up a row boat about a mile off. I trotted with small artificial minnows and two flies, getting only one strike. As we neared the shore where our companions' rods were seen busily casting I noticed great splashes in the water to front of them. On closer approach I found them alternately casting on their hooks and throwing large stones into the water. I supposed, naturally, that bites were wanting and that they were plaguing each other. My astonishment was simply indescribable, when our bow grated on the shore beside them to find that they were as serious as deacons and were pulling out white perch by the dozen. On asking the reason of this extraordinary performance was answered, "It's to make perch bite." I thought they were trying to make a fool of me. I noticed that besides "rocking" the perch they would splash and agitate the water violently with the points of their rods. Pretty soon one of them landed a fine bass and another a second one.

I began to believe. Taking a row of an hour in the boat, trolling without much success—owing to the boat, not the want of fish—I returned to the same ground whence the others had departed and carefully tested the "rocking" theory by practice. As I had never read or heard of anything of the kind before you may imagine my amazement at finding that it worked well. Almost every time a large stone splashed into the water our hooks were immediately fast to a white perch. Only one red perch was taken and no sunfish, though the water is full of them.

We returned at dark with exactly one hundred fish, the most delicious of the perch family, as I had proved to me the next morning at breakfast.

I am curious to know if this practice of throwing stones at fish to make them bite is new to your readers, or whether I am merely an ignoramus. The gentlemen here say it is a usage handed down from their forefathers and only prevails in this neighborhood. They surmise that the white perch being originally a native of salt water is used to heavy surf and mistakes the splashing for a shoal of small salt-fish breaking water. Is this so? I think I shall try a Gutting gun and a band of minie next summer.

Another fact which may be of interest to trout breeders I will also give. A gentleman of this vicinity who has a fine pond full of noble trout was surprised to find that they were disappearing rapidly. As he had a high picket fence more than a rod from the stone embankment of the water box was at a loss to account for the success of the poachers until he detected one of the thieves shooting his baited line in among the trout with a bow and arrow from between the pickets—almost every shot being rewarded by the capture of a goodly fish valued at \$1 per pound.

What next shall we bear of as a victim to the insatiable archer?
H. D. J.

BASS, AND BASS.

GLENS FALLS, N. Y., Feb. 24, 1878.

EDITOR FOREST AND STREAM:

In your issue of Feb. 14 "Greysteel" describes both the black and Oswego bass, in markings and game qualities, and had it not been for the letter which follows I should have thought in the dark gamy fish he caught black bass, and in the light colored fish that soon tired he caught Oswego bass.

In the letter of "T. W.," while the characteristics are the same, the form of the Oswego bass is given to the dusky game fish, and the form of the black bass to the lighter colored fish. Difference in water or food cannot make the change, for both fish are caught in the same stream, and I fear that upon investigation both sexes will be represented in the same colored fish, at least I have found it so. I have remarked, too, that the young of the black bass are lighter colored than when they attain a pound weight, or near that. I hope during the coming season that "Greysteel" and "T. W." in pursuing their investigations will look in the eyes of the fish, of both kinds, when first caught, for a small red dot, and if either give out a musky odor; if so, which? and if the curve at the end of the lateral line where the tail joins is double or single, and in which fish is the greatest change in coloring after death. I have never seen an Oswego bass with a red dot in his eye, nor with a double curve at the end of the lateral line, nor known him to give out the musky odor of the black bass, or show the dark bars of the black bass, or change in color after death like the black bass, or fight like the black bass. He will grow larger than the black bass, but he is a non-combatant compared to his dusky relative. No sooner does the bass question seem all right than it is found to be all wrong. Will not Uncle Seth step forward? Why does not Mr. Wood advertise his new bass fly, if they are for sale?
GLENS FALLS.

THE SINKS OF FLORIDA.

GAINESVILLE, Florida, Feb. 21, 1878.

EDITOR FOREST AND STREAM:

Here in Florida we are having warm, growing weather, although the season is a little backward. Garden produce is growing finely, with early peas on the table. The colored people report deer and turkey very plenty, four or five miles either side from railroad in this region (Spanish Grant).

Yesterday I visited "The Sinks," about a mile and a half from town. There are twenty or more of them, from twenty-five to one hundred and twenty-five feet deep, and from fifty to one hundred and fifty feet across at the top. They are very regular in shape; in fact look like large bowls sunk in the earth. The wild orange grows in great profusion here, and in one of the sinks I noticed a tree loaded with fruit. The sinks are nearly all dry, one or two having nice clear water, fit for drinking, which would make a splendid tank for keeping fish alive. These are on the border of a large lake six miles wide by twelve miles long, abounding in fish. Black bass, pike, two or three kinds of perch, roach, etc. Also countless numbers of ducks and blue jays, and some geese and cranes. Twenty years ago the ground, now covered by this water, was all under cultivation, cotton and corn, the water being confined to a small stream, having an underground outlet which was by some means choked up, thereby forming the now lake. It is a natural curiosity and a great resort for the visitors at this place. The land around and in the sinks is owned by two enterprising citizens of this place who have laid out the lands and intend to put up a large hotel, and on account of its rare boating, fishing and hunting facilities I predict for it a liberal patronage.
CHAS. O. GRADWIN.

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

A number of anonymous correspondents will understand why their queries are not answered, when they read the lines at the head of this column.

C. R., El Paso, Ill.—Can you recommend a breech-loader for \$45?
Ans. Yes, a very good gun.

G. C. B., Turner's Falls, Mass.—Did Bogardus in his match use the A. B. or C. Dittmar powder? Ans. The C.

MUNTER, (New Centro).—Your communication wants your name in full. We never publish otherwise.

J. B.—For an 8 pound breech-loading gun, for glass ball shooting, use 3½ drs. powder, 1¼ oz. shot.

B. H. M., Franklin, Mass.—Where can I get a good stag hound? Ans. Of Dr. Charles Digges, Chestnut St., St. Louis.

W. L. M., Philadelphia.—Give me load for a 12 gauge 8 pound B. L. Remington? Ans. 3½ drs. powder, 1½ oz. shot.

BLUNDERBUSH, Denver, Colorado.—1. What is the weight of the iron Creedmoor targets? 2. Who makes them? Ans. 1. 40 lbs. to the foot. 2. Diamond, 209 W 3rd st., N. Y.

W. D. H., Elgin, Ill.—The .22 cal. is a very close shooting arm. See the target made as reported every week in the paper. A .32 would tear game. The .22 ought to make, in good hands, 35 or 40 out of 50. Use then the .22.

R. B. S., Boonville, Miss.—Have a Dexter Smith single barrel. I want to buy shells for the gun. 1. Is the gun still manufactured? 2. What shells shall I use? Ans. 1. Makers are no longer in business. 2. Use extra paper shell 14 A, or a metallic shell 12 B.

E. L. C., Cleveland, Ohio.—Precisely the same kind of double shell was tried fully some three years ago, and did not produce any marked results. You are likely to spend time and money uselessly. Would say, Don't. There is no reason why it should present any advantages

E. F. Y., Boston.—A ball such as you describe—a bolt with spherical or conical head and base, point and butt alike—would turn on itself and go in all directions. That similes so many people use, of a ball and a boat, is absurd. A boat goes through two mediums, a ball through one. Next.

C. R. H., Newcastle.—My pointer dog received a scratch on the flank which has left a scar. Now, what can I do to make the hair grow so as to cover up the defect? Ans. It is not probable that the hair will grow again; friction with any simple stimulating lotion may promote growth to a limited extent.

A. C. T., Ashtabula.—Have a — and — gun, in gauge, muzzle-loading gun. At a thirty inch circle with 1¼ oz. shot and 4 drs. powder I put 374 shot with R. B. and 354 with L. B. at 40 yards. How does this compare with breech-loaders? Ans. Most favorably. You have made very good shooting.

J. Von L., New York.—Will this gentleman kindly inform us, when the paragraph is regarded to the Dachshunde is found in the paper? We are afraid some typographical error has been made. We simply advocate two classes for these dogs. If a mistake has been made, we shall be glad to correct it.

D. and J., St. Louis.—1. Two dogs were imported. One year after importation the bitch has pups. Are these pups native or imported? 2. Where can the Complete American Trapper be had? Ans. 1. The puppies are native. 2. Published by J. Miller, 641 Broadway, N. Y. We can furnish the book.

BUTKO, Painted Post, N. Y.—My cocker spaniel has symptoms of cholera. First noticed it six weeks ago; have been giving nitro of silver without apparent relief; otherwise he is in good condition. Age ten months. Ans. History is insufficient. Probably ½ grain nux vomica three times a day might do good. Write us again more freely.

W. Cincinnati, Ohio.—Where is the nearest good fishing water to this city, and what fish are to be looked for? Ans. Excellent sport trolling for black bass at Newport. Good bass and reitoe fishing in the Licking River at Portsmouth, and other points along the line of the K. C. R., in Pendleton county. Good bass fishing at Stamford, Lincoln Co.

SANKEY, Summit, Troy.—My red Irish setter dog pup, eight months old, is afflicted with reddened eyes, moist and slight discharge; also discharge at the nose. Good appetite, etc. The dog has plenty of exercise. Is this epizootic (if dogs ever have it), or is it distemper, first stages? Ans. Your dog probably has distemper. Dogs are subject to the epizootic.

HENRY H. THORP, Concord, N. H.—Where can I get, and what is the name of a book, giving pictures and descriptions of the foot-prints of animals; also, what will be the price? Ans. Blitchcock's "Ichthyology" was published by the State of Massachusetts. It is now out of print, but can, perhaps, be obtained. Write to Leggett Bros., 5 Beekman St., and let them hunt you a copy.

A. R. D., Washington.—Have a muzzle-loading gun, weight 16 pounds, barrels 9½ pounds. Length of barrels thirty-six inches, diameter of barrel 13-16 of an inch. Use six drachms of powder and two ozs. of shot. 1. Would it be safe to shoot a solid round ball? 2. What would the ball weigh? Ans. 1. The gun would stand the ball perfectly. 2. About ten balls to the pound.

G. H. K., New York.—1. The hair around the eyes of my cocker spaniel has fallen off and her coat also; eyes do not seem to be sore. Tell me what would make her hair grow again. 2. Which do you think is the best for general work, cocker spaniels or setters? Ans. 1. Keep her in good health and the hair will grow all right again. 2. Could not answer unless we were further informed what want the dogs for.

H. C. L., Allentown.—1. Where is the land agent's office of the N. P. R., and what is his name? 2. Where are the places of business of Henry, of Edinburgh, and of Rigby? 3. Where is the place of business of Rogers & Son? Ans. 1. J. B. Power, St. Paul, Minn. 2. A letter addressed to Rigby, Dublin, or to Henry, Edinburgh, rifle manufacturers, would reach them without fail. 3. Rogers & Son is No. 6 Norfolk St., Sheffield.

A. B. V., Malmo.—1. Please inform me the shortest string on record at 100 yards off-hand? 2. Does a round rifle barrel shoot more accurate than an octagon or half octagon? 3. What is the size of the bull's eye at the 100 yd. range at 200 Broadway? 4. Is the Sharps mid-range rifle as accurate as their long-range up to 600 yds.? Ans. 1. To match Mr. Joy made at Creedmoor tunnel is, 2. No difference. 3. Four inches. 4. Yes.

A. W. O., Boston.—Am going to Texas. Tell me which of the two guns to get for the shooting there—a breech-loading shot-gun, or a repeating rifle? 2. Is the composition called Babbitt good for making bullets, and if too hard or soft, what shall I put with it to make it right? Ans. 1. If you have but one gun, take a good weight of 10 bore. 2. Babbitt's metal is too hard. Use, if you want a hardened ball, ½ lead ½ tin. Would not advise Babbitt's metal.

A. H. F., Conestoga, Pa.—1. Can I get Dittmar powder in Philadelphia? 2. If not, where? 3. Price per pound? 4. Would it be safe to mix 2½ drs. Dittmar and ¼ dr. black powder for charge of 7½ lb. No. 7, breech-loading gun? Gun was made by P. Webley & Son, England. Ans. 1. No agency in Philadelphia as yet, but will be shortly. 2. Nearest agency, Henry C. Squires, No. 1 Courtland St., New York. 3. Price per single canister \$1, in larger quantities at lower figures. 4. It is perfectly safe to mix 2½ drs. Dittmar with ¼ dr. black powder.

NOVIE, Pottsville, Pa.—1. Have a 10 gauge gun, 32 inch, 8½ pounds, muzzle-loader. The barrels weigh 5½ pounds, heavy across the breech and are, I believe, what is called wire twist. I have killed a deer with it as far as 60 yards with buckshot, and pheasant as far as 50 yards with small shot. How shall I load it? 2. Yesterday one of our sportsmen shot a female fox, and in taking off the skin they found she was in whelp. Is he entitled to any premium for the four unborn whelps? Ans. 3½ drs. powder, 1¼ oz. shot. 2. Foxes in utero would not count.

H. P. S., New Brunswick.—My Newfoundland bitch pup, four months old, fed on table scraps, milk, bread and soup bones, cries in her sleep and jerks her legs. Thought she had worms. Gave her arsenic, but passed up worms. Has a large bolt on her left shoulder. Have poulticed it for three days, but it does not improve. Mouth looks purple. Has had sores on her lip. Bad appetite. Have given her oil. Never been lively. What shall I do? Ans. She is probably constitutionally unhealthy. Feed on milk and meat only and give two grains quinine three times a day.

WILLIS J. POWERS, Tomah, Wis.—1. Can you tell me where I can get a book instructing how to train or tame hawks? 2. In what manner can I catch old hawks alive without hurting them? Ans. 1. G. L. Freeman's "Falconry: Its Claims, History and Practice," and the authorities referred to therein, will give you fullest information on this subject. The work was published in London in 1859. 2. A steel trap, with the jaws covered with cloth, and set on top of a post in an open field, would perhaps do, but we would advise you to get young birds from the nest and rear them.

YOUNGSTADT, Barren Hill.—1. What is termed a full choke-bore? What is a modified bore? What is a taper choke? 2. What would you

call a good pattern at forty yards with a 17 gauge gun, two drs. of powder and ¼ oz. shot No. 5? Would 150 pages of the FOREST AND STREAM be equal to the pads shot at the trial of the oblique shot? Ans. 1. Full choke in a rapid closing of the muzzle, a modified one is a gradual closing at some inches from the muzzle, and a taper cylinder is exactly what the words imply. 2. We can give no comparison between the sheets of this paper and regular target.

NEW SUBSCRIBER, Georgetown, D. C.—1. Is driving No. 3 or 4 shot with a No. 11 muzzle-loader, 3 drs. powder, 1¼ oz. shot, through ¼ in. pine at 75 yards, good penetration? 2. What is the number of shot in an oz. of the different Nos. of shot? 3. Can you give me Heller & Sons' address, and what is their reputation? 4. Where can I purchase W. W. Greener's book on choke-bore, and price? Ans. 1. Very excellent penetration. 2. To give this in extenso would take half a page of close figures. We must give it soon. 3. The address is Weanman St., Birmingham. 4. Mr. S. J. Fair, No. 1 Courtland St., New York.

J. C. C., Pottsville, Pa.—1. What is the extreme vertical height and horizontal distance that the Bogardus trap throws a glass ball? I mean approximately, and, of course, when the trap is new or in good working order. 2. Does Captain Bogardus use soft or chilled shot for ball shooting? 3. Should the ball be hit as it rises, or is it fair to hit it any time before it reaches the ground? Ans. 1. About 25 to 66 feet, as the spring is regulated. 2. Soft shot, but only because in shooting before an audience chilled shot might rebound from the screen, if they struck a knot or any hard substance. 3. Depends on the skill of the shooter. The ball may be broken any time before it grounds.

BRADDER, Brooklyn.—1. Would it pay to go into the orange business in Florida, either by raising the fruit and selling it, or by buying and selling the fruit? If profitable in the former business where would be the best place to go to and where could I procure a book on orange culture? 2. Would near sightedness be an impediment to becoming a good shot? Ans. 1. We consider orange culture a good paying business. The northern and central parts of the State are the best. Should select some part of the St. Johns River or other locality which has a good outlet. You can obtain books from Florida New Yorker, 31 Park Row, New York City. 2. Not at all. We have seen an excellent shot who used glasses.

G. A. S., Westfield.—I know a gentleman who has a gun 2½ barrel, 12 bore, 7 pounds, which outshoots all our guns. Has good penetration and pattern at 45 yards. 1. Are guns of this length reliable? 2. What is the shortest gun you would advise for general shooting? 3. My pointer pup has worms. Passed some ¼ inch long. Have given him sulphur. Would you advise area nut, as per "Gazetteer"? Ans. 1. and 2. 2½ for a barrel is too short. It is generally allowed by all practical people that 21 inches is as short a barrel as will burn all the powder. Would not advise using a gun shorter than this. Thirty inches is an approved length. It will burn powder of a heavy charge, is a balance to the gun and facilitates the aim. 3. Give the area nut and follow the "Gazetteer."

J. D. M., San Francisco, Cal.—At what range is artillery effective? At about what distance does rifle practice begin in an actual battle? How close did the old musket fire? Ans. Your term "practice" is hardly admissible in speaking of actual warfare. Light artillery is now effective up to 2,500 yards, and even up to 3,000. Rifle fire may begin at 400 yards, although the picked men would commence at 1,000. As to effectiveness as far as to the killing and maiming of the men, it is doubtful whether the old Napoleonic artillery did not affect heavy masses more than does our modern rifled guns. The ordinary fighting range of the rifle is quite equal, however, to the artillery of thirty years ago. We think the deviation allowed in the old musket at 100 yds., was 3 ft. to the right or left when fired from a fixed rest.

B. B., Washington, D. C.—1. Have a dog twenty months old. Head stopped up with matter which gathers in his eyes. Been this way ever since distemper when was fourteen months old. 2. What is the difference between an English and an Irish setter? Ans. 1. The dog needs plenty of fresh air and exercise. If appetite is not good give two grains quinine three times a day for two or three weeks. The condition described is a frequent result of distemper. 2. Stonehenge tells us that for standing rough work the Irish is better than the English setter. In points there is some similarity and divergences in others. Irish are more leggy. Color is an important point. Irish should be red, though they are good blacks and some with white. Irish are perhaps harder to break, and forget sooner, but make up for it by dash, courage and endurance. It is difficult in the short space of questions and answers to give all details.

W. H. FULTON, New Haven, Conn.—I see in your paper of Jan. 17 an account of a Bezoar stone, and having a stone that answers the description—with the exception that it came from a horse instead of a deer—I write to inquire why it is called a Persian medicine stone, and any other information you can give in regard to it. The stone I have answers as to the size and color of the one spoken of in your paper. I have had it cut into, and find in the centre a coarse pebble about the size of a hazel nut, with the coating formed regularly, as the rings show. Ans. The Bezoar stone was formerly much prized for its supposed medicinal virtues, and as an antidote to poisons. That of the antelope was especially valued. It is scarcely necessary to state that it is quite worthless as a medicine. The Bezoar is simply a concretion—some foreign substance, as a stone or piece of tooth, is taken into the stomach, and about this as a nucleus, some salts of lime crystallize in concentric layers. [This question has been mislaid for several weeks, for which our correspondent will please accept our apologies.]

GASPE.—To sportsmen, invalids, tourists and artists the beautiful, healthy and popular summer resort, Gaspe Basin, offers unsurpassed facilities for fishing, shooting, boating, bathing and driving. There is no spot in the Gulf of St. Lawrence or on the British American coast where the scenery is so beautiful, and so much can be found for small cost. We hear with pleasure that Mr. E. G. Straker—so long and favorably known to the traveling public as the popular and experienced steward and purser of the Gulf Port Steamer "Secret"—has leased the "Gulf House" at Gaspe Basin, which he has refurbished and renovated, and made a comfortable home for his friends and patrons; and we have no doubt that, with his known courtesy and moderate charges, he will draw a full house. During the summer the steamers leave Montreal and Quebec weekly, and there is constant telegraphic and postal communication with all points, and more frequent modes of arrival and departure by Intercolonial Railroad.—See advertisement.

—The new recoil check, made of very flexible rubber, can be put on and taken off a gun in a moment. Price \$2. Send for circular.
C. L. RUTEMANN, 943 B'way.—[Ad.]

—A few gentlemen wishing to join a first-class shooting and fishing association can hear of a favorable opportunity by addressing Gams, this office.—[Ad]

—The Bible College, located at Binghamton, N. Y., which affords a free university course to the daughters of disabled or deceased ministers, without regard to race, is full to overflowing.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INDOCTRINATION OF MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

No. 111 (old No. 103) FULTON STREET, NEW YORK.

[POST OFFICE BOX 2832.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Twenty-five per cent. off for Clubs of Three or more.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

* Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, MARCH 7, 1878.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous contributions will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost. No person whatever is authorized to collect money for us unless he can show authentic credentials from one of the undersigned. We have no Philadelphia agent.

Trade supplied by American News Company.

MARDI GRAS.—While regretting our inability to have been present at the court of that jolly monarch, who reigned supreme over the Knights of Momus at Galveston, Tex., last Tuesday, we trust that this recognition of his summons may prove our loyalty as dutiful subjects. May the clemency of his kindly old heart preserve us from the vengeance of those fearful ministers of wrath whose dragon images embellished his royal missive.

THE FOREST AND STREAM AND ROD AND GUN TOURNAMENT.—At the request of numerous clubs, who have not yet been able to prepare teams for the tournament, we have been induced to open the lists for another week. The match will open, then, on the 18th of March. Mr. Conlin requests that captains of teams will meet at his gallery on Tuesday, the 12th, to arrange preliminaries for the match. The following clubs have entered teams: The N. Y. Rifle Club, the Centennial Rifle Club, the Scottish-American Rifle Club, the Seppenfeldt Club, and the Zettler Club. There are five prizes offered so far. More prizes and entries are expected.

"FRED BEVERLY'S" EXPLORATIONS IN THE WEST INDIES.

THE MYSTERIOUS SOUFFRIERE BIRD.

OCCASIONALLY we receive a few lines of intelligence from Mr. Fred A. Ober, as he wanders from island to island of the Caribbean Sea, pursuing his solitary labors in behalf of science and the Smithsonian Institution, camping in caves and huts, sleeping on volcanoes, and spreading his blanket among the venomous creeping and crawling things of a tropical climate. He has been gone more than a year already, and it is likely that his researches will be much longer and further extended, as he says that the Smithsonian has allotted to him more islands than he at first intended to visit.

He has already explored Antigua, Martinique, Dominica, St. Vincent, Barbados, Barbuda, and some others; will go next to Guadeloupe and then to Grenada. Notwithstanding a hardy constitution and wiry physique, he has suffered much from local fevers, and was laid up for six weeks at one time. Rains have interfered with his labors, and sometimes kept him housed for days in a miserable hotel in the wilderness, where nothing could be done except to sit with folded hands and wait for the rain to cease. The hardships of a naturalist are perhaps as arduous as can be imagined. To push on in spite of obstacles of every description requires pluck of no ordinary character. It is not strange that, weakened by sickness and longing for some familiar face, he should occasionally become despondent. In a letter dated at St. Vincent, Jan. 23, he says in his quaint way: "On Dec. 19, I lay in bed two weeks with fever. Lost all my meat—living skeleton. As soon as I was able to walk a kind friend took me down the coast to his estate, a lovely valley filled with sugar cane, a river flowing through it, with palms, bread fruit, etc. Yesterday I took my first long ride, and got soaked in a heavy rain coming back. A strong application of towels and rum toddies, I hope, prevented a relapse. It seems impossible for me to regain my health, but if I do I must press my work."

We have already printed three letters from him, which afford some insight into the nature of his work, and are promised another soon. In a personal letter to the editor of this paper he mentions incidentally the capture of some specimens of an exceedingly rare bird. We quote:

"I have explored the crest of the Souffriere, the crater of the great volcano, where I camped five days and nights in a cave, hunting for the mystical 'Souffriere Bird,' a bird always heard on that mountain top—nowhere else. From the stunted trees covering and hiding the deep gorges that seam the lip of the crater, come strains of most delicious melody, yet strangely wild and melancholy. No one ever saw the bird, much less had any one captured it. It possessed a fascination for the listener that the notes of few birds could command. The blacks, and even the whites, say that the first one of a party who hears it will soon die. I was the first of my party, as I was, as usual, alone; but that has not exercised a depressing effect upon me during my illness. I found a hollow in a bank which protected me from the trade wind, and there Iaving my hammock and camped for five days and nights, 3,000 feet above sea level, with mist or rain always descending. I captured that mysterious bird—five of him—and carried to town the first ever seen there. My 'Camp in a Cave,' with all its attendant discomforts, will some day be fully written out. I think I found another bird near there—can't tell. After that I lived two weeks with the Caribs, collecting such words and traditions as I could, with a few pictures. There are few birds here. The most beautiful is the island parrot, a bird of rare beauty, which I have got, but whose habits I've not sufficiently observed; and if I am ever strong enough to camp again, I shall do so among the mountains for that purpose."

We think we shall be doing our duty as promoters of scientific explorations in stating that Mr. Ober's operations are much retarded from want of money, notwithstanding advances made by the Smithsonian Institution and two or three sympathetic friends. Should any of our patrons feel sufficiently interested to contribute something toward a small fund we will thankfully acknowledge their donations through our columns, and forward the same to him at the first opportunity.

SEVENTH ANNUAL MEETING OF THE AMERICAN FISH CULTURAL ASSOCIATION.

IT is not without a certain amount of just pride that the members of the American Fish Cultural Association regard their seventh annual meeting, which event took place at the rooms of the Fulton Market Fishmongers' Association, of New York, on the 27th and 28th of February. In point of number of persons present, for the intrinsic value of the papers read by the various sections, and for the interesting character of the debates, this meeting may be cited as among the leading scientific and practical conventions of the present year.

In changing somewhat the name of the association from Fish Culturists to Fish Cultural, an increased scope and tendency is plainly shown. From a simple gathering of fish culturists, who had assembled together to discuss what some few years ago was an unknown science, the results of which were as uncertain as the methods were undefined, at every meeting the association gained new strength and knowledge, until to-day this organization contains within itself not only the leading fish culturists, but the most distinguished ichthyologists in the United States and in Canada. It is certainly flattering to think that before the association last week questions in regard to the disputes between the United States and the Dominion were ably discussed, and it is not saying too much that perhaps from among its members may be found those whose information on these vexed subjects may be of material service in adjusting the dispute.

A most important event, and one which members may congratulate themselves about, is the fusion of a new commercial spirit which has joined their forces. We allude directly to the aid the association will acquire from the leading members of the Fulton Market Fishmongers' Association. This new element has just that thorough commercial and practical acquaintance with fish which the association requires. These new members, who are all more conversant than any one else with the supply of fish food, such as is wanted in a large metropolis for its own consumption and for distribution, are fully cognizant that the aim of the Fish Cultural Association is not only to produce fish by the most approved methods of culture, but to preserve them. Cheap fish, fish in plenty, means more business for them and food for the masses. Such wise legislation, then, as the association may advise in the fu-

ture, will owe its weight to the combined influences, not alone of scientific men, but to those who gain their living by the disposal of fish.

In commenting on the general character of the meeting, one is struck by the practical value of the papers read, and how admirably the method of having sections ready to present their contributions prevented desultory and worthless talk. It is to be regretted, perhaps, that the Fish Commissioners from all the States were not present. There is scarcely a good reason to be alleged why we should have to note any absences. As a medium of interchange of thought, such a convention presents advantages to officers connected with State fisheries, which would be of incalculable benefit to all. It is, in fact, difficult to ask any question in regard to fish culture, of practical use, which would not have found a ready and satisfactory answer.

The progress made in fish culture (which science, of course, must be the basis on which the association stands) has made notable progress during the last year. Gradually awakening to a sense of its importance, other States are becoming cognizant of the advantages of stocking their barren waters. With new wants, new inventions, due to ingenious fish culturists, have been presented. Certainly among the first will stand Mr. T. B. Ferguson's plan for hatching shad by means of a mechanical power, a full description of which may be found in our last issue. This invention, due to the energetic Fish Commissioner of Maryland, in the opinion of the U. S. Commissioner, Professor Baird, marks a new epoch in fish culture. It will enable us to utilize the waste eggs of many valuable sea fish, such as the mackerel and cod. The eggs of both these fish, cast loose on the waters, may be obtained in countless millions, and may be hatched by the Ferguson process. A most able paper on the statistics of fisheries, furnished by Professor G. Brown Goode for the first time, acquainted the public with the immense value of the fishing products of the country, while Professor Milner's paper on shad hatching gave some idea of the scope and magnitude of the work. Mr. Eugene G. Blackford gave a most practical idea of the staple fish furnished to the New York markets, as did F. Mather, Esq., on food for fishes raised in aquaria. In another portion of this journal will be found a synopsis of the meeting, and we shall reproduce, as soon as possible, some of the most important papers. The printed report of the transactions of the association, which we understand will shortly be published, will be of exceeding value.

What praise, then, we freely give to the association, is mainly due for the common-sense method it employs, and the desire it has evinced to instruct the public, not only in scientific, but practical fish culture.

CONFUSION IN THE NAMES OF SOME OF THE AMERICAN FISHES OF THE HERRING FAMILY.

THE representatives of the herring family most abundant in the waters of Great Britain are three—the shad (*Alosa fulta*), the alewife (*Alosa vulgaris*), and the herring (*Clupea harengus*). Their names were at an early date appropriated for representatives of the same family on our own coast. The name of "shad" is, from Maine to Florida, yielded, by common consent, to our *Alosa sapidissima*, which, in many particulars, resembles its namesake, though they "be bigger than the English shaddes and fatter," as an early writer declares ("New England's Prospect," by William Wood, London, 1634).

In the Southern States this fish is sometimes called "white shad," to distinguish it from the *Dorosoma cepedianum*, there known as the "mud-shad" or "gizzard shad." On the coast of New England the mottowoc, or tailor-herring (*Pomolobus mediacris*) is sometimes called the "hickory-shad" and also the "sea-shad," under which name it is often confounded with the true shad, which is known from recent investigations to be frequently taken far out at sea in company with mackerel, alewives and menhaden. In the Bermudas, there being no large clupeoid fish, the same name has been for centuries applied to two species which somewhat resemble it externally—*Eucinostomus gula* and *Eucinostomus Leffroyi*.

The "herring," or "English herring," of New England, north of Cape Cod, is identical with that of Great Britain, but at certain points in Southern New England—such as New Bedford—the name of herring is transferred to *Pomolobus pseudo-harengus*, and on the Hudson River this usage is general, though this species is occasionally called the alewife. South of the Hudson the name of "herring" is universally used in connection with this species of *Pomolobus* and the allied *Pomolobus mediacris*, or "mottowoc," which is known as the "tailor-herring," or sometimes, as in the St. Johns River and about Cape Cod, as the "hickory-shad." In the Great Lakes the name "herring" is also represented, being applied to one of the whitefish family—the lake herring, *Argyrosomus clupeiformis*. To *Pomolobus pseudo-harengus*, the name of "alewife" is commonly applied in New England and even occasionally, as mentioned above, in New York. South of New York it is used for the menhaden (*Brevoortia tyrannus*) only. The name is corrupted into "old wife" and "eel wife" and "wife."

On the Connecticut River the same name appears under the guise of "ell-whop." At Maurice River the *Brevoortia* is called the "old wife eebog," eebog being probably of Indian origin. Thomas Morton, writing in 1833 of the fishes of Virginia, gives the names "shadd" and "al

among the colonists at that time. [New English Canaan, or New Cuman, containing an abstract of New England. "Forces Hist. Tracts," vol. II., tract 5.]

The original derivation of the word alewife is somewhat obscure, though it may probably have originated in *Alansa*, the name applied by Ansouius, a Latin poet of the fourth century to the European shads in his celebrated poem on the Moselle River:

"Quis non—novit,
Stridentisque sociis opsona plebs alansas."

The transition through the French "*alose*," the English "*allis*," "*allice*," or "*alize*," is not difficult, and when we find these names, together with "*alewife*," applied indiscriminately to the same fish, it is, to say the least, suggestive. Such an etymology is, at least, more satisfactory than that of Josselyn so often quoted: "The alewife is like a Herrin, but has a bigger bellie, therefore called an Alewife" [An account of two voyages to New England; a Description of the country, natives and creatures. By John Josselyn, Gent., 1675, Coll. Mass. Hist. Soc., third series, III., 1833;] or that of Mitchell: "Called *alewife*, probably from the French *alevin*, the young fish rejected as being under size;" or Dr. Smith's etymology, which has been so often quoted, has been adopted by our standard lexicographers, and which Professor Trumbull so thoroughly explodes in the Report of the Commissioner of the Fish and Fisheries for 1871-2, p. 166.*

THE RECENT FISHERY TROUBLE.

WE credit the *Toronto Globe* with giving us what we have no doubt is the gist of the late trouble between our fishermen and those of the Provinces. It seems that our fishermen employed for the herring catch very large seines, some 250 fathoms long by 350 in depth. With these seines "inbarring" the herring was attempted; that is, one end of the net being fixed near the shore, a complete sweep was made around the arc of a circle. This, the *Toronto Globe* says, is illegal, according to the Newfoundland regulations. It is also affirmed that the fishing took place on Sunday, which is also in contravention of the law. The fishermen from the States being requested to desist, did so, with the exception of the crew of one vessel. These people having refused to abide by the laws, the Newfoundlanders were stupid enough to destroy the American nets, thus taking the law into their own hands. We think our Canadian contemporary is quite in error as to the absence of fish on our coast. Special fish, it is true, are to be had on the Newfoundland coast, but we by no means admit that the destructive process has rendered fishing on the New England coast impossible. We may state that the cod never have been so plenty as this year on American waters, from Maine down to the capes of the Delaware, while they have been very rare on the Newfoundland coast. Possibly, as was remarked at the meeting of the American Piscicultural Association, the cod, disgusted with the decision of the Halifax Fishery Commission, have left the waters of the Dominion for more enlightened shores. We regret, though, exceedingly, any lawlessness on the part of American fishermen, and we would be the last to uphold any measures in dereliction of the laws. Such contests we are afraid are, however, likely to continue, rather excited by personal feelings than otherwise. If we are not misinformed, in former years herring were caught by the Newfoundlanders and sold to the vessels coming from the States. To-day the fishermen from Gloucester make the catch for themselves. Better vessels, more fully equipped and with the improved apparatus used by us, will in time deprive the Newfoundland fishermen of a portion of their hardly acquired gains. We do not say this with any idea of triumph or spread-anglism. It is sure to happen in the course of time. In the Halifax dispute the question was not for us as to the plentifulness of fish in the waters about the coasts of the Dominion or of the Provinces, but whether the fishermen from the Provinces had the means or ways to catch a proportionate quantity of fish in our own littoral. If A and B, each for their own separate and divided account, have agreed to get all the fruit which may grow in the C and D orchards, and A, because he has longer ladders and more baskets, can pick twice as many fruit in the C and D orchards than can B, it is B's misfortune, not A's fault.

FOREST AND STREAM will be sent for fractions of a year as follows: Six months, \$2; three months, \$1. To clubs of two or more, \$3 per annum.

* I forget whether or not I made a note for you on the alleged derivation of "*alewife*" from "*alose*." Dr. J. V. C. Smith, in his "Natural History of the Fishes of Massachusetts, 1833," was perhaps the first to record the suggestion that "*alewife*" is derived from the Indian word, "*alose*," signifying a bony fish." Dr. Bartlett's Dictionary of Americanisms, Webster's, and I believe, Worcester's Dictionaries accept this etymology, and Professor Schiele De Vere, in his recently published volume of "Americanisms," is misled into recognizing in "*alewife*" a most ludicrous corruption of the Narragansett term "*alose*," though he appears to have been struck by the objection that neither "*alose*" nor "*alewife*" can have a place in a Narragansett word, and he suggests that the original name may have been *alosep*.

The Narragansett and Massachusetts name of the alewife and herring (common to several species) was *Alumet* (plur), as noted by Roger Williams, and, with slight dialectical variation, by President Stiles, as you have seen. The only authority for "*alose*" is a letter of the (second) John Whitrop, printed in the "Philosophical Transactions for 1673" (No. 112), in which he mentions the use of "the fishes called *alose*" for unrounding corn fields. If we could refer to Whitrop's manuscript, I am confident we should find that a copyist or printer had substituted "*alose*" for "*alosep*," *alewife*, *alewife*, or *alewife*.

GAME PROTECTION.

POUND NETS ON STATEN ISLAND.—The reign of the pound-net fishermen in Staten Island waters has been glorious, but transient. The nets were introduced two or three years ago, and took into their capacious meshes all the varieties of fish which of yore there rewarded the angler's patience. Now, before the final depletion of these fishing grounds, the Walton and Excelsior Clubs have, after much patient labor in agitating the subject, secured the passage of a bill which forbids the use of seine, purse or pound nets at any time under severe penalties, and forbids the use of fyke, drift or other nets between June 1 and Sept. 1. The owners or occupants of water frontage, and any person who has been an actual resident of the county for two years, are permitted to use fyke nets extending out not over 110 feet from low-water mark. Other persons may obtain a license to use such nets from Sept. 1 to June 1, though no person can obtain a license for more than a single net.

OUR THANKS.—We are much obliged to the Secretaries of the following clubs—the Yonkers Game and Fish Protective Society, the Black Hawk Club of Wisconsin and the Farmington Sportsmen's Association—for copies of their Constitution and By-Laws. Will other clubs kindly follow suit?

MICHIGAN.—Residents along the banks of the Kalamazoo complain because the dam owners do not put up fish chutes as required by law. Fish Commissioner Hon. Eli Miller is determined the law shall be observed, and he has completed the drawings and specifications of such chutes as are needed, and the engravers are now at work printing such cuts and explanations as will leave the supervisors no option but to enforce the law.

PRACTICAL INSTRUCTIONS FOR WINTER PRESERVATION OF QUAIL.—In reply to numerous inquiries elicited by a communication in our issue of Jan. 31, our correspondent gives the following very valuable suggestions for the winter preservation of quail:

WATERTOWN, Wis., Feb. 22.

A park may be constructed very cheaply with a few bundles of laths, having first put up a frame by setting posts in the ground, and nailing on scantling two by four. The inclosure should be sixteen or twenty feet square and eight feet high, which will take two laths in length for the height of walls. The top may be covered with laths also, by having some girls or poles for them to rest on. A part of the top should be covered with boards so that it will not leak in a rain-storm, and the north and west sides boarded tight to keep off the cold winds, and under the close part of the roof. Set in a stack of corn stalks well spread out at the bottom for the birds to run under; this they will use for their sleeping apartments. Some brush or a small tree-top might be put in one end of the park for them to perch upon. There should also be a bush or two of sand and fine gravel thrown in. Make your door so you can go in and out yourself, and be sure and have a lock on it and carry the key yourself, for there are some two-legged sneaks that will catch quail out of season. Now, put in your quail (this house will accommodate a hundred or more), and feed them every day with fine wheat, screenings, or any kind of grain, and watch them and see how they enjoy it. They will soon look for your coming to feed them, and you will yourself enjoy it and consider yourself well paid for your trouble.

In fine weather my friend, Mr. Hoyt, lets his quail out, and they go about over the farm where they please, but they always come back of their own accord. A few days ago he let them go, and on their return the next day they brought another flock of about two dozen more home with them to share the hospitality of their friend and protector, and Mr. Hoyt now has over fifty of these little boarders that receive their daily food from his hands.

S. M. EATON.

AN EXCELLENT IDEA.

CIRCULAR FROM THE WEST JERSEY GAME PROTECTIVE SOCIETY, OF CAMDEN, N. J.

We are in receipt of a circular, issued by the West Jersey Game Protective Association, which is admirable of its kind. Long ago we urged on fish commissioners the necessity of informing the general public what were the shapes and colors of fish placed by them in streams, and insisted that the only sensible method of instruction was the pictorial one. "How," we asked, "could an ignorant person tell whether he was catching a smolt or a fresh-water herring?" Acting on this idea, the circular we have before us is headed with a neatly colored lithograph of a California salmon one year old, the size of life. The printed matter reads as follows:

OFFICE OF THE WEST JERSEY GAME PROTECTIVE SOCIETY,
Camden, New Jersey.

EDITOR FOREST AND STREAM AND ROD AND GUN:

Dear Sir:—Above you have a representation taken from life of a California salmon, one year old.

As the West Jersey Game Protective Society, during the last two years, has placed in the streams of Southern New Jersey a large number of these fish, as per the following statement:

Great Egg Harbor River, 19,500; Mullica River, 10,000; Maurice River, 15,500; Tuckahoe River, 6,000; Chubbsey Creek, 9,500; Alloways Creek, 8,000; Mantua Creek, 6,000; Timber Creek, 3,500; Oldman's Creek, 3,500; Salem Creek, 3,000; Dennis Creek, 2,500; Raccoon Creek, 1,000; Woolbury Creek, 500.

With the view of introducing them in the waters of that part of the State, the committee having the matter in charge have thought it advisable to take this means of informing the people in the vicinity of the above-mentioned streams in order that they may be protected and if caught, returned to the streams again.

Your assistance in protecting these fish and aiding the society in its efforts is earnestly requested.

GEORGE ENLIS,
RICHARD T. MILLER,
BENJAMIN W. RICHAUDS,
Committee.

NOTICE TO SPORTSMEN.—Having received so many communications asking us for information in regard to our six-section bamboo trout, black bass, grise and salmon rods, we have prepared a circular on the subject, which we shall take pleasure in forwarding to any address. We keep on hand all grades, the prices of which range from \$15 to \$150. We put our stamp only on the best, in order to protect our customers and our reputation, for we are unwilling to sell a poor rod with a false enamel (made by burning and staining to imitate the genuine article) without letting our customers know just what they are getting.

P. O. Box 1,294.—(Ado. ASSET & LEBRIS, 38 Maiden-Lane.

The Rifle.

THE FOREST AND STREAM AND ROD AND GUN TOURNAMENT

For the Short-Range Championship

And three team medals, which will be awarded to the teams making the first, second and third best scores. Other prizes will be offered also, to take place at Conlin's shooting gallery. Open to teams from any organized rifle club.

Conditions.—Teams—Each team shall consist of ten men. The teams participating must be composed of members of the various clubs which they represent. Lines—Limited to ten pounds in weight; minimum pull of trigger, three pounds; 22-100 cal. Teams can furnish their own rifles and ammunition, or use those at the gallery, as they may desire. Number of Shots—Ten by each competitor. Sighting Shots—Two shots will be allowed each competitor. Position—Off-hand. Targets—200-yard targets, according to the regulations of the N. R. A. reduced in proportion to the range at the gallery. Practice—No practice allowed on the day of the match. Entrance Fee—Five dollars to be paid at the office of the FOREST AND STREAM AND ROD AND GUN, No. 111 Fulton street, N. Y. All teams desiring to compete must be entered ten days before the time the match is announced to take place. The match to be governed by the rules of the N. R. A. relating to teams. Captains of the competing teams shall meet one week before the commencement of the match, make all preliminary arrangements, choose referees, and decide in what order their respective teams shall shoot. The referees shall elect an umpire, whose decision in all cases shall be final.

The match will commence on Monday, March 18, and not on the 11th as was before published. Clubs can enter up to the 12th of March.

Prize Offered.—The U. M. C. Co., of Bridgeport, Conn., through their superintendent, W. A. Hobbs, Esq., will present to the FOREST AND STREAM AND ROD AND GUN Tournament, an elegant gold medal. We are now having the medal made, which will be of the handsomest character.

"NICK" ON THE RIGBY-SHARPS CHALLENGE.

THE question of the relative superiority of breech and muzzle loading rifles will never be decided by the series of international matches on which we have entered with the Centennial Trophy as our bone of contention. Popularly a conclusion may be reached, and this may be the correct one or it may not, as minor and irrelevant circumstances may decide. The riflemen understand this, though they may not be ready at all times to acknowledge it. There are a thousand and one little omissions which may help to defeat what is really the better team, and on the reverse, accidents and bits of luck may come in to give the nominal victory to the squad of inferior ability. Many pretend to despise the tests laid down and carried out by technical boards of examiners, on the ground that not infrequently their conclusions give favor to an arm which subsequent trial in the hands of soldiers or marksmen shows to be an inferior one. They omit certain elements and important factors which go to reach the final result of comparative superiority, while, on the other hand, in a popular match, the test is not by any means so thorough in certain directions as an ordnance board would make it.

To combine the two lines of examination is what is most urgently needed, and none can make this inquiry more severe than those having a pecuniary interest in the result. Hence I look with some interest in the proposed Sharps-Rigby match, if not too much heaped about with restrictions, as likely to show some interesting, and, to the present, conclusive results. It is to be in general a combined test of time and results. Mr. Rigby has all along asserted that one of the strongest reasons put forward in advocating the breech-loader is entirely lost sight of in the great matches, and that instead of being an arm "of precision and rapidity," it becomes a slowly-handled weapon of great accuracy only.

The time schedule of the last match would hardly bear out Mr. Rigby in this, as at every range, on each day the American squad had concluded their rounds long in advance of their antagonists and enjoyed a brief season of rest before proceeding. But as I before remarked, this popular style of demonstration is not conclusive, and now Mr. R. proposes a distinct match, two men per side, at 1,000 yards, shooting for a fixed length of time (1 hour); the one squad using muzzle-loaders and the other American breech-loaders, cleaning at discretion, the prize going to the pair making the best score in the allotted time. It is directed mainly at the point of the excessive and disproportionate cleaning which Mr. Rigby claims is necessary to get reasonably fair work from an American breech-loading arm.

Of course such a direct challenge did not long go unanswered. The Sharps Rifle Company snapped it up forthwith; the men, as they proposed, were to be armed respectively with Rigby and Sharps rifles, to shoot under the N. R. A. rules; but they proposed matches on separate ranges, each squad to shoot in its own country and to secure equality as to weather conditions, three days' shooting to be done, three hours on each day, and the grand aggregate to count. These conditions were specified to avoid the trouble and expense of a personal meeting, and yet secure as nearly similar conditions as such an encounter would give.

Under date of Feb. 12th Mr. Rigby begins to "hedge." His first challenge proposed a match "between two men shooting with muzzle-loaders and two men with American breech-loaders," and yet when he finds so really an acceptance he says: "I did not propose to enter into a contest of muzzle-loaders against breech-loaders in general, but against Creedmore (Creedmore—Nick) rifles, loaded and treated in the special manner which was found at the Centennial Matches to gain the best results." In other words, Mr. Rigby keeps himself well posted on rifle progress here, and knows that the Centennial breech-loaders are in-day defunct arms, that they have been superseded by improved weapons, and that when the next match shall be fought, although the muzzle-loading teams may use their old and trusted weapons, the American team will come into the field with a different and better weapon than any yet seen in public.

Of course the American squad will use their latest pinks of perfection in the small-arm line; and if we are to be restricted to breech-loaders that we once used, it might as well be proposed to hold us back to the original Colt revolving rifle.

No, sir, Mr. Rigby; the test, if test there is to be, must be of the best against the best, without any restrictions to the rifles of the past. Let us bring our best weapons to the front, and do you the same, and when rapidity of firing is a *sine qua non* it is simply absurd to object to the use of any special apparatus to abridge the time required for cleaning from the breech. Of what use is it to fire over again the Centennial match in such a disjointed way as is here proposed. If it is to be a match against time—that is, the greatest score in the least time—make it so in every respect—place no obstacles in the way. Methods of manipulation, which might be very appropriate in the leisurely conduct of an all-day match, would be entirely out of place here. Then the marksmen could get up from the firing mat, sit comfortably down and swab out with care and deliberation. Does Mr. Rigby suppose that we would not bring every appliance to bear in the saving of time? There is a very much quicker way of cleaning a rifle than that followed in the Centennial match, and Mr. Rigby would have an opportunity of witnessing it if this proposed match be carried out as it should be; and to insist further that the men should use one and the same target, fulling back after firing, is placing an unnecessary clog in the way of those wishing to make the most of their time.

On the point of firing the match on different ranges, which the Sharps people propose, Mr. Rigby makes very proper objections. If Mr. Rigby can secure time and opportunity for the match at Wimbledon, it would seem to be an excellent stroke of policy to fight the matter out there in July next. A match shot on ranges where the climatic conditions and weather surroundings are so dissimilar as Creedmoor and Wimbledon, would be decisive of nothing at all, and Mr. Rigby is justified in objecting to such a cheap farce; but if he is really desirous of "demonstrating that the American breech-loading match-rifle does not possess the advantages of rapid and simple manipulation, which properly belongs to breech-loaders, and that it is in this respect inferior to our muzzle-loader," let him make a match or agree to one in which each arm shall be handled by experts bound to get the very best results out of it, each weapon to be the best of its class, and let no circumstance be tacked on or condition imposed which shall hamper in the slightest degree any of the contestants. Mr. Rigby's letter of February 12 proposes many such impediments which cannot be justified. I know that the view I am advocating was that taken by everybody in the N. R. A. office when the challenge first appeared, and these restrictions do not strike us as in consonance with the first broad gauge of battle.

NICK.

THE WINCHESTER RIFLE IN THE ROCKY MOUNTAINS.

SAN LUIS PARK, Colorado, Feb. 14, 1878.

EDITOR FOREST AND STREAM:

Your correspondent, "Viator," in your issue of Feb. 7, asks your readers, who have used the new .45-calibre, 75-grain Winchester rifle, to say what they think of it for deer shooting. I was enabled through the kindness of Wm. Read & Sons, Boston, to procure one of the rifles from the manufacturers early in the fall, made to order, pistol grip, short magazine, nickel trimmings, and with sling; in all other respects the rifle is the same as those now in market. I wanted it for use in the Rocky Mountains for deer and mountain sheep, and where, I am glad to say, it has given me great satisfaction. I have used it on at least twenty hard days' mountain tramps, giving it as severe usage as any rifle should ever be subjected to, using it fairly as a staff in climbing, and I can now say that the rifle seems to have improved by this hard treatment. Our mountain hunting here is perhaps as hard and difficult as can be found anywhere, and often demands from the hunter a free use of his rifle to assist him in climbing to the altitude necessary to reach to find the mountain sheep. For this the Winchester is admirably suited. If "Viator" is a mountain hunter, and remembers his mountain climbings, he will appreciate the Winchester's rather short stock and rifle butt plate, with its long toe or beak, unusually well adapted to give a firm hold upon the rocks. I find the rifle to give but little recoil, and to be an accurate shooter up to 300 yards. I have not tested it carefully for the longer ranges. The shape of the butt plate makes it a pleasant rifle to use for off-hand shooting, and especially as a magazine gun, where rapidity of fire with a correct aim is required. One needs but to raise the elbow as high as the shoulder, and the rifle will rest naturally at a level if held firmly against the arm at the shoulder. I was unused to it at first and did not like it; I now like it very much for off-hand shooting. But a short time since I fired with it three shots per day for three days, 300 yards off-hand, Creedmoor target, making 39 out of a possible 45. I have never done better under the same conditions with any rifle.

"Viator" writes of using the English double express rifle. I have one, but it lies now unused in its case; in almost all respects I prefer the new Winchester. I can get in two shots a little quicker with the double rifle, but with the Winchester I can get in six in rapid succession, and one often wants more than two shots. Last December, while out for mountain sheep, I came upon a band of five black-tail deer; they were 150 yards off at first shot, but before they got out of range I had four of them down and had wounded the fifth.

I found the nickel trimmings too bright, and the metal where one grasps the rifle in carrying it still-bunting very cold to my hand, and to remove these objections I covered these parts with buckskin, which answers the purpose admirably. My Winchester shows service, and I find it can be relied upon, and I like it for deer hunting better than any other rifle I have ever used. The only drawback I find in the most satisfactory use of the rifle is in the cartridges furnished for use with it by the Winchester Company. The materials, powder, lead, etc., are all right, but the shells are so tightly closed down upon the bullets that many of them, after carrying in the magazine but a short time, riding or climbing, become shortened an eighth to a quarter of an inch, caused by the bullet being forced into the shell, and they cannot be loaded from the magazine (not an agreeable condition of things), and they must be taken out of the magazine from the side before the rifle can be made to work, and if they are used must be loaded from the top. I am very careful and often examine to see that I have no shortened cartridges in the magazine. I am surprised that the Winchester Company does not remedy this defect in their cartridges. Certainly, it can be done and it should be done, and so thoroughly done, too, as to render any objectionable shortening of the cartridges impossible. I sent for their reloading tools and used them, employing the best skill I was master of, but the result has been very unsatisfactory. If the Winchester Company will remedy this defect in their cartridges, and could be induced to send me a few to assure me that they are what they should be, I should

be made very happy. Has "Viator" tried the new Evans' magazine rifle model of 1877 for deer-hunting? I have not had the opportunity as yet. There can be no such trouble with the cartridges in the Evans.

G. S.

SOME RECOIL NOTIONS EXPLODED.

MONMOUTH, Ill., Feb. 5, 1878.

EDITOR FOREST AND STREAM:

In looking over your very interesting paper, I have, from time to time, seen I know not how many long-winded articles on the cause of recoil of guns. One would naturally suppose when the truth lies upon the surface plain and palpable, as it does in this case, that he who goes digging and delving at the bottom of a well for it, should at least be left to enjoy the pastime as best he may in silence and alone, and not trouble others with his far-fetched folly.

The theory advanced is that when the ball is driven from the chamber of the gun, there is a vacuum created in the barrel into which air rushes, striking the bottom of the chamber with force enough to cause the recoil: a most stupid proposition, and one without a single fact to support it. A good article of gunpowder will produce, on combustion, about fifteen hundred times its volume of gas. This gas is nearly, if not quite, as heavy as atmospheric air. The most of it, of course, escapes immediately after the escape of the bullet, but the chamber remains full of it. There is no vacuum. Look through the barrel of your breech-loader immediately after it is discharged, and you will see a practical refutation of this theory. The barrel is found full of gas, mixed with a quantity of free carbon, in the form of smoke. Is it not plain that if the air had entered, as stated, that the gas and smoke would have been driven out? The gas evolved by the combustion of gunpowder is a positive power, instantaneously created, acting with equal force in all directions. The bullet is driven out because it is the only wall of the house weak enough to yield to its power. And there is a shock equal to the weight of the ball added to the friction communicated in the opposite direction upon the breech of the gun. The explosion tends to drive the two bodies apart in opposite directions, as it were, and if the gun were no heavier than the ball, it would be driven just as far backward as the bullet would be forward. That the lighter the gun, and the heavier the ball, with any given charge of powder, the greater the recoil, is a truth in the experience of any one who has used guns very much.

Mr. Editor, do you not remember in the old muzzle-loader days of glorious memory, when you, in your excitement, chanced to put too loads of shot in the same barrel, and at night, while you were rubbing the discolored swelling on your shoulder with arnica or whisky, did you, in your mighty wisdom, conclude that the double charge of shot had nothing to do with it? I guess not! No, sir; the expanding gas forces the bullet in one direction, and jams the breech of the gun in the opposite, and that is all there is of it.

Mr. Ferris says he has never been able to detect recoil until after the ball has left the muzzle. In answer, I would just say that if Mr. F. has the senses of sight and hearing good enough to verify his statement, he sees and hears most acutely. I undertake to say that the time between explosion and exit is inappreciable to the senses of common mortals. His experiment with the rifle rested on an incline proves nothing, as the recoil is directly backward, and would give no lateral displacement to the barrel, and would not, therefore, disturb the accuracy of the shot. Mr. Editor, I am not surprised to see such a fallacy advocated by a single individual (for some men are very full of notions), but I am amazed to see so many others falling in with it, and commending it through the columns of your paper. In this, as in most other cases, truth is on the surface, and does not need a metaphysical deduction for its discovery.

VENATOR.

In your issue of the 24th Jan. there appeared two articles upon the subjects of recoil and upset of bullets. In one of these—from the pen of Mr. George H. Ferris—I was much interested, especially as it corroborated and gave emphasis to my own views upon the same subjects. From my own experiments, I am positive that recoil never takes place until after the exit of the charge. Furthermore, it appears to me that the frictional force of the projectile along the bore of a gun is sufficient to carry the gun slightly forward in the direct line of fire prior to the exit of the ball. This would seem to be the case, since the most perfectly fitting false muzzles have at times been shot away, through negligence, particularly those that are not provided with a safety knob, which obstructs the view beyond the muzzle sight. Mr. Ferris attributes the upsetting of projectiles mainly to the "great blow" given by the explosion, in opposition to such theories as attribute it in a great measure to air pressure. The resistance of the air column within the bore of no rifle is of sufficient moment to figure as a factor of prime importance in investigating the upsetting of projectiles. This is a fact which will eventually become equivalent to an axiom, and it is already recognized as such by many who have had any experience with explosive shells. These missiles, when proper care is bestowed in their preparation, are so sensitive that contact with the merest twig which opposes their line of flight will too often explode and scatter them. If driven at sufficient velocity they may be made to explode upon the surface of a suspended playing card. Now it is clear that these shells would be exploded in the bore of the rifle the instant the explosion behind them overcame their own inertia, were it true that the resistance of the air opposed even a fair proportion of that crushing force exerted to upset a projectile.

The second communication, to which I referred at the outset, was from your correspondent "Venator" of Monmouth, Warren county, Ill., who opposes Mr. Ferris, to no purpose, however, as his objections are overruled by facts, adduced from many carefully annotated experiments. "Venator" accuses Mr. Ferris of misapprehending both the long-range breech and long-range muzzle-loaders, and I am at a great loss to discover that he (Mr. Ferris) misapprehends either. "Venator," however, shows himself at fault in more ways than one. He asserts, to quote his own words, "the base of the ball is either perfectly flat or slightly oval, and cannot be influenced in that way (i. e. swaged into the grooves) by the force of the discharge behind." Now let it be granted that the projectile in being pushed home in a muzzle-loader takes the grooves upon a bearing surface of, say one-sixteenth of an inch. If this bolt be fired into a snow bank with a reasonable charge of powder, it will, when found, bear the impress of the grooves upon two-sixteenths of an inch, or more, of its length, according to its ratio of hardening alloy. Again "Venator" is wrong in his conception of the projectiles used upon the occasion of the international match by the respective

teams, and Mr. Ferris is right in asserting that these projectiles were swaged into the grooves of the American and foreign rifles alike by the "spreading" (i. e. upsetting of the ball). Although there is a perceptible difference in the calibres of some Remington Creedmoors, I have never as yet seen or handled one of them of a calibre sufficiently small to prevent its being loaded from the muzzle with either the old style forty-four, or the new Hepburn forty-four bolt. The "Hepburn" is a rather close fit, more so than the old "style" (both being paper patched), and yet it is solely on account of the patching that they accommodate themselves to the rifling when loaded from the muzzle. I will conclude by saying that I used my Remington Creedmoor invariably as a muzzle loader, and of all the hundreds of bolts of four varieties fired from it, not one has taken the grooves until upset by the powder discharged.

GILBERT T. SMITH,

Sandy Spring, Montgomery Co., Maryland, Jan. 30, 1878.

"RECOIL" AND "UPSET."—Editor Forest and Stream: I have read the numerous letters upon the above subject from "Straight-Bore," "Venator," "Ferris," and others, until all my previous theories are upset, and I recoil from presenting them. In the language of the poet—I have forgotten his name who wrote—I have also forgotten the language, but, stated in prose, I had not supposed so much could be written upon the subject. According to one the "recoil does not take place until the bullet leaves the muzzle." Now, if you get a posterior kick from a mule, the recoil takes place about the same time that the foot commences to start on its return voyage, and the recoil and upset are simultaneous. According to my notion, it is the same with firearms. If the recoil only takes place after the bullet leaves the muzzle, then there should be just as much recoil without a bullet, or with a light bullet as a heavy one, which is decidedly not the case. The explosion of the powder generates a force in the shell equal to from fifty to seventy-five tons to the square inch. It is a culminating force, and with proper powder should reach its greatest about the time the bullet leaves the muzzle. When the force is generated, the bullet, offering the least resistance, is moved, and that instant the recoil commences. In proportion to the resistance offered by the bullet will be the recoil at the same instant the upset commences. It undoubtedly fills the grooves as once, otherwise gas would escape, but it continues to be upset and shortened till it leaves the barrel. In proof of this, I cite an experiment. I shot a Sharps 550 grain bullet in a 2 6-10th chambered rifle, but fired a 2 1-10th shell, thus bringing about one-half the bullet into the chamber. I caught the bullet in sawdust, and found about one-third the distance from the heel a plainly marked ring around it, showing what part had been caught in the chamber by the blow; but behind this ring the marks of the rifling showed as plainly as in front of it, and must necessarily have been made after the force that formed the ring. It "Ferris" will try the experiment of resting the muzzle loosely in a given position, and fire a few shots, and then fasten it in the same position, so it cannot move, and shoot again, he will discover that "the world moves." The barrel, in my opinion, unquestionably moves before the bullet leaves it; but with uniform ammunition and uniform holding, it will move alike each time, and therefore give uniform results. It is the lack of uniformity in these respects that makes poor shooting.

Yours, truly,

F. HYDE.

UPSET OF BULLETS.—Utica, Feb. 4.—Editor Forest and Stream: In your issue of January 24 I noticed an article from "Venator," who takes me to account for my statements "that those foreign muzzle-loading rifles and American breech-loaders (used in the national match) were made on the same principle." I dislike to take space in your valuable paper to argue a question that is so well understood by riflemen and riflemakers; but I feel it my duty to reply. I do not wonder that my statements were so unaccountable to "Venator." It is evident that he does not understand the principle on which those long-range rifles are made. His idea that a bullet cannot be upset by force of powder (unless it has a cavity, or a taper plug in the base) is many years behind the time. The old style, cone-shaped bullets, used in muzzle-loaders, would not shoot well unless they upset and formed a bearing three times longer than the imprint made on the bullet in loading. It is true that the old style bullets for breech-loaders were too large (if made of hard metal) to load at the muzzle; but those of recent make for long-range shooting are made to just fill the bore with a patch, and depend mostly on the force of powder to expand them to the grooves in the gun. The foreign muzzle-loaders have bullets fitted in the same manner, and both guns used in the national match were much on the same principle as I stated. In the national match of 1874, Lieut. Henry Fulton loaded his Remington breech-loader at the muzzle (and it did not make him sweat much either). He thought it an advantage to do so to insure a perfect expansion near the base of the bullet. His theory was that a bullet expanded only at the moment of explosion, and the portion near the base that fitted into the shell did not take the grooves at that point. His theory was correct as far as my observation goes. I have noticed that bullets that fit tight in the shells do not take the grooves near the base, because there is no room for expansion. Those that fit loose in the shells take the grooves near the base. I tried solid base cylindrical bullets in a Government carbine some twenty years ago. The bullet just fitted the base with a patch, and depended on the force of powder to expand them to the grooves. They shot much better than the old style bullets with a cavity at the base. If Col. Minnie had known the force of powder upon a solid base bullet of suitable length, he would have found it unnecessary to make a cavity in them to make them take the grooves. If "Venator" will consult some one who is posted on rifles, he will get more light on the subject, and find that he was much further from the mark than he supposed me to be. Let me here say a word to "Straight-bore" and "J. H. K.," to show that a bullet is not upset after it starts by compressed air, or friction. Before a bullet can upset after it gets under motion there must be resistance in front equal to the force behind. In that case the part near the base gets a shock to expand it as much as it would in front; and why does it not expand that thin portion that fits tight in the shells? It would certainly do it if a bullet gets an additional upset by compressed air. The concentrated force of the powder at the moment the bullet leaves the shell is greater than at any other point while within the barrel, and it does not expand that thin portion near the base that failed to take the grooves on the start, which is conclusive proof that no upset takes place after the bullet starts. Friction causes less upset at centre of gravity than when the bullet is free to react, but would upset more close to the base. If a long bar of lead was held at one end in a vise that weighed one ton, it could not be upset with a sledge hammer only on the end where the blow was given. The heavy, dead weight of the

side lines and measurements are correct, the divergence of the inside lines produce an area of space equal to the extra inch. If the angles are made square the diagonals will not coincide, but there will be a triangle, whose area will make just the square inch to be accounted for. A Lakeville, Conn. correspondent, who is a civil engineer, thus sets it forth:

"If proof in another way is desired, square up a 5x13 parallelogram, put in its diagonal and measure the perpendicular height to the diagonal from the 8th inch, and it will be seen to be the 3-14 inch and not just the 3 inches. The length of the diagonal is 13.92838339 inches. The difference on an 8-inch base from a perpendicular side of just 3 inches and one of 3.07692312, represents such an angle as will require a perpendicular width of .07179 inches at its opening; and inasmuch as there is a space on each side of such a parallelogram's diagonal, its area, though of a long and slim nature, is ascertained by the multiplication of the diagonal length by that 1-13 to 1-14 of an inch space 13.93x.07779 equals 1 inch."

With the answers have come numerous other puzzles of an equally puzzling nature, which we must decline publishing, simply from prudential motives. One query of a New York correspondent we give, but wish it distinctly understood that we do not wish solution of it:

"A goes to market with thirty prairie chickens, which he sells at the rate of two for one dollar, and for his thirty chickens gets \$15. That is plain. B also goes with thirty chickens, but he sells at the rate of three for one dollar, and for his thirty chickens gets \$10. Total received by both men for sixty chickens, \$25. The next day B is sick. A takes B's chickens to sell them, but says to himself, 'If I offer my friend's chickens at three for one dollar I can't sell my own at two for \$1.' So he offers two of his own and three of his friend's for \$2. Now sixty divided by five equals twelve lots, at two a lot equals \$24, or five for two equals forty cents apiece; forty by sixty equals \$24. One dollar has disappeared, and yet he has obtained apparently the same price. Figures, they say, 'won't lie,' but they sometimes equivocate slightly."

LAWYER.

OBJECTIONS TO HAMMERLESS GUNS.—In your last number (Feb. 21) appeared an article strongly advocating the W. W. Greener hammerless gun. I grant that if it is perfection we are aiming at, the hammerless gun comes as near it as anything yet invented; but cannot we be contented to let well enough alone? It seems to me that "perfection" in this case would be rather too much of a good thing. Your correspondent brings forward as one recommendation to the hammerless gun that we never have a broken hammer to mend. How often does a sportsman have a broken hammer to mend? Must use his gun rather roughly if he often has accidents of that sort; and for my part I would rather have a broken hammer to mend than my own or some one else's arm or leg or shoulder, for there is about three times the danger of being shot with a hammerless gun than with the good old breech loader, which I do not think any hammerless gun can replace.

Further, our friend says, that with the hammerless gun the sportsman is not made to blink by the pulling of the trigger. Does Capt. Bogardus blink every time he pulls his trigger at Gilmore's? It seems to me that sportsmen of a slight degree of experience would get pretty well accustomed to pulling the trigger.

As to the objection that the hammerless gun is less dangerous while passing through a thicket or climbing a fence, it is to be hoped that most hunters know how to hold their guns in a proper position while in a thicket, and to put them over the fence first. And, indeed, this objection seems hardly worth noticing, for it stands to reason that if one gun is naturally more dangerous than another it will certainly be more dangerous in extraordinary circumstances.

And, lastly, I never saw yet a man calling himself a sportsman who would forget to cock his gun, even in the excitement of hunting.

H. M. II.

New Brunswick, N. J.

We give with pleasure our space to our correspondent H. M. II. All opinions for or against a new weapon may be useful; still the onward march of progress in all things is irresistible. When muzzle-loaders gave way to breech-loaders precisely the same arguments as our correspondent H. M. II. uses were advanced. One thing urged by all those who advocated the old style was that more accidents would occur with breech-loaders than with muzzle loaders. The very opposite is now found out to be the case. We do think that with the hammerless gun it may take some time before sportsmen can become acquainted with them; but it should be remembered that hammerless arms are by no means exactly novel, that is as far as cocking the piece by application of the finger on the hammer goes. The bolt action used for military arms has been the gradual step forward which has led up to other important changes in lock mechanism. Some of these days we shall consider even the hammerless gun as old fashioned. The world must move.

LUX FEMINA FACTI.—No; we have not blundered in that quotation. It was the woman's privilege to be the light of this jaunt to the woods; the leadership was undoubtedly a thing of masculine assumption. We have always contended that the world, forest and stream, and all good things pertaining thereto, were made for woman as well as for man. We are therefore glad to present the unhjoined letter in substantiation of our theory, simply premising that we have a companion letter from the husband, in which he expresses the very worthy resolution never again to go off into a corner and have his enjoyment alone:

EDITOR FOREST AND STREAM:

For many years, on the coming of autumn days, my husband, who is quite domestic in his habits at other seasons, has an attack of a migratory character, and the overhauling of tents, camp chests, and the varied paraphernalia that years of experience have accumulated in his outfit for the woods, finally culminates in a northerly flight about the time chilly winds and frosty mornings betoken approaching winter. Many a time, on bidding him adieu as he has started for a month's absence, have I wondered where in the vast solitude of the northern wilderness existed a charm that could allure him from comfortable surroundings, and the regularity of his migrations served to deepen the mystery, until feminine in-

stinct could endure it no longer, and my parting admonition in 1876 was, "I shall go with you next year." So it came about that last season, for the first time, I caught glimpses of the forest and stream primeval, and the rocks and lichens olden, and gathered some of the treasures that are stored in the solitude and sunshine of forest life. In a sheltered glade, adjacent to the rocks and rapids of a noisy river, among the magnificent pines and hemlocks, far from all signs of civilization, we pitched our tent, and the unspeakable charm surrounding that four weeks in the wilderness is a treasured memory. My husband was successful in the chase, and enjoyed the triumphs of a hunter, while I was captivated with the ferns, mosses and evergreens that grew about in bewildering profusion. We climbed the highest peaks, and worked our way through tangled swamps and thickets, paddled our bark canoe under the drooping branches of the spreading cedars that overhung the margin of the stream, and guided its course in safety among the rocks in the whirling rapids. We found pleasure in the Indian summer noonday sun, and our admirable outfit fully protected us, while the "patter of the rain on the roof" mingled with the roar of the storm far up among the tree tops. The snowy mantle that finally covered the trees brought new charms, and many weird and fantastic outlines were woven in the branches over us, and the crisp, frosty air and hillside climbing brought us health and color to the sallow cheek, and developed a relish for eating and sleeping that civilization knoweth not of. The mystery of my husband's migrations has been in a measure revealed, and a charm in the revelation folds me as closely, and we anticipate greater pleasure in the coming of the Indian summer days that will see us off again to the woods.

KALoola.

For Forest and Stream and Rod and Gun. BEARS IN THE GREAT DISMAL.

IN perusing my traveling friend, guide and companion in my southern trip this year—"Hallock's Gazetteer"—I came upon a passage which spoke of the game in the Dismal Swamp, page 167 (of "Fish and Game Resorts"), and it brought to mind an adventure there in 1863, or the winter thereof where for a time my regiment lay at Suffolk, in the edge of Nansemond.

One day I was out on our picket line on the Dismal Swamp side, when a boat came down the river literally loaded with game—aadles of venison, bear-meat, possum, ducks, etc. A lank, awartly-faced man, rather past middle age I should judge, was in charge, and asked to be passed in with his cargo. Wanting some game myself, and wishing still more to know where to find it, I talked with him a little while and then passed him in, sending a man to show him to various quarters where I knew officers would soon buy up all his game. This man's name was Duke; perhaps the *Prentiss* Duke spoken of in your *Gazetteer*. But he was no *prentice* at hunting; he was a foreman in the craft. When he sold out, which was speedily, he came to me, and, in a gruff tone, said:

"Colonel, I've heard you're right smart with the rifle. There's a powerful chance o' game up my way. Come to my Thin when the moon fulls and I'll give you a showin' at bar!" ca'fo say I jumped at that invitation it is to utter truth, no more. When the moon was at full I got a Nansemond skiff, took two picked men to row or tow up the canal just as it best suited them, and started for Duke's. By the way, it is the easiest point to reach him: rail to Suffolk, and up the canal, I should judge seven or eight miles to his place. Am not certain as to distance. It seemed that I got there just before dark, had a splendid fish and game supper, enlivened by coffee which I took with me, looked at his hounds, curs and bear dogs, of which he had a yard full, and then got ready for our night hunt in the swamp bordering the banks of Lake Drummond.

Duke led out four bear dogs—they looked to me like a cross between the bulldog and bloodhound—and we started, he letting the dogs run as soon as we were out of his little clearing. In ten minutes they were yelping "like mad."

"They've struck bar!" was Duke's quiet answer to my look of inquiry. We pushed on through the weird and tangled forest of cypress, gum, water oak, and I know not what else, the bright full moon casting fantastic flickers of light among the dense and varied shadows, nearing rapidly the spot where the dogs kept up their wild chorus. Soon, in a little open, we came to a thick, bushy persimmon tree, around the base of which the dogs sat on their haunches barking their level best. They were silent at a word as Duke and myself walked up.

"You wanted bar, Colonel; there's a spunkie for you," said Duke, quietly; "An old lady, and two cubs nigh full grown!"

So it was; three bears in one tree; better luck than I ever had before. The tree was low; I carried two army Colts in my belt and a Sharps' carbine in my hand.

"I think I'll take a contract for all that meat, Mr. Duke!" said I, and I pulled for the head of the old bear an inch or two under the ear.

In a second she was tumbled down among the dogs, and too badly stunned to do any damage. Duke's knife let the blood from her neck, and then with my revolvers I "went for" the cubs. One fell at the first shot, giving the dogs more fun, for it was a body shot; but he was soon still, and then with two shots, one through the kidneys and the other a neck shot cutting the jugular, I "let down" number three—limber when he struck ground. The whole work probably took from three to five minutes. It looked too much like laughter, but bear-meat was a luxury in camp, and I had come for meat as well as sport.

I will not tire the reader with repetitions, for the whole night was spent out, and in the morning Duke sent in two men with mine to bring out the large game; the small we packed in ourselves. Seven bears, four racoons, two wild turkeys and one fat "possum" was the result of one night's sport in the Dismal Swamp. Who could ask better?

NED BENTLINE.

QUAIL SHOOTING WITHOUT A DOG.

MAHLBORO, N. J., Jan. 23, 1878.

EDITOR FOREST AND STREAM:

I've been interested in reading some article in your journal describing the way quail shooting is conducted in some parts of California—i.e., without the use of a dog. It brought to my mind pleasant reminiscences of a day's sport in Ohio that I enjoyed a few years since, and prompted me to relate them. I may add that I've been a very active and enthusiastic quail shooter for the past twenty years, and during all

this time do not remember to have had a single day's quail shooting (except the one I will try to relate) without the use of a dog. This exceptional day was very unexpected, and happened in this way:

I was visiting some relatives in Ohio, not far from the town of Dayton. A sporting friend whom I met proposed a trip up the Dayton and Detroit R. R. to a point not far distant from Sidney. My friend shot so little that he did not keep a dog, but he assured me that there would be no difficulty in procuring one at his relative's where we were to stop. We were soon en route, and found at our destination most comfortable and hospitable entertainment. During the night it snowed about two inches deep, and cleared away before day. In the morning we were late in getting out, as we waited for our glib and promissed dogs. My friend finally ascertained that no dogs could be obtained that day, as they were all in use, so we determined to try it alone and do the best we could. It was a new country, and much of the ground was uncleared.

The first piece of ground we hunted was full of stumps and brush, and very extensive. In walking along the outside of this ground, and near some ragweed and stubble we discovered some quail tracks in the snow, upon what I supposed the feeding ground; but they soon returned again to the stumps, and then we lost them altogether. In one corner of this new ground was a large flock of sheep feeding upon corn fodder, scattered over an acre or two. We tracked the quail to this place from several directions, but invariably lost them here, and finally gave them up and concluded to go home. We had not thought of looking among the sheep for the quail, but here they were feeding upon the loose grain that they found shelled out—t suppose by the sheep. It so happened now that we were walking home directly through the large number of sheep, when what was our astonishment to hear the whirr of the quail's wings not twenty paces from us. I must confess I was so startled I did not get but one barrel into them, and that one aimed at the whole covey, thinking to kill them all, and, of course, with no other result than making a few feathers fly. My friend, if anything, was more frightened than myself, and could not get his gun into position at all. It was a fine, large covey, and they went out among the stumps and scattered most beautifully, and were carefully marked down. They did not fly very well—I suppose because of the snow—but gave us good shooting. There was scarcely any cover, and the ground was so large they did not fly out of it after several attempts. We followed them up most perseveringly, thinking this our only chance, and bagged ten very fine birds. On our way back we passed through a large cornfield, where the stalks had been left standing and the corn had been gathered out and placed upon the ground in large heaps. These heaps had been removed, but much loose grain had been scattered about upon the ground, which was getting rare in places, as the snow began to disappear with the warmth of the noonday sun, affording feeding for quail, etc. We were fortunate to find another large covey upon this ground, and to be ready for them when they first rose, securing three. Following them up into open shooting, we got nine more. Three rabbits and one ruffed grouse upon the edge of some large timber completed our bag, and we went home to enjoy a late but most excellent dinner.

M.

CHILLED SHOT—A REPLY TO MR. KNOWLTON.

EDITOR FOREST AND STREAM:

I must confess that I was somewhat surprised to find so strong a champion in favor of chilled shot as Mr. Knowlton seems to be, knowing this gentleman to be a salesman for a shot manufacturer who does not make chilled shot and consequently might be expected to condemn it, as a matter of policy; but Mr. Knowlton generously suggests advantages for it which I think Messrs. Tatham & Bros. must have forgotten to claim. He proves to the sportsman that it is economy to use chilled shot, as it does not take as much powder to drive a number of pellets of hard shot with greater penetration and produce a better pattern than a like number of soft shot of the same size. A sportsman will readily see that he not only saves on his powder, but also gets a greater number of loads out of a pound of shot. Mr. K. could scarcely suppose that Messrs. T. & Bros. had neglected to experiment with an equal weight of hard and soft shot.

Before and since his communication I have made a number of experiments in that direction. The average result of a uniform charge of powder and shot by weight, the pellets in each load gauged and counted, shows, for soft shot—pattern 85%, penetration 14%; improved chilled—pattern 65%, penetration 29 3/8. Pattern 58 per cent., and penetration 49 per cent. better for chilled shot. When loaded by measure, the pattern is slightly decreased, and penetration somewhat increased on chilled. These results were obtained by using 4 1/2 drachms Curtis & Harvey's No. 4 powder, a felt wad over it, and cardboard wad over the shot.

Mr. K. closes by condemning black lead finish, "which so fouls the gun, and takes the game," but which is used by all soft shot makers; thus, it seems to me, leaving the sportsman no choice but to use the "Improved Chilled Shot," to finish which plumbago is not necessary. It is scarcely necessary to state what every practical sportsman knows, that when a gun does lead it is with metallic lead, and not plumbago, the latter being a lubricator.

The communications from Mr. Geo. Hayden and Maj. Merrill in your last issue, seem to be from gentlemen of practical ideas, who understand what is wanted by sportsmen, viz.: Ammunition and appliances which will give best results. I agree perfectly with Mr. H. in using the best, strongest, and cleanest powder. My experiments teach me that the best results with chilled shot are to be obtained by using strong shooting guns and strong powder. The killing penetration of soft shot may be increased by using stronger powder, but what is gained in penetration is more than balanced by loss in pattern, the increased propelling force causes the pellets to bruise each other so much more in passing out of the gun barrel, that fewer reach the mark, or, in other words, scatter more. I consider that the recently published trial was about as poor a result for chilled shot as could honestly be obtained. If quick, strong powder had been used, a felt wad over it, and a cardboard wad over the shot, the soft and hard shot sifted to exactly the same size, the result would have been twice as great in favor of hard shot.

I wish to correct a few errors which Maj. Merrill has made, as he will see by referring to your report of the trial. He says, "Each gun fired but one round, sixteen loads in all," when the fact is, each gun fired two rounds—one of hard, and one of soft shot—thirty-two loads in all. He will also notice that the guns showing in favor of soft shot, or nearly so, were comparatively weak in penetration, not shooting with sufficient force to mash up the soft shot.

I have experimented with various sizes of shot, at different distances, and find the result much the same. I was very much averse to using chilled shot, until I tried it in the field. After a month's shooting during which time I killed more birds, wounded fewer, and killed at longer range with hard than with soft shot, I was forced to believe in its efficacy.

CHAS. RICHARDS.

CALIFORNIA WINE DEPOT.—Mr. Aubrey Meyer, of No. 392 Bowery New York, has been in business for over twenty-five years, having been the first to appreciate the excellence of the California champagnes. His trade mark—an M—is recognized among the best brands. Mr. Meyer has opened, in his extensive wine vaults, a rifle range in which shooting takes place every night. The prize for the best shot is a Creedmoor long-range Remington rifle.

THE BOGARDUS GRIP.—Captain Bogardus appeared on Monday at Gilmore's Garden in a double capacity. The Captain was to shoot glass balls and carry by main grip some unknown weights. Of course, most everybody knows "it come down, Captain Scott," as far as his gun performance. Still some people were skeptical as to the Captain's grip

A few years ago Maine was the greatest lumbering State in the Union, but now she is sixth on the list, and the business is rapidly falling off by reason of the wasting away of the forests and the competition of the Western men. Shipbuilders at Portland say they can get pine masts and spars from the Pacific coast cheaper than they can cut them in their own woods.

WINES AT \$524 PER BOTTLE.—The vintage of 1811 has now acquired a peculiar celebrity, and the good wine produced that year all over France has been generally attributed to the influence of the comet. France was in that year passing through too anxious a crisis to care much for choice wines, and these vintages were, in the autumn of the following year, freely sold at \$300 a cask. In 1868 there was a sale of the cellars of Chateau Lafite, including much of the Comet-claret. The auction was held on the 27th of October, and as these were the days of the Second Empire, high prices were realized. The lots were started at \$4 a bottle, and the bidding went up to \$24, at which price a hotel-keeper at Bordeaux bought a large quantity.

Tiffany & Co., Silversmiths, Jewellers, and Importers, have always a large stock of silver articles for prizes for shooting, yachting, racing and other sports, and on request they prepare special designs for similar purposes. Their **TIMING WATCHES** are guaranteed for accuracy, and are now very generally used for sporting and scientific requirements. **TIFFANY & CO.** are also the agents in America for Messrs. **PATEK, PHILIPPE & CO.**, of Geneva, of whose celebrated watches they have a full line. Their stock of Diamonds and other Precious Stones, General Jewelry, Artistic Bronzes and Pottery, Electro-Plate and Sterling Silverware for Household use, fine Stationery and Bric-a-brac, is the largest in the world, and the public are invited to visit their establishment without feeling the slightest obligation to purchase.

THE
SHONINGER ORGAN

PROVINCED UNANIMOUSLY AS THE
Best Instruments.

Their comparative excellence is recognized by the Judges in their Report, from which the following is an extract:

"The **B. SHONINGER ORGAN CO.** exhibit as the best Instruments at a price rendering them possible to a large class of purchasers, having a combination of Roads and Bells, producing novel and pleasing effects, containing many desirable improvements, will stand longer in dry or damp climate, reliable to get out of order, all the hoarls being made three-ply, put together so it is impossible for them to either shrink, swell or split." **THE ONLY ORGANS AWARDED THIS RANK.**

There are 50,000 of our Instruments in this and the European countries in use, and they are so made that they will keep in tune, and stand any climate. They contain a magnificent Chime of Bells, tuned in perfect harmony with the Roads, producing wonderful effects. The Music Box, when turned forward, will make a splendid writing desk, with our Book Closets and Swinging Lamp and Flower Brackets, with a line of steel boxes free with each Organ, makes the **SHONINGER ORGAN** the most substantial, convenient and perfect Organ.

ESTABLISHED 1850.

Guns, Etc.

W. W. Greener's CHOKE-BORE GUNS, Tried on Game in America.

Supplied by H. C. Squires, American Agent,
1 CORTLANDT ST., NEW YORK.

The Gun of the Future.

Samples of the Hammerless Gun now on exhibition, and orders taken by our agent. Guns to be delivered June 1.

See the Following Testimonials:

Sir—It is a pleasure for me to inform you of my high appreciation of the 10-lb. Greener breech-loader purchased of you last winter. I consider choke-boring, if skillfully done, as the greatest improvement in fowling pieces since the introduction of the percussion cap. It gives the maker complete control of the pattern, and greatly increases penetration. To prove this, I will give you the performance of this gun. The 32-inch 10-gauge barrels, charged with 4½ drachms of powder and 1½ ozs. No. 6 + 1/2 high chilled shot, give patterns ranging from 235 to 330 pellets in 30-inch circle at 40 yards. The same charge of powder and 1½ oz. No. 4 American shot gives 160 to 175 pattern, with penetration which kills ducks at 50 to 70 yards like a stroke of lightning. It is a characteristic of the choke-bore to show its greatest superiority in the large-sized shot. What I am about to say will perhaps surprise you as much as the performance surprised me. On trial of the 12-gauge 28-inch modified choke-bore barrels, with 3½ drachms of powder and 1½ oz. of shot, I got about the same pattern and spread of shot at 25 yards as with the full choke 10-gauge barrels at 40 yards, with tremendous penetration. This is just the performance required of a gun for thick cover, in which you generally find ruffed grouse, woodcock and quail, these birds being killed, with few exceptions, at from 15 to 24 yards.

COL. JOHN BODINE.

BY CHARLES HALLOCK.

EDITOR OF "FOREST AND STREAM," "AUTHOR OF THE
"FISHING TOURIST," "CAMP LIFE IN FLORIDA," ETC.

NEW YORK:

The book is a complete manual for sportsmen: It gives every sportsmanlike method for capturing every known game animal, bird and fish in North America.

It designates the proper charges for guns for each kind of game, the various kinds of decoys and blinds, and baits and tackle for the fish.

It gives over 4,000 localities where game and fish may be found, specifies the game found in each locality, the hotel accommodation, and the best route to get there. (The preparation of this Directory was in itself a work of great magnitude.)

It gives the scientific name and specific characteristics of each species it describes, with the habitat and breeding season of each—a most valuable contribution to science.

It describes 287 varieties of edible fish alone, that may be taken with the hook; 50 varieties of ducks; 50 varieties of snipe or waders, and the different methods of shooting each.

Its instructions for capturing large game are very minute, and the chapters on woodcraft, outfitting and camping have been pronounced by "El Cazador," of Los Angeles, California, to be simply complete.

Every kind of dog used for sport is designated, and his points for bench judgments fully given. The chapters relating to selection, breeding, rearing, breaking, care and diseases, comprise a seventh part of the volume. There are 71 prescriptions and recipes given under the revision of the best modern canine therapeutists.

It is in itself the most concise, accurate, instructive, sensible and comprehensive work ever written upon the dog and his diseases. Any physician can administer the prescriptions with perfect confidence in their safety and efficacy.

It contains very useful recipes and remedies for wounds, bites, poisons, illnesses, and emergencies of all kinds; for cleaning, repelling, and preserving every implement used for sport; for selection and use of every kind of boat employed by sportsmen; a reference list of several hundred books in request by sportsmen, and a directory where to buy outfitting goods.

It instructs in taxidermy, and tells how to preserve and mount specimens of animals, birds and fish.

Gunpowder.

THE HAZARD POWDER CO., MANUFACTURERS OF GUNPOWDER,

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. only.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6½ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot-guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6½ and 12½ lb. kegs. Burns slowly and very clean. Shooting remarkably close and with great penetration. For field, forest or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Keenley Rifle."

FFFG, FFG, and "Sea Shooting" FG, 1 lb. kegs of 25, 12½, and 6½ lbs. and cans of 5 lbs. 4 FFG is also packed in 1 and ½ lb. canisters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard rifle powder of the country.

Superior Mining and Blasting Powder.
GOVERNMENT CANNON & MUSKET POWDER; ALSO, SPECIAL GRADES FOR EXPORT OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents in every prominent city, or wholesale at our office,

Sportsmen's Goods.

BOSTON SHOOTING SUIT.

Manufactured only by

G. W. SIMMONS & SON,
BOSTON, MASS.

THE BEST IN USE.

ONLY ONE QUALITY MADE AND THAT IS THE VERY BEST.

Flexible, Waterproof, Tan-Color, Duck. Each article—coat, trousers, vest and hat—has the name and manufacturers' address stamped upon it, and no suit is genuine without it bears this imprint.

The suit can be sent, securely packed, by mail to any part of the United States or Canada on receipt of \$1.25 above the price of the suit.

We make no discount except to the trade. The price of the suit complete is \$13.

The suit consists of coat, trousers, vest and choice of either cap with havelock, or hat.

The material is of the best quality of duck, waterproofed by a patent process. The color is that known as "dead grass shade."

The seams and pocket corners are copper riveted, and nothing is neglected to make the whole suit complete in every way.

This is what one of our best sportsmen says of it, writing from camp: "Miserable, drenching rain, pouring down in a perfect deluge, as if a second flood had come upon the earth, two portages to cross, and a swamp between them; that was the prospect before we reached our camping ground. Such a swamp, too; almost impassable, for where the ground was firm was an almost impenetrable thicket of thorns and what not, that looked as if it would tear you to pieces. Well, we got to our camp, and I must confess I was agreeably surprised on my arrival. Although I had been nearly eight hours under incessant rain, laboring and striving along under the adverse circumstances above mentioned, yet I found myself comparatively dry, and my clothes without a tear. For the benefit of our brother-sportsmen, let me advise one of Messrs. Simmons' (of Boston, Mass.) Waterproof Suits. Oh! what a relief it was to find one's tobacco was dry, and that one could light a pipe; that you could laugh at your miserable friend, who stood shivering and shaking as if he had the palsy; and then, next morning, oh! what fun it was to see him mending his clothes, while I had not a tear to complain of. Ventilation, also, that great bugbear of waterproof suits, is legislated for in the most ingenious manner. No sportsman should fail to supply himself with a suit which is at once cheap, practical, and will last almost indefinitely time."

Our Leather Jackets and Vests are the great wind protectors. They are made from soft, pliable black leather, flannel lined, and sell at \$9 and \$7.

Our Flexible Tan-Colored Waterproof Leather Coats and Breeches are considered the finest things ever made. They sell at \$22 and \$15.

An illustrated circular, containing full description of each garment, with sample of the material from which made, will be sent free on application.

Hart's Sportsman's Favorite Metallic Shells. FOR BREECH-LOADING SHOT GUNS.

These Shells are easily loaded, and the caps easily extracted from inside. Head solid and much thicker than any Shell now made, giving a solid seat for cone or wad, which prevents it from driving through or springing away, thereby causing miss-fires. The Cone is made of buckel, and fastened solid in its place. Neither rusts nor corrodes fast, like movable wad made from steel. The Nickel Cone also prevents miss-fire when a cap has been left on shell for a few days, which is liable to occur either in steel or iron. These Shells are nicely finished, and made any length ordered, from 2½ to 3½ inches. Shells and Loaders and Descriptive Price-Lists can be obtained from all the leading Sportsmen's Houses HART & SLOAN, Newark, N. J.

FROM CAPTAIN BOGARDUS, CHAMPION WING-SHOT OF AMERICA.
MESSRS. GEORGE E. HART & CO.—Gentlemen: The fifty Shells I received from you to-day suit me better than any I have ever used. They are stronger and better in every respect, and I shall use them in all my shooting hereafter.
Yours truly, A. H. BOGARDUS.

W. W. Greener's Champion Treble Wedge Fast, Breech-Loader.

THE WINNING GUN.

At the International pigeon shooting, Monaco, Feb., 1878, the Grand Prix de Casino, an objet d'art valued at £100, and a money prize of £105, the greatest prize ever shot for at Monaco, was competed for by sixty-six of the best shots of all nations, and won by Mr. Cholmondeley Pennell, with a full-choke bore Wedge-Fast Gun by W. W. Greener, killing 11 birds out of 12 at 28 yards and 1 foot and 2½ yards. He also won the second event, killing 8 birds in succession at 33 yards, making a total of 19 birds out of 20. This is acknowledged to be the best shooting on record. The winning gun at the choke bore match, 1877, beating 17 guns by the best London makers, and winning the silver cup, valued at 50 guineas, presented by Mr. J. Parley, the gunmaker.

The winning gun also at Philadelphia, 1876, in the pigeon shooting match between Capt. Bogardus and Mr. South for \$500 a side, South killing 86 birds out of 100, using a one barrel only.
The winning gun also at the great London Gun Trial, 1875, beating 102 guns by all the best makers of Great Britain and Ireland. THE PATENT TREBLE WEDGE FAST BREECH-LOADER is the strongest and most durable ever invented, and the most successful gun of the period. Patented in the United States, Oct. 5, 1875; No. 165,325. BEWARE OF INFRINGEMENTS OR IMITATIONS.

THE SCIENCE OF LIFE, OR, SELF-PRESERVATION.—Two hundredth edition, revised and enlarged, just published. It is a standard medical work, the best in the English language, written by a physician of great experience, to whom was awarded a gold and jeweled medal by the National Medical Association. It contains beautiful and very expensive steel-plate engravings, and more than 50 valuable prescriptions for all forms of prevailing diseases, the result of many years of extensive and successful practice. 300 pages, bound in French cloth; price only \$1, sent by mail. The London Lancet says: "No person should be without this valuable book. The author is a noble benefactor." An illustrated sample sent to all on receipt of 6 cents for postage. Address Dr. W. H. PARKER, 4 Bulfinch street, Boston. The author may be consulted on all diseases requiring skill and experience.

"THE OOLOGIST,"

A MONTHLY JOURNAL DEVOTED EXCLUSIVELY TO BIRDS AND BIRDS' EGGS.

This magazine, the favorite of amateur ornithologists, is now in its third volume. It is replete with all that is new or recent in Ornithology and Oology, and publishes important papers on the rarer of our birds and eggs. It is just the periodical for those making collections of birds and eggs for scientific examination, as its columns are constantly furnishing descriptions of the eggs of new and rare species.

TERMS—Forty cents a year, in advance. Specimen copies and prospectuses only on receipt of stamp. Address,

SCHUETZENFEST

The FOREST AND STREAM AND ROD AND GUN having given a gold medal for team shooting at the

SCHUETZENFEST

of the Sharpshooters' Union of the United States of North America, the Executive Committee of this Union takes pleasure in informing their American friends that they will make all arrangements for team shooting for this medal. The match will take place at the Schuetzen Park, Union Hill, on

Monday, June 24, 1878,

at 11 A. M. Each team to consist of eight men. Entrance fee, \$15 per team. The team making the highest score to win the Forest and Stream and Rod and Gun Medal. The entrance fee money, after deducting cost of markers, will be divided among the teams, pro rata. All the members of such teams must be "on" to the same society, and must have been members of it for ninety days previous. The entrance fee is to be paid on or before June 10, 1878, to Mr. F. HARENBURG, Treasurer of the Sharpshooters' Union, No. 190 Greenwich Street, N. Y. Any rifle club or shooting society of the United States will have the privilege of sending their teams without being members of the Union. Any communication directed to the secretary will be promptly replied to. GEO. AERY, President. J. H. BEHRENS, Cor. Sec., 37 Bowerj, New York.

My motto is, THE BEST GOODS AT THE LOWEST FIGURES.

IRA A. PAINE'S

FEATHER FILLED CLASS BALL.

PATENTED OCTOBER 23, 1877.

The "Standard" Ball.

The Bohemian Glass Works would respectfully call the attention of all dealers in Glass Balls to the fact that the Paine Patent Filled Balls the STANDARD AND ONLY BALL MADE TO A SCALE, therefore we would respectfully caution the dealers against laying in a stock of unsaleable articles for the Spring Trade, when you can purchase the Best Ball ever made at prices less than is charged for other inferior balls.

No other ball affords the PLEASURE of the Feather Filled Ball, and no other Ball is as beautifully made. It will break in every instance when hit by shot, and is sufficiently strong to prevent breakage either by transportation or falling on the grass.

Every ball is weighed and examined, then packed with the greatest care, in barrels of 800.

Send for price list. Special inducements to the trade.

HEADQUARTERS BOHEMIAN GLASS WORKS, 214 Pearl Street, N. Y.

Bogardus' Patent Rough Glass Balls and Glass Ball Traps.

These Traps are the only ones that give satisfaction, as they are simple of construction, easily set, and not liable to get out of order, and they throw the ball in a manner that more closely resembles the flight of a bird than any other trap in the market. The Patent Rough Glass Balls are made of uniform weight and thickness, and have a corrugated surface that strengthens the ball for shipment to any part of the country, prevents the glancing of shot, and thereby insures the breaking of the ball when hit.

CAPTAIN BOGARDUS was the first to introduce the ROUGH BALL, and at a price far below the smooth ball at that time.

Balls and Trap can be ordered through all Gun Dealers. Liberal discount to the trade.

MY IMPROVED TRAP (warranted), which will throw a ball in any direction from the shooter at the option of the puller, is now ready for the market. Price \$8.

Parties buying glass balls will receive score book for glass ball shooting in each barrel.

HEADQUARTERS FOR BALLS, HAGGERTY BROS., 10 Platt Street.
FOR TRAPS, HART & SLOAN, Newark, N. J.

Second and enlarged edition of "Field, Cover and Trap Shooting," containing instructions for Glass Ball Shooting, now ready. Price \$2, by mail, postage paid. Address: Capt. A. B. BOGARDUS, International Hotel, N. Y.

SONG.

BY THE LATE JOHN WARD, SHEFFIELD, ENGLAND.

[Written for the opening of the season for trout fishing of the River Derwent Association, Derbyshire, England.]

At length the first of April, once more has come again,
Again the Derwent Fishing Clubs have opened their champagne;
Of all the joint stock companies, so far as I can learn,
There is not one succeeds so well as our joint stock concern.

For our joint stock's the "Derwent Bank" which answers to our wishes—
That is, when we get credit there and draw large drafts of fishes.
True, sovereigns and notes are not held by the Bank of "Derwent,"
But what of that when fishes pass and silvery streams are current!

That trout and tarlups are akin, you cannot well deny,
Since every body knows that both are taken with the fly.
But flies at all times will not do, though Turton's self should dub,
And so the better to get through, we start well stocked with grub.

The wisdom of our ancestors—a well-known fact I'm stating—
Thought bulls and bears as well as hooks were suitable for baiting;
But now this most degenerate age destroys half our resources,
We've nothing but our hooks to bait unless we bait our horses.

We dearly love the daisy tribe, and covet with all our powers;
Presenting silks and feathers too, to win them to be ours.
We don't indeed by word of mouth say, Trout, will you be mine?
The way we pop the question is to drop the fish a line.

The trout from Derwent's rocky shelves their answer never send,
For when the fish yield to our wish they always come themselves.
So now I've sang you all to sleep, and when for home you're stealing
Don't dream you've hooked some famous fish and on the road go reeling.

Swan Shooting on the Potomac.

"Like some full breasted swan
That, fluting a wild carol ere her death,
Itutiles her pure, cold plumie and takes the flood
With swathy ebbs."—*Tennyson.*

SOME unsentimental, practical sportsmen, scarcely deserving to be classed higher than mere pot-hunters, have declared that the music of the dying swan is the fantastic creation of poetic fancy; and it is doubtless because the "wild carol" of the poor bird, when transfixed by the hunter's bullet, is not a strain to be compared with the lays of the muse, as our modern ears are taught. But you must remember that when that piteous, flutelike dirge was called music, it was in the days when the young shepherd was taught the divine art on the *tenera avena* by old Pan; and the instrument was of so limited a register that it would be a compliment to compare its notes to the reed-like sounds that the wounded swan utters when he perceives his inevitable fate at hand.

I remember once shooting mallard along the great Arkeadale Marsh on the Potomac, when suddenly my faithful retriever, a red terrier, stopped and cocked his ears and tail, and there, in one of those serpentine "guts," that wind their tortuous way through great marshes, was a majestic swan, snow white, and winged by a shot, swimming down toward the open river with wonderful speed, and trying to get to the mouth of the tide stream before me. Running up to the mouth of the gut, I awaited him with my gun cocked—an eight calibre, "silver steel" weapon, made by Geoffreys of London. Seeing the little tints of blue on him, I knew that the shade of Lucullus could not desire a better temptation to visit this world again than that bird properly roasted and served with red Burgundy of Volney—"le bon vieux sang de Burgoyne," as the old Souldin minstrels called it. My dog Bob trembled all over and whined in anticipation of my own delight; for he is too game a dog to eat game himself. But behold! my royal bird came up within twenty feet, and when I raised my gun to give him a quietus, he suddenly began to circle round, making that flute-like dirge with such a piteous accent that, though as a youngster I had been nursed in the camp and with all the horrors of war, I could not so harden my heart as to give that bird the death shot. And seeing me take down my piece, he presently half spread his snowy wings, and taking the wind directly aft, sailed majestically out into the open water, while Bob looked first at him, then at me, and then began to bark, as much as to say, "What can be the matter with that gun?"

I have known the hardest professional "duckers" to have such experiences with this bird; and it goes to prove the beauty and poetry of his nature, which caused the ancient bards to make the swan the type in mythology of the lapsing of animal passion, just as the story of Psyche and Cupid illustrates the lapsing of ethereal love by an inverse principle, as you may read in that quaint old curiosity of literature, "The Golden Ass," written by Apuleius, and translated into English in a style more classie than the original.

As is the habit of the wild goose, the swan roasts out in the open water with his family around him, swimming out from the feeding grounds at nightfall, and separating from the flock as they go until presently, in the dusk, you only perceive a number of little saowy patches in groups on the water, and so glistening white is the plumage that the birds take a reflection in the darkest night when all the water, even the white caps and floating ice, is dusky black. To successfully decoy either geese or swan, the sportsman must understand that they come in to feed in the morning just as they go out at night, *i. e.*, in families, and they will swim for miles and miles sooner than take wing, unless the wind be high, when it is their delight to work up against it until they find a bar, which they know, even in strange waters, with an intuition that no pilot's science can equal. At such times a single decoy anchored judiciously on a bar will lure them group after group. I have known them to be "tolled" by a reddish colored dog, after the manner used with canvas-back and red head ducks, but this was only on rare occasions.

A Winchester rifle, from a blind, is perhaps the most satisfactory method to shoot them, though there are some grievous disappointments attendant on this style, as I experienced once in company with my agreeable and hospitable kinsman, Gen. Fitz Lee, on his splendid river estate, "Kichland," between Aquia Creek and Quantico. Having fired at the swan for six days with buck-shot without declaring any dividend, I was at last fortunate enough to horrow a Winchester rifle from Col. Waller, and that very morning, as soon as the swan had collected on the bar, about 200 yards from the shore, I crept along down the main ditch, which drains the lowlands, and reached a position behind two great holly trees; and there they were, seemingly not three score yards away, riding gracefully on the waves, which, with the steady northeasterly wind, were rolling equal to old Chesapeake Bay; for the water here is six miles one way and twenty the other. My first bullet skipped clear over their heads, because I had forgotten the effect of the refraction of light; but making a proper allowance the next time, I had the satisfaction to see the ball light right in their midst, and without moving the rifle from my shoulder sent eleven shots into them by the time they could get up, for it is a clumsy bird to rise, in spite of its beauty in the water. In the meantime my host, who is the very ideal of a cavalry chief—handsome, jovial and amiable—

"That ever with a frolic welcome took
The sunshine and the storm!"

was watching with a telescope long enough to find a Congressman's wilt with; and he was promising himself a hearty laugh at my disappointment, when to his own ebaggia and dry delight, as the flock of birds, squawking and clapping, rose and labored up the wind, there was one fellow left riding on the sea, but with his head down in the water. I should certainly have plunged in and waded out to him, but the wind sweeping down, and the tide flooding with the current of a mill-stream, the counter forces immediately took the bird right into the river with wonderful speed; so, dropping the rifle, I started up the beach to get the boat at full speed, but impeded by a pair of rubber boots which reached up somewhere between my waist and chin, so that when I reached my shallop I was fain to sit down on the gunnel and blow, while I cast a longing eye toward the snowy form of my first swan, swiftly fading o'er the waves;

"A white-sailed bark, launched on a billowy track,
That bore my dearest hope and never came back."

Just as I had worked the boat out of her bed of ice and across the sand into the water, and had shipped the oars, I was aware of a voice that bailed me through the storm, and there was old Fitz standing on the bluff above, ballooning through his hands, trumpet fashion, "Go it, old boy, I'm betting on the swan." And again, as I pulled out, "Two to one on the swan." But though the bird was by this time a mile out, I was sure of overhauling the prize, for the wind and tide operated on the boat just as on the drifting swan, and I had only to steer up against the wind, and with little exertion my speed was sufficient. In about twenty-five minutes I was within 100 yards of him, and had measured his proportions with delighted eye more than once. But, alas! in the midst of highest hopes disaster doth ever await us poor mortals, just to prove how helpless we are; for which sentiment see any philosopher on psychology. Heading up to windward of my prize, and pulling with all my might, I already, in fancy, seemed to hold him up before my host in triumph, and then take him to the kitchen to show the cook how to roast him in the "tin kitchen" on a spit (*more Virginianis*). In the midst of this delightful dream I was startled by a series of loud reports right ahead, which sounded something like a file-fire of musketry, and, looking around, there I beheld a rakish fishing schooner, just in stays, with her canvas flapping and cracking. I was just thinking why such a pretty craft should fail to get away at once on the other tack, when all at once I noticed that my swan was drifting right up to the schooner's weather-side, and before I had time for a thought the damnable, diabolical skipper leaned over the rail, grabbed my bird with a piratical hand, and hauled him in-board with a demoniacal chuckle; and then, as I stood up in the boat blaspheming at him, and wishing for the rifle I had left on the beach, the cantankerous pirate snng out to "haul the job to windward," or some such water slang, and in a second the schooner was off on the other tack, and the unblushing rogues sitting on the cabin examining the swan—my swan, mind you—and pointing at me with derisive jeers.

Spare me a description of my reception when I came back, wet, dragged and mud; I hadn't even wit enough left to know that it was merely a cruel ill-timed joke to tell me that the whiskey was out, and the rifle, which I left on the sand, stolen.

As beautiful as this noble bird is when swimming on the water and arching his slender neck, he is still more so when, in the spring, at the first warm breath of March, he lightens up his weight for his long journey northward by practicing constantly on the wing in company with a shousand of his fellows. Day after day they will rise miles into the air, squawking and flitting to rally the others, and for hours and hours fly around in great circles, until at last the king, as he seems to be—some giant, hoary old fellow, with great horns protruding from his elbows—will circle higher and higher, signaling all the rest with a continuous fluting call, till at last a million of them, as it seems, squawking and flapping, will form up with military precision into a barrow, the king patriarch in the point of the triangle, and then, with a wild, weird chorus resounding and echoing away up in the clouds, they head their way to the north, and as far as I ever heard, nobody, Canadian nor Esquimaux, has been far enough northward to see where they rest their untiring wings.

It is the custom with certain traveled people, who are sometimes called on the Continent "hotel Americans," to decide American cooking and American dinners by comparison with those of Europe; but, saving a discussion, it is only necessary to cite the testimony of the High Joint Commissioners a few years ago as to the superiority of our game and fish when served in the style which obtains in the old country mansions of Maryland and Virginia, and in the Maryland Club, or at Welker's and Wormley's in Washington. One who remembers a rare symposium there, will forget sometimes the wilt and the good company, even the champagne and Burgundy, and paraphrase Sheridan Knowles' famous gourmand with the enraptured exclamation: "How I do revere a canvas-back roasted before the hickory fire, a twenty-pound striped bass wrapped up in brown paper and roasted in the ashes, a golden plover broiled, a wood cock with the bill (which is high, as well as long), cherry-stone oysters roasted in the fire, terrapin stewed in oyster liquor, etc., etc.!" But better than these, than all, is first and passionate love "towards a year-old eyngnet roasted in a 'tin kitchen' and put on the table with Burgundy. It is the very realization of an Utopian dream, a foretaste of the gourmand's heaven; and if the soul of the bird could witness the happiness his beautiful carcass affords, he would change the mournful death-song into a Bacchanalian refrain, for it is written that "true happiness consists in making others happy."

PAGE McCARTY.

For Forest and Stream and Rod and Gun. DUCK SHOOTING ON THE TENNESSEE RIVER.

DUCK shooting, with its many pleasures, has one drawback in most cases, and that is the severe hardships it brings with it. But where you can hunt this attractive game with but slight—if you can call it any—exposure, it makes, indeed, royal sport. The Tennessee River, with its fine, fertile banks, affords to ducks capital feeding grounds, which they seem to thoroughly appreciate, judging from the number that are ever floating peacefully on its beautiful body of water.

But when and how to get at them is a question which, unless one knows, is hard to be solved. There is but one successful time for hunting these birds, and that is after the river has overflowed its banks and is well up among the branches of the large willows which are so thickly studded along the water's edge. On account of the swiftness of the flood current, the ducks are forced to hug close to the banks and swim among the branches of the inundated trees. These floods, moreover, are of very frequent occurrence since the river has made its course between the mountains which so thoroughly cover the eastern part of Tennessee.

While paying a visit to this part of the country, I experienced the most enjoyable and picturesque duck hunt which I ever expect to realize. I luckily fell in with a gentleman who is well versed in handling a gun, and is noted for the good luck which invariably attends his duck hunts. Eagerly accepting one of his kind offers "to give the ducks a turn," one early morning in January, after a large flood tide, we, together with a steersman, pushed off in an ordinary row-boat from the foot of K.'s principal street into the sweeping current of the Tennessee. The weather was but a trifle cold, which we remedied by placing a small charcoal stove at our feet. The peep of day was just dawning, and far around we could hear the long baying of the hounds and the clear call of the hunter taking his dogs from their nightly moon hunt, causing the cliffs to catch up their sound until the echoes finally lost themselves in their countless repetitions. We continued noiselessly drifting down the river, and hugging closely the curving bank. The day breaking found me seated, with fixed eyes and throbbing heart, watching for the first duck. Suddenly, right before us, I heard the splash and clean cutting stroke of a duck. Up goes my gun, but before I could aim, my comrade asked, "What! are you really going to fire at a little wood duck?" He had not persuaded me of his good sense before I was made to know it by circumstantial evi-

Fish Culture.

MIGRATION OF FISHES.

BY J. BROWN GOODE—READ BEFORE THE AMERICAN FISH CULTURAL ASSOCIATION.

It was formerly believed that all seasonal migration was directed toward and from the equator, but zoologists of the present day recognize another kind of migration quite as important, although not usually so extended. At the approach of the hot season in sub-tropical climates the birds seek a cooler temperature, either by flying northward or by ascending the high mountains. In like manner the fishes of any region may find water of suitable temperature by moving north or south along the shores of the continent, or by changing to waters of less or greater depth. The former may be called littoral migration and the latter bathic migration.

Bathic migration is the most common. The cod family, the halibut and flounders, the scupping, tautog, sea bass and sculpins are well known examples. The cod prefers a temperature of from 35 deg. to 42 deg. F., and this it secures in a temperate climate, such as that of Southern New England, by remaining on the off-shore banks in 15 to 35 fathoms of water, coming near the shore in winter. On the coasts of Labrador, Newfoundland, Nova Scotia and Eastern Maine, they are near the shore in summer, and in deep water in winter. In Norway the fish are caught to some extent in the fjords in the summer season, though never in the winter. In summer they still remain on the off-shore banks. The halibut move up and down on the sides of the great oceanic banks and the continental slopes with the seasonal changes of temperature. In the summer they are abundant in the shallows of South Greenland, while in winter they are out in deep water. On the coast of Massachusetts they come near the shore only in dead of winter, though abundant in summer on the edges of the outside banks in 80 to 300 fathoms of water. The sand-dabs (*Hippoglossoides limandoides*) are abundant in July, in water of 60 and 80 fathoms, ten miles off Cape Ann. In the middle of winter they swarm upon the sand-bats in 2 or 3 fathoms depth.

The Spanish mackerel, the bonito and the tunnies are good examples of the nomadic species. In the summer they throng our northern waters; in the winter they are under the tropics. Others, like the sea herring, appear to migrate in both ways. Their movements are both parallel with and vertical to the coast line. The researches of Boeck in Norway show that the schools approach the coast by gullies or submarine valleys from the oceanic depths. Such was doubtless the case on our coast, in their earliest approaches, but after having reached the shallows near the shore, the schools range along great stretches of coast line. Since fishes have no restrictions upon their movements, except those of food and temperature, all active species must traverse areas of many hundreds of miles during the year.

The tendency of all the researches made during the past few years have been to confirm the views advanced by Professor Baird, in an unpublished letter, written in 1873, to the Hon. Hamilton Fish, Secretary of State. "The question in regard to the migration of fishes is one that has attracted the attention of both fishermen and naturalists for many years past, and a great deal of eloquence has been expended by Pennant and other writers in their history of herring and other species. For many years it was considered beyond question that the sea herring, having their homes in the Northern Seas, were in the habit of prosecuting extensive journeys, in the course of which they successively visited the shores of Europe and America, penetrating into their bays and sounds, and returning afterward to the point from which they started; the adults decimated by the predaceous fishes and their capture by man, but their numbers kept up by the progeny, the result of their spawning operations, for which purpose it was supposed their journeys were initiated. In the same manner the shad and the fresh water herring of the American coast were supposed to start in the late winter along the southern coast of the United States in a huge column, the herring first, and afterward the shad, first entering the St. John's River in Florida, and while passing up the coast, sending off detachments into all the principal rivers, and finally stopping in about the latitude of the mouth of the Gulf of St. Lawrence.

This theory is at present almost entirely abandoned, and there is reason to believe that after the herring and shad have spawned in the rivers they proceed to sea, and spend the period until their next anadromous movement in the immediate vicinity of the mouths of the rivers, where they are followed, in due course of time, by their young.

This is illustrated by the fact that fish of nearly every prominent river show some peculiarities by which both the fish dealer and the naturalist can distinguish them; the difference not being sufficient to constitute a specific rank, but such as to mark them as local races. Numerous captures, too, in Gill nets and otherwise, off the northern coast, during the period when they should be gathered together in the southern waters, prove that a portion at least remain. It is difficult to imagine how a shad or a river herring, spawned in the St. Lawrence river or any northern stream, could avoid entering a more southern river, if in its vicinity; but if any fact has been well established of late years in the history of fishes, it is that the anadromous fish, or such as run up the rivers from the sea to spawn, will return, if possible, to the river in which they first saw the light. So true is this, that where there may be two or three rivers entering the sea in close proximity, which have become destitute of shad or herring, in consequence of long continued obstructions, and the central one only has been restocked by artificial means, the fish, year by year, will enter that stream, while those adjacent on either side will continue as barren of fish as before.

INFLUENCE OF OCEAN TEMPERATURE ON MENHADEN.

The influence of ocean temperature on the menhaden is not at all well understood, and I can here record only crude generalization founded upon very unsatisfactory data. I have before me three tables showing the variation of temperature by monthly means for Key West, Fla.; Jacksonville, Fla.; Savannah, Ga.; Charleston, S. C.; Wilmington, N. C.; Norfolk, Va.; Baltimore, Md.; New York city; New London, Conn.; Woods Holl, Mass.; Portland, Me.; and Eastport, Me. Table I. shows the monthly means of surface temperature, table II. the temperature at the bottom near the shore, and table III. the average means of surface and bottom temperatures. The observations were all made at 3 p. m., and are continuous from March 1, 1876, to March 1, 1877. They are reproduced in appendix F. There is also a table of the daily observa-

tions of temperatures at the same stations. A study of these tables, which for convenience were mapped out in curves on section paper, affords some interesting results.

MINIMUM REQUIRED.

The monthly mean of surface temperatures at Eastport is greatest in September, when it is 50 deg. 6 m., while the highest daily observation is 51 deg. 5 m. The menhaden do not visit Eastport in midsummer. Let us divide the monthly averages for May, at Portland, into quarterly periods. The average for May 16th to 23d is 47 deg. 1 m.; for May 24th to 31st is 51 deg. The quarterly monthly averages for October are 53 deg. 8 m., 50 deg. 8 m., 47 deg. 9 m., 48 deg. 8 m.

The schools of menhaden arrive in Eastern Maine late in May and early in June, and depart usually before the middle of October. At Woods Holl the quarter-month's averages for May, as taken by the signal service observer, are 48 deg. 2 m., 49 deg. 6 m., 53 deg. 1 m., and 57 deg. 6 m., approximately, or the monthly average, 52 deg. 3 m. These observations are made in the Great Harbor at the railroad wharf. Another series of observations, made by Captain Edwards for the Light-House Board, in the Little Harbor, are believed to indicate more nearly the temperature of the Vineyard Sound. These, however, are only for bottom. The difference between the monthly mean of bottom temperatures for May, at the two stations, is almost two degrees (1 deg. 8 m.) the figures being 51 deg. 5 m. for Great Harbor; for Little Harbor, 53 deg. 3 m. It does not seem assuming too much to place the quarter-month average for the first half of May at 50 deg. and 51 deg. 4 m. For November the Great Harbor quarter-month means are 51 deg. 51 deg. 47 deg. 7 m. 43 deg. 3. The menhaden strike into Vineyard Sound early in May or late in April, and linger until November and even December. At New London the quarter-monthly averages for the last half of April and the first half of May are 49 deg., 48 deg. 5 m., 52 deg. 5 m., 54 deg. 5 m.; for late October, 55 deg. 2 m., 54 deg. 9 m.; for November, 53 deg. 5 m., 51 deg. 1 m., 48 deg. 1 m., 46 deg. 1 m. The fish come on the eastern coast of Connecticut late in April, and are frequently taken as late as the middle of November. The temperatures of New London suggest that there may be something in error in the Woods Holl observations, so far as they indicate the temperature of the ocean in its vicinity. The periods of appearance and disappearance at Waquoit and Mequasha, in the Vineyard Sound agree nearly with those of Eastern Connecticut. The temperature of the Chesapeake must be studied from the observations made at Baltimore and Norfolk. At the latter place the April means are 52 deg., 56 deg. 5 m., 61 deg. 2 m., 60 deg.; the Nov. means are 59 deg., 54 deg. 6 m., 53 deg. 5 m., 48 deg. 5 m.; at the former for April, 45 deg. 6 m., 50 deg., 54 deg. 5 m., 55 deg. 7 m.; for November, 54 deg. 2 m., 52 deg. 1 m., 50 deg., 47 deg. At Norfolk the averages for the last half of March are 43 deg. and 50 deg.

The movements of the menhaden in these waters have not been very carefully observed, but we know that they enter the Potomac late in March and early in April, and that they linger till the last of November. In 1874 the young menhaden lingered in the lower Potomac until the middle of December. In 1876 the average for December surface temperatures at Norfolk was 36 deg. 8 m.; for bottom temperatures, 36 deg. 4 m. In 1874 the average surface temperature for December at Norfolk was 43 deg., or 6 deg. 4 m. higher than in 1876—the year for which our tables of observations is made up. The average for Norfolk surface temperature in November was, in 1870, 53 deg. 4 m.; in 1874, 53 deg. 1 m., or 1 deg. 7 m. higher. It is quite probable that in 1874 the water of the lower Potomac did not become colder than 50 deg. until December. At Wilmington the monthly means of bottom temperatures in 1876 and 1877 were, for December, 43 deg. 1 m.; January, 43 deg.; February, 48 deg. 5 m. In 1874 and 1875: December, 48 deg. 1 m.; January, 43 deg. 8 m.; February, 45 deg. 5 m. December, 1876, was unusually cold, the mean temperatures of the air being 46 deg. 3 m., against 59 deg. 1 m. for the same month in 1874. January and February of 1874 were relatively cold, the air temperature being 43 deg. 1 m. and 53 deg. 1 m., against 57 deg. 1 m. and 52 deg. 5 m. In 1870. The surface quarter month-averages for the last half of February, 1876, are 40 deg. 1 m., 50 deg. 5 m.; for the first half of March, 1876, 52 deg. 6 m., 57 deg.; for late November and early December, 1876, 57 deg. 1 m., 53 deg. 6 m., 40 deg. 6 m., 45 deg. 3 m.

No observations have been made upon the movements of the menhaden at Wilmington. At Beaufort, 30 miles further north, they appear to be absent during the winter. It is much to be regretted that there are no temperature observations from Cape Hatteras. The relations of this locality to the Gulf Stream are peculiar, and corresponding peculiarities in the temperatures no doubt exist. The hundred-fathom curve is distant about 40 miles from the point of the Cape, and the average summer limits of the Gulf Stream, as laid down upon the British Admiralty charts, extend nearly to this curve. The observations made at Wilmington, situated as it is in a bend of the coast, at least 100 miles from the summer limits of the Gulf Stream, and at the mouth of a river which rises 200 miles away in the elevated central portion of North Carolina, can hardly be taken as criteria of the temperature of Cape Hatteras. This is still more unfortunate from the fact that the movements of the menhaden, blue-fish, sea-trout and other warm-water species, are very peculiar at this point. It will be strange if the monthly mean of water temperature for Cape Hatteras, in December, and perhaps January, does not prove to be more than 50 deg. Savannah is at least 120 miles from the Gulf Stream, and its means for December and January, 1876—1877, as well as those of Charleston, are below 50 deg. Charleston water appears to be uniformly warmest. In 1874, December, in Charleston, averaged 48 deg. 8 m.; in 1875, January averaged 50 deg. 2 m. The movements of the menhaden in this region have not been observed, but since in the north it is not more hardy than the shad, and since the shad do not venture into the Georgia and Carolina rivers in December, it is safe to predict that the habits of the menhaden are similar. Jacksonville, Fla., is the only point on the coast from which there are observations showing a temperature uniformly above 51 deg., and here menhaden remain throughout the winter.

(To be continued.)

CONNECTICUT.—The Staffordville reservoir has been stocked with 10,000 land-locked salmon.

FISH CULTURE IN MICHIGAN AND INDIANA.—Editor Forest and Stream: In your issue of February 14, I noticed that you mentioned a shipment of 25,000 salmon ova from the Government Hatcheries to the Michigan State Hatchery at this place. Inasmuch as you did not mention the kind of salmon ova received, nor any previous shipment received from the same source, I will state that the 25,000 mentioned by you were a

dence. Scarcely had I cooled off before I saw a very home-like looking mandrake dodging first in and then out of the branches, and looking with a very distrustful eye at the stationery objects floating toward him. My comrade assured me that there were plenty of ducks among those branches, and soon his statement was verified. At last the distrustful duck became more and more so, until, at last, with a "quack! quack!" she rose from the water. There immediately followed such a whirring, splashing and quacking as only an immense flock of ducks can produce when startled from the water. Out rang four shots into the air, and down fell, with a splash, six of the finest mandrakes I ever saw. On we drifted, every few minutes scaring up either a flock, a pair, or a stony bird, which, if I failed to hit, my companion would invariably come to his aid. This continued until near mid-day, after which we scarcely saw a duck till about sunset, when up they started from all directions, and, with shooting and picking up our birds, we had plenty to do till we desisted, eager to come upon a house (which, by the way, were scattered at the distance of about ten miles from each other), where we might lodge for the night. Finally, we landed near by an old log cabin, which, in its time, must have been very fashionable. A slight rain had just set in, and, tired and hungry, you may be assured that we relished the pork, beans and pies, which were our "bill of fare" for supper. After a sound night's sleep, we woke up to find the rain still continuing. But we left our lodgings at 6 a. m., and proceeded on our hunt. It was during this rain that the breech-loading gun showed its superiority over the old muzzle-loader. I had a pin-fire breech-loading gun, while my companion had an ordinary muzzle-loader, and he was forced (although he took every precaution to keep the nipples dry) to be content with watching me shoot. After having drifted about sixty miles and bagged fifty-two mallards (we killed about twice that number, but the current of the river prevented our stopping to pick them up), we at last reached the place of our destination, a small railroad station called London. There we hailed the cars and were quickly taken back to Knoxville, where we, along with the ducks, were most warmly welcomed by our friends.

L. C. V.

THE LAKE REGION OF FLORIDA.

We present this week the second letter of our observant correspondent, describing a portion of Florida seldom visited or referred to by letter writers. There are very many of our readers to whom the information herein imparted, as to the climate and agricultural resources as well as the sporting inducements, will be of much value. We have been twice over this country, and can testify to its attractions to the hunter and settler:

LAKE REGION, March 3, 1878.

We left Waldo Tuesday morning, Feb. 26, for a few days' trip through the Lake Region. Striking off in a south-east course, in about three hours we arrived at Gen. Earl's place on the Santa Fe Lake. He has a pretty location on the banks of the lake, with quite a number of orange trees in bearing, also a grove of younger ones well started. Two hours more of rather a tiresome walk, our road being sandy, brought us to Melrose, a new settlement, at the lower end of Santa Fe.

The land in and around Melrose is rather high and rolling, as is the land generally in this region; the soil light and sandy, but, I should suppose, well adapted for fruit growing. Here frost is almost unknown, and vegetation is much more forward than at the places we have seen along the line of railroad. I think Melrose will grow fast, and in a few years will be quite a town. It seems to have many advantages, being high and healthy; also its location on the lake is fine. Santa Fe Lake is a fine body of clear water, six miles long, two to four wide, abounding in fish—black bass, pike, perch, bream, etc. Large flocks of ducks make this their winter home. In fact, this whole Lake Region, about thirty-five miles long by sixteen wide, abounds in fish and game, and the sportsman would be amply repaid for a few weeks visit, I think. We stopped at Melrose to spend the night, intending to take up our line of March in the morrow. We sleep in a log cabin (for the novelty), and on awaking in the morning I take a look out of a crack, which runs very accommodately by my head, and find that it is raining very softly, but as Florida rain, like New York rain, is wet, we conclude to pass the day with our cards and pipes, which we do very satisfactorily.

Thursday morn is bright and clear—a beautiful day—and we buckle on our armor and start off in good spirits. We are bound for Mr. Wall's, on Pleasant Lake, eight miles South and East of Melrose. We have a sandy road and must take it easy, for we are in a Southern climate and nobody but burrys here. The sand here makes walking very wearisome; besides my boots are too heavy for this part of the country, and when Wall's house comes in view, we are glad. But it is all right soon, for we are sitting in the shady porch, fanned by a cool wind from the lakes, and all the troubles we ever had are forgotten for a while. We have struck just the right kind of a man and family and house for our headquarters. Mr. S. Wall has lived here about ten years between two lakes, both in sight; owns many acres of land about him; has a small grove of orange trees in bearing, a larger one of young trees, with considerable land under cultivation, and I have seen no better place for the sportsman and invalid than his. He is a hearty, genial, whole-souled man, a keen sportsman, a good fisherman, always ready for a tramp after deer or a day on the lake; and when you bring in your game or fish, just hand it over to his wife, and when you next see him it is not spread before you in most tempting array, then I am a poor judge of such matters.

Yesterday we took a little tramp in the woods. We saw nine deer in the distance, with plenty of signs. Our plans are all laid for a deer hunt with the dogs next week, of which I will give you a brief account in due time. We have tried the fishing. It is superb. You can catch black bass until you are fairly tired of fishing. They average six pounds; run as high as ten and over. This region is full of lakes, and by getting upon some slight elevation one can see two and three from the same place, and they all abound in fish and game, duck, geese and brant being plenty in their seasons. I notice in every little brook by the wayside, and in pools of standing water, multitudes of little fish, showing that the water is pure instead of stagnant, as one would suppose, and as it would be with us North. But I am making this too long. Will let you know about our deer hunt.

Yours,

CHAS. O. GLADWIN.

BUCKSKIN JACKET.—Messrs. Holberton & Co., of 117 Fulton st., New York, have made a jacket that will be a great boon to sportsmen and others who are exposed to the weather. The jacket is made of genuine Indian smoke-tanned buckskin, lined with flannel; is very strong, durable and perfectly wind proof; under a coat it does away with the necessity of wearing a heavy overcoat or thick, bulky underclothing, and being very soft and pliable, will not interfere with the movements of the shooter.—See advertisement.

lot of land-locked salmon eggs taken from the lakes of Maine, and donated by Prof. Spencer F. Baird, U. S. Commissioner of Fisheries, to the State of Indiana.

As Indiana has not any State hatchery of her own, our State Superintendent of Fisheries, the Hon. George H. Jerome, kindly volunteered to hatch them, and without cost.

As I understand it, the State of Indiana is at present even without a commission. Through the enterprise of Captain Allen, of Goshen, and three or four other gentlemen of that vicinity, strong efforts are being made to establish a fish-commission and secure an appropriation from the State Legislature, an amount sufficient to build and operate a State hatching house at some desirable point in the State, where the propagation of all our leading fresh water fish can be carried on with success. These gentlemen were instrumental in securing the above lot of salmon ova. They have paid all expenses for the transportation, by express, on eggs, from their own pockets, and intend paying all other expenses for the distribution of the young fish in the lake and rivers throughout the whole State.

If a few more such men as the above named gentlemen were scattered throughout the States of the Union, our lakes and rivers that once were so productive, but now so sadly depleted, would, in a few years, be restored, and the lawful fisherman and sportsman would gather a magnificent harvest therefrom.

The eggs for Indiana were received at the Michigan State Hatching House with a loss of only 5 per cent. They are now all hatched out and apparently in fine condition. The previous shipment of 50,000 land-locked salmon ova to this hatchery, was also a gift from Prof. Baird to the State of Michigan, being the largest shipment of salmon ova from that source made this year to any State in the Union. Michigan is now taking the lead of all other fish States in her artificial culture and propagation of food fishes, and her efforts are nobly assisted by the United States Commission. Wishing Indiana success in her new enterprise, I am, truly yours, etc.,

HENRY H. POITEN, Sup't of State Hatching House.
State Hatching House, Pokagon, Mich., Feb. 25.

FISH PROPAGATION IN MICHIGAN.—Three thousand California salmon ova have been deposited in Loon Lake, Assinippi. That lake and High Hill Lake will soon be supplied with 12,000 whitefish fry.

The Game Protection and Shooting Club of Howell received 30,000 whitefish fry last week, from the Fish Commissioner, which they deposited in Thompson's Lake in that village.

—Of the 25,000 whitefish eggs consigned from Northville, Mich., to California, all but about 5,000 were perished by incompetent attendants.

BIRDS AND SALMON.—A correspondent of the Sacramento (Cal.) Weekly Union, writing of the fish law in that State, calls attention to a class of fish poachers which has so far enjoyed a little-merited immunity:

"The fact is also overlooked that a number of birds continually prey on the young salmon when on their way down the rivers to salt water. There are five species or kinds of these birds, the squawk, shag, crane, pelican and fly-up-the-creeks. The large fish drive the smaller ones on shore, and the birds gobble them up by the thousand. Some of the birds feed on them in the night and the others in the day time. I have seen them so thick that their gunno killed the fish in the lakes and sloughs, the water being poisoned by it. If a price was set on these birds to thin them out, the salmon law vigilantly enforced everywhere, and especially on the spawning grounds, the fish would largely increase. I am quite sure the birds alone destroy more fish than are consumed for food in California by our people.

SALMON IN THE HUDSON.—The following is welcome news. We shall doubtless have salmon in abundance in the Hudson:

PERKSKILL, N. Y., March 11, 1878

EDITOR FOREST AND STREAM: I wish to mention the capture of a salmon, a true *salmo salar*, in the Hudson, about two miles north of our village. It was taken on the Flats this morning near the mouth of Snake Hole Creek, just below Loua Island, in an ordinary sieve, while its captors were hauling for perch and other small fish. It measured thirty-three inches in length, and weighed but eight and a half pounds, being in very poor condition and presenting the appearance of having recently spawned. Small fish of this species have been taken through the ice during the past winter in T nets, but nothing approached this in size. I regret my inability to forward you the fish, but it was disposed of before I saw it. Am I justified in supposing it to be one of the fry introduced into the upper part of our river a few years since?

S. H. W.

[Ans.—No doubt it is.—Ed.]

Natural History.

DR. HAYDEN'S SURVEY.—Attention is again called to the grand work which Dr. Hayden's survey is doing, by the appearance of Vol. VII., of its quarto publication, which consists of Prof. Lesquereux Tertiary Flora. This superb work, containing sixty-five lithographic plates and over 350 pp. of text, deserves an extended review instead of the mere mention here, which lack of space enforces. It is another reminder of the painstaking zeal of the author, and the energy and wisdom of the Chief of the survey.

We have also to call attention to the issue of No. 1, of Vol. IV., of the bulletins of the survey. Besides some papers by Drs. Coues and Yarrow, already referred to in these columns, it contains Notes on the Ornithology of the Lower Rio Grande, by G. B. Sennett; Descriptions of New Tineina from Texas, by V. T. Chambers; a paper by Prof. A. R. Grote, on Noctuid Moths from California; Notes on the Mammals of Dacotah, by Dr. McChesney; a new classification of the Heterodontes, by Mr. Ridgway, and many other papers of interest.

MILD WEATHER IN NEW BRUNSWICK.—Our correspondent H. G., writes us from St. John, as follows:

"While strolling near the city, on January 11, I observed a small bird which proved to be a hermit thrush (*T. pallasi*).

When I saw him he was feeding on the berries of the mountain ash. The cedar bird (*Ampelis cedrorum*) has also been with us all winter, and feeds upon the same berries, which are quite abundant about the suburbs of the city. With the cedar birds I observed several red linnets; also several pine grosbeaks, feeding quite contentedly on the same tree. These birds were all remarkably tame, especially the pine grosbeaks, which allowed me to approach within a few feet of them. Is it not rather a rare occurrence for these birds to remain so far North at this season of the year. I have frequently observed the robins here before at this season of the year, but never these birds.

RARE VISITORS.—During the violent storm of snow and wind which prevailed in New England, January 20, a female Louisiana tanager (*Pyrrhuloxia ludoviciana*) was observed to approach the window of a house in the city of Lynn, in which there were a number of caged birds. It was evidently suffering for want of food. An open cage was put out for it with food, into which it immediately entered, and allowed itself to be easily captured. It was evidently a wild bird, was an adult female, and, though ravenous for food, was not in a wasted condition. This bird, during the summer months, is a resident of the regions west of the Great Plains, and in the winter is a visitant of Mexico and Central America. The great storm in which it was captured came to us from the Mexican Pacific coast; its progress was heralded several days before it reached us finally, coming toward us at the rate of about 800 miles in twenty-four hours. It seems probable, therefore, that our visitor being overtaken some five thousand miles away in the vortex of this tempest, may have been an unwilling traveler forced to visit the inhospitable shore of Massachusetts Bay. This is the third species from the far West that has turned up on our seaboard—*Plectrophanes ornatus* at Gloucester, the lark hunting at Swampscott, and now this tanager at Lynn. It seems more and more probable that these erratic visits of birds that do not belong to our fauna are much more common than we have been in the habit of supposing. Their visits, with occasional calls upon us, from such species as the blue-gray gnat-catcher, the tufted titmouse, the cerulean, Audubon's, and the yellow-throated warbler, the Oregon snow-bird, the scissors tail fly catcher, the white ibis, frigate pelican and sooty tern, prompt one to ask what we may not expect to see.

T. M. BREWER.

LOCAL ORNITHOLOGY.—I have a male redwing blackbird, in which the two outer feathers of the tail are pure white. Also, a fine specimen of the porcupine, fully albino, with pink-red eyes. It was an adult male. Grows have been in plenty during the winter. Snow buntings and red polls have been very scarce in this vicinity. We regret the absence of their cheery notes, and the flitting of their charming wings have so often gladdened and made pleasant the tedious winter days. Feb. 28.—Robin reported seen. March 2.—An Acadian owl heard filing his saw preparatory for business. M. C. H. Warner, N. H., March 4.

SPRING ARRIVALS IN VERMONT.—Ferrisburg, Vt., March 7. The weather is quite springlike just now, and this morning I saw a song sparrow, two blackbirds and a bluebird. If my memory serves me right, it is early for any of these in this latitude. R. E. R.

FOOD OF THE WILD PIGEON.—To-day, on the market, a huckster had for sale 1,200 pigeons (*Columba migratoria*), just received from the Chicago market. They are what are called "trapped pigeons," and are in excellent condition for the table. All trapped pigeons that I have ever seen, until now, have had their crops filled with some sort of cultivated grain, but these birds, without a single exception, had their crops filled with acorns, specimens of which I send you. As I know hardly anything of botany, it is impossible for me to say to what species of oak these acorns belong, but my impression is it is the pin oak of the Southwest, sometimes called "Black Jack Oak."

The question now is, did the men who trapped these pigeons bait their nets with pin oak acorns?—and if so, where is the locality of their industry?

The knowledge of the food of a bird is an introduction to his life-history. 'Twas said once that the passenger pigeon had never been killed in the Northern States without rice in his crop, but I believe now that all agree that this bird can gather his daily meal from the rice swamps of Carolina and digest it the same night on the soil of Northern Ohio.

I never see the passenger pigeon flying or for sale on the market, without thinking of the naturalist Audubon and the much respected naturalist Alexander Wilson.

Yours, respectfully, DR. E. STERLING.
Cleveland, O., Feb. 6.

[Our impression is that, as our correspondent suggests, the acorns are those of the Black Jack Oak.—Ed.]

A LARGE WOODCOCK.—A correspondent, Mr. G. Lyman Appleton, who writes from Bryan Co., Georgia, informs us of the killing of a nice ounce woodcock near that place. This is certainly an unusually large bird, but Mr. Appleton says it was exactly like the others that he killed the same day, so that it could scarcely have been anything but an American bird. Our correspondent writes:

"I killed yesterday a woodcock that weighed nine ounces. Is not this a remarkably large bird for this country? I have shot woodcock in Europe much larger than this, but never saw one here so large before. A friend and myself killed fourteen other birds yesterday, and weighed them all. We were much surprised to find the wonderful difference. The largest of the fourteen weighed 8 ounces and the smallest 4 ounces. The average of the fourteen was 6 1/4 ounces; only two were over 7 1/4—all the rest from that down. Do you know the greatest weight of European woodcock?"

We cannot explain the difference in size, except by referring it to individual variation. There are large men and small ones.

In a note recently received, the same correspondent asks what is the difference between the European and American woodcock, and do the former ever occur in this country? To the last question we reply yes; and to the first say that the European bird is much larger, weighing from 12 to 15 ounces, while the black markings of the plumage are much finer and the russet lighter in shade. There are other differences, but these are the most striking to the unscientific eye. Does not our correspondent remember how his European birds looked?

ANOTHER VICIOUS OWL.—The account of the attack of an owl upon a human being, by "Dom Pedro," in your last issue, and something similar among the "fixed facts" which are known by myself. About twenty-five years ago a Mr. Colwell, of New York State, going home at night through a piece of woods with a tall tree on, was greatly surprised to find his hat suddenly struck (as from one behind), and so violently as to fall in front over his eyes. Thinking it very strange (especially as it fell in an opposite direction from that which it would have taken had a low bough hit it) he picked it up and put it on his head, and proceeded on his course. He was trying to account for this singular circumstance, when of it went a second time. Hearing this time (having all his senses thoroughly aroused) a slight whistling sound as of wings, he took his walking-stick, after readjusting his hat, and prepared for defence. Shortly he heard the sound again, and bringing his cane, with both hands, suddenly and vertically through a quick sweep in front of him, he hit, as his hat went off the third time, a large owl, stunning it so that it fell on the ground, where the fluttering wings told him where to strike to finish his task. His owlship was of course soon overcome, and he bore the trophy of this singular occurrence home in triumph. Subscribers.

Malawau, N. J., Feb. 9, 1878.

A DOMESTICATED TEAL.—Mr. James H. Comall, of Mount Pleasant, St. John, has in his possession a blue-winged teal, which was caught while quite young on the Grand Lake near St. John's River. Mr. C. has had this interesting little pet in his possession nearly six months, during which time it has become quite domesticated. Having had full liberty of his work-room, it appears to be quite contented. Through the day it remains very quiet, but in the evening amuses itself by flying around the room, on one occasion settling on the stovepipe, which proved a little too warm for its feet, which were sore for several days afterward. It has had several opportunities of escaping. Upon one occasion it walked out into the yard, looked all around as though surveying the situation, and then allowed itself to be driven back into its old quarters. On another occasion, on a stormy night, the work-room door was open, allowing the bird full opportunity to escape if it had felt so inclined. Mr. C. upon coming into his work-room the first thing in the morning, and finding the door open, did not think it worth while to look for the duck, feeling quite confident that his little pet had escaped; but after working for about two hours, to his great surprise the teal walked out of his box as usual and took his morning stroll around the room, and then laid down by the stove, for it appears to be very fond of the heat. It feeds on Indian meal and water, and is also very fond of canary seed, which it picks up singly from the floor quite expertly. It has apparently no fear for any one, it and an old sparrow being on quite friendly terms. They will feed together and lie down together; the teal without the least fear, and the dog without the least ill-feeling toward it. H. G. St. John, N. B., Feb. 3, 1878.

KNITTING TOGETHER OF THE BONES OF A FOX.—Dunbarton, N. H., Feb. 8.—Seeing an article in this week's paper about the growing together of the bones of a bird, I think I can state a similar instance in a red fox. About a year ago, while driving along the road, I saw a fox sitting on the snow under an apple tree. I drove to the nearest house and borrowed a gun, which was loaded with blasting powder and No. 2 shot, and went back and crept behind a fence, and then, by imitating the squeak of a mouse (which, by the way, I have never known to fail, unless the fox should see or scent the shooter), I called him up within about thirty yards, but failed to kill him, breaking the near hind leg above the second joint. The following winter I shot a fox in the same locality, and on skinning him found that the near hind leg had evidently been broken, as it had grown together, leaving quite a large hard bunch on the bone. I may be mistaken about its being the same fox which I shot at, but I am certain that I never have known of a fox being killed about here (and there are a great many shot every winter), with a broken leg, unless it showed signs of having been recently done; and I have known of several instances in which a fox has had his leg broken and the hunters fail to get him. C. M. STARR.

[The growing together of bones recently broken is by no means uncommon, and every collector of birds and mammals has his attention called to it now and then.—Ed.]

THE WEIGHTS OF DEER.—I have heard from trustworthy sources that the deer of Northern Wisconsin and Michigan occasionally weigh as much as 300 lbs. I have shot for many seasons in that locality and can personally vouch for two bucks weighing 217 lbs. and 228 lbs. The latter was killed late in the season and was in poor condition. A year ago last fall, shooting with a party in Chateaugay Lake, Franklin Co., N. Y., I saw a large buck which weighed 258 lbs. E. E. F., New York, March 2.

DEER SHEDDING THEIR HORNS.

IMPORTANT EVIDENCE.

MOOREFIELD, W. Va., Feb. 1, 1878.

EDITOR FOREST AND STREAM: I feel almost like an intruder on venturing any further remarks on this subject. However, as I believe I was the first to provoke the discussion, and as my interest is unabated, I trust you will pardon me a few comments on "Penobscot's" article. I most earnestly beseech that writer to ponder well over that excellent advice furnished by Judge Calton. I beg of him, as a fellow sportsman, to take notes of his doings, test by some little indulgence in hyperbole he bring our whole craft into disrepute. Let me not offend when I venture the opinion, that had he found a horn for every day he ever hunted he would still lack a few of filling a "city bedroom." Let the gentleman reflect a little, and I am sure he will either be more modest as to the size of his room, or at least come down a horn or two. If, after roaming the mountains of Maine and California, he does not comprehend what is meant by a "secret place," let him come to the insignificant Alleghenies, and he may soon learn. By permission of the writer I desire to lay before your readers the contents of a letter lately received by me in answer to inquiries about park deer. The abundant opportunity for observation, and the name of the writer, give ample assurance that it will be read with great interest. It tells its own story:

BALTIMORE, January 20, 1878.

Dear Sir—Yours of 20th inst. received. In regard to your first inquiry, "Do deer bury their horns?" I answer, emphatically, they do. After a careful observation of eleven years, I have abundant evidence of this fact. They sometimes bury their horns in their contests for the does, but when they are about to shed them (during Dec.) they get off and rub the horns violently against a tree. After the horns are gone, are off, they paw the ground, also using the nose to make a cavity. After which they stamp the horns in, frequently covering the place with leaves. On several occasions I have taken four does with me, hunted the park through in sections, but we have never found more than five horns in any one season. As a further evidence, I, in company with an officer, have watched the whole proceeding. They seldom leave both horns in one place. (Dispensing with "Penobscot's" cache arrangement.—Syc.)

These facts can be substantiated to the satisfaction of any one who, in this vicinity, will take the trouble to call at the park. We have one seven-year-old buck, whose fine antlers we wished to get for one of the Commissioners. I detailed a man to watch his movements. Both horns were obtained after the buck had bled them, the whole proceedings being watched by my detail. At this time the bucks go singly, and seem droopy. The rutting takes place with our deer about the second week in October. If two bucks cross each other after a different second week in October. If after the same doe, a fierce struggle ensues, they keep on; if after the same doe, when the battle is over, the doe looks on at a respectful distance. When the battle is over, often ending in the death of one—he goes off with the victor, showing her pleasure in many ways, as licking his wounds or his face. In one instance I found two dead bucks lying close together, the ground bearing evidence of a fierce struggle. Our deer shed about the middle of April, and look quite shabby until the middle of May. They get quite thin at this season, seeming to get along better during the rough winter, when they feed on the undergrowth.

After the rutting season is over, the bucks herd together in separate squads from the does. In regard to your third question, I have always observed that the spike bucks keep a good distance between themselves and the older bucks. I have never seen one chasing a doe, that did not come to a dead halt on being crossed by an older buck. I think they seldom get a jump until they are at least three years old, unless by chance. They are the ones which do so much damage to the trees by sticking their spikes in the bark, and often killing a tree in one night by girdling. This year I have put North Carolina tar on the trees which they have attacked, and I find it a sure preventive. They will not go near a tree coated with tar. Very truly,

W. H. CASSELL, Supt. Park Police, Balto.

I take great pleasure in quoting the above letter of Captain Cassell, though his statement contradicts a former one made by me in regard to spike bucks. I accept it unconditionally, and am glad to be corrected by such authority. To my mind the dispute about the horn of horns is settled, and I trust that at least your correspondent will cease to ridicule the idea. If it be possible for men who shoot at deer heads with the rifle for a frivolous pastime, or those who have witnessed hundreds of bloody struggles between deer to acknowledge an error, why I shall consider they have erred in their observations, and not

SYCAMORE.

DEER SHEDDING THEIR HORNS.—La-Sbar-u-Kittibutz, Little Chief of the Pawnees, writes us from his cattle ranch among the sand hills of Nebraska, on this subject, as follows:

"White tails commence shedding their horns here as early as the first of February, and the last buck that I saw with horns (and he had only one) was on the 16th of February. I am told that the black tails (mule deer) shed about the same time, but as I haven't seen a black tail since January 1, I can't tell anything about it. As for elk, I am pretty sure that they shed about the first of March, but can't say positively. I see that one of the correspondents of the FOREST AND STREAM says that deer bury their horns or hide them when they shed; but they don't do it in this country, for I find freshly shed horns every day in the sand hills, and they lie right out in plain sight on top of the ground."

As a conundrum for those who believe that deer knock their loose horns off against trees, we would like to ask what those animals do which live in a country without timber?

DEER'S HORNS—GROUSE SHOOTING.

RIDGEWOOD, N. J., March 4, 1878.

EDITOR FOREST AND STREAM:

Noticing several communications in the FOREST AND STREAM AND RON AND GUN relative to deer shedding their horns, I will give you my experience in relation thereto. I grew up in what was considered, at one time, a very good deer country, and have an experience of thirty years' shooting, in which time I have shot and killed many deer (and have not, a much greater number). In Northeastern Pennsylvania has been my only experience. I have never, in my thirty years' shooting, observed where a buck had shed his horns before Christmas, and I have never seen a buck with his horns after February, and, if my recollection serves me, not after the month of January. I believe that the bucks drop their horns between the times I have mentioned, and in a quiet way—not by force against trees. On high ground I have observed more old horns than on level or low land, yet I have discovered them on both high hills and low, level country. Now, as to the spots. My observations are that they are, as a general thing, entirely off by the 1st of September; still, I would not say I had not discovered them in September, but it's a rare thing. I wish to be understood as not doubting the opinions and experience of others, but I firmly believe that different climates may change time of losing the spots. I wish that I had done as Judge Caion suggests, for memory is uncertain—noted down all that came under my observations while engaged in the pursuit of game during the time I have referred to. It would undoubtedly be an interesting story to the lovers of the gun and rod. It would afford me much gratification to have some of our older hunters for deer and other game give their experience.

Now, Mr. Editor, I observed in last week's paper, a record of the work of two pot-hunters headed, "Market Shooting in Massachusetts," a total of fifty-four days—1,159. One thousand one hundred and eighty-nine birds, or an average of twenty-six birds per day—several days as high as thirty to thirty-eight partridges, besides woodcock. I suppose they mean by partridge our pheasant, not quail. Now, I shall presume that the said George and John Stone, the market shooters, must be, judging from their success, similar to some of our pot-hunters in Pike County. Upon the examination of the birds you will, perhaps, find where a little brass wire has encircled the neck, and the bird is unharmed, so far as shot is concerned. I am sorry to say we have, once in a while, a very successful shooter in our country. Sometimes he will be gone two or three days at a time, and will return with a bag of fifty or sixty birds. Yet he is considered only an ordinary shot. I myself had the opportunity of testing his way of killing, and I found the wire had done its work; and further inquiries led to the fact that the party had several pot-hunters in the woods awaiting his arrival. He gave the game and returns loaded. Great success! What glory!

You will pardon me for my insinuations, but I will close by saying that it would afford me a fearful sight of pleasure to accompany these gentlemen for one week during the best shooting season. Poor as I am, I would cheerfully pay the week's expenses, give them all their game, if they would average twenty-five pheasants, if this is what they mean by partridges per day. I am fifty-five years old, have followed shooting for thirty years, and it certainly would be a gratification to me to witness one week's shooting with this party on terms I have stated, so that I might see what I have never seen, and what, I believe, I never will.

PENNSYLVANIA.

"Confess, confess, hath he not hit you here?"—Ed.]

ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDENS FOR WEEK ENDING TUESDAY, FEB. 19.—One bald eagle, *Haliaeetus leucocephalus*, presented; two rough-legged buzzards, *A. lagopus var. sancti phannix*, purchased; two white rabbits, *Lepus cuniculus*, presented.

Arrivals for Week Ending Feb. 22.—Four hybrid fowls, presented; one white rabbit, *L. cuniculus*, presented; eight dingoes, *Canis dingo*, born in garden.

For Week Ending Tuesday, March 6.—One great horned owl, *Bubo virginianus*, presented.

ARTHUR E. BROWN, Gen'l Supt.

A few gentlemen wishing to join a first-class shooting and fishing association can hear of a favorable opportunity by addressing GAGE, this office.—[Ad]

Woodland, Farm and Garden.

THIS DEPARTMENT IS EDITED BY W. J. DAVIDSON, SEC. N. Y. HORTICULTURAL SOCIETY.

THE TRUE SHAMROCK.

We have often been asked about it, and have puzzled our brains over the vexed question of which is the true shamrock. St. Patrick's Day will soon be here, and many, doubtless, would like to know what the true shamrock is. Antiquarians abroad have exercised themselves considerably on the matter, and there are many plants of the clover family that are designated as the Shamrock. Many think that it is the *Trifolium repens*, or common white clover; others think it is the *Trifolium minus*, or small yellow clover; while others declare, and with much probability, that it was not a species of clover at all, but the common wood sorrel (*Oxalis acetosella*), the leaves of which look like clover, and which is one of the most common of the early spring flowers in Britain. The antiquarians argue that in the days of St. Patrick Ireland was very thickly wooded, and that as this plant (the *oxalis*) grows very abundantly in woods, it was doubtless very plentiful in Ireland, and would readily be used by St. Patrick to illustrate the doctrine of the Trinity to his hearers; and, besides, it is not certain that the two species of clover before-mentioned—not being indigenous to the country, were introduced before St. Patrick's time.

The Irish themselves do not appear to have any decided tradition as to which plant is the correct one, and it is quite a vexed question which cannot be solved at this day. In fact, while writing, two Irishmen, well posted too, argue the point—one for the *Oxalis*, and the other for *Trifolium*. Either will do for the believer, and the Trinity is as well represented by the *Trifolium* as by the *Oxalis*.

"SPORTS" IN PLANTS.

Mr. C. M. Hovey, the able and experienced horticulturist of Boston, has had something interesting to say on this subject to the Horticultural Society of Massachusetts. He says:

"What is a natural sport? To most horticulturists and cultivators of experience this may appear a simple question, but by numbers of persons it is not so well understood. A natural sport is a variation of peculiar change of any part of a plant from its normal state. Take, for instance, the Camellia, or Japonica as it is often called. Here we have the old Double White (*alba plena*), a Chinese variety, imported into England so long ago as 1739, and since then extensively propagated and disseminated all over Europe and America. Yet it is still the very same flower it was in 1739, so far as we know ourselves, or can learn from descriptions, paintings, or books. It has never been anything else. If, however, you or I had a plant which should, upon one particular branch, show a flower of a different form or color, that particular flower would be denominated a 'sport.' So, too, if the leaves were to assume a different shape, or the branches some peculiar form, that would be also a sport, because, in either instance, it has departed from its original type. Such a flower or branch is, therefore, a 'natural sport,' and so considered in these remarks. It is somewhat extraordinary, when we notice the character and importance of these sports, that so little has been written upon the subject. In the very hasty manner in which I have been enabled to look through the works of various authors I find that it is scarcely mentioned at all. Mr. Knight, in his numerous physiological and horticultural papers published from time to time in the 'Transactions of the Royal Horticultural Society,' does not speak of sports. Loudon, in his various exhaustive volumes on trees, plants and shrubs, has little or nothing to say of them. Lindley, in his 'Theory of Horticulture,' does not notice them, and McIntosh, Thompson, and other authors, do not give us any information upon the subject. Indeed, it is only in the periodical works upon horticulture, and scattered through many volumes, that much can be learned, and this in the main recorded of only a few particular sports. When we reflect a moment upon their importance, and consider how much our pleasure grounds and gardens, our greenhouses and conservatories, have gained in valuable additions through these sports, we are surprised that so little has been treasured up regarding them. The fact that we know so little of the cause of these sports is probably the reason why the record of their production is all that can be found. It is only within a few years that they have assumed any prominence, though, undoubtedly, they have existed for a long period. The very curious variegated trees from Japan, though probably some are from seed, are, many of them, undoubtedly sports, for it is not probable that so many seedlings should be precisely like the parent, except in the color of the leaf. Loudon, in describing one of the very dwarf forms (*Abies elaeagnifolia*) of the Norway Spruce, states that it was said to have been found at Belfast, but he remarks, that to him 'it was very doubtful whether such a stunted variety as this was ever found in a bed of seedlings; we think it more probable that it is a continuation by cuttings of one of those bird-nest-like monstrosities that are occasionally found on all trees.' In reality a sport, though he does not use that word. As we have stated, little can be learned about sports in books, and we are driven to form our own conclusions regarding them. That they do take place on original plants there is no doubt, but it would seem that this tendency to sport is greatly increased by continued reproduction from seed. We have stated that, so far as we know, the old Double White Camellia has, in nearly a century and a half, never sported. Yet, when we look at that incomparable and most exquisite of all flowers the Camellia flammula, a perfect counterpart of the Double White in leaf and form, except that its petals, pure as the driven snow, are as delicately cut as the most delicate of fair hands alone could cut them, throwing a charming fringe around each petal, we think this, too, was a sport saved by some observant and enthusiastic cultivator of the Flowery Kingdom, and bequeathed to us as a token of the care which that heathen nation has ever bestowed upon one of the most beautiful handiworks of the Creator. The Azalea is another Chinese plant which, at the present day, is the most 'sportive' of all that we possess; in fact, it has become so to

such a degree that a name signifies but little. Sometimes the flowers of striped varieties are all white, sometimes red, and at others parti-colored, and many of our varieties are perpetuations of these sports, some of which continue true and others go back to the original. As to the cause of these sports we have little to say. Our only theory is that, having undergone so many cross fertilizations, they have become, as we often say, 'somewhat mixed,' for the older varieties of the large-flowered, or rather large-leaved kinds, of the Phlox, nicotiana and alba type remain very true and sports among them are exceedingly rare—indeed, we ourselves do not know of one. I trust that the few instances I have mentioned of the origin of sports will show you the importance of observation. No doubt many interesting additions might have been made to our variety of plants, had the cultivators of fifty years ago been as numerous or unremitting in their labors as those of recent years. The number now who are on the look out for every sport is legion, and the yearly additions to our catalogues show that they are not idle."

VERDURE FOR TREELESS PRAIRIES.

St. Louis, Feb. 22, 1878.

EDITOR FOREST AND STREAM:

In some former numbers of your valued paper I noticed reasons were set forth why our Western prairies are treeless. If I remember aright, the principal reason assigned for their being so was that the soil generally is too fine and compact. So far as my observation and experience go, these conclusions are erroneous, as wherever forest or fruit trees, indigenous to the locality, have been properly set out or propagated from seeds, they thrive and grow remarkably well. Last spring I put out a quantity of fruit and forest trees of various kinds in a firm, hard, loam soil, and I have never seen a finer growth anywhere. I procured about 500 little cottonwood stocks from a sand-bar in the Saline River, set them out, and many of them attained a growth of more than three feet in height the past season. My theory as to the prairies being bare of trees is the almost annual fires that sweep over all their surface, licking up and destroying every vestige of living tree and shrub. On most of the water courses trees and small fruit bearing shrubs are to be found, but remote from the track of the devouring prairie fires, and where no fuel was afforded no grasses grow. There has been no trouble in making trees grow on timber elms, on sod ground, when they could be kept secure from fires; and the day is not far distant when fine tracts of woodland will be present to view, where now nothing greets the eye but vast tracts of treeless prairie. I am glad Congress granted the right to enter quarter sections of government lands for tree culture. Its provisions are: That ten acres shall be broken the first year; that during the second year another ten acres shall be broken, and the first ten acres be planted with forest trees not less than twelve feet apart; and so on yearly until forty acres are thus planted. At the expiration of eight years, if proof is made that the conditions have been complied with, the trees properly cultivated, etc., then the government gives the person entitled to it a patent and full ownership. Many such claims have been entered throughout our Western States, notably in Kansas, but I regret to state the great bulk have been forfeited for non-compliance with the conditions attached to the entries. It looked easy to set out ten acres of little forest trees each succeeding four years, but when the time came to do so a great majority of these timber claimants backed down and out, and their claims have been taken by others for homesteads and pre-emptions. On many accounts I am sorry to see so little true grit displayed by these would-be philanthropists, for if all the land is to be taken up for farms we shall have no forests or timber culture to speak of. It certainly is no great task to collect sufficient forest trees to plant ten acres the second year after entry, and continue on until one-fourth of the land is planted. Nuts and seeds could be gathered and propagated the first year, and sprouted ready for setting out the second (as this mode is allowed by the act of Congress). The land between the rows of trees could be cultivated to good advantage for trees and crops until the expiration of the eight years; so, also, the balance of the tract. I am a lover of trees, and it would do my heart good to see our vast prairies dotted all over with well-tended and growing forest and fruit trees.

D. L. DICKINSON.

AMERICAN WOODS FOR PARIS.—One of the most remarkable exhibits designed for the Paris Exposition is a tablet of native American woods, which consists of a mosaic tablet eight feet wide and twelve feet in height, and was designed expressly for Mr. William H. Lippincott, the well-known Philadelphia lumber dealer, by the best artists and architects of the Quaker City. The tablet is in the Egyptian style, and consists of a flat moulding on the outer edge made of three quarter circles of bird's eye and curled maple; with a triangular-shaped piece of hickory and beech filling the blank portion of the circle. The main panel is of white and yellow pine, ash, striped and plain walnut, poplar, apple, chestnut and sycamore. The bottom is a broad piece of close-grained oak skillfully carved. Resting on the oak rail is an antique vase of various woods, from which springs a lotus plant with a wide-spread flower and leaves, all carved with great delicacy from ordinary American building woods. At the right and left upper corners of the tablet are dragons, made of California red wood. The open spaces of the design are filled in with rosettes in relief composed of Florida, North Carolina and New Jersey cedar, with caps of white holly and locust, forming a most beautiful contrast to the deep red cedar. The tablet is suspended by large rings of black walnut relieved with hickory, from a handsome bracket with a polished hickory roller. On each side of the bracket is a flying bat carved from hickory wood. Forty-three different varieties of native American woods enter into the construction of the tablet, including, besides those already named, birch, elm, cypress, spruce, gum, hemlock and others. Two cross-bars bear the words, "Lippincott, Bois d'Amerique pour l'exportation." The whole affair has been pronounced to be the finest collection of American woods ever gathered together.—Graphic.

NEW YORK HORTICULTURAL SOCIETY.—The regular monthly meeting of the above society was held at their rooms, 53 West 33d st., on Tuesday of last week. The room was crowded with visitors, and the display of plants and flowers was unexpectedly fine. Mr. Boileau delivered an address on the proper method of training and fruit trees, a resume of which we will have much pleasure in laying before our readers next week. This is the season these things ought to be attended to, and we try to draw attention to all these things in their season.

The Kennel.

TO CORRESPONDENTS.—Those desiring us to prescribe for their dogs will please take note of and describe the following points in each animal:

1. Age. 2. Food and medicine given. 3. Appearance of the eye; of the coat; of the tongue and lips. 4. Any changes in the appearance of the body, as bloating, drawing in of the flanks, etc. 5. Breathing, the number of respirations per minute, and whether labored or not. 6. Condition of the bowels and secretions of the kidneys, color, etc. 7. Appetite; regular, variable, etc. 8. Temperature of the body as indicated by the bulb of the thermometer when placed between the body and the foreleg. 9. Give position of kennel and surroundings, outlook, contiguity to other buildings, and the uses of the latter. Also give any peculiarities of temperament, movements, etc., that may be noticed, signs of suffering, etc.

FIXTURES FOR 1878—BENCH SHOWS.

Boston Kennel Club Show, Boston, Mass., March 26, 27, 28 and 29. Dr. E. J. Forster, Secretary.

Baltimore Kennel Club's Show, Baltimore, Md., April 23, 24, 25 and 26. L. R. Cassard, Secretary.

The Westminster Kennel Club (New York) Bench Show, Gilmore's Garden, May 16, 17, 18 and 19. Dr. W. Seward Webb Secretary.

MASSACHUSETTS KENNEL CLUB.—The absolute work of this leading New England Club has now fairly commenced, so that everything will be in perfect order for the opening of the Bench Show at Boston, which takes place on the 26th of this month, to be continued on to the 29th. Entries are being made rapidly. From the demand which has been made on us for blank entries, we should suppose that the attendance would be very large. It looks as if this bench show would be a representative one, as a number of the St. Louis winners will again strive for victory. Of course the champion list will be a large one. The judges are: For setters and pointers, John Davidson, Esq.; spaniels and Chesapeake Bay dogs, hounds and non-sporting dogs, Dr. L. H. Twaddle, assisted by Mr. T. H. Scott, of England. Mr. Charles Lincoln will act as superintendent.

FOR THE BOSTON BENCH SHOW.—Mr. James R. Tilley will send to Boston some of his finest Gordon stock, including Whip, Ring, Grace, Gypsy, Count, and a lot of likely puppies.

BEAGLE FOR THE BOSTON BENCH SHOW.—Mr. Geo. Pounall, of Christiana, Pa., will send to the Boston show one of his best beagle hitches. Mr. Pounall's kennel is well known, and his breed of beagles—a not common race of dogs in the United States—is among the best.

TREMONT HOUSE, BOSTON.—During the bench show for exhibition of dogs, the well-known Tremont House will charge a dollar less than usual rates. The Tremont House will be the headquarters of the Massachusetts Kennel Club.

BALTIMORE KENNEL CLUB.—We shall be very glad to forward to any one desirous of exhibiting their dogs, the rules and regulations of the Baltimore Kennel Club, with the list of premiums, also blank entries for the Bench Show, which is to take place on Tuesday, April 23d; Wednesday, 24th; Thursday, 25th, and Friday, 26th. The show will be held at the Masonic Temple, North Charles street. The officers of the association are: Pres., J. Addison Smith; Sec., L. R. Cassard; Treas., Philip Rogers; Executive Committee, Thomas A. Symington, A. Jenkins, Jr., M. D. Groverman, R. Stuart Latrobe, Charles S. Bancroft, H. S. Zell; Charles Lincoln, Superintendent, P. O. Box 767, Baltimore. Special Prizes.—Up to the time of printing the prizes offered by the club, a large number of special prizes have been presented, and a list of the same will be printed and circulated as soon as it is complete, together with the classification under which they will be awarded.

THE VALUE OF DOGS IN VIRGINIA.—The Lynchburg Virginian of the 7th inst. says: "Mr. Hunter's Dog bill passed the House. This bill allows owners to value their dogs at \$100, and to pay to the Commissioner the tax on that amount, which is \$1 for the first dog, and 50 cents for all others. After the dog is so listed for taxation, he becomes as much personal property as a cow or a horse. Of course no one is compelled to pay the tax; it is purely voluntary. It will have the effect of stopping the stealing of valuable dogs, and a stolen dog will be as rare as a stolen horse. This tax will place some thousand dollars in the State Treasury."

THE MONTCLAIR BEAGLES.—The beagles which were ordered out from England some time ago by the Montclair Riding Club, arrived last week in good condition, by the steamer Holland, of the National line, after a passage of seventeen days. This club began hunting with a paper scent last autumn, and soon grew enthusiastic over cross country riding, and resolved to procure a pack of hounds, and decided upon beagles. The pack comprises six dogs and four bitches—Brilliant, Bluebell, Equity and Countess, who have been hunted in Yorkshire to hares, rabbits and a drag; Faithful, Trumpeter, Rambler and Monitor, from a kennel in Cheshire, where they have hunted hares; and Ticker and Rattler, who have been hunted in Kent for a drag and for rabbits.

DISPENSING WITH A CAP FOR CANKER OF THE EAR.—A correspondent from Philadelphia sends us the following plan for keeping the dog from troubling his ears, in canker: "I see, by looking over your answers to correspondents, that you often have occasion to give a cure for canker in the ear, and you advise the use of a cap placed on the head, to keep the dog from shaking his head. I will give you my cure, which I think you will find very beneficial. I use a solution of

equal parts of lead water and water poured into the ear three or four times each day; and in place of the cap a strip of common sticking plaster, heated and placed on the inside of the ear, and then tied under the throat, which will answer much better, and is not as troublesome." The sticking plaster is very good, if it can be kept on.

FOR DISTEMPER.—A correspondent from Mount Carmel, Ill., sends us the following prescription for distemper. As there is nothing noxious in the compound, it can do no harm: "I have used this with good success for a great many years, having handled dogs of all kinds. I find the receipt invaluable: Mix 3 oz. bitter aloes, 3 oz. saltpeter, 3 oz. pulverized sulphur, with lard, so that it will easily run out of a bottle. Drench twice a day, morning and evening, with the mixture. The above is sufficient for two doses. I have never yet lost a dog on which I have used this preparation." J. W.

FOX HUNTING IN TENNESSEE.—A few days ago there was a meet of a portion of an old "Fox Chasing Club," which is now nearly extinct, although measures are being taken to revive it. There were present with their "packs," D. D. McFall, L. M. Matthews, Gen. A. Bowen and Gen. James A. Fleming, and about forty invited guests. They started Reynard in a few minutes, and ran him back and forth over a bit of country about two miles square. After a run of some 15 miles, the fox was shot by one of the party, one and a half miles ahead of the hounds. Foxes are plentiful here, and good fields for chasing. Packs are owned by gentlemen living near, and all that is lacking to rival Virginia in fox chasing is the organization of two or three clubs, which we expect to have in due time. VAL.

Columbia, March 2.

FOXES AND SPIRITUALISM.—The Culpeper (Va.) News is troubled about an old fox whose wiles have proved too much for the huntsmen of all the counties round about. The peculiar method of mystification employed by this four-footed phantom seems to consist in walking rails and leading dogs and hunters round about promiscuously, and then vanishing into thin air, leaving everything at a dead loss. We confess that we can account for the phenomenon only by accepting the theory that this is not a real fox, only a shadowy semblance. We believe it to be the avenging spirit of some Virginia Reynard, who, in the flesh, suffered martyrdom by the shot-gun; and not losing his brush in the time-honored way prescribed by the precedents of all fox hunting, has now returned to avenge the indignity offered to his kith and kin. The huntsmen, horses and hounds of Culpeper County may follow the chase until doomsday, but we venture to predict that they'll never catch that ghost.

THE DOG DEBRY—COOMASSIE THE WINNER.—The three days of coursing on Altcar Flats, near Liverpool, recorded the victory of Coomassie. Forty thousand spectators were present on the first day of the meeting. The weather was all that could have been desired, and on the last day the excitement was intense. The result was finally in favor of Coomassie, last year's winner of the same cup. This is one of the most remarkable facts in connection with the contest, for never before in its annals has the same greyhound pulled through twice in succession. Master McGrath, it is remembered, won in 1868 and in 1870. Peasant Boy is the only instance in which a dog ran up twice, and this meritorious performance the black accomplished in 1873, when he was second to Bed of Stone, and in the next year when he occupied a like position to Muriel; but Coomassie's performance stands unrivaled. Coomassie is a light fawn, and weighs no more than 43½ pounds. She ran in the name of Mr. Stocken, but is the property of Mr. Thomas Loy, who purchased her for \$1,000 from a gentleman who bought her for \$250 from her breeder, Mr. Cuffley, a Norfolkshire gentleman, who, a few days previous to the meeting, failed to obtain a bid for Queen, the dam of Coomassie, at auction. The party connected with Coomassie won a tremendous stake, and the public also won largely, much to the grief of the layers of odds. The second greyhound was Zazel, the property of Lord Fernoy. This was his first venture, and to come out second best in a field of 64 was no small victory. Besides the cup there went as first money to the winner, Coomassie, \$2,500; second money, Zazel, \$1,000; third and fourth money, Whistling Dick and Rival Belle, \$250 each. The next four hounds got \$150 each; the next eight, \$100 each, and the next sixteen, \$50 each. The Waterloo Purse, for greyhounds defeated in the first round of the cup, fell to Adelaide, who was very much fancied for the cup itself.

A CORRECTION.—In a former issue Belle and Trim were credited as belonging to Dr. S. Reilly Beecher. This was an error; the dogs were bred by, and are the property of Dr. S. Reilly Bueher, of Lebanon.

NAMES CLAIMED.—Paris, Ont., March 2.—O. Totten claims name Princess for his orange and white setter bitch pup, out of Mr. B. Capron's Blanche by Butte, he by Carlowitz—Rose, she by Rufus—Rose.

NAME CLAIMED.—Sport: Mr. S. Washburn, of Esperance, N. Y., claims the name of Sport for his liver and white pup, out of Bess and Captain.

—Sam: Rev. J. A. Dobson, of Newark, New Jersey, March 8, 1878, claims the name of Sam for his five months liver and white cocker spaniel dog pup, purchased of Mr. P. McKoon, and out of his Fanny by Captain.

VISITS.—New Bedford, Mass., Feb. 9.—Joseph Bassett's (of Foxboro, Mass.) Bess visited my Gordon setter Tam, winner of first at Boston, Sept., 1877. The pups should be exceedingly handsome, as both Tam and Bess are perfect specimens. J. H. J. DOANE.

WHEELS.—New York.—Mr. F. C. Merrill's "Pet" whelped on the 5th inst. Eight—six dogs and two gyps, by Morford's Don; seven died soon after birth; one dog living.

Sea and River Fishing.

FISH IN SEASON IN MARCH.

SOUTHERN WATERS.

Pompano, *Trachinotus carolinus*. Grouper, *Epinephelus nigritus*. Drum (two species). Family Sciaenidae. Trout (black bass), *Centropomus viridis*. Kingfish, *Menticircus nebulosus*. Striped bass, or Rockfish, *Morone chrysops*. Sea bass, *Sciaenops ocellatus*. Sheepshead, *Archosargus probatocephalus*. Snapper, *Lutjanus caxus*.

The trout season on Long Island, which opened last year, and previously on the 15th of March, does not open this year until the 1st of April. The law is now uniform throughout the State.

FISH IN MARKET.—RETAIL PRICES.—Hackensack smelts, the most delicious and the finest in flavor, have been taken in large quantities this week, and are selling at 15 cents. Their small size, when compared with other smelts, has prejudiced people against them, whereas the smaller smelt are, in reality, the finer flavored fish, having the peculiar cucumber flavor. Our quotations are:

Striped bass, 18 cents; large do., 15; smelts, 18; green do., 20; bluefish, 15; frozen salmon, 35; green do., Halifax, \$1.25; mackerel, 25; small do., 15; James River shad, 40 to 75; white perch, 15; Spanish mackerel, 35; green turtle, 18; terrapin, \$18 per doz.; frost fish, 6; halibut, 15; haddock, 6; codfish, heads off, 8; do., heads on, 6; blackfish, 15; Newfoundland herring, 6; flounders, 10; do., small, 6; sea bass, 15; eels, 18; lobsters, live, 8; do., boiled, 10; sheepsheads, 25; turbot, 25; scallops, \$1.50 per gallon; soft clams, 30 to 60 per 100; whitefish, 18; pickerel, 15; yellow perch, 10; salmon trout, 16; Virginia black bass, 18; hard crabs, \$2. 0 per 100.

PENNSYLVANIA.—Yellow catfish are caught in the streams emptying into the Delaware.

GIANT TROUT AT RALSTON, PA.—Several correspondents, including our worthy and voracious friend, William Robertson, who has fished at Ralston for eleven years, take exceptions to Jack's statement in our issue of February 23, that he took 23 dozen (!) fine trout in the neighboring waters, which averaged 2½ lbs. each (!), and we do not wonder at it. We would not have printed the statement unqualified had it come under our special notice, and we will allow Jack the saving grace that he intended to say that the trout averaged 2½ pounds per dozen. If Jack really designed to impose upon us, he deserves to have his head held under water in the coldest spring-hole of the river until his teeth can no longer chatter. The hotel at Ralston, and the scenery round about, including the old mill or forge, are all very fine; but the trout—well, we have said.

TENNESSEE—Nashville, March 7.—The weather for the past few days has been unfavorable to anglers, though the market is kept well supplied by the net fishermen. Some of the buffalo caught in the Cumberland River are very large, frequently weighing from thirty to forty pounds. Reelfoot Lake is the place, however, from which the main supply comes. This lake was formed by an earthquake which took place near New Madrid, on the Mississippi River, in the year 1811. The earth sank to a great depth where the lake now is, and the waters rushed in from the river. Trees are still standing all through the lake, which corroborate the fact. The quantity of fish in the lake is incredible, and of all kinds that are found in the rivers and creeks in this part of the country. There seems no doubt but there is a subterranean connection between the lake and the Mississippi River.

Columbia, Tenn., March 9.—Some few trout (called bass) are being taken, and the sport and creels bid fair to be unusually fine. Suckers and mullets are caught in abundance. Some fine bass and pike in market from Reelfoot Lake. VAL.

FLORIDA—Bay Port, March 4.—The abundance of fish here in the Wickawacha River is truly surprising. All along the river are what they call alligator holes, great deep places. They average 50 feet wide by 100 feet long, and from 10 to 40 feet deep at low tide. Most all the large fish in these rivers retreat to these holes—sheepshead, red snappers, groupers, mullet, growlers, garfish, redfish, sea trout, black bass and small sharks. The other day I caught in half an hour thirteen black bass, which together weighed sixty-three pounds, and a half bushel of sea trout, besides a sprinkling of snappers and redfish—in fact, I caught more than I could give away, and within a week the veritable bluefish of the New England coast have become quite abundant here. I struck a school the other day and caught eight nice ones. Yesterday I caught a new kind of fish: none here ever saw it before. It was shaped somewhat like a mackerel, had the same kind of fins and tail. It was about three feet long and of beautiful shaded blue sides, with sixteen golden spots of about ¼ inch in diameter on each side. The fish was supposed to weigh about eight pounds. To-day we had him fried, and it was the best fish I ever ate in Florida. The fish was very slender, with peaked head and a formidable mouth. I had two others bite, but they were larger and snapped my line at once. We desire to learn the name of the fish. This morning I saw lots of them in the river. Yours truly, G. F. WIZTIA.

[Our correspondent's fish bears a close resemblance to the skipjack, or ladyfish, except as respects the golden spots on side, which are those of a Spanish mackerel. The family name of the latter is scomber, while the skipjack, from a partial resemblance to a pike as well as a mackerel, is included among the scomberesocidae. Both are voracious feeders, but the Spanish mackerel is capricious. The skipjack are usually quite common on the Gulf coast of Florida, and a nuisance to the angler. We have never seen *Scomberesox maculatus*, if this described fish is such a one.—Ep.]

WISCONSIN—Ashland, March 2.—Herring and trout fishing yield poor returns.

ICE-FISHERMEN ADRIFT.—A large field of ice on Saginaw Bay, near Bay City, Wis., broke loose one day last week, carrying with it out into the lake fifteen of the fishermen, who had remained in their shanties. They were rescued after a day's adventure and peril.

SOMETHING NEW FOR ANGLERS.—Mr. S. F. Fisher, a jeweler, of Columbia, Tennessee, has just obtained a patent on a reel that has many points of merit. It multiplies four and one-fifth times; has an alarm and rubber that are thrown in and out of gear by milled knobs. The spool runs on tempered steel points, is accurately balanced, and fits the cap so closely that it is impossible for dust to get in. It has compensating screws at ends of spool, and can be oiled without taking off cap. They are so accurate and finely finished that one will last a lifetime with proper care. Mr. Fisher is making arrangements to manufacture them in quantities, and as soon as he gets his orders filled, will put them on sale in all the principal cities where, we are confident, they will meet with rapid sales.

MAKEREL AND SCUP AS FOOD FOR COD.—Early this week Captain Masher, of the schooner Mary and Carrie, while fishing some six miles south of Sandy Hook, when catching cod, on opening them, found in some of the larger fish scup, or porgie, and mackerel, the latter weighing about a pound. These fish had furnished food for the cod quite recently. Now this, if proved to be true, may point to some very important facts. The question arises, "Do the mackerel or scup winter near our shores?" Mackerel are caught off our immediate shores in the later part of April, and porgie or scup toward the close of this month (March). This finding, then, of these particular fish in the cod should be more thoroughly understood. Professor Spencer F. Baird, of the Smithsonian, is very desirous of having these facts verified. Will the fishermen who are after cod in the vicinity, should they find any mackerel or scup in the cod, be good enough to preserve the mackerel or scup, and forward them at once to E. G. Blackford, of Fulton Market, New York, so that the fish may be sent to Washington for verification. The migratory fish, it seems, will be narrowed down after a while, but it is only by means of constant observation that positive facts can be determined.

PASQUE ISLAND.—Mr. Editor: Pasque Island is situated about twelve miles south of New Bedford, Massachusetts, lying between that city and the Island of Martha's Vineyard, and being one of the group of the Elizabeth Islands. It is about one-and-a-half miles long, by one-half to three-quarters of a mile wide in its widest part, and containing over one thousand acres. Its surface is undulating, with abrupt and rocky shores, with here and there a sandy beach, which affords fine bathing. The island is covered with grass, which affords fine pasturage. Many years ago it was heavily wooded, but to-day there are only two or three stunted cedars, with the exception of the young shade trees that have been planted around the house by the club. It is asserted that the timbers in the old farm house, the only dwelling on the island except the club house, were hewn from native trees.

This island was purchased in 1867 by a number of gentlemen, and a club formed, incorporated under the laws of Massachusetts, by the name of "Pasque Island Corporation," which to-day has about forty-five members. They have built a pretty and substantial two-and-one-half story club-house, stable, ice-house and other outbuildings for the comfort and accommodation of themselves and guests during the fishing season, which commences about June 20 and ends about October 15. A few years since, on account of the increasing membership, some ten members clubbed together and built and furnished at their own expense a wing of two-and-one-half stories to the main building, divided into rooms, which are their private property, and only occupied by them, except by their permission. The club-house and wing has a wide covered piazza running around it on three sides, so that upon the hottest day, which is rarely eighty degrees in the shade, you can always find a cool and shady place with a good breeze. One of its luxuries is the cool nights, as it is seldom but that you need a blanket over you, and there is no annoyance from mosquitoes. Pasque Island is the healthiest and pleasantest place I know of to spend a few weeks vacation with one's family.

Stands are erected at all the best fishing points around the island, to which are fastened chairs for the comfort of the angler. There is a record kept of the striped bass taken each day, by whom, weight, etc., no account being taken of any other fish. Those who do not wish to try the bass can take a boat and anchor almost anywhere off shore and take all varieties of bottom fish found upon the New England coast. Bluefish and weakfish afford fine sport, and are very abundant. Often the bluefish run as large as twelve pounds, and are so plenty as to give one all the sport he wants with rod and reel, and which affords more sport than any other way of taking them.

The club owns three mules and wagons, which convey the anglers to and from their fishing stands and bring home the day's catch.

It is not unusual or rare to take bass as large as forty or fifty pounds. Aug. 16, 1873, the writer killed one of fifty pounds after a fight of half an hour, which tested his tackle and skill. The sport it afforded him will never be forgotten.

Section 2 in the certificate of incorporation prohibits seining or taking fish within forty rods of the shore in any other mode than by hook and line, under a penalty of a fine for each offence.

We have a fine garden, with a professional gardener, which supplies all varieties of fresh vegetables to the table. We have our own cows, raise our own chickens and eggs, and only rely upon the main land for our meats, which are sent us twice a week from New Bedford by a propeller chartered by the club to convey passengers and freight to and from the island.

You see our table is supplied with everything necessary for the comfort of the inner man, unequalled by the best hotels of the most fashionable summer resorts. Your readers may think I am an enthusiast, and so I am when Pasque Island is the subject. I would not sell my share of membership for \$5,000 could I not procure another.

As the summer approaches my impatience is great to once more migrate to my beloved Pasque Island.

LARRY LINEATUS.

New York, Feb. 25, 1878.

WHERE SOME GOOD TROUT FISHING CAN BE HAD.

Mr. Editor: Fifteen years ago I made my first visit to the far-famed trout streams of Maine. Every year since then (but one) those grand old mountains and beautiful streams have welcomed me to their wild wood boue. Ten years have passed since I killed my "large fish." I had been a faithful follower of Sir Isaac for five years, and flattered myself that I knew where the big ones lay, and that I knew how to take them. Many a hard fight have I had with large fish since that time, but never with so large a fish, and under such disadvantages.

It was the last day but one of September, 1863, that I stood on "Jig Rock" in the sun, between Trout Cave and the Rips, above the Upper Dam Camp. I could see heavy fish rising occasionally just below, slowly but surely making their way up towards me. At last a monster fish broke water about fifty feet below me.

With a half turn of the wrist, and a gentle movement of the arm, the "jay bird" pitched upward and outward, and landed as gently as a snow flake some forty feet away. A gleam of golden light shot upward, the water parted, and, good heavens! what a mouth closed over the fly, and sank from sight. To say I struck him hard would be stating it lightly, for the leader "twanged" like a cross-bow. With a mighty rush he found his way up stream past me, and as I had a fair view of his great length and size, I fairly "shook in my boots." Up stream for a hundred feet, and as I put too pressure on, aided by the swift current, he turned down stream. Down past me he rushes with a velocity that makes the water hiss as the line cuts through it. As he nears the Rips the pressure is brought to bear on his mouth, for he must be stopped now, or good-by to trout, leader and all.

See! the noble old green-heart bends to the half circle. Never had its fullness been put to such a test; but it came off conqueror at last. As the trout headed up stream once more, he came within ten feet of me, and "sniked" at this turn of affairs, while I called loudly for a boat to take me off the rock. Just at this time his troutship turned a double somersault, and went tearing around like a race-horse. The rock I stood upon was cone shaped, and slippery at that, and had you seen me "waltzing around" and "cutting up" generally, you would have said it was rightly named "Jig Rock."

At last I got into the boat, and continued the fight until he rolled up his golden sides near the surface, when the landing-net was passed under him, and he lay in the bottom of the boat. He measured twenty-seven and one-half inches in length, girthed eighteen inches around the body, and eight and one-half inches across the tail when it was spread; his weight was 10½ lbs. He was measured and weighed in the presence of twenty gentlemen, and all, without exception, said it was the "boss trout," and I thought so myself.

I have had the pleasure of fishing in all the favorite places on the whole range of Richardson lakes and streams, and I prefer the upper dam fishing to any other, unless the fishermen are so thick that it is impossible to cast your fly within ride shot of the dam without doing so over somebody's head, which is generally the case in the fall of the year.

If a sportsman cares for comfort and good fishing also, I would advise him to stop at the middle dam, for the cook—Mr. Frost—cannot be beaten by any man or woman in the Maine woods, and the accommodations will be excellent, as Brooks, the proprietor, is building a good hotel, 75x25 feet, two stories high, with eighteen good sleeping-rooms.

The building will be completed by the time the lakes are open. The price of board will be reasonable, and no one will go away from the house dissatisfied. There is to be a large ice house connected with the establishment—a great item in packing fish to take out to the woods. I understand the carriage to Umbagog Lake is to be put in good condition for hack board conveyance the coming season, making the place very easy of access, either by the way of Upton, where Mr. O. E. Reynolds, the proprietor of Lake House, will see his guests well cared for, or by the way of Andover, where Mr. Thomas will welcome sportsmen to as hospitable a house as there is in Maine, while his good lady will see to it that you have plenty to eat, and excellently well prepared at that.

I have had the pleasure of tracking over all the different routes to reach this famous fishing ground. If one cares to go quickly, comfortably and cheaply, take the Worcester and Nashua, Portland and Rochester route from Worcester, Mass., to Portland, Me., then the Grand Trunk R.R. to Bryant Pond or Bethel, where stages will be in readiness for passengers.

I shall hardly care to say that the conductors on this route are "angels in disguise," but it is safe to say they are gentlemen in every sense of the word, and passengers are made as comfortable as they would be at home; and if you should chance to ask a question of the conductor, you need not reach for your shooting iron, for the answer will be pleasant. The best thing about going this route is, you save hotel fare, also back fare across the city of Boston both ways, and it saves one day's time from the lake to New York city or any part of Connecticut, which is a great item when one has a nice lot of trout he wishes to keep, and is anxious to meet his family—if he is lucky enough to have one.

In conclusion, let me say, if any one has doubts about good fishing grounds at or near the Middle Dam Camp, I would whisper in the reader's ear that our party of four gentlemen, in 1876, took 300 lbs. of trout, twelve of the largest weighing 43 lbs., and all were hooked in the mouth at that. If fishermen cannot be satisfied with such sport as that, and the facilities I have named for getting to the grounds, they ought never to have the privilege of "netting a lice" as long as their miserable lives are spared.

E. T. W.

KENTUCKY WATERS.

EDITOR FOREST AND STREAM:

The first column that we Kentuckians read in your good paper is the fishing column. We shoot but little comparatively in this region, for the reason that game is very scarce. A few birds each season are bagged by some enthusiastic gunners, who do not mind a day's tramp, or of several days, for that matter, which will result in bringing to bag a half dozen partridges per diem. But when it comes to the "gentle art" of angling, the devotees at the shrine of good old Isaac are quite numerous and indefatigable. In the days long ago, Kentuckians enjoyed a world-wide reputation as marksmen, and their feats with the rifle have formed the attractive feature of many a story of actual history or wild romance. That day has about passed. The deadly accuracy of their long rifles, or some other cause, has almost eradicated the game of our good State, and those who seek recreation amid these degenerate times are forced to be content with what amusement they may "pluck from sitting time" by the more quiet banks of some tortuous stream, where black bass can be "lured to their undoing."

We have many streams in our State that afford splendid sport to the angler. Our larger streams, as the Kentucky and Licking Rivers, for some unknown reason, afford but meagre sport; but Green and Salt Rivers, in the Southwestern part, and Rock Castle and the forks of the Cumberland, in the Southeast, together with Dix River and Elk Horn Creek, in the central portions of the State, all afford fine sport in bass and newtite (croppie) fishing.

This brings me to remember the very interesting note of "Kentuckian" in your issue of 23d ult. from Stamford, and the comparative

merits of the ordinary reels of the East and that made by Mr. Miam at Frankfort, known as the "Meek's reel." Now, our manner and method of fishing here may be peculiar and different from that which prevails at other places, as we use live bait and know but little of fly fishing—in fact, though I have fished for many years, and with a great many of our most successful fishermen, I have never seen a fish taken with the fly, or even seen a regular fly-casting line, though the delicate, wispary fly rods have now and then been exhibited as curiosities. In our section we use a stiff bamboo or West India cane, 8½ or 9 feet long, rigged with wire loop at each alternate joint, and a Meek's reel, armed with a hundred yard of the finest grass or silk line. With such tackle and three huckshot as sinkers, any expert angler is enabled to drop his minnow eighty or one hundred feet from him in any part of the stream he may choose; and for bottom fishing with a live minnow, no other tackle compares to it. Indeed, no one who aspires to be an angler ever thinks of contenting himself with the best click or balance handle reel, although costing less than one-third the price of the Meek. They will not work; they fail to deliver the line rapidly enough to land your bait unharmed to the distance it is necessary often to put it to lure the wary bass. An adept never tangles his line. It is only the result of awkward handling, and never occurs when a fisherman is handling his own tackle. If the bobbin is very full, and the "alarm" bears but lightly, it will run so fast as to tangle the line by over-running; but the expert appreciates that, and with the tip of his thumb barely touching his hobbit, regulates to a nicety its delivery, and his bait is landed exactly where he elects, without the violent jerking that often deprives the poor minnow of its life and its usefulness when a reel is used with slower and harder delivery. Only very impetuous fishermen will be content to forego a Meek. It is the dream of his life to be able to have \$15 or \$20 in a No. 2 or No. 3, and then his dream of life is beatifically fulfilled. Our bass fishing in Elkhorn has just opened. One gentleman a few days since—March 1—made a string of seven fish fellows—the largest weighing three pounds and the smallest one pound. Like your correspondent from Stamford, I have no earthly interest in the sale of these reels, but, being an enthusiastic angler, would like to see my brethren of the craft armed with the best implements to be had. A little practice and some patience until the art is obtained, and the lovely excellence of the Meek will endear it to every lover of perfect tackle. Try again, brother anglers; you will not regret it. ELKHORN.

Midway, Ky., March 6.

THE MECK REEL AGAIN—A MECK REPLY TO A MECK MAN.

MR. EDITOR: I expected somebody would "pick me up" for intimating that the Meck reel was not at all perfect in all kinds of fishing, and now I suppose that I have my hands full in answering my brother of Stamford, Kentucky. It is not to be wondered at that "Kentuckian" should defend the merits and reputation of the Kentucky reel. I am glad, however, that he presents the case in such kindly language and friendly spirit. It may be safely wagered that he is a gentleman as well as a sportsman.

Having persistently fished with this reel for fifteen years, in all sorts of weather and water, I ought to know something about it. Of course, one man may perform better than another (there is a knack about these things), and my assertion simply meant that I myself could do better casting and more satisfactory work with a good balance reel than I could with a Meek, and I stick to it. Until within the two last years, I used nothing but the Kentucky reel, and even now always have one on hand when "out fishing," but prefer the other. I think that the Meek reel might be altered in some particulars so as to improve its qualities for casting. For instance, it is too wide for fifty yards of the fine linen or silk lines in use in bass fishing. Unless the line is carefully and evenly wound when reeling in, it has a tendency to bunch in the centre or on one side; then, we baffle you on the next cast. (For Hallock on reels, see "Gazetteer," page 515.) No man ever did or could pay much attention to the manner his line went on the reel when taking in a four or five pound bass. Whatever his intentions might be the fish would not permit it. Then, too, the weight and light of the fish packs the line tightly on the reel. The least impediment of this kind sends the reel whirling the other way and you have a tangled line—not that packing does not happen with other reels, but the effect is not as disastrous.

A few days ago a pickerel was caught in Fowler Lake, Oconomowoc, weighing twenty-one pounds, and a day or two later a similar fish was taken from Silver Lake, two miles from the village—weight, twenty-three and a half pounds; length, three feet six inches. Come up, Kentucky!

Chicago, March 5, 1878.

Geo. A. SAUFELDT.

[The chief trouble with the Meck reel, in our opinion, is that it is too wide. With the shape of the Orvis reel, which is high and very narrow, the Meck reel would be vastly improved. It would take up line rapidly and more evenly, while the line would be less likely to foul on the parts projecting on either side of the rod. To obviate the latter difficulty entirely, adjust the reel plate so that it will screw into the extreme butt end of the rod. There is a gentleman, a jeweler, in Grand Rapids, Michigan, who affixes his reel in this manner, but his name has gone from us at present.—Ed.]

A REEL WITH A HISTORY.

EDITOR FOREST AND STREAM AND RON AND GEN:

I was much interested in the article "A Gun With a History" in your issue of Feb. 14. I have seen a salmon reel, which has, I think, a more interesting history. It belonged to Dr. Livingston, and was used by him during one of his journeys into Central Africa. It is a large bronze reel, some four and a half inches in diameter, and one and three-fourths in breadth, capable of holding three hundred yards of line. It is now in the possession of Mr. John P. Looser, of Denver, Colorado, and was presented to him by the Rev. Horace Waller, Vicar of Leytonstone, England, who accompanied Dr. Livingston upon one of his exploring trips in Africa. To Dr. L. there attaches an interest, greater, perhaps, than to any traveler of modern times, and whatever belonged to him, or was used by him, must, in some degree, share that interest. As I looked at the reel there came into my mind a vivid picture of the trials, privations, hardships, exposures, fatigues and dangers so bravely and uncomplainingly borne by the courageous and true man, now, alas! departed, who once used it.

O. B.

THE BOSTON SHOOTING SUIT.—Messrs. G. W. Simmons & Son, the Boston manufacturers of the well-known Shooting Suits, have found it necessary to appoint an agent in New York for the sale of their goods. Messrs. Fowler & Fulton, of 300 Broadway, New York, will be constantly supplied from Boston with a full stock of the shooting suits. If men in the field only could appreciate what a comfort it is to have dry clothes on, and how health is increased thereby, all sportsmen would buy the Boston shooting suits. Four kinds of suits are made, from \$16 to \$60. It is a perfect outfit, including a cap. In the \$60 suit leggins are included. Messrs. Simmons & Son, of Oak Hall, Boston, supply hunters' tents and patent decoys.

Yachting and Boating.

HIGH WATER FOR THE WEEK.

Date.	Boston.		New York.		Charleston.

NEW YORK BAY REGATTA.—From the very marked success of the Newburg Regatta last year, ex-Commodore Joseph Nobles, of the Columbia Yacht Club; ex-Commodore John D. Brassington, of the Manhattan Yacht Club; ex-Commodore A. L. Kreymer, of the Pavonia Yacht Club; Nathaniel B. Lockwood, of the Empiro City Yacht Club, and Mr. John M. Sawyer, of the Brooklyn Yacht Club, met in convention last week, and resolved to give a regatta in New York Bay, that should be called "the first annual New York Bay regatta for open yachts," that should be free to all open yachts, without regard to clubs and without entrance money. In order to obtain funds to carry out this resolution, each of the five members (referred to above) were authorized to receive subscriptions, which are to be devoted to the prizes and other expenses of the regatta. It was also resolved to invite a delegate from each yacht club to confer with the members of the committee upon further arrangements, as this was virtually a national enterprise in which all yacht owners would be more or less interested. The event will come off in June or July, and a large meeting is to be expected.

SEAWANAKA YACHT CLUB.—The programme of the regatta of this club for 1878, is:

First regatta, Saturday, June 15.—Open to all clubs, with the usual restrictions. A Corinthian regatta for second class schooners and first and second class sloops. Two schooners and three sloops in either class to start. Regatta to be sailed with time allowance. Prizes, \$150 in each class, \$450. Second regatta, Saturday, June 22.—An ocean race, twenty miles to windward and return, starting from Sandy Hook, for first and second class schooners and first and second class sloops. Owners to command and steer their own boats. Open to all clubs with the usual restrictions. Two yachts to start in either class. Prizes for schooners, \$150 each, \$300; prizes for sloops, \$100 each, \$200. Third race.—Annual regatta at Oyster Bay, July 4. Five prizes, at \$50 each, \$250. Corinthian cruise to start from Oyster Bay the day after the regatta.

There may be some alterations in this scheme, possibly in the time of the Corinthian regatta.

ATLANTIC YACHT CLUB.—The opening regatta of this club will be held May 30; a regatta for open boats early in June; the regular regatta June 17th; followed by a regatta for catamarans. The officers newly elected are: Com., George A. Thayer, of the schooner yacht Triton; Vice-Com., William Cooper, of the sloop yacht Orion; Rear Com., William Hildreth Field, of the sloop yacht Kaiser; Meas., George B. Moffat; Rec. Sec., John B. Morgan; Cor. Sec., J. Lawrence Marcellus; Treas., Richard C. Field; Trustees—George A. Thayer, J. R. Maxwell, J. H. Rhodes, L. A. Fish, W. H. H. Beebe, W. W. Beebe; Com. on Membership—W. W. Richards, Austin H. Easton, William Peet; Regatta Com.—H. S. Manning, A. H. Farrington, Austin H. Easton.

JERSEY CITY YACHT CLUB.—At the annual meeting, March 7, the following officers were elected for the ensuing year: Commodore, John A. Nugent; Vice-Commodore, A. P. Ball; Treas., Asa Brainerd; Sec., James T. Grady; Measurer, George N. Weston; Directors—John A. Nugent, A. P. Ball, Asa Brainerd, James T. Grady, George N. Weston, John A. Hilton, William Clarke, John H. Carnes, Charles E. Gardner, J. A. Roberts and A. B. Reynolds.

ST. AUGUSTINE YACHT CLUB.—Saturday last was a gala day for the St. Augustine (Fla.) Yacht Club, it being the fourth annual regatta. Other sports added interest to the programme.

NEENAH YACHT CLUB.—Neenah, Wis., March 5.—We have one of the finest lakes in the country for fishing and boating, and there are a number of yacht races during the season which are very interesting. The present season promises to be very lively, as some new yachts have been built the past winter, which will make a fleet of over thirty on the lake. We expect boats here from Chicago, Milwaukee, Madison and Geneva Lake to participate with us in our races in July and August. Inclosed you will find a copy of the by-laws, etc., of the yacht club here. S. F. HENRY, Secretary.

—Considerable disappointment is felt in yachting circles that the reported prize of \$2,500, offered by the managing committee of the Paris Exposition, has proved to be a fable.

THE AMERICAN AMATEUR CHAMPIONSHIP.—To settle the question of the championship for amateur rowing crews, the Watkins, N. Y., Regatta Association have announced a grand national test regatta, open to all amateurs, to take place May or June next, on Seneca Lake, N. Y. Representative races will embrace fours, pairs and singles, and will be one and five-sixteenths of a mile straightaway (exact distance of Henley course). Winning crews are to be sent to Henley-on-Thames and Paris Exposition races by the Watkins Regatta Association as representative amateur oarsmen of America. Exact dates and details of regatta will be furnished in a few weeks and forwarded to all amateur clubs in the United States.

METROPOLITAN ROWING ASSOCIATION.—At a meeting held last Saturday evening, the following clubs being present—Argonauta, Atlanta, Carman, Columbia, Dauntless, Hesper, Nassau, Nautilus, Vesper and Winona—it was resolved to open the regattas of the club to all amateur boat clubs in the world. The first regatta will be held July 4, on the Hudson River, somewhere between the Battery and Spuyten Duyvil.

ACQUAKANONK ROWING CLUB.—This club of Passaic City, N. J., has elected the following officers: Pres., John M. Oill; Capt., Wm. J. Cooper; Lieut., Chas. Pike; Treas., Jos. W. Highio; Sec., Cornelius Demarest; Trustees, Wm. J. Cooper, Chas. White, J. W. Highio. E. C. B.

YALE AND HARVARD.—The course for the regatta at New London, June 28, is down the Thames, toward the city, the finish to be at Withrop's Neck, a neck of land a quarter of a mile above the city. Buoys will be anchored along the centre

of the course one-eighth of a mile apart, and the start and finish will be marked by stern-posts placed on opposite banks. The choice of a referee, hereafter to alternate between the two colleges, falls this time to Yale, who selected Professor A. M. Wheeler, of New Haven. The conditions for spectators are most excellent. It is proposed to run flat cars along the railroad track on the river bank, keeping the sight-seers abreast of the race the whole distance.

THE YALE CREW.—The crew chosen for the coming race with Harvard is as follows:

	Weight.	Height.
Curtiss, '79	Bow 165	5 feet 10 1/2 inches.
Clarke, '78	2 163	5 " 11 1/2 "
Wright, '80	3 171	5 " 11 " "
Hyde, '79	4 172	5 " 10 1/2 "
Taft, '80	5 151	5 " 1 1/2 "
Rogers, '80	6 191	5 " 3 1/2 "
Livingston, '79	7 171	5 " 11 " "
Polhemus, '79	Stroke 181	5 " 10 1/2 "
Thompson, '79	Substitute 165	5 " 11 1/2 "

—Harvard has challenged Cornell to an eight-oared race at New London, next June.

Game Bag and Gun.

GAME IN SEASON IN MARCH.

Hares, brown and gray. Wild duck, geese, brant, etc.
FOR FLORIDA.
Deer, Wild Turkey, Woodcock, Quail, Snipe, Ducks and Wild Fowl.

"Bay birds" generally, including various species of plover, sand piper, snipe, curlew, oyster-catcher, surf birds, phalaropes, avocet, etc., coming under the group *Limicola*, or Shore Birds.

RETAIL PRICES, POULTRY AND GAME.—Game—Canvas-back ducks, \$1.50 to \$2 per pair; red head, \$1.00 to \$1.25; brant geese, \$1.25; mallard ducks, 40 to 50 cts.; black do., 40 to 50 cts.; widgeon do., 30 to 40 cts.; broad bill do., 40 cts.; teal do., 40 cts.; wild geese, per piece, \$1; quail, per dozen, 40 cts.; wild pigeons, flights, \$1.75; stall fed do., \$2.50; Philadelphia squabs, \$4.00.

Poultry.—Philadelphia and Bucks County dry picked chickens, per pound, 20 to 22 cts.; do fowls, 15 cts.; do turkeys, 20 cts.; do ducks, 20 cts.; do geese, 15; State and Western chickens, 12 to 15 cts.; do turkeys, 15 cts.; do fowls, 13; do ducks, 16 cts.; do geese, 10 cts.; capons, 25; slips, 22; spring chickens, per pair, \$1.50.

NEW HAMPSHIRE—Nashua, Feb. 26.—The prospect for quail shooting next fall is very good. The Fish and Game Club has a membership of 45. Officers for 1878 are: Pres't., Edward Spalding; Vice-Pres't., Hon. Virgil C. Gillman; Clerk, Chas. E. Whitmarsh; Treas., Geo. H. Andrews; Executive Committee, Gill. C. Shattuck, Aaron King, A. W. Greeley; Attorney, E. E. Parker. The club has been actively engaged in the stocking of our waters with salmon and bass. Wann.

Dover, March 11.—We note that blue-birds and robins have arrived, and wild geese are flying over. Ducks of the different kinds have begun to bed along our coast in large numbers. G. A. W.

MASSACHUSETTS—Salem, March 12.—A woodcock lost its life last Monday night, the 4th ult., by flying against Hospital Point lighthouse. Beverly. Wilson snipe are along. Spring birds are very early. Black ducks are getting into some of the inland meadows, etc. Ipswich, Rowley, Parker River, and Newburyport marshes and rivers free of them. R. L. N.

CONNECTICUT—Lakeville, March 8.—Robins, bluebirds, redwings, blackbirds, etc., plenty; have also seen ducks going North. W. H. W.

NEW YORK—New Utrecht, March 4.—The birds are commencing to go north rapidly. Meadow hens (*Rallus crepitans*) were seen on our meadows a week ago, and woodcock are striking on. I flushed one a few nights ago in my yard, and to-day a friend brought me a female bird which flew against a telegraph wire, severing its throat and causing death. Scattering flocks of blackbirds, bluebirds and robins are passing, and the gulls have left our bays. The crows and English sparrows are building their nests, and if the instinct of birds is a good criterion, we shall have an early spring. The frost is out of the meadows, and if the weather continues fine, the next warm rain will bring on the first flight of English snipe, which will give sportsmen better recreation than glass-ball shooting. J. H. E.

Eldred, March 11.—Under above date, we hear from the veteran hunter, Isaac M. Bradley. The new protection law will probably make partridges very abundant here the coming season. One man shipped, last fall, over one thousand birds, and more than five thousand were sent from here.

Buffalo, March 8.—Blue birds and meadow-larks here to-day. Pigeons flying plentifully in the southern part of the county. No snipe yet. UNOAS.

NEW YORK STATE ASSOCIATION.—We acknowledge from John B. Sage, Esq., the receipt of the constitution and by-laws of the N. Y. State Association, amended, to 1878. The constitution has been ably revised by the Secretary. The most notable change is that of section 5, in regard to the treasurer, who now has to execute a bond for \$4,000. Some fifty clubs will be represented at the coming convention. Mr. Sage has been busy in New York arranging the programme, which, thanks to his energy, is sure to be a very complete and interesting one.

NEW JERSEY.—Barnegat Inlet.—Kinsey's Ashley House, March 11.—Our bay is full of geese and brant. More of the latter came into the inlet on Saturday in one day than we have known for years. B.

PENNSYLVANIA—Titusville, March 11.—Pigeons have been flying every day last week, but most too high to be shot. Several flocks of geese passed over Saturday. Poor weather for fox-hunting; none have been killed lately. "Clinton

fox-hunter" relates of finding a dead fox half eaten by some animal; perhaps it was a dog, for we have a dog that delights in eating the same after being skinned. He does it not for hunger, as he has plenty of fresh meat every day. O. H. W.

TENNESSEE—Nashville, March 7.—Now that the season for shooting quail, turkeys and deer has closed, our sportsmen are anxiously waiting for the appearance of jacksnipe and woodcock, of which there is generally an abundance about here, for a short time, in the marshy places and along the river banks. Immense numbers of wild fowl are also to be found at Reelfoot Lake, such as ducks, geese, brant and swan. Many of our sportsmen go there for shooting as well as for fishing. A pigeon match came off a few days ago on the fair grounds at Murfreesboro between the following crack shots of the place: Messrs. Horace Childress, J. D. Miller and Dr. J. H. Nelson, of the one part, and Messrs. H. O. Smith, Jos. E. Arnold and W. J. Childress of the other. It was won by the former after a closely contested match, the victors winning by only one bird. J. D. H.

KENTUCKY—Louisville, March 7.—Val. Cowling and Sam. Hutchings returned from Kankakee this evening with one hundred and ten ducks.

—The Louisville Sunday Argus, of which newspaper Mr. W. H. Stanley is the "Rod and Gun" editor, reports ducks plenty on the river from that city to Westport. Louisville is to have a shooting tournament during the spring races.

FLORIDA—Halifax Inlet, March 1.—The hunting in this region has improved under the new game law, and more deer have been killed than for the last two or three years. A lad twelve years old, from Philadelphia, who was out with a hunting party near New Smyrna, is reported to have killed a bear, a deer and a wild-cat. [Good work for a boy of twelve.—Ed.] I notice the white herons and egrets, being no longer hunted for their plumes, are becoming tame and easy of approach. S. C. C.

ILLINOIS—Peotone, March 4.—Ducks and geese numerous. Prairie chickens are quite plenty here; the males can be heard drumming on a sunny morning. Quails are scarce; have seen none for a long time. Saw robins, blackbirds, and meadow larks on the 2d. T. U.

IOWA—Winterset, March 6.—We have a duo prospect for grouse during the coming season. They were quite plenty last year, and as the winter has been so unfavorable for trapping, there will be an abundance after the spring hatch. Quail are very plenty. J. W. M.

WISCONSIN—Janesville, March 7.—Canvas-backs arrived in large numbers, March 5, at Lake Koshkonong. Col. L. A. Harris, Thos. A. Logan (Glean) and Ben Robinson, all of Cincinnati, are at Bingham's, Koshkonong. R. V.

Janesville, March 7.—Blue birds and robins first seen here Mar. 3; wild geese and some ducks seen on the prairie for the past week. Large flocks of wild pigeons flying here to-day for first time. Weather warm and poor prospects for spring duck and snipe shooting. R. V.

WISCONSIN—Menasha, March 1.—Game season will probably be unusually good. S. L. H.

COLORADO—Colorado Springs, Feb. 27.—The sage brush on the line of the Denver and Rio Grande Railroad, about twenty-five miles south of this place, abounds in jack rabbits, with now and then a specimen of his more Northern brother, *L. campestris*, and a fair sprinkling of the ubiquitous cotton tail. Large hogs (in this case gunny sacks) are brought home by the sportsmen who care to go down after them. On Saturday last I shot six inside of an hour, and fifteen in about three-fourths of a day. A few ducks are making their appearance, though not in sufficient numbers yet to make it worth while to go after them. O. B.

A SPORTSMAN'S RESORT IN WYOMING.—A correspondent writes from Wyoming Territory under date of February 8:

"Our camp is located on the road from Fort Reno to Fort Custer, where the road crosses the Tongue River. We are five miles from the foothills of the Big Horn range of mountains. We have had the most enjoyable trip conceivable, and all the sport the hardest to please could desire. We put up a most comfortable log cabin, and built the best chimney and fire-place I ever saw out of the slabs of sandstone we found just where we wanted them, and got everything in the most comfortable shape, ready for some cold weather, and have been most agreeably surprised not to have any. The snow fall has not exceeded six inches, and it disappeared almost as fast as it fell. We have determined to locate here, and open a resort for sportsmen in combination with stock raising. This is the best wooded, watered and grassed country in the United States. Besides an abundance of good coal crops out in many places. Some of it can be fired with a match. As soon as I can get buildings erected, and otherwise prepared to make one comfortable, I propose to open a house for sportsmen. Such a place for game—bear, buffalo, elk, deer and mountain sheep—I have never seen. The streams are full of the finest trout, while this mountain climate is simply superb. H. D."

NEW BRUNSWICK—St. John, Feb. 25.—There is much complaint about cariboo slaughter. Some time ago eight carcasses were openly exposed in the country market here for sale, and last Friday seven were brought down to Moncton from the North Shore. We had a "Game Protection Society," but the big fire destroyed their records and upset things generally. They intend to reorganize; such a society is wanted very much. The cariboo were killed by our own people, and not by outsiders. C. W.

NEWFOUNDLAND—Harbor Grace, Feb. 17.—Our old friend, the partridge, seems to be getting scarce, and the cluck cluck of his voice is less frequent. Some say the rabbits destroy the eggs. How far this is true I know not. I am of opinion, however, that the rabbits are far better for the poor people. You must have setter dogs to hunt partridge. There are four nice setters here—Shot, Grouse, Pat and Grouse. Pat is a fine, smart, light, humorous young Irish dog. He is complaining of cough now. C.

WILD PIGEONS.—The first flocks of the usual wild pigeon flights have appeared in Oceana and the adjoining counties of Michigan.

PENNSYLVANIA—Tionesta, Forest Co.—Pigeons are very numerous in this county and have been all the winter. McK.

Hornellsville, N. Y., March 5.—Wild pigeons are reported a few miles west of here. JOHN.

Mexico, Mo., March 2.—Pigeons here for two weeks past; are now flying northward.

CAPTAIN BOGARDUS IN NEW JERSEY.—On Tuesday, March 19, Captain Bogardus and his son, Eugene, will give an exhibition at Marion, N. J., at the grounds of the Jersey City Heights Gun Club. Captain Bogardus will shoot 300 glass balls in twenty-one minutes. There will be a sweepstakes open to all amateurs, and, to conclude, Master Eugene will shoot a match of 25 balls, 10 yards rise, with a 20 gauge gun, weighing 5½ pounds. The captain will commence shooting at 4 o'clock.

FIELD, COVER AND TRAP SHOOTING.—Copies of Capt. Bogardus' work on Field, Cover and Trap Shooting, with the appendix, may be had at this office. This, the second edition, contains the rules for glass ball shooting. Price \$2.00.

ENGLISH EXPERIMENTS IN PENETRATION AND TRIAL OF EXPLOSIVES.—The London Field proposes making a series of experiments with various powders, and for this end has constructed a new machine gun rest. "By imitating the human shoulder and allowing a certain amount of elasticity in the slide, we have," says the Field, "fortunately succeeded in our efforts, and we have obtained a rest which equals, if it does not improve upon, the best shooting of any of the gunmakers' experts." The difficulty heretofore in using a double gun was that the double-barreled guns being closer at the muzzles than at the breeches, the projectiles crossed at the line of fire. Our English contemporary is ere this fully under way with the experiments, and we look for the elucidation of many interesting questions, particularly in regard to recoil. The former plan of counting penetration by the sheets, we suppose, will be adopted by the Field experts. Nothing can be more slow and tedious than this method. In a former issue we explained a new plan of getting penetration, which simplifies all this and gives quicker and, we believe, even more accurate results.

QUAIL SHOOTING WITHOUT A DOG. HOW IT DOES IN THE AZORES.—G. W., a correspondent at Chippewa, Ontario, Canada, is kind enough to send the following interesting letter:

"In your issue of March 7th I noticed an article from Mr. of Marlboro, N. J., on 'Quail Shooting Without a Dog,' and as he has been interested in reading some article in your journal describing the way quail shooting is conducted in some parts of California, I, without the use of a dog, perhaps he would be again interested in hearing of the same shooting in the Azores (western) islands. Quail shooting without a dog—I only had the sport I speak of once, but a brother-in-law had it several times, and some of it grand, if you can call slaughter grand. We left the hotel at Ponta del Gardo on the island of San Miguel, which is the capital of the group, at eleven o'clock one morning on a bright day, and we returned (to the hotel) at two. We had no dog, and at the time it would not have been possible. We managed to bag eleven brace of quail. The fields on the islands are very small, and divided from each other by little brush fences. One of us would go down the middle of the field we were in, while the other would walk by the hedge, so putting up the birds, and which very seldom got up more than one at a time. To be sure, many got up that we never shot, it being the first time that I ever shot at quail. I managed to kill seven. We both had breech-loaders. My brother often after that, with a pointer, which he found on the island, in two hours' shooting, has bagged sixteen brace of the same bird (quail). There are a few woodcock in the islands, but so few it is thought not worth the trouble hunting them up. Where we did the above shooting was some two miles back in the country from the city, and through the newly 'hoed'—they do not plow them—fields, it was very tiresome walking. I hope your correspondent will be interested with the above account, though poorly written. Yours, etc., G. W."

THE "DO-FUNNY."—In a recent issue we described a very ingenious combination tool, presented to us by S. B. Dilley, which we supposed to have been invented by him, but find that we were mistaken; which see below:

LAKE CITY, Minn., March 6, 1878.

My Dear Hallock: Your mention in your last issue of the combination tool, so kindly intended, has become serious. Your valued journal at hand one day, and the next came pouring letters of inquiry for the "Do-funny." This proves the value of your columns as an advertising medium. Now, this may "do" for you, but is no "funny" matter. I may be arrested for piracy, and held up to scorn by the man who so successfully invented so desirable an article. I am not the inventor, and do not know who is. I hope whoever he is he will see the benefit that an advertisement in the FOREST AND STREAM would be, not only for himself, but for the good of the fraternity in general.

Respectfully, yours,

S. B. DILLEY.

PAINE'S FEATHER-FILLED GLASS BALLS.—"To make the feathers fly" is a most desirable thing. There is a double reason for using a ball with feathers in it. Firstly, there is the satisfaction of sight, which enjoys seeing the flying of the feathers, that adds to the fun; and, secondly, if a ball is struck by the shot, the feathers must scatter, and any doubts as to whether the ball is hit or not must be removed. All the Paine feather-filled balls are carefully made, and are of the same weight and size, so that the delivery from the traps must be uniform. The demand for the Paine ball has been so large that machinery has now to be used in order to fill the balls with feathers. No sportsman's warehouse can be complete without the Paine feather-filled balls. The headquarters for these balls is the Bohemian Glass Works, 214 Pearl street, New York. The balls are put up in barrels, and are guaranteed to contain three hundred.

CHILLED SHOT.

It has been proved by experience that ordinary shot is so jammed out of shape before leaving the gun, that a great many pellets fall short of the mark or fly out of range. It also flattens on entering an object, lessening its penetration. To obviate these difficulties use "IMPROVED CHILLED SHOT," which is hard enough to retain its spherical form, and so makes a better pattern and has much greater penetration.

Squirrel shooters often find the ordinary shot flattened just beneath the skin, and it frequently requires a number of loads where

a single charge of chilled shot would kill, and it is an undisputed fact among duck shooters that soft shot flattens on the feathers, and sometimes on a wing bone. Chilled shot would break the wing and pierce the feathers, finding a vital spot. For woodcock and all brush shooting it is more advantageous, as it cuts the bushes, and flies with more accuracy than soft shot.

There is much said about the best kinds of powder, and but little about the best shot, when it is, at least, equally important. The query among sportsmen, therefore, should be, what kind of shot is most perfect when it leaves the gun? This can be learned by firing into a large bag of bran or some other soft substance, preserving the shot for examination. The strongest powder and strongest shooting gun will show the best result in favor of chilled shot, by crowding the soft shot more in the gun barrel.

The chilled and soft shot being of the same diameter, the number of pellets is alike by measure, but by weight the chilled shot will be found to be a little lighter, say eight pellets to the ounce in No. 7.

TATHAM & BROTHERS, New York.

MOMENTUM AND PENETRATION.

MORE ABOUT CHILLED SHOT.

NEW YORK, March 8, 1878.

After reading the interesting article on chilled shot by Major Merrill and Geo. Hayden, I desire again to occupy your space in connection with the same subject. I still think that, to ensure a fair trial and to prove whether soft or hard shot has the longest range, equal weights of each should be used with the same charge of powder. For shooting game, long range is of much more service than penetration, and, as is shown in both articles referred to above, the extent of penetration in trial shooting depends so much on the methods employed and the targets, etc., used, that it is not always a fair test of the relative range of the two kinds of shot. For the same reason it is clear that penetration does not vary "with the weight of the pellets into their velocities," although momentum does, for penetration and momentum are not always proportionate.

In the case quoted by Col. Merrill, the gun shooting with the greatest force (momentum) caused in one trial the least penetration. If the range of shot is sufficient to reach the bird, there is little fear but the penetration will be sufficient to kill it; but if the shot is too light to attain sufficient momentum to insure long enough range to reach the bird, it is a clear case that the gunner will go home with an empty bag, notwithstanding the fact that at some target trial, the penetration of the shot was all that could be desired. Theory and practice are, in shooting as in most other matters, quite different things. It is a question of serious import to owners of valuable guns whether they are willing to risk the injury of the inner surface of the barrels by the action thereon of the hard shot, without any compensating advantages.

Yours truly,

H. W. KNOWLTON.

P. S. A word to Mr. Richards' article in yours of the 7th inst. His implication, that because a man is compelled to work for others in order to support himself, therefore, of necessity, he cannot give an honest opinion, is, to say the least, ungenerous, and, if true, would invalidate Mr. Richards' opinion on the subjects in question. "Chilled" shot has been made in England as well as by American manufacturers, and as any of the latter can make it, they would not be likely "to condemn, as a matter of policy," an article out of which money could be made. It may, however, be "a matter of policy" to ascertain that an article possesses the qualities claimed for it before staking one's reputation on its manufacture. To do this requires discussion and trial, hence my article. The gist of the matter is contained in this fact—which cannot be disputed—that heavy bodies with similar motive power have a much longer range than lighter ones.

H. W. K.

PIGEON MATCHES.

SCORES OF MATCHES.—To insure insertion in current issues of our paper, scores should be sent so as to reach us on Tuesday.

NEW YORK.—Newark, March 4, 1878.—The Wayne County Sportsman's Club held their regular competition for the Champion's Badge at Lyons to-day; match open only for members of club; 7 birds; 21 yards rise:

S Dayton.....	1 1 1 1 1 0 1-0	A Hale.....	1 1 1 1 1 1 1-0
S Dayton.....	0 1 0 w	A Hale.....	1 0 0 w
J Burdick.....	0 1 0 w	B Hotchkiss.....	0 1 0 w
J Burdick.....	0 1 0 w	J See.....	0 1 1 1 1 1-6
C Elliott.....	0 1 1 0 w	W Miller.....	0 1 0 w
H Wadsworth.....	0 1 1 0 w	O Helmer.....	1 0 1 1 1 0-5

Ties on six—25 yards rise.

S Damewood.....	1 1 0-2	J Wirts.....	1 0 0-1
J See.....	1 0-2		

On ties on 2, 31 yards rise, Damewood won, killing 2 birds and Sees 1 out of 3.

Sweepstakes: purse, \$48; \$18 to first, \$14 to second, \$10 to third, \$6 to fourth; 5 birds, 21 yards rise:

C G Elliott.....	1 0 1 0-2	J See.....	1 0 0 1-2
A S Hale.....	1 0 0 1-2	J Burdick.....	0 1 0 1-3
H Silsby.....	1 0 1 1-4	G Jones.....	1 0 1 0-2
S Damewood.....	1 0 1 0-3	J Wirts.....	1 1 1 1-5
B Hotchkiss.....	1 0 1 1-4	W S Murray.....	1 0 1 0-3
G Stempson.....	1 1 1 1-5	S A Dayton.....	0 0 1 0-2

On ties of 5, 26 yards, 3 birds each, Wirts won first money, killing 3; Stempson lost first bird and withdrew.

Ties on 4, same conditions, Silsby won second money, killing 3; Hotchkiss killed first, missed second and withdrew.

Ties on three, same condition.

Damewood.....	1 1 1-3	Burdick.....	0 0 0-0
Murray.....	1 1 1-3		

Second tie on 3, 31 yards, 3 birds; Damewood won, killing 3; Murray lost first and withdrew.

Ties on 2, 26 yards, 3 birds; Dayton won fourth money, scoring 2; Jones, 1; Elliott, Hale and Sees lost two each and withdrew.

Shoot at glass balls, 18 yards; purse \$11.

S A Dayton.....	1 1 1 1 1 1 1-10		
B Hotchkiss.....	1 1 1 1 1 1 0-10		
H Silsby.....	1 1 1 1 1 1 0-10		
G Stempson.....	1 1 1 1 1 1 1-10		
C Elliott.....	0 1 0 1 0 1 0-5		
O Helmer.....	1 1 1 1 1 1 1-10		
J Wirts.....	1 1 1 1 1 1 1-10		
J Burdick.....	1 1 1 1 1 1 0-7		
W Miller.....	1 1 1 1 1 1 1-9		
S Brownell.....	1 1 0 1 1 1 1-9		

S Hale.....	1 1 1 1 0 1 0-7		
H S Taylor.....	1 0 1 1 1 1 1-9		
S Damewood.....	1 1 1 1 1 1 1-9		
W Compson.....	1 1 0 1 1 0 1-7		

Ties on ten, 21 yards.

Dayton.....	1 1 1 1-5	Helmer.....	0 w
Stempson.....	0 w		

Dayton won first money.

Ties on nine, 21 yards—miss and out.

Servis.....	1 1 1 1 1-7	Brownell.....	1 0 w
Hotchkiss.....	1 1 1 1 0-6	Damewood.....	0 w
Miller.....	1 0 w		

Servis won second money, \$4.

On ties on 8, Silsby and Wirts divided third money.

Shot.

Croton Landing, N. Y., March 9.—Score of our last glass ball shoot; sixteen balls each:

H Tice.....	13	A Rolfe.....	11
C M Taylor.....	14	W R Talcott.....	11
A Tompkins.....	11	E Travis.....	2
E Baker.....	6	S McCord.....	16
Chas H Warring.....	10	W Hance.....	10
J A Chase.....	15	W Southard.....	12
C W Talcott.....	14	F D Fox.....	12

SOUTH ORANGE CLUB.—Match at South Orange, N. J.; 18 yards, 3 traps; score:

Burt.....	1 0 1 1 0 1 1 1 0 0 1 1 0 0 1-10
Crowell.....	1 1 0 1 1 0 1 1 0 1 1 0 0 1-11
Ball.....	1 0 1 1 1 1 1 1 1 1 1 0 1 0-13
Brown.....	1 1 1 1 1 1 1 1 1 0 0 1 1 1-13
Willou.....	0 1 0 0 1 1 1 1 0 1 0 0 1 0-9
Pierce.....	0 1 0 0 0 0 1 0 0 1 1 1 1 1-8

Double balls, six pairs, 14 yards rise.

Brown.....	10	11	11	10	11	10-11
Ball.....	10 w					

SOUTH ORANGE.

FOUNTAIN GUN CLUB.—Parkville, L. I., March 6.—Regular monthly shoot for champion gold badge; 80 yards boundary, 1½ oz. of shot; H and T traps; ties shot off at three birds. The Long Island rules to govern:

B Water.....	21 yds rise.....	1	1	1	1	1	1-7
G Henry.....	21.....	1	1	1	1	1	1-7
Williams.....	25.....	1	1	0	1	1	1-6
Madison.....	25.....	1	1	1	1	1	1-6
McMahon.....	25.....	1	1	1	1	1	1-6
Henderson.....	28.....	1	1	1	1	0	0-5
Bohling.....	21.....	1	1	1	1	0	0-6
Durfee.....	50.....	1	1	1	1	0	0-6
White.....	21.....	1	0	1	1	1	1-6

At a match against time, Mr. L. H. Smith, of Flatlands

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

S. L. W., Ulrica.—A first class house, and who sell reliable guns.

MORRA, N. Y.—Address the advertiser. We know nothing about it.

PAREN, Thiboute.—For clubs of three or more the price of the paper is \$5.

F. B. F., Albany, Pa.—We don't know what it costs to teach a dog to play tricks.

C. T. J., Jr.—Is chilled shot liable to burst a choke-bore? Ans. Not in the least.

J. W. F., Jr., Philadelphia.—Have written to Nichols & Lefevre, and will inform you shortly as to your question.

F. F., Columbus, Ohio.—The gentleman whose name you ask for is in the employ of Messrs. Conroy, Bissett & Malleson.

JOHN, Albany.—Which numbers of your paper contained the full account of the dog show last summer? Ans. May 10 and 17, 1877.

GEORGE HENRY, New Hope.—Write to G. W. Poussil, Christiana, in your State; he has some of the finest bengal hounds we know of.

M. C. H., Warner, N. H.—The bird description you send is that of the young male of the reit wing blackbird *Agelaius phoeniceus* (Linn.).

K. H. M., Wytheville, Va.—We wrote blue, not black. Probably the mistake was the stenographer's in transcribing from his short notes.

S., Westfield, Mass.—Want to get my dog into good condition for a bench show. Ans. Exercise and regular feeding twice a day is the best thing.

SOUTH FORD.—Will the correspondent with this pseudonym, who contributed an article to the kennel department June 23, 1877, send us his address?

C. TAMPA, Chicago.—The amount you mention is not large, but everything is in favor of a sober, industrious and energetic man. Would prefer Texas.

H. G. D., Philadelphia.—What is the best food for a Newfoundland dog during the warm months? Ans. "Mush," with occasional little scraps mixed in.

E. A. T., Mexico, N. Y.—Is there a work on the marine compass? Ans. Consult Appleton's Encyclopedia and Draper's Intellectual Development of Europe.

W. D., Virginia.—Can I get the common English wild rabbit in America? Does any one import the English pheasant? Ans. Chas. Reiche, 64 Chatham street, New York, imports both.

C. P. S., Richmond, Va.—The 2: Billard should be understood as 22 Ballard's. It was not one ball which perforated the six inches of lead, but a series of balls which traversed the lead.

H. H. T., Concord.—Have a single-barrel Remington; weight, seven pounds, 12-bore. What would be the proper charge for snipe and small birds? Ans. 2½ drs. powder and 1 oz. shot.

C. D. K., Halifax, N. S.—The canoe builders at Peterboro, Ont., are John S. Stephenson, who is the inventor of the bass-wood canoe, and Wm. English. Thomas Gorloun's address is Lakeside.

C. H. H., Columbus.—There is the kennel stud book published by the London Field, and the American Kennel and Sporting Field of Arnold Burges, with some few pedigrees, the latter yet incomplete.

PHOTOGRAPHY.—The correspondent who wrote inquiring where he could secure lessons to photography can probably have instruction at the Cooper Institute. Write also to Wm. R. Howell, 841 Broadway.

J. W., Pittston, Pa.—Have a Remington No. 10, 28 in. barrels, weight, 3½ lbs. What kind of powder should I use to obtain good results? Which would you advise me to use? Ans. Use Orange Lightning No. 6.

A. O. W., N. Y.—1. How many copies will your FOREST AND STREAM binder hold? 2. Was there a law passed last year prohibiting shooting o game in Richmond Co for three years? Ans. 1. Twenty-six numbers; costs \$1.50. 2. Yes.

A SUBSCRIBER, Gouverneur, N. Y.—Where can I procure a pocket spring-balance scale for weighing trout? Are they accurate and what is the price? Ans. At most any fishing tackle store. Very accurate and price from \$2 down.

C. T., West Meriden.—We advised Texas, being more familiar with that State than Colorado. Would prefer Texas or Colorado to Kansas, as we think it is likely that sheep raising will bring both these States into greater prominence.

J. R. B., Jr., Boston.—1. What powder does Captain Bogardus use? Ans. 1. Bogardus when he shoots black powder uses No. 6 Orange Lightning. 2. Geo. H. Sampson, 25 Congress st., is the agent of the Orange powder in Boston.

LONG RANOS, Sag Harbor, N. Y.—Mr. Reiche, of No. 55 Chatham street, had goldfishes, but the demand was greater than supply. Expects to have some more shortly. Price of males, \$2; females, \$2.00, but females are hard to get.

E. M. E., Hancock, N. Y.—Does the book published by you (the Sportsman's Gazetteer) treat on fly fishing for trout? Ans. Most carefully and exhaustively. It is also a compendium of all matters and subjects relating to sport, excepting the turf.

H. K. S., Greenfield, Mass.—Who is there in this vicinity that can train a Gordon setter in good shape for field work? Ans. S. T. Hammond, of Springfield, would be likely to give you the necessary information where such a trainer could be found.

F. V. A., Phila.—A setter five months old has an irritation on his belly. It does not seem to inconvenience him. Continues scratching the part. Ans. Probably mange. Try application of kerosene oil, well rubbing in twice a day for a short time. Wash off each day.

F. A. S., Honesdale, Pa.—Where can I get green heart for my rod making? Ans. Any of the large makers keep it. Conroy, Bissett & Malleson have it. Green heart, however, is not in the same vogue that it used to be. The former person we wrote you about has removed from the city.

E. M., Greenboro, N. C.—A pointer recovering from distemper. Has swelling on left side of neck. Does not seem to hurt him. What shall I do for it? Ans. Probably enlargement of some of the glands of the neck. Avoid exposure to cold and wet, and use gentle rubbing if it does not hurt him.

A. G. B., New York.—Where can I purchase a book on yacht signals; also a map of the Hudson River? Ans. "The American Yacht List," published by Neils Olsen, Steward of the N. Y. Yacht Club. For best map of Hudson River address John Featherston, care of Day line of Albany Steamers, office at Vespy st. pier.

C. E. O., Boston.—For two weeks at one time in the fall, is there any objection to a red Irish setter, owing to their high feeling and desire to run wildly? Is a dog but slightly broken of any service in the field? Ans. A well broken pointer is probably best in such a case. A badly broken dog is generally worse than none.

H. F. W., Elmira.—1. Cannot a very fair fly rod be purchased for \$3 or \$4? 2. Will not trout take a fly better than a worm during April and May? 3. Is the fishing at Ralston, Pa., best suited for fly or bait? Ans. 1. Yes. 2. Generally, though capricious at times. 3. We are afraid the fishing at Ralston has been very much exaggerated. Use fly.

J. C. S., White Plains.—1. Was born on the 23d day of April, 1850—what day of the week was that? 2. What is the best dog for coons? 3. What does an advertisement cost in your paper? Ans. 1. On a Monday. 2. A mongrel, some little foxhound in him, with terrier. Most any dog will track and tree a coon. 3. See editorial page of the paper.

PLANKERS, Hudson, N. Y.—Can you give name of person who wrote quite a lengthy article in FOREST AND STREAM some time ago on spraying? I wish to write and thank him, as my friend Dr. F.—and myself have performed the operation on several, and that successfully. Ans. We have mislaid the address and advertise for it in this column to-day.

A. T. F., Oshawa, Ont.—1. Which shell is preferable for the Creed-moor Remington, 2½ or 2-7-16 ounce, and which is more common in use by the distinguished American riflemen? 2. Also, if you can, give me your opinion on the respective merits of the — and —. Ans. 1. The 2-7-16, and is the one used. 2. Both good guns, can make no differences.

G. H. M., Bridgeport.—1. Where is a good place to trap in Maine? 2. How many times can the Evans rifle be shot without reloading? Ans. 1. The country around Upper Richardson Lake is quite good. Around Moosehead Lake—say fifteen or twenty miles east of it—is another good place. 2. The Evans rifle fires some thirty-four times without reloading.

A. S., Cleveland, O.—A black setter pup, 10 months old, out of good stock, but has a ridge of hair on the top and back some 2½ inches long, which won't lie down. Will it come out when he grows older? Does it show Newfoundland blood? Ans. If out of "fine stock" there can be no Newfoundland in him. Probably after his puppy coat is shed he will be all right.

F., Alexandria, Va.—1. Which is the better for squirrels, ducks, etc., Hunter's Pet Rifle or a No. 2 Remington? 2. Where can I get a second-hand one of either kind? Ans. 1. They are pretty much the same as to effectiveness; both are fairly accurate. The Pet can be packed more readily. 2. Mr. Squires, of No. 1 Courtland street, N. Y., has a second-hand Pet for sale.

H. O. Jr., Stamford.—May is rather early for the Northern Pine woods for a person in delicate health. Go into Northern Maine, there are plenty of small settlements there, where a guide can be had who could show you good fishing and hunting, and where camp expenses would be slight. There is a range of country north of Lincoln or Enfield which might do.

M. K. J., Colorado.—Why not use a rag moistened with water to clean a B. L. gun? Everybody says, "Use oil, turpentine, or petroleum." 1. Hot water cleans the gun better and quicker than any of the above. Ans. The only trouble is that water may get into the finer mechanism of the gun and produce rust. Water first is good for the barrels, and a lubricant afterward.

M. A. T., Third Auditor's Office, Washington.—In regard to Mr. J. P. O'Neil's apparatus for measuring penetration, which you say was in use by you two years ago, the patentee says he does not claim disposition of cards, because that was done by Dingall some years ago; but what Mr. O'Neil does claim is the combination, so that pattern and penetration can be taken at the same time.

W. A. P., Virginia, Nevada.—I want a rod for general fishing with two tips. Our fishing consists of brook trout ¼ to 2 pounds weight, and lake trout from 2½ to fifteen pounds. Can I get a good rod for \$35? Ans. We would recommend a heavy split bamboo, say from 13 to 19½ feet long to weigh 12 to 13 oz., such as are made for land-locked salmon. They may be had in New York for from \$25 to \$30.

C., Danville, Va.—My deer seems to be much troubled with lice; can you tell me of a remedy? Ans. Anoint with mercurial ointment, muzzling the deer so that they cannot lick the parts anointed. Wash off with warm water afterward. Or apply the pyrethrum roseum, or Persian insect powder, to be bought of druggists; or use soft soap with the addition of a few drops of liquefied thymol.

J. Y., Wapakoneta, O.—When you speak of 3½ drs. of powder do you mean weight or measure? For ducks I use a 12-bore Parker, 7½ lbs., with brass shells; have been loading 3½ drs. of powder, using a Dixon & Sons charger, and 1 oz. of shot. What is the proper load? Ans. 1. By measure. 2. You might increase charge of powder a trifle. Stop when the recoil is manifest. Try 4 drs.; guns vary.

O. T., Paris, Ont.—In a pigeon match where there are several prizes and several men tie on the highest score would those who thus tie shoot off for all the prizes, or only for first prize? Ans. For first prize only; second and third prizes would go to those who made second and third best scores on first shoot. For instance, if the match is for 10 birds, the ties of 10 are first shot off; then those of 9; then those of 8, and so on.

D. O. C., N. Y.—1. Can you inform me how long it will be before Vol. 1 American Kennel Register will be published, and when time for filing pedigrees for Vol. 2 will close? 2. I see that May 19 is one of the days set apart for the bench show. Is there not some mistake, the 19th will come on Sunday. Please enlighten me. Ans. 1. That is what no fellow can tell. In the 20th century, we are afraid. 2. We have copied the dates from the announcement.

J. F. B., Baltimore.—Can you furnish me with a full pedigree of Colburn's Gordon setter Dash? Ans. Our Kennel Register, comprising several hundred pedigrees, which we had carefully prepared, was taken from us by the solicitation of the National Kennel Club and placed in the hands of Arnold Burges, of Hillsdale, Mich., who is now compiling the Stud Book. Better address the owner of Dash, George S. Colburn, 58 Ward street, this city.

I. L., South Pittsburgh, Tenn.—My setter puppy, six months old, coughs occasionally; has a red eruption on the inside of his hind leg. The hair is coming out. It is not sore, but he licks and bites it. Have washed it, and been advised to use iodine. His eyes are blood-shot, and a discharge comes from them. Passes small white worms. Is this eruption serious, and what shall I do? Ans. The eruption is probably mange. Try kerosene oil rubbed in twice a day for a short time. Continue to use soap and water, and give plenty of exercise and less food.

E. H. H., Boston.—Can three young men, with a capital of \$500 to \$700 each, start in the sheep raising business in Texas? Is Colorado better than Texas? Ans. 1. Yes, they can make a moderate start with that capital. We shall soon publish what available information we have on this subject. 2. Sheep raisers in both States are satisfied with their ranges. See the letters recently published from our Texas correspondent and the opinion contained therein of veteran Australian sheep-raisers.

J. C., Girard, Kan.—Can you give me a receipt to cut rubber, or make rubber cement? Have tried all three receipts given in your book, but none of them work. Where can I buy it already cut and a good article? Ans. We know of no other receipt. Those referred to have received the endorsement of our New York rubber dealers. Perhaps you have but mixed the ingredients properly. You can procure a preparation for the purpose from Hodgman & Co., 21 Maiden Lane, N. Y. Price 25c., 50c., and \$1, sent by mail.

L. F. N., Johnstown, N. Y.—At Hot Springs, Ark., can deer be shot now? Also can you catch trout in that country? I think of staying a couple of months, would you take Winchester and my rod? Ans. Most of the buildings at Hot Springs, Ark., were burned last week, and we cannot promise good accommodations. There is excellent shooting for deer, and good bass fishing in the vicinity. It is well enough to take your Winchester rifle for bears, but deer are out of season. Take your fishing rod by all means.

W. B. B., Charleston, S. C.—The Dittmar powder has been very much improved, and we have every reason to suppose that it is now made of a constant standard. Conservatism is a good thing, but, as you remark, may be carried to too great a pitch. Wood powder is extensively used in England, and, we believe, in time, Dittmar powder will be in demand here. That Bogardus used it in his 6 and 8 glass-ball match has brought it into favorable notice. Write to Mr. Squires, No. 1 Courtland street, N. Y., about it. He is agent for the Dittmar powder.

M., Wisconsin.—1. Where can I get a treatise on milk culture? 2. Who is Secretary of the Interior? 3. Have the red-head ducks been domesticated? If so, where can I obtain them? Ans. 1. No special treatise on this subject. See back numbers of this journal, especially July 2, 1874 and Oct. 22, 1874; also consult Coe's "Far Bearing Mammals." 2. Hon. Carl Schurz, of Missouri. 3. Not so far as we know—but you can, perhaps, obtain live specimens of the European pochard, a near relative of our bird, from Reiche Bros., of Chatham street, New York.

THOUT, Hempstead, L. I.—Has a man a right to catch trout out of his own pond to eat out of season under the present law? Ans. He has no right, but in case of sickness or protracted illness of starvation no judge would take cognizance of the offense. We quote from the opinion of an eminent jurist as follows: "If every man could kill and destroy at his own option what the statute was intended to protect, what need would there be of any statute? If the statute does not apply to all, it is without the breath of life." We send a pamphlet copy of the full opinion, and can furnish other parties to a limited extent if they will send 6 cents for postage.

A. A. F., Sing Sing.—Will a game law made and passed by the board of supervisors of a county hold good if the law on the same birds is different from the State game law? Ans. The section 32 of the game law of N. Y. reads: "It shall be lawful for the board of supervisors of any county to make regulations protecting other birds, fish, or game than those mentioned in this act, and such ordinance shall be published in the papers in such county in which the session laws are published and in the State paper before going into effect." We can find no authority for alteration of the State law, and should therefore decide that such alteration could not be legally binding.

NEW SUBSCRIBER, Georgetown, D. C.—In your Answers to Correspondents, in regard to calibers, you speak of 10's being about ¼ of an inch and 12's being about 1-16th of an inch less. Again, you give measurements to the one thousandths of an inch. Which is exact, the first measurement or the second? Ans. The word about in the first measurement was our saving clause. It was only approximate. The measurements to a thousandth of an inch are absolutely correct and were furnished us by Mr. Hobbs, of the U. M. C. Co. Mr. Hobbs has gauges which show exactly the thousandth of an inch. It was Whitworth, of England, who first determined for actual work measurements of this delicate character.

AMATEUR, St. Klammath.—1. What is the composition of the wax used in tying trout flies? 2. Can you recommend a glue impervious to water and adapted to the mending of wading stockings, rubber boots, etc., and where can it be obtained? 3. Where can a stock of fathers for making these be procured? Ans. 1. One ounce clear rosin, one crinoid gum, one teaspoonful crude linseed oil; put these in a cup, heat and keep stirring, and when thoroughly mixed pour out into cold water. Take it, and then go through a candy-pulling process with it. To soften it, add a little more oil; to harden it, more rosin. (See Hallcock's "Gazetteer" page 539.) 2. Try rubber cement. 3. Try India rubber, cut into the finest shreds, say a piece as big as a walnut, and dissolve in benzole. Wilt with patience until the rubber dissolves. 3. Miss McBride, No. 650 Broadway, New York.

H. M. B. D., Corning, N. Y.—1. I wish to make a portable canoe. What wood can I use for the frame which will be as light, elastic and durable as possible? 2. Will a sample of paper I send be suitable for covering the frame, or at least paper like it? 3. And what waterproof preparation can I use to saturate the paper with? 4. Where can I find a book which treats of the art of making artificial flies for use in American waters? Ans. 1. Bass wood or white cedar would probably be the best. 2. Yes. 3. Use marine glue between the layers of paper and cover the outside with pellucide of a water-proof varnish, sold by the Averil Paint Company, of this city. Your canoe if built of ¼ inch white cedar planks would probably be lighter than if built as you propose. 4. Hallcock's "Sportsman's Gazetteer."

GUN MAKER, Rawsonville.—Will you or some of your readers please inform me how short a twist, and whether even or gain, is used in the "express" rifles? For a muzzle-loader how long a bullet and how patched? Would 28 in. slight gain, handle the Exp. ball? 1. Could any one learn the Japanese language by himself, and what works would be necessary? 2. How long a bullet did the British riflemen use at Creedmoor in muzzle-loaders, and how were they patched? Ans. Refer you to an article in this week's paper, in which full details are given. 3. Suppose it would be very difficult. The best dictionary is one English and Japanese, by J. C. Hepburn, M. D., published by the American Mission, Shanghai, of which the Messrs. Putnam & Son, of New York have an abridgement. There is a teacher in N. Y., Mr. F. Yamada. 3. 1½ inches long. Patched with paper. Can send you one if you want it.

INQUIRER, Washington, D. C.—Do you know of Tunks, of Boston, as a gun builder? 2. Have a 12 gauge, Damascus barrels, 15 ft. long at the above make, 7½ lbs. weight; would the breech be strong enough to bear the charge if I placed upon the same stock a pair of barrels, 10 gauge, full choke? 3. Can cylinder bores be changed to choke, and is it done (if done at all) by reborring or by inserting a piece in the muzzle. Would the change increase the recoil? 4. Will a 12 gauge choke bore shoot as far and strong as a 10 gauge choke? 5. Is the lever under shoot any stronger than the top snap action? 6. Is the pistol grip stock as strong as the straight stock? 7. Is the — or — the same make? good in point of finish and shooting power as — of the same make? Ans. A good maker and torse out excellent work. 2. Would not advise it, might be a trade dangerous. Don't 3. By reborring. 4. Shoot further. 5. As to strength, the under lever is said to be the stronger, but the best makers build guns in both ways. 6. Pistol grip must make it stronger. 7. Respectfully decline answering.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCUCLATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

No. 111 (old No. 103) FULTON STREET, NEW YORK.

[POST OFFICE BOX 2832.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Twenty-five per cent. off for Clubs of Three or more.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

*. Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, MARCH 14, 1878.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous contributions will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost. NO PERSON WHATEVER is authorized to collect money for us unless he can show authentic credentials from one of the undersigned. We have no Philadelphia agent.

Trade supplied by American News Company.

CHARLES HALLOCK, Editor.

Business Manager.S. H. TURRILL, Chicago,
Western Manager.

OMELETTE A LA NOUVELLE HOLLANDE.

IF he who makes two blades of grass to grow where but one grew before has deserved well of mankind, surely he who has discovered a new dish has performed for the race a far greater service. In the rush and hurry of American life, too little attention is paid to the pleasures of the table, and to appreciate the comforts of good living one must travel eastward 3,000 miles. We, ourselves, confess to a vast delight in things gastronomically excellent; we like to have our dishes well cooked and delicately served, our wines of proper vintage and at just the right temperature, our coffee black and strong, with all its delicious aroma preserved, yet with none of the bitterness which comes of our cooking. We experience most extravagant feelings of pleasure in the discovery of a new comestible, and have devoted no little time to making experiments in gastronomy. We are familiar with the roast beef of old England, the frogs of France, and the national dish of the Italians; have eaten pates at Strasbourg, sturgeon with the Cossacks of the Don, black bread with the Magyar peasants of Hungary, and locusts and wild honey on the banks of the Jordan. We have dined at the Trois Freres, enjoyed ices at Tortoni's, chops at Tavistock's, by old St. Paul's, and have eaten *marins* and sipped *modere* at the Cascade, in the Bois, and picked the bones of *petitons cailles* on the piazza San Marco, in beautiful Venice.

In the course of a long and not uneventful experience we have been introduced to more than one novelty of the table; have partaken of jerked meat on the plains, grizzly bear meat in the mountains, tomas and chile colorado in the land of Montezuma, cowees with the Pawnees, and, to our sorrow, have been obliged to break our fast on sand rats, and to dine on a tough old dog hadger.

In striking contrast to these last meals was a delicious

breakfast which we recently enjoyed, and which consisted in part of a dish which was wholly new to us. Our friend, Mr. F. H. Thompson, was kind enough to send us, some days since, a fresh emu's egg, which had been laid in the Gardens of the Cincinnati Zoological Society but a short time before. The specimen was most beautiful, but aside from its attractive appearance, thoughts of its economic value occupied our mind. The contents, when extracted, filled to the brim a large soup plate, and furnished us with one of the most delicious omelets we have ever eaten. Having discovered this new dish, we, with all modesty, lay claim to a position among the ranks of the world's philanthropists.

And this is but another instance of the comprehensive scope of this journal. Here, 10,000 miles from his native jungles, we announce in clarion tones to the lean and hungry hush-ranger, that his companion of the forest, the *Dromaius Novae-Hollandie* will afford him the means of a fat and easy subsistence.

To the farmer, the inference from the above remarks is obvious; invest your unemployed capital in the importation of a herd of emus. Do away with your hens, which grow tougher day by day, and never lay except on the stomach of the eater. Save the expense of supplying *Gallus domesticus* with hot food twice a day, whole corn and scrap cake *ad libitum*. The emu needs none of this—give him a trough filled with a good assortment of pebbles and broken bottles, and he will ask for no more; nay, he will grow fat on such a diet, for this is his natural food.

We are not yet prepared to furnish an exhaustive treatise on emu culture, but we wish to suggest that if an emu lays at a single session an omelet for eight, while it takes a hen a fortnight to accomplish the same feat, then we feel to see why the emu is not destined at no distant day to play an important part in the commerce of the world.

THE SPORTSMAN'S YEAR BOOK.

"Away, away to the forest glades,
Fly, fly with me the haunts of men.
I would not give my sunlit glades,
My talking stream and laughing glen,
For all the pageantry of slaves.
Their fettered lives and trampled graves."—ANON.

TO the true sportsman—he who is filled with an intense love for the innocent and health-giving pursuits of land and water, and to whom familiarity with nature and her bounties yields that pure delight and lusty strength worth millions to a man—every season of the year, in this our own America, yields tribute.

When March, with lengthened days, raw winds and pelting rains, ushers in the spring, the wild duck's fancy lightly turns to Labrador, on whose rocks she last season built her nest and reared her young, and all over the drowned lands and lagoons of Florida and the Gulf States may be heard the quack of gathering squadrons massing for the northern flight. Headed by some old drake who knows the route, these dusky divisions wheel and circle in momentary indecision, and are off for the north. But our friend, the sportsman, heard that quack, and knew well its import. And now we find him lying *perdu* in the rustling sedge beside each water course from Maine to Florida. For the ducks stop occasionally to feed and rest, and then the boom, boom of the heavy ducking guns carry terror to their hearts and decimation to their ranks.

It is a bright page in the sportsman's year-book, when the "spring flight" comes. There is a freshness in the surroundings. The face of nature that but a short time since was wrapped in an icy covering; seemingly impenetrable, has relaxed to the gentle seductions of the sun's rays. The ice has gone out. The notes of the blackbird are heard from the dead trees in the marsh, and as the sportsman, lying in his blind with breech-loader ready, drinks in the beauties of the surroundings, and feels the soft southern breeze on his cheek, he is happy. But the spring duck shooter must not give way too much to fancy. Listen! That "soft, southern breeze" brings on its wings a subdued murmur, which soon becomes a confused gabble, and, peering through the blind, our friend sees a large troop of mallards making direct for his decoys. With bated breath and retriever at "down charge," he waits, trembling lest the ducks, discovering the deception, wheel and destroy the chance for a shot. No! They are coming head on now. They circle, the leader plumps into the midst of the stools, discovers the cheat, and flutters to rise. Now is the time, and the number fours hurtle in their midst, dealing death.

When the ducks are gone, comes the snipe, that little autocrat of the marshes, who springs from his little tussock of hog grass with a shrill "Skeap, skeap," and with an erratic zig-zag flight, tests the quickness of the shooter's eye and finger to the utmost. Barring the had walking, spring snipe shooting is glorious. The birds lie well to the dog, and require a slashing snap-shot to bring to bag, and are, withal, a toothsome morsel when properly cooked.

About the middle of April the pigeons begin to fly, and although this bird is not strictly game, yet show me the sportsman who can find no delight in bagging this little fellow, and I will show you an anomaly. There are but few sections of the Eastern and Middle States where the pigeon is now found abundant. In some portions of Pennsylvania, in those vast wooded tracts, an uninhabited wilderness, because it can be nothing else, there are still some few nesting-places where the pigeon breeds undisturbed. From these haunts in the spring they come forth in quest of food, extend-

ing their flights more or less as necessity requires. The supply of last year's acorns failing, down they swoop on the farmers' fresh sown grain, and here, saugly ensconced behind some friendly stone wall or stump fence, we find our friend, the sportsman, popping away at the rushing plunderers, and demeaning himself not a whit; for behold! his game pockets are full. But summer has come, and with the heat, our sportsman, excepting an occasional excursion to the beach for shore birds, ceases shooting. The gun is cleaned, oiled, and hung upon its accustomed rack, while from its case is drawn the phantom fishing-rod. Tackle is overhauled, flies are tied, and the exact condition of each trout, salmon and bass rod determined. For June is here, and our friend is somewhat bewildered with the multitude of vistas opening before him, each one leading to some happy angling ground where he knows the "finny denizens" are but waiting for a dexterous cast of the gaudy fly to be lured to their destruction. The sportsman angler is now ubiquitous. Upon the salmon rivers of Canada and the provinces you find him with his long, double-handed rod hard at work killing the heavy, but lively, *Salmo salar*. In the Adirondacks he is content with smaller fish, but more of them, and his creel is filled with that finest of all game fish, the *Salmo fontinalis*, or brook trout.

At the Rangeley Lakes, in Maine, the more ambitious members of the guild are whipping the bright waters of that wonderful chain of lakes, angling for and procuring those giants of the race, the Rangeley speckled trout, which, although identical with the ordinary *Salmo fontinalis*, often reach the extraordinary weight of seven pounds.

Ah! the sportsman is in clover now. You can hear the musical "click" of his reel and the "swish" of his skillfully cast leaders wherever the trout and his peer in point of gameness, the bass, abound. His loud, cheery laugh wakes the echoes of the Pennsylvania plineries, and you hear the splash of his wading boots in the crystal streams that come leaping down the Blue Ridge. June and July are halcyon days for the true sportsman. At no time of the year is he happier than now. His appetite is enormous. His lungs are strengthened by the invigorating air. The outside world is forgotten; he cares not a straw for business or politics. All these seem folly in his sight. He loses himself in the following of his favorite pastime. The ecstasy attendant upon the capture of his legitimate prey is enough of joy for him, and he would willingly stay in the sweet spot forever.

But August has come, and our true sportsman bids adieu to rod and line, and, taking up the gun again, makes ready for woodcock shooting. This delicious little game bird is now well grown and found in low, swampy undergrowths, where the soft, slimy ooze is easily penetrated by his long, sensitive bill as he hores for succulent worms, which form his diet. The discomforts of summer woodcock shooting are many, but heat and mosquitoes predominate. Nevertheless it is good sport following the yelping cockers as they dart hither and thither, flushing the birds, who rise with a nerve-tingling flip-flap, showing their graceful forms but an instant as they top the underbrush and stretch away. A snap-shot through the brush is all the shooter can hope for. He must cover the game instinctively, and oftentimes by taking the line of flight he will drop his bird, even after it has passed from sight. Woodcock shooting also continues through September and October, when, with the first hard frost, he migrates.

With the 15th of August comes pinnated grouse shooting, and our Western sportsmen take the field and find splendid sport among the young, unbroken packs. So plenty are these birds that a couple of crack shots, over staunch dogs, can easily bag, in one day's fagging, fifty brace. But on the dry, treeless, waterless prairies, both men and dogs suffer from heat and thirst, and it is oftentimes necessary to take a supply of water for the dogs, or the creatures would give out before the day was half done. Grouse shooting has the name of being the finest and most thoroughly enjoyable of all the sports in which the gun and dog figure; and well may it be so considered, for in August the birds are comparatively tame and easily knocked down. Later they grow more shy, stronger of wing, and by the middle of October, large bags of pinnated grouse are the exception.

Having now taken our sportsman through the spring and summer, we come to that season dear to every lover of legitimate sport—autumn. The foliage, now ripe and touched by an occasional light frost, has taken on those lovely tints peculiar to the American forests in the fall. A mellow haze fills the atmosphere, softening the landscape and giving an air of indescribable beauty to the face of nature. There is a "vague, indefinable something" pervading all things that speaks of decay, although the sun still shines with undiminished fervor, and the frondage, though slightly tinged with color, is just as thick as in midsummer. Olorious Autumn! he must indeed be a misanthrope who cannot see in thee the embodiment of all that is bright and beautiful in nature. Thy very decay, which we know is the harbinger of nipping winter, but tends to enhance thy beauty, and so we hail thee, loveliest season of the year!

September offers to the sportsman ruffed grouse, woodcock, wood-duck, blue-wing teal and general duck shooting, although the two last-mentioned varieties of duck are the only ones of the great family *Anatina* which have begun their fall migrations.

Probably the ruffed grouse of all American game birds is the hardest to bring to bag, owing, first, to the impenetrable nature of the cover he frequents, and second, to the fact that it is almost impossible to make him lie to a dog. When flushed within shot, the ruffed grouse offers a large, fair mar-

but will carry off a large charge of shot, even though planted in a vital point; its extreme tenacity of life enabling it to fly several hundred yards, when it will drop dead, the sportsman mentally scoring a clean miss, when had he followed up the bird, as all sportsmen should do, he would have saved himself the ebb and self-torture of missing, as he supposed, a fair shot.

So extremely wary is this bird, and so perfectly able to take care of himself, that a man is justified in shooting him in season in whatever way he can—flying, drumming, on the ground, on a tree—any way. You can't annihilate him, his instincts are too acute, and sportsmen can congratulate themselves that there is at least one game bird in our land that never will be exterminated so long as our game protective laws are enforced. The ruffed grouse is found in all the hilly wooded tracts of the Union—more abundant in the Eastern and Middle States than other portions, owing to the nature of the cover, which is more suited to its habits. It is a delicious game bird, its flesh being far superior to any other of the species.

With autumn well advanced, our sportsman is kept busy. The close season on all game birds and animals has expired, and he is not confined to single species, but the whole broad field is open before him, and no country on earth presents such a variety of bipeds and quadrupeds, strictly game—besides others which, although not game, yield sport—as this broad land of ours.

He may go out some bright, frosty November morning, ostensibly for quail. Let us follow him as, with a trusty companion and a pair of blooded setters, he sallies forth. Our friends are in high spirits, men and dogs both seem to partake of the general "snag" pervading the atmosphere, and many a jolly song rolls out upon the morning air as the hunters wend their way across the fields to the stubble, where they have been assured two or three heaves were "using." The walk is quite a long one, and by the time our friends have arrived upon the ground, the morning sun has dispersed the frost and the stubble is in fine condition for the dogs to show that remarkable power they possess of finding the birds by scent alone. At a word from the master they are off quartering the ground thoroughly, and leaving no clump or tussock bordering the field unexplored by their sensitive noses. Soon the advance dog strikes the trail of a roading bevy, and with all due caution works it up. Slowly, inch by inch, he draws towards the birds, the hot scent growing every instant more furious, until at last, right over the hiding quail, he stops, motionless as a statue. The other dog who has been following, noting every movement, also stops and backs the first. It is a pretty picture, a brace of staunch dogs on a point. It seems too bad to spoil it by walking in and flushing the birds. But our sportsmen, nothing loth, get them up, and as they whirr away like bullets, the round reports of the four barrels speak the death knell of as many quail. Having accurately marked down the survivors in the west field, our sportsmen advance, and again is the same scene enacted, and so on until either all the birds are killed or the bevy so scattered as to make further pursuit unprofitable.

Let us now follow the hunters as they turn their steps toward yonder gully that seems to have been formed by some great convulsion. Scanning, as it does, the whole mountain side, its course is plainly marked by the depression in the evergreen foliage. The mouth of this gorge looks dark and forbidding, shaded, as it is, by the sober pine and hemlock, with an undergrowth of laurel and cedar. But it is in just such places as this that the ruffed grouse lurks, and with the sportsmen at the bottom and the dogs working up the thickets along the sides, many fair cross shots are obtained. It is hard work, and if two or three brace are bagged by the two guns in an hour's toiling, our friends may feel that they have done well. In knocking about in a late autumn day an occasional hare will be hounded from her form, only to be bowled over to help out the assortment. In passing by the creek-side a belated plump of teal may be induced to pay tribute to the already plethoric game-bag, while a shot now and then at a black or gray squirrel is not wasted. So when, at sundown, our sportsmen return from the field and empty upon the kitchen table the fruits of their prowess, there are quail, ruffed grouse, hare, ducks and squirrels. A goodly sight they are, laid out in neat array, and although the result of a hard day's work, our sportsmen vow they never passed a more pleasant day, and while partaking of the smoking dinner kind hands have prepared, they talk of incidents of the day's sport; and when the after-dinner pipe is being discussed before the glowing hearth, they live over again in fancy those happy hours just passed.

But our sportsman, tiring of small game, has, during the autumn, larger and nobler species at his command. The common Virginia deer, the great moose and elk, the black bear and wild turkey are all in fine condition, offering the best sport in the world, that in which there is a dash of danger. The No. 8 cartridges are changed for buckshot, or the shot-gun is rejected entirely for the heavy rifle, and the light moccasin or shoe pack takes the place of the heavy-soled, long-legged hunting-boot. No whistling or slugging can now be indulged in, for in the pursuit of any of the above-mentioned large game, the strictest silence is necessary.

In pursuing the common deer many devices are employed by the sportsman to get within shot, the principal ones of which are stalking, running with hounds and shooting at "licks." All of these require patience, endurance and a quick eye to aim the deadly tube accurately and bring down the game. The deer is common in nearly every State of the

Union, and one need not go far to find fair shooting. The wild turkey and black bear are also comparatively common, having a wide distribution; but to find those "monarchs of the forest," the elk and moose, the sportsman must take a long journey and be prepared for a season of genuine "roughing it." Comparatively few elk are now found east of the Missouri river, the onward march of civilization having driven them from their old stamping grounds. But they are still plenty in those far off localities, and the sportsman of nerve, grit and good horsemanship may have royal sport among these noble fellows.

The moose is also well nigh exterminated in our country, a few still linger on the northern confines; but in the British Provinces alone is he found in numbers sufficient to make pursuit profitable. The usual method employed in hunting the moose is to repair, some moonlight October night, to a favorable ridge, and while your Indian guide sounds his hirl-hark moose-call, in imitation of the cow, listen for the crashing through the undergrowth of the amorous bull, and as he dashes into the open, expecting to meet the cow, an ounce bull finishes him. A trifle unfair, perhaps, but as a single shot seldom kills, and a wounded bull moose is no mean enemy, perhaps the sportsman is justified; for a fair shot at one of these noble creatures is an event seldom repeated in a lifetime.

Both turkey and bear shooting are of a nature to test the staying qualities of the most sturdy sportsman. These creatures are best pursued when the snow is on the ground, during the months of December and January, and hunting for them may properly be classed under the head of "winter sports." Bears are tracked with dogs, brought to bay, or "treed," and shot. Turkeys are tracked in the snow, while a careful watch is kept out ahead; and unless all the little minutiae of silence, keeping out of sight with the birds up wind, etc., are observed, the chase might as well be given up, for, at the first suspicion of danger, these wary birds are off, running like race-horses and leading the hunter a long chase, only to foil him again as he approaches too eagerly.

In most of the States the close season for all game, except hares and ducks, begins January 1st. But as in this latitude, at this time of year, nearly all the ponds and watercourses are frozen, the ducks have all left; but bare shooting, either brown or gray, is good sport. To make this branch of shooting agreeable, a pair of beagles or an old slow hound is the correct thing in dogs. The sportsmen take positions on "runways," and by standing perfectly still, the hare will bound along within a few feet of the stand, offering the fairest possible shot.

There are many true sportsmen who still enjoy the sport of running foxes. Not the sort with "whipper in," and horse, and hounds and horn, but the real old-fashioned fox hunting, with gun and dog, following Reynard all day through the snow, taking advantage of every ridge to cut him off, and at last being rewarded with a running shot, which tumbles the sly fellow over in the snow.

Pickering fishing through the ice is a sport that, for real excitement and genuine fun, ranks high enough to be included in the category of the sportsman's winter pursuits. The method of taking the fish, as practiced on our fresh water lakes and ponds, consists of chopping or chiseling as many holes, a foot in diameter, as the patience and muscle of the party will admit. Laths about eighteen inches in length, with an auger hole through them about six inches from one end, are then taken, and a round stick thrust through and placed across the hole in the ice, resting upon its edges. A line, twelve feet or more in length, with hook baited with a live minnow, is tied to the short end, and when a fish bites, up flies the long end of the lath, which is the signal to the watchful fisherman that a fish is on. Oftentimes, in place of the bobbers, the line is fastened to a simple twig set in the ice by chopping a little hollow, thrusting in the butt of the bough, dashing in a little water and loose ice, which soon becomes solid, holding it firmly. A red rag is tied to the top, and when a bite occurs, the jerking movements of the rag soon catch the sportsman's eye. A party of four men to a hundred lines will be kept busy if the fish are biting at all eagerly. Great is the excitement when a number of bobbers fly up at the same time. And the rush for the lines often results in verifying the truth of the old saying, "the more haste the less speed," and many an eager sportsman attempting to stop too suddenly on the slippery ice has either gone helplessly sliding on beyond his objective point, or possibly thrust a leg into a convenient hole.

Occasionally a signal will fly up at some outlying station and attract the attention simultaneously of two of the sportsmen who are standing beside the great log fire built on the ice. Off they both dart, and the race is watched with much interest and amusement by the other members of the party. The winner triumphantly waves the fish in the air and proceeds to put on a fresh minnow. Some sportsmen may sneer at the pickering and consider him beneath their notice; and we grant that he is rather a sluggish summer fish. But in winter he throws off that apathy, and a five-pounder on a short line requires careful manipulation to get safely on the ice. We will guarantee, however, that to partake of him baked with cream sauce will conquer all prejudices, no matter how deep seated.

And now that the winter is made enjoyable by hare and fox shooting and pickering fishing, we bring our sportsman to his starting-place. That he has been busy and that his sporting proclivities have been fostered and exercised through the last twelve months there can be no doubt. Every season, from its treasure-house of sylvan delight, has ministered to his wants. And here we leave him, with a vigorous frame, a fresh fund

of knowledge relative to his mother nature, an appetite for innocent and healthful recreation unclouded, and, in a word, in splendid condition for launching forth on a new sporting year.
H. W. DE L.

NEW HAVEN REGISTER.—William Parsons, Jr., a prominent lawyer in Lock Haven, Penn., assumed the editorship of the New Haven Register, March 1st. Mr. Parsons is a son-in-law of the late Marcellus A. Osborn, and former editor of the Register. Mr. Parsons is a young man of very promising ability, and we are sure that the Register will be ably edited, as it has heretofore. Mr. Parsons is a graduate of the class of '68, Yale.

GAME PROTECTION.

MEETINGS OF STATE ASSOCIATIONS FOR 1878.

New Hampshire State Sportsmen's League, Manchester, April 2.
New York State Association for the Protection of Fish and Game, Buffalo, May—; Sec'y., John B. Sage, Buffalo.
Connecticut State Sportsmen's Association, Hartford, May 15.
Iowa State Sportsmen's Association, Des Moines, May 28.
Nebraska State Sportsmen's Association, Fremont, May —.
National Sportsmen's Association, Wilkesbarre, Pa., June 11.
Illinois State Sportsmen's Association, Quincy, June 11.
The Pennsylvania State Association for the Protection of Game and Fish, Wilkesbarre, June 11; Sec'y., Benj. F. Downace.
Ohio State Sportsmen's Association, Cincinnati, June 15; Sec'y., Wilbur, Toledo.
Tennessee State Sportsmen's Association, Nashville, Dec. 2.
Wisconsin State Sportsmen's Association.
Massachusetts State Sportsmen's Association, at call of President.
Missouri State Sportsmen's Association.

EUROPEAN QUAIL AND LAND-LOCKED SALMON FOR CONNECTICUT.—W. H. Williams, Esq., Secretary of the Salisbury (Conn.) Bird and Fish Protective Company, writes us as follows:

"We have just received from the State Fish Commissioners 10,000 young land-locked salmon, which are safely deposited in our lakes, and an order has been sent to the American consul at Messina for 200 European quail, which we hope to get and turn out this season."

SCOTLAND QUAIL.—Several associations of gentlemen having requested us to inform them whether Judge Everts would import quail for them, in case he sent for any birds for himself this year, we wrote to Judge Everts, and have had the reply, which will be found below. We beg to state that in our opinion the successful acclimatization of the European quail is by no means certain as yet. Mr. Everts says, "If the birds come back in the spring," etc. Should, however, the quail, after having migrated to the South, return to their Northern homes, and it becomes desirable to import birds, there are many nearer points on the Mediterranean than Sicily from whence quail can be had. As Mr. Glass, of revered and culinary memory, said, "First catch your hare." Let us then patiently await further developments:

"Your favor of March 2d is received. In reply, would say that I had not intended to send any further orders for quail this spring, having already sent two separate orders for birds for Western Vermont. If your friend wishes for the birds, he can send an order to Mr. Bonanno, care of George H. Owens, consul at Messina, and on notice of the order will write Owens, who is a personal friend, to do all in his power to fill the order, and they can be shipped with others already ordered. I think birds shipped as Bonanno ships them are very certain to come through safely. I would not recommend any person to order less than two hundred—the more the better—and would turn them down near enough together so that they would not separate too far. I think that was the trouble with Hapgood's quail. I am constantly hearing of more nests and young birds hatched last summer. I heard of three nests on our farm last week, all of which hatched large broods—one of them sixteen. If the birds come back in the spring to their old breeding grounds, so that the parties importing them will be sure to derive immediate benefit, large numbers will be imported another year.
M. G. EVERTS.
Rutland, Vt., March 4.

THE ADIRONDAK GUIDES TO THE FRONT.—We recorded two weeks ago, with a great deal of satisfaction, the formation of the Long Lake, N. Y., Game Club. All sportsmen who repair to the North Woods will appreciate the beneficial results likely to follow such a movement on the part of the Adirondack guides. A Glens Falls correspondent writes:

"Charlie Hanner is an old guide of mine, and I see by the FOREST AND STREAM that he is President of the Long Lake Sportsman's Club. This is a move in the right direction. Once the guides in the woods are interested in the protection of game, much success may be accomplished."

—There has been much complaint recently of the operations of still hunters in the Adirondacks. Great numbers of deer have been slaughtered in the "yards."

A SUGGESTION AS TO GUIDES.—Commenting upon the antagonism so often existing between landholders and sportsmen, and the rebuffs experienced by the latter when seeking permission to hunt over property, our correspondent, "Greenwood," suggests that much of the trouble is traceable to a third party—the guide. After speaking a good word for the many members of that craft who have rendered him good and faithful service, he says:

But, notwithstanding all this, it is but too often the case that guide and pot-hunter are synonymous terms in the estimation of the community. However, in those cases where the guide is most obnoxious he is least necessary; namely, in a thickly settled country. The landholder who would accede to the request of the gentleman sportsman will refuse point blank when the sportsman is accompanied by the well-known, well-posted guide, whose intimate knowledge of the haunts of the game is derived from systematic tracking and watching of the breeding and roosting spots. The farmers, not usually sportsmen themselves, have a kindly feeling for the birds that breed upon their premises, and will almost invariably, if aware of the location, leave unharvested and unmolested spots rather than disturb the nest of a bird. And there is also the proprietary interest in the game; and it is with indignation

expressed in no measured terms that these farmers complain of the wily guide who leads directly to the game, and knows where, with unerring certainty, from hour to hour to follow them till the last poor fledgling is bagged. Let me suggest to sportsmen the experiment of hunting and shooting without a local guide wherever practicable to do so. They will find, as I have by experience, that their intercourse with the landholders will be far more pleasant, their sport fully as good if not better, their expenses less, and that places now prohibited will then be accessible to them. Of course you must expect some rebuffs and absolute refusals. Do not be too easily discouraged, and, above all, keep your temper. Bear in mind that the farmer who was poached on yesterday is in no humor to-day to grant hunting privileges; bide your time. It will require patience, good humor and tact to succeed. In fact, the pursuit of the permission to shoot will be found in many cases as exciting as the shooting of the game, and you will encounter many a stubborn proprietor as shy and hard to approach as his game. If possible make your first approach to him without your gun and dog. It is not prudent to show a red flag to a strange bull. Give him a newspaper or a cigar, put him in a good humor with himself, and often the invitation to shoot will anticipate the request. Or, if you are in the field, go directly to him; don't wander about his place or pull trigger till you have seen him, and my word for it you will make friends instead of enemies of the landholders, who will in time welcome you with pleasure instead of with suspicion as a depredator whose every movement is to be closely watched.

GREENWOOD.

NEW YORK ASSOCIATION.—At a meeting of this association, Monday night, Hon. Robt. B. Roosevelt, the newly-elected President, suggested that a suitable place near the city be purchased, where the members could establish themselves as a club, and pursue their propensities as sportsmen. This will be made the special business of the following meeting. It was proposed that, to avoid confusion in the fish law, a competent person should draw up a comprehensive law, and have it passed separately. Mr. Charles E. Whitehead, senior counsel, rendered a very satisfactory report of the condition of the various suits in progress for the enforcement of the Game laws, and said that the newly-appointed detectives, after a searching tour of the city, had only reported two well-authenticated cases of violation of the law since March 1, a fact which he considered was an indication that the people intended to observe the law.

—The Greenwood Lake Ice Company have stored 1,800 tons of pure transparent ice. The lake is now open and the voice of the peep-frog is heard in the sloughs.

The Rifle.

THE FOREST AND STREAM AND ROD AND GUN TOURNAMENT For the Short-Range Championship

And three team medals, which will be awarded to the teams making the first, second and third best scores. Other prizes will be offered also, to take place at Conlin's shooting gallery. Open to teams from any organized rifle club.

Conditions.—Teams.—Each team shall consist of ten men. The teams participating must be composed of members of the various clubs which they represent. Rides.—Limited to ten pounds in weight; minimum pull of trigger, three pounds; 22-100 cal. Teams can furnish their own rifles and ammunition, or use those at the gallery, as they may desire. Number of Shots.—Ten by each competitor. Sighting Shots.—Two shots will be allowed each competitor. Position.—Off-hand. Targets.—200-yard targets, according to the regulations of the N. R. A. reduced in proportion to the range at the gallery. Practice.—No practice allowed on the day of the match. Entrance Fee.—Five dollars to be paid at the office of the FOREST AND STREAM AND ROD AND GUN, No. 111 Fulton street, N. Y. All teams desiring to compete must be entered ten days before the time the match is announced to take place. The match to be governed by the rules of the N. R. A. relating to teams. Captains of the competing teams shall meet one week before the commencement of the match, make all preliminary arrangements, choose referees, and decide in what order their respective teams shall shoot. The referees shall elect an umpire, whose decision in all cases shall be final.

The match will commence on Monday, March 18.

The following teams have entered: N. Y. Rifle Club, Centennial Rifle Club, Scotch-American Club, Seppenfelt Team, Zettler Rifle Club, Hellwig Rifle Club, Newark Rifle Club, Yorkville Rifle Club, Irish-American Rifle Club.

At a meeting held at Conlin's gallery, on Tuesday evening, all the above clubs were represented by their various captains. Judge Gaddersleeve and Major Fulton were appointed judges, and T. C. Banks as referee.

The clubs will shoot in the following order:

Zettler, Yorkville, on Monday, March 18th; Seppenfelt, Newark, Tuesday, 19th; Hellwig, Centennial, Wednesday, 20th; Scotch-American, Thursday, 21st; New York and Irish-American, Friday, 22d.

The prizes are as follows:

1st.—The FOREST AND STREAM AND ROD AND GUN badge; 2d.—The Union Metallic Co's badge; 3d.—The Shepard badge; 4th.—Ballard rifle, presented by Messrs. Schoverling & Daly; 5th.—Revolver, gilt and pearl-handled, presented by the Messrs. Remington; 6th, 7th, 8th and 9th.—A prize of \$2.50 in gold to the highest score in each team not winning one of the above prizes.

It was agreed that any team after the champion team should select prizes in the list.

Captains of teams agreed to send in the names of their men, with those of the reserve. The shooting is to commence at 7½ P. M. on each evening.

As ninety men will shoot, the contest is likely to awaken a great deal of interest. In the teams may be found, perhaps, some of the champion shots of the United States.

PROJECTILES.

ENGLISH AND AMERICAN POINT-BLANK RANGES CONTRASTED—
ELEMENTARY PRINCIPLES OF RIFLE SHOOTING.

In the FOREST AND STREAM AND ROD AND GUN of the 14th inst., I observe one error in that very able and interesting article of Col. Ship, of the Virginia Military Institute, on the fall of the rifle ball on leaving the barrel. This error is doubtless due to an oversight of his, for his writings show he must be familiar with the science of rifle shooting. He says: "Suppose a gun fired over a horizontal plane, with the axis of its bore parallel to the plane, it will strike this plane at a certain determinate distance, depending upon the charge, piece, bullet, etc., and this distance is called the 'point-blank range.'" Here he errs if he intended to define the American point-blank range. It is the English point-blank range he defines. I will, for a comparison, quote both definitions:

English—"Point-blank in gunnery denotes the position of the gun when pointed, so that it is parallel to the horizon. Point-blank range is the distance to which a shot fired in the point-blank or horizontal direction is carried."—*Brand's Encyclopedia*. This covers the definition of the Colonel for the range, as will be seen. The range is a trial of the power of the gun.

American—"By point blank, in rifle shooting, is meant the second point, where the trajectory of the ball in its downward course cuts the line of sight."

This mathematical point in theory corresponds to the exact centre of the target in practice. If the centre be aimed at and struck, the shot is both theoretically and practically a true point-blank shot.

"By point-blank range is meant the straight line or shortest distance to the point-blank or second intersection of the line of sight by the trajectory."—*Hallock's Sportsman's Gazette*, p. 547, and FOREST AND STREAM, July 8, 1875.

Thus the English point-blank range is measured from the piece to where the ball strikes the level ground; the American, to where it intersects the line of sight. Thus, in the English service, point blank refers to the position of the gun. It is in a point-blank position when the axis of the bore is horizontal; the American point-blank refers to the second intersection of the line of sight by the trajectory of the ball, or to the centre of the target in practice; and by custom and common consent to the whole bull's-eye.

Thus, in the American service, two lines as elements determine the point blank. It is entirely independent of the pointing of the gun or of the direction in which the axis of the barrel points. This fact brings out another very important one, and one I wish particularly to be noticed, viz.: That point-blank or centre shooting can never be found along the prolongation of the axis of the barrel. Why? Because the axis of the barrel prolonged, and known as the line of fire, is not an element in the definition. But point-blank or centre shooting is always to be found along the line of sight, and where the ball meets or intersects it. Remember the barrel always points above the centre of the mark when the centre is aimed at and hit with the centre of the ball.

In point-blank practice, as at Creedmoor and generally, we cause the ball to strike where we wish it to by raising or lowering the rear sight. I speak only of elevations. Raising or lowering the rear sight lowers or raises the breech. This in effect causes the muzzle to point upward or downward. By this means we cause the ball to go higher or lower as we please. We are thus enabled to bring the ball down on the line of sight just where the aim is, at the centre of the target. This is the way we make point-blank shots. You will see they are always made by a falling ball, and never by a ball going straight from the gun, for the gun never shoots straight. To resume: In an article entitled "Point Blank and Point Range Explained," for which see FOREST AND STREAM of June 1, July 8 and Aug. 19, 1875, and wherein I regarded the fall of the ball under the influence of gravity, I used these words:

"The moment the 'new beginner' with the rifle will discard the false idea which many have, that the 'rifle carries straight,' that moment is he in a condition to begin to understand rifle shooting. Many persons, and some of life-long experience, still cling to this false notion. The course of the ball must be, and always is, a curved line; gravity is always pulling it down. This curve, however, is very small within a short distance, but at long ranges it is astonishingly great."

I am now very much obliged to Mr. Stokes for asking Prof. Ship this question: "Will a bullet shot from a rifle, the axis of the bore being parallel to a perfectly level plane, be the same distance from this plane when ten feet from the rifle as when it left the rifle?"

Mr. Stokes had contended it would, and quoted as authority from "Hallock's Sportsman's Gazette" (a very fine work). The subject was referred to Col. Ship for decision. All should carefully read that letter in reply. It is full of instruction. His reply was:

"You are right in your view. * * * Gravity opposes no resistance to motion in a horizontal direction, but it acts in the vertical direction, and will pull the bullet down in the first ten feet; even in the first one-tenth part of an inch."

Such is his reply, and he doubly proves the fact; and I here add this will be the case no matter if the ball has received the force of a thunderbolt and the speed of lightning. I hope we may hear from your able correspondent in Richmond more frequently.

MAJ. H. W. MERRILL.

New Rochelle, N. Y., Feb. 20, 1878.

THE UPSET OF BULLETS.

I noticed in the Rifle Department of your issue of the 17th instant a letter from Mr. F. Hyde. The greater part of the letter is devoted to the subject of "recoil." With this subject I have nothing to do at the present time, though I will say, *en passant*, that in my opinion the writer is much nearer the truth than are a great many others whose letters appear from time to time in your columns.

The statement in Mr. Hyde's letter which does not seem reasonable is, that "the bullet continues to be upset and shortened till it leaves the barrel." If the bullet is upset enough to fill the grooves at once, as Mr. Hyde admits, how can it be shortened still more? There is no more room for lateral expansion; and if the bullet is shortened, it must expand laterally.

The experiment described by Mr. Hyde is not at all conclusive. He says: "I shot a Sharps 550-grain bullet in a 2-6-10 chambered rifle, but fired a 2-1-10 shell, thus bringing about one-half the bullet into the chamber. I caught the bullet in sawdust, and found, about one-third the distance from

the heel, a plainly-marked ring around it, showing what part had been caught in the chamber by the blow; but behind this ring the marks of the rifling showed as plainly as in front of it, and must necessarily have been made after the force that formed the ring."

In this last statement Mr. Hyde is undoubtedly right. The marks of the rifling behind the ring were impressed upon the bullet after the ring itself was formed, but not in the way in which he seems to think it was done.

My explanation is, that at the instant of the explosion of the charge, the bullet was upset and shortened, and expanded laterally till it filled that part of the chamber between the mouth of the shell and the point where the rifling commenced. As the shell was 5-10th inch shorter than the chamber, of course nearly 5-10th inch of the bullet would be caught in the chamber and expanded laterally till its diameter was considerably greater than the diameter of the barrel through which it had to pass. This being the case, it will readily be seen that it would be impossible for the bullet to pass through the barrel of the rifle without receiving the impression of the grooves upon its surface.

To my mind, Mr. Hyde's experiment proves that my theory is the correct one—viz., that the upset and lateral expansion of the bullet is complete before it starts on its passage through the barrel.

Trusting that I make myself understood, yours very truly,
HENRY FULTON.

New York, March 11, 1878.

LONG-RANGE AND SHORT-RANGE.

It is probable that long-range shooting will not attract general attention during the coming season to the extent it has throughout the last few years. The prospective indicates the approach of nothing similar, in point of interest, to the past international matches; in fact there are several items tending to cause the belief that this will be an "off" year among the long-range marksmen.

The American teams, having successfully held the champion trophy, have the "field" to themselves. At present our marksmen are like Micawher, "waiting for something to turn up." The English and the Scotch long-range shots are silent in reference to the sending of a team against our skilled ones, but this quietness is not thought to be "the calm before the storm." The Australians are too far away from their northern brother riflemen to be able to form the habit of visiting them often, and consequently there are few prospects of hearing from their quarter of the globe. Our cousins, the Canadians, may show a little valor, but a match with their "crack" shots would be too much like a family dispute to cause much enthusiasm. The Irish are showing the most enterprise. Their leader, Major Leech, from all accounts, is endeavoring to have an international match shot on neutral ground. He suggests having the "shoot" in France at the French Exposition. What progress he has made toward accomplishing the object in view has not been announced. There is, however, no eagerness manifested on this side of the ocean to have the "gauntlet thrown." The reason for such indifference is not owing to a lack of confidence if a challenge should be accepted. An explanation of the backwardness may be because of the number of formidable obstacles in the way which would require more loss of time and trouble in removing than has ever been the case previously in organizing a representative team, and raising the requisite amount of funds to carry the enterprise along. Those who would be the prime movers in such an undertaking, if they could see their way out, refrain from taking hold of the helm on account of the difficulties to be met with. Outside of New York and vicinity, the riflemen of the United States have never exhibited a creditable amount of "vim" in aiding any of the past moves for sustaining the American skill with the rifle. For this reason little is expected from them toward putting new life in the sport. In many instances the leading riflemen of the country have done comparatively little else but shoot, and in some cases their business was left to take care of itself too much, and, as a natural result, suffered. Thus, in looking through the present spectacles, the outlook is not very promising in favor of a lively season among the long-range shots. But who knows what is to come? Some never-say-die type of individuals may rake up the smouldering brands of long-range marksmanship, and cause a renewal of the blaze of enthusiasm over the "poetry of shooting" among the knights of the trigger.

ONICO.

THE SPORTING RIFLE.—No. 1.

CHICAGO, Feb. 22, 1878.

I am very frequently in receipt of letters or personal applications soliciting advice as to the selection of a rifle for sporting service. Most of these inquiries come from persons of little or no experience in rifle shooting, but many of them are from men who are more or less familiar with rifle practice, but have no knowledge of the principles which should govern them in selecting a rifle for a special object. As it is impossible to reply in a single communication to all the questions which present themselves, I have thought that a series of articles, extending through several numbers of the FOREST AND STREAM AND ROD AND GUN, setting forth the requirements of the sporting rifle and the principles on which they are based, might be of interest to a large class of readers, and furnish such information as many persons are seeking for. The prominent position which of late years has been assigned to long-range shooting, as the crucial test of the excellence both of men and weapons, has tended to withdraw the attention of manufacturers and of sportsmen from the really more important and practically useful requirements of the sporting rifle, and the quick and ready manipulation demanded in sporting service.

Of course no sportsman would ever think of taking the long-range target rifle, with its elaborate and delicate arrangements of sights, for the purpose of shooting game; neither does the use of such weapons, as practiced on the established ranges, tend to the promotion of such practical knowledge as would ever be of any use in legitimate game shooting, and only on rare occasions in military service. Except upon the plains, where one must sometimes shoot at very long range or not at all, 200 yards may be taken as the very outside limit at which a sportsman should ever allow himself to shoot at any game for which the rifle is used; and, in reality, not one shot in ten is ever taken at deer at more than half that distance.

It is idle to cite single instances of remarkable shots in proof of what may be done. I can tell my share of stories of

that kind, and in my early hunting days, like all young hunters, was as ready, perhaps, as any one to blaze away at game at almost any distance, and take the chance of the possibility of killing, and the much greater probability of missing or inflicting a wound which might doom the poor animal to a slow and miserable death.

But such shooting is barbarous and unsportsmanlike. Clean and speedy killing should be made a matter of principle by every man who would preserve the manly spirit which comes of a noble exercise, and prevent its degenerating into a cruel and brutal butchery. Much can be excused to youth and the excitement of an inexperienced hunter, but after a man has become familiar with the powers of his weapon and the habits of the animals he pursues, he should consider it an act to be ashamed of to fire a shot at any animal without a reasonable certainty of killing it. One hundred and fifty yards is as long a shot as one can take at a deer when standing still, with any such certainty, and the rifle best adapted for ready and efficient service up to that distance is very different in its character from that required for long-range shooting.

The great desideratum in long range target rifles is the preservation of extreme accuracy up to a distance four or five times as great as is ever required in game shooting, and this is secured, first, by the use of a very long bullet, by which the momentum of weight is secured without increase of atmospheric resistance, which would necessarily result if it were attained by increasing its diameter; second, by a very sharp twist to the grooves of the rifle, which is essential to keep the bullet spinning to the end of its flight, and prevent its turning obliquely to its course, which would be fatal to its accuracy. But this sharp twist tends to reduce the initial velocity of the bullet, so that for the first two or three hundred yards of its flight it will be found to require a greater elevation than a rifle using a lighter bullet and having a slower twist, though the former will "hold up" to a much greater distance, because it derives its momentum from its weight, whereas with the latter the momentum results from its greater velocity, which is speedily reduced by atmospheric resistance. The long-range guns, therefore, are, in one sense, less accurate than those which give a greater initial velocity to the bullet; that is to say, they do not give so flat a trajectory for the first portion of its flight. But the great object in the sporting rifle is to give as flat a trajectory as possible for the first two or three hundred yards, or, in other words, to give the greatest possible initial velocity, so that for any distance at which game is usually shot the aim may be taken exactly at the object, or with no other change of elevation than is secured by a fine or a full sight.

Every experienced sportsman knows that more game is missed by over or under shooting than in any other way, and the reason is, that with many, if not most rifles, the curve of the trajectory is so great that even at short ranges the sights must be carefully adjusted, and unless the exact distance is known the elevation is mere guesswork. In reality, no elevating sight ought ever to be used in ordinary game shooting, and the sporting rifle ought to be so constructed, and the relative weights of powder and lead so adjusted, that with a very fine sight at fifty yards, and a very full one at 150, it may be reliable for a two-inch ring at the first distance, and an eight-inch ring at the last. The secret of the skill for which our backwoodsmen were so celebrated forty or fifty years ago, was simply that within the range of 100 yards, beyond which the shooting of game was almost unheard of, no allowance was necessary for the dropping of the bullet, except a fine or a full sight, which long experience enabled them to apply almost instinctively. Only draw the head on the game within ordinary sporting range, and down it went. The rifles were of very small bore, with a long twist, and the little round bullet was driven out with a velocity which made its course practically a straight line within the limit of its range. But those rifles would be useless for long range shooting, and the men who used them knew nothing of the long bullets, sharp twist and elaborate system of sights, by means of which we have so greatly developed the power of the weapon. On the other hand, in the development of those powers, we have lost sight of some of the essential requirements of the sporting rifle, which must of necessity be sacrificed in order to obtain the greatest possible accuracy at very long range.

H. W. O.

HINTS AND HELPS IN THE CHOICE OF A RIFLE.—With a view of assisting your readers in the selection of rifles best adapted to their use, I present the following considerations to this end:

If one should order a sample each of all the rifles made, he would have nearly five hundred weapons on hand. All rifles are guns, but all guns are not rifles. Guns that have spiral grooves cut in the barrel are rifles. I make this distinction, because smooth-bore rifles are often asked for. There are smooth-bore muskets and rifled muskets, but not smooth-bore rifles. If you want a rifle, of course you have some idea of what you wish to do with it. You contemplate, perhaps, a visit to the Adirondacks, or you are going to Florida, or have planned a more extended trip to the Rocky Mountains. In all these cases you are going on a tour of recreation, and will want what we call a "sporting" rifle. These are made in a variety of styles, weights, bores, sights, etc. For these purposes, any of the following rifles will be found serviceable, viz.: 26, 28 or 30 inch; 38 and 44 calibre, rim-fire; 40 or 44 calibre, centre-fire; weight, 8½ to 10 lbs., with combination sights which can be used as either plain or globe and peep sights at will. The question as to length of barrels and weight of rifle is left to every one to decide for themselves, as it is a matter of choice or taste. The shooting is not affected thereby. The bore (or calibre) can best be determined upon when the character of the game the sportsman will probably meet with is known. If big game, then the larger bore is necessary, in which case more powder is required, and the longer barrel; the smaller game will require the lighter projectile, hence the shorter barrel; medium game will be best managed by an intermediate length of barrel and weight of ball.

The centre-fire cartridges are better only because they can be readily reloaded, which is a desideratum where cartridges are not easily obtainable. The rim-fire cartridges are more economical, and can be found at almost any country store.

To all classes of hunting rifles previous remarks apply, except for buffalo and other wild game usually hunted for their hides and fur. For such, a heavier ball is necessary. For this purpose the 43 cal. 77 grains, 45 cal. 70 grains, or 50 cal. 70 grains are best suited. These should be centre-fire, on account of the convenience in reloading in the woods. The barrel ought to be not less than 30 inches to 34 inches in length, and weight of rifle not less than 10 to 12 lbs. The cartridges for these rifles may be increased in powder charge 10 to 20 grains at pleasure.

I pass next to target rifles, in the selection of which the principles laid down in the sporting rifle apply, except that

distance is to be considered instead of game. These rifles should be centre-fire, for the reason that more care can be bestowed upon the filling of cartridges, which will of course insure greater accuracy and uniformity in hitting the point aimed at.

For short range up to 300 yards, the 26 or 28 inch, 40 cal., 50 grains, 8½ lbs., with ordinary peep and wind-gauge sights, may be depended upon; but if greater distance, say up to 500 yards, 70 grain cartridge of the same bore, 44 cal., 77 grains, or 45 cal., 70 grains, and 30 inch barrel, are more desirable. Same as to sights, except at 500 yards, the Vernier peep sight is preferable. If you go back further on the ranges, say up to 800 yards, the powder charge must be increased up to 90 grains, and the Vernier sight indispensable. The rifle should weigh not less than 10 lbs.; this is the maximum weight allowed under the rules at Creedmoor and Wimbledon. At the extreme or long ranges, 800 to 1,200 yards, nothing short of the rifle designated the Creedmoor is to be relied upon. This rifle is 34 inch barrel, weighs 10 lbs., 44 cal., (i. e. 44-100ths of an inch in diameter), and has "Vernier peep and wind-gauge globe sights." Some prefer them with pistol-grips, but as most riflemen assume the back position, the plain grip is just as good. The powder charge used differs; some prefer 95 grains, others think 105 better, while many content themselves between these figures. There is no choice in the quality of these guns. The ordinary style is equal in shooting qualities to the higher grades; the difference being in the finish, ornamentation, etc.

The question of head or fore-sights must be settled by each shooter; but the majority of marksmen use the open bead disc, having a different sized aperture for each distance—especially is this the case since the round bull's-eye has come into vogue. Hair or set triggers are not allowed at Creedmoor and other ranges organized on the same basis.

AMATEUR CLUB.

THE WINCHESTER RIFLE FOR DEER SHOOTING.—In *FOREST AND STREAM* of Feb. 7th I see that "Viator" wants the opinion of some of your subscribers in regard to the Winchester Rifle (model 1876, 75 grains of powder) as a gun for deer. My belief is, that it is as good an arm for any kind of game America affords as is made. If we want to compare it with his Express rifle, we can say that the Winchester is superior, on account of its rapidity of firing; for you must remember that a man does not very often kill a running deer in less than three or four shots within three hundred yards; and supposing it was loaded with Express bullets, it would be once as formidable again. As an instance of its shooting qualities, while in Klamath county I killed a large buck elk at one hundred yards, the last shot striking him in the fore shoulder, and passing completely through him. There is no doubt that the Express bullet would have damaged him just as much if it had hit him; but, as I have already stated, a man does not often hit a running deer in less than three shots. I have also tried the Winchester 1876, with explosive bullets (made by inserting a 22 cartridge in the head of the bullet). I killed a doe once, this way, at one hundred and twenty-five yards, the ball striking her in the hind thigh and shattering her terribly. I would not advise the use of explosive bullets in a Winchester, on account of the danger of a cartridge exploding while pumping rapidly at running game.

PTARMIGAN.

San Francisco, Feb. 18.

SHELLS FOR THE WINCHESTER REPEATING RIFLES.—Your correspondent, "G. S.," in *FOREST AND STREAM* of March 7, alludes to a defect in his cartridges, caused by their upsetting after being carried for some time in the magazine, from jolting. This difficulty has occurred only in a few of our rifles, and is only the second one we have heard of. This objection was removed as soon as ascertained. If G. S. will send us his correct address, we will "make him happy" by sending him some cartridges that are right?

O. F. WINCHESTER, President.

New Haven, Conn., March 9, 1878.

[Will "G. S.," of San Louis Park, Colorado, kindly send us his address?]

THE EXPERIENCE OF A BOSTON MEMBER OF THE TEAM.

LETTER FROM W. H. JACKSON.

BOSTON, March 1, 1878.

EDITOR *FOREST AND STREAM* AND *ROB AND GUN*:

I am pleased to comply with your request for me to give my experiences with the N. R. A. as a competitor and member of the American team. As I was the only one of the team outside of New York, and not a member of the Association, I have not read all of the strictures upon the N. R. A., but I think I know the spirit that actuates the association. The odds are always bitter against the one where there are honors to come, obligations that these honors have been won by that indefatigable toil and untiring devotion which have brought rifle practice into the front rank in America. Gentlemen who have borne the heat and burden of the day, and who still have their shoulder to the wheel, I am satisfied are alone fully capable of leading us. It is an easy matter to give advice. I prefer, however, the knowledge of experience and the absolute attrition of facts. These have placed New York as the leading State in rifle practice, and carried to a successful issue two international competitions, sent a team to Europe, organized a team to meet the Irish team, and have held successful semi-annual meetings for the last four years. The N. R. A. may have made some mistakes; it is by mistakes that experience is gained. We must weigh the N. R. A. by what it has accomplished, and not by its errors. I think it has properly earned its title in every way. I am not jealous of its officers, neither do I wish to curtail their honors. There are some that are always desirous of pulling themselves up, but they are not the workers. They would like to gather the fruit, but will not plant nor tend the vine. Such men are probably jealous of the title. The N. R. A. has been earned by the parent association of America and they not consulted.

To prove that I am not making empty assertions, I will give my experience as a competitor and member of the American team: The N. R. A. invited all riflemen, native born, to meet at Creedmoor on July 17, 1877, to compete for places upon the team, with a record of 100 out of 225. Three of us of the Massachusetts Rifle Association decided to enter the competitions. We took the pleasantest route to New York, which was the steamboat, and were delayed by the fog upon the Sound, and did not arrive at Creedmoor till noon, two hours late. By the strict rule we had forfeited our chances by not appearing to enter our names at ten o'clock. But we found a target reserved for us, and Col. Wingate and the committee ready to give us all the assistance necessary to make us feel at home, and these most comforting words were said to us: "Don't hurry, gentlemen; we will wait for you." A fearful storm ended the competitions for the day with the 800-yards range, but the spirit was evoked on the range to give us every chance from the start, and this good treatment followed us through all of the competitions. Col. Wingate was always present, and was never arbi-

trary in his decisions. Targets were assigned by him, and every one was made to feel that he had all the light that anybody else had. This kindly feeling manifested by the New York riflemen toward us, who were strangers, was very encouraging; in fact, the story that was constantly being drilled into our ears before we came to Creedmoor, that "it was useless for us to waste our time—we should have no show"—was entirely set aside by the marksmen's kindness and politeness of all that we came in contact with. In the second competition, when I had made 48, and it seemed pretty certain that I would be one of the team, old riflemen came up and congratulated me. These were precisely the same gentlemen who were competing with me, and my success was their loss. This generous spirit gave me heart. When at the final competition I was placed in the first six, there seemed to be a general rejoicing that an outsider had won his place upon the team, and the controversy settled that none but New Yorkers could make a team.

The "survival of the fittest" was the motto of the committee all through the competitions. Targets, scorers, attendants and conveniences were supplied for the needs of every one. As soon as the team organization was completed and we commenced our regular practice, the parental care and inducement of the N. R. A. was manifest in a hundred different ways. Not by any control upon our actions, but by the constant care to supply all of our wants and make us comfortable. Members of the team who had received these attentions in the past might have looked upon it as a right; I regarded it as a privilege.

I think Creedmoor is the proper place to hold Inter-State matches and international matches. There is no range in the country with its conveniences and space. The only drawback I know of is the short-sighted policy of the railroad, which charges such high fares and gives such poor accommodations, and who would not even give passes to the American team.

From the first I found no difficulty in shooting at Creedmoor. In the second competition, first day, I scored 211, a higher score than I have ever made upon our range. After the match I could shoot no better at Creedmoor than at home. In fact, I think that a strange range, if it is properly flagged, is as good to score over as a home range. I found that team shooting was detrimental to individual shooting. One loses his individuality for the greatest combined success, and the habit of expecting some one to watch for us is to induce carelessness when one has to depend upon one's own watchfulness. I call attention to a letter from Col. Wingate, in the *Spirit of the Times*, Feb. 9. It is from a man thoroughly acquainted with rifle practice, and identified with its interests from the very earliest as an earnest worker. He covers the whole ground in a very able manner, and I heartily endorse his ideas.

W. H. JACKSON.

N. R. A. A.—A meeting of the Directors was held on Tuesday last. Major Fulton, Col. Scott, and Col. Ward were appointed as a committee for designs for "score-blanks." The committee on finance reported as follows: "As under the provisions of the by-laws of the association no obligations of the association beyond those necessary for current wants shall be made until the Finance Committee has considered and reported upon the accessibility and propriety of the proposed plan, hereafter no bills shall be acted upon by the Board of Directors, or passed to the Treasurer for payment, until they shall have first been referred to and signed by the Finance Committee." A contract was made with a firm for the erection of a club house. The range is to be opened April 1.

In regard to the request of Messrs. Tiffany & Co., asking permission to take the Centennial Trophy, the American Rifle Team decide to grant the permission after June 1, in case no foreign team should accept the challenge to compete for the trophy by June 1. The following gentlemen were appointed to prepare a plan for the selection of the next American Team: Gen. T. S. Dakin, Isaac L. Allen, Major H. S. Jewell, and L. Weber. An adjournment was then taken.

Boston, March 5.—Best scores for three prizes at rifle gallery, 655 Washington street:

F. Hollis.....	4	5	5	5	5	5	37
E. F. Richardson.....	4	4	4	5	5	5	30
C. W. Chamberlin.....	4	5	5	5	5	4	36
N. W. Covell.....	4	5	5	5	5	4	36
L. L. Hubbard.....	5	4	5	5	4	4	35
J. C. Haskell.....	5	5	5	5	4	4	35
L. Marchant.....	5	4	4	5	4	4	34

E. B.

WALPOLE RIFLE CLUB.—Walpole, Mass., March 5.—At the annual meeting held this date, the following officers were elected for the year ensuing: Pres., William Moore; Vice Pres., W. H. Pray; Sec. and Treas., W. Glover. Directors—Wm. Moore, W. H. Pray, W. Glover, T. H. Gray, R. S. Gray, J. E. Maan, H. P. Blake. Executive Committee—Wm. Moore, W. H. Pray, W. Glover, T. H. Gray, Joseph Hawes, E. F. Lewis, H. P. Blake, H. A. Pickering.

W. GLOVER, Sec.

NEW HAVEN, March 3.—The following handsome score was made by F. I. Allen, of the Yale Rifle Club, at 200 yards, with a Ballard, with no sighting shots:

4 4 5 5 5 5 5 5 4 4 5 5 4 5 5 5 5 12

NEW HAVEN RIFLE ASSOCIATION.—The regular monthly shoot of the New Haven Rifle Association was held at Quinipiac range, on Wednesday, March 6, together with the regular competition for the association medals. Following are the scores made:

Military Match—200 yards.

N. M. Bassett.....	5	4	4	5	4	4	29
W. Gunn.....	4	4	4	4	5	5	28
F. J. Calvin.....	4	4	5	5	4	4	28
S. M. Smith.....	4	3	4	4	4	4	27
W. Gunn.....	4	4	4	4	5	4	27
L. O'Brien.....	3	4	4	4	5	4	27
A. Z. Downs, Jr.....	3	4	4	4	4	4	26
A. Z. Downs, Jr.....	3	4	4	4	4	4	26
N. M. Bassett.....	4	4	5	4	4	4	26

There were, besides these, ten scores of 25, four of 24, four of 23, and eight others ranging down to 12.

All-Comers' Match—200 yards.

Dr. A. Rulekoldt.....	4	5	4	5	5	4	31
W. E. Story.....	5	4	5	4	4	5	31
F. I. Allen.....	4	5	4	4	5	4	30
J. E. Stetson.....	4	4	5	5	4	4	30
J. E. Stetson.....	4	4	5	4	4	4	30
C. Z. Gordon.....	4	5	4	5	3	4	30
N. M. Bassett.....	4	4	4	4	4	4	29
W. E. Story.....	4	5	4	4	4	4	29
C. Z. Gordon.....	4	3	5	4	4	4	29
P. O'Connor.....	3	4	4	5	3	5	28

There were, besides these, two scores of 27, one of 26, four of 25, two of 24, and seven others ranging down to 15.

All-Comers' Match—300 yards.

W. Gunn.....	4	5	4	5	5	5	33
F. J. Calvin.....	5	5	4	4	4	4	31
N. M. Bassett.....	5	5	4	5	5	4	30
R. M. Walker.....	5	5	4	4	4	4	28
C. Z. Gordon.....	4	3	5	4	4	4	27
A. Allen.....	4	5	4	4	4	5	26
F. J. Calvin.....	4	4	5	3	5	5	25

Military Match—500 yards.

F J Colvin	4 5 5 5 4 5 5 33
F C Bronson	4 5 5 5 4 5 5 33
R M Walker	4 5 5 5 4 5 5 33
F J Colvin	4 5 5 5 4 5 5 33
P O'Connor	4 5 5 5 4 5 5 33
R M Walker	4 5 5 5 4 5 5 33

There were seven other scores, J. C. Thompson getting 23, F. J. Colvin 23, A. Allen 21, and J. P. Landers 16.

All-Comers' Medal—200 yards.

F I Allen	4 5 5 5 4 5 5 33
W E Story	4 5 5 5 4 5 5 33
A Rickoldt	4 5 5 5 4 5 5 33
C Gordon	4 5 5 5 4 5 5 33
J E Stetson	4 5 5 5 4 5 5 33

There were three other scores in this match.

"Military" Medal.

200 Yards.	500 Yards.	Total.
S R Smith	4 5 5 5 4 5 5 33	4 5 5 5 4 5 5 33
F C Bronson	4 5 5 5 4 5 5 33	4 5 5 5 4 5 5 33
R M Walker	4 5 5 5 4 5 5 33	4 5 5 5 4 5 5 33

THE COMING EMPIRE; OR TWO THOUSAND MILES IN TEXAS ON HORSEBACK. By H. T. McDaniels and N. A. Taylor. A. S. Barnes & Co., New York, 1878. For sale at this office.

Texas is a wonderful country, and two thousand miles is a long journey. One man can see and hear a great deal in one thousand miles; two men in two thousand miles can see just four times as much. Our author (the singular pronoun is used throughout the book) became a stock holder in the Texas Western Railway. Like a sensible stockholder, he added his horse and rode forth to see for himself the wonders of this new country. And what is more sensible, he started out in the best of humor and kept his good nature through it all. Something of a philosopher withal, his philosophy helped him in all the exigencies of Texas travel. Left alone on the prairie by his faithless steed, freed by wolves, surrounded by the *ferre natura*, or in the depths of Sant Angeles, it was all sunshine to him. Commend us to such a traveling companion and *recounteur*. The book abounds in episodes. The story of "Strap Backner," the hero, endowed with an overmastering genius to knock people down; who vanquished whole villages of white men, whole tribes of Indians; who was vanquished only by Satan himself, and even now, mounted on his steed, the gift of King Tuleahchoma, on tempestuous nights whirled down the valley with sulphurous glare, while the cowboys lift up their prayers and the Great Medicine Man sounds his big bongoorie—this is a story to engage the genius of an Irving. With a keen sense of the humorous, our author combined the faculty of gathering enough facts and practical knowledge of the country he traversed to make his book valuable to all who are seeking information of what may be justly termed a "Coming Empire." Those of our readers who are interested in sheep culture and Texas sheep ranges will find in these pages descriptions of sheep farms and armers, a class of men with whose intelligence and good manners the writer seems to have been most favorably impressed.

3—Kt-Kt6 mate			

The subjoined table contains the solutions received from competing solvers to March 7, 1878, inclusive.

G. R., Phila., Penn.; Waldmann, Rocky Hill, N. J.; E. H. W., New Haven, Ct.; S. Rev. L. W. Madge, Princeton, N. J.; W. B., Waterbury, Ct.; S. Wm. Mylchreist, Middletown, Ct.; R. H. Seymour, Bolyoke, Mass.; Prof. D. S. Jordan, Irvington, Ind.; Prof. C. Jacobus, Malawan, N. J.; E. L. Bradford, Webster, Mass.; W. D. Willis, Savannah, Tenn.; Rook, New York City; Frakklin Benner, Astoria, L. I.; W. A. Briggs, Montpelier, Vt.; Wm. Parker, New Britain, Ct.; Rich. Fairley, Chatham, N. B.; Geo. Noble, Fisherville, Canada; Chas. C. Hebbard, Cambridge, Mass.; O. K. Andrews, Mahonington, Penn.; Geo. A. Lee, 1; E. S. Bradford, Webster, Mass.; Harry M. Wheelock, Red Wing, Minn.; Statius, Boston, Mass.; Bishop, New York City; 4; Inoc, Boston, Mass.; A. Taylor, Phila., Penn.; 1; F. A. N., New Orleans, La.; 1; A. M. J., Galveston Texas, 6.

We commence below the publication of the variations in the Handbuch on the Vienna or Queen's Knight opening. They will be published as games and continue weekly until the Handbuch variations are exhausted.

Game No. 22.—VIENNA OPENING.

White.	Black.	White.	Black.
1—P-K4	1—P-K4	8—P-Q4	8—Kt-K5
2—Kt-Q B3	2—B-Q Kt5 (a)	9—P-K4	9—P-Q3
3—Kt-Q5 (b)	3—B-Q R4	10—Q-K Kt5	10—Kt-Q2
4—P-Q Kt4	4—P-Q B3	11—P-Kt4	11—P-Kt4
5—P-Kt4	5—P-Kt4	12—B-Q Kt2	12—P-K B3
6—P-Kt4	6—Q-Kt R P	13—Q-K3	13—Q-Kt B4
7—Q-K Kt4	7—P-K Kt3		

NOTES.

(a) This move is the invention of Hampe and the opening is known as the Vienna.
(b) The more favored continuation is with the gambit move. If 3—Kt-K5, 3—B-Kt5; 4—Q-P Kt4, 4—P-Q3; 5—B-Q B4, 5—Kt-K5; 6—B-K Kt5; 7—Q-Q2, 7—Castles; 8—Castles Q R, 8—Kt-Q2 and neither player has the advantage.

Game No. 23.—VIENNA OPENING.

White.	Black.	White.	Black.
3—P-K B4	3—P-Kt4	9—P-Q4	9—P-Q3
4—Kt-K B3	4—P-K Kt4 (a)	10—Q-K Kt4 P	10—B-K3
5—B-Q B4	5—P-K Kt5	11—P-Q5	11—B-Q2
6—Castles (b)	6—B-Kt4	12—P-K5	
7—Kt-P Kt4	7—P-Kt4		
8—Q-K B P	8—Q-K2		

NOTES.

(a) The following (Schach Zeitung 1852 p. 167) variation which occurs in the King's Gambit can also be arrived at, viz.: 4—Kt-K B3; 5—P-K 5, 5—Kt-K R4; 6—Kt-Q5, 6—B-Q R4; 7—P-Q Kt4, 7—P-Q B3; 8—Kt-Kt5 B P, 8—Kt-Kt5 Kt; 9—P-Kt5 B, 9—Q-Kt R P; 10—B-Q B1; 10—Castles, etc.
(b) The opening moves, which are analogous to those in the Muzio Gambit, form a game in the Schach Zeitung, 1855, p. 314, between Falkbeer and Brien.

Game No. 24.—VIENNA OPENING.

White.	Black.	White.	Black.
2—Kt-Q B3	2—B-Q B4 (a)	7—B-Kt4	7—Q-P Kt3
3—Kt-Q B3	3—Kt-Q B3 (b)	8—B-K Kt5	8—B-K Kt5
4—B-Q Kt5	4—Kt-K B3	9—Q-K2	9—Q-K2
5—Castles (a)	5—Q-K2		
6—P-Q3 (b)	6—Castles		

NOTES.

(a) The Chess Journal (1871, p. 38) observes that this move Anderssen gives the preference. The opening can afterward resolve itself into a King's Gambit declined.
(b) Imagine, Schach Zeitung 1860, p. 54, occurs 3—P-Q3!
(c) Paulsen attained the same position in a game with Morphy (Schach Zeitung, 1855, p. 99) as follows: 2—Kt-Q B3, 2—Kt-Q B3; 3—B-Q B4; 4—B-Q Kt5, 4—Kt-K B3; 5—Castles. Then continued by: 5—Castles; 6—Kt-Kt4 P, 6—R-K; 7—Kt-Kt4, 7—Q-P Kt3; 8—B-Q B4, 8—P-Q Kt4; 9—B-K2, 9—Kt-Kt4 P etc. White could have maintained the P by playing on his 5th move B-Q3.
(d) At this point 6—Q-Kt-Q5 can be played advantageously.

Game No. 25.—IRREGULAR OPENING.

The following game is said to have been played by Napoleon the great.

White.	Black.	White.	Black.
Mme. Remusat.	Napoleon.	Mme. Remusat.	Napoleon.
1—P-B3	1—Kt-K B3	8—Kt-K B3	8—Q-Kt-B6 ch
2—P-K4	2—Kt-Q B3	9—K-K2	9—Kt-Kt5 Q P ch
3—P-K B4	3—P-K4	10—K-Q3	10—Kt-K4 ch
4—P-Kt4	4—Kt-Kt4 P	11—Kt-Kt4 K1	11—B-Q B4 ch
5—Kt-Q B3	5—Kt-K Kt5	12—Kt-Kt5 B	12—Q-Q Kt8 ch
6—P-Q3	6—Q-R5 ch	13—K moves	13—Q ch mates
7—P-K Kt3	7—Q-K B3		

Game No. 26.—ALIGIER GAMBIT.

The following skirmish is taken from the last number of the Nuova Rivista Degli Scacchi, of Italy.

White.	Black.	White.	Black.
Dilettante.	Pr. of Mussini.	Dilettante.	Pr. of Mussini.
1—P-K4	1—P-K4	8—Q-Kt4 P	8—B-Q3
2—P-K B4	2—P-Kt4	9—B-Q B4 ch	9—K-Kt2

7—Q-Kt4 P	7—Kt-K B3	14—Resigns	

OUR EXCHANGES.

We have not, as yet, seen the January, February and March numbers of the Schach Zeitung, Westminister Papers and the Chess Players' Chronicle. We request that these exchanges will note this, and act accordingly.

CURSORY JOTTINGS.

—The Holyoke, Mass., Transcript's chess column is conducted with marked ability by Seymour and Carpenter, and is one of the best that finds its way to our table. We wish it unbounded success.

—One of our foreign antagonists desires to arrange a postal card game with an American player. Address, without further ceremony, Serg. Maj. W. McArthur, Barracks, Chichester, Eng. Foreign games, we find, are "just the thing" in our case, as one is not obliged to transmit a move every day or two.

—The Voice of Cleveland, says that "We learn with much pain that the Cafe International * * * has been destroyed by fire." Please to respect McK.

—The chess players of Peoria, Ill., have organized a club, and elected Miss Jennie Johnson as Secretary.

—Julius Grevy, the successor of M. Thiers, has a great reputation as a chess player. In this game and shooting he finds his chief recreation.

—Mr. C. S. Bell, of Detroit, Mich., announced, on the thirty-eighth move in a game with B. F. Fields, of Hannibal, Mo., a mate in forty (4) moves. Next.

—The Holyoke Transcript states: "Nearly all the population of Patmahoe, New Zealand, Auckland, have formed themselves into a chess club. It contains fifteen members out of a population of five or six families."

—Solvers will kindly communicate us any errors they discover in their score in this week's table of scores.

ANSWERS TO CORRESPONDENTS.

C. A. G., N. Y. City.—You may expect to hear from us very soon. Excuse delay and long silence.

A. D. O., Hartford, Conn.—We are anxiously awaiting a reply to our last letter. Hurry up.

Mr. Duffy, London, Eng.—Please to inform the editor-in-chief of the C. P. C. of our exchange notice in this column.

A. Taylor, Philadelphia, Pa.—The following move in Game No. 10 should have been printed: 12—K Kt-K B3. Have written you on other subject.

Rook, N. Y. City.—Your address is earnestly requested. Upon B-Q6 then Kt-Kt4 P ch mate.

Reader, Bloomington, Ill.—There are several chess magazines printed in the English language, viz.: Chess Journal, Dubuque, Ia., Westminister Papers and Chess Players' Chronicle, Eng. The American Chess Journal has not yet made its appearance under the new management, but Mr. Loyd, of Elizabeth, N. J., will publish the first number very soon.

W. A., Briggs, Montpelier, Vt.—Shall we not hear from you soon? Another tourney set would please us not a little. Can you not send on a game or two played beneath the shadows of the Green Mountains?

W. Mylchreist, Middletown, Conn.—By all means send us some of your games and those of other players in your city, particularly one or two of Oldack's best efforts.

H. M. Wheelock, Red Wing, Minn.—Quite pleased to add your name to the solver's list, and shall expect an occasional contribution of games and tourney problems from you.

T. P. B., Detroit, Mich.—Thanks for copy of constitution and by-laws of the Detroit Chess Association. What are the duties of the Sergeant-at-arms?

NIBLO'S GARDEN.—This most popular house of entertainment gave on Monday last the first representation of a new piece entitled, "The Serpent and the Dove," due to Mr. W. E. Barnes. Abounding with dramatic incident, the interest is fully sustained until it culminates with the final act. The plot, in its simplest conception, is that of a girl, left an orphan, by the death of a mother on shipboard, who is married at her mother's request to Captain Barton, who commanded the ship. In a delirium of grief, Elsie Elliot, just after her marriage, jumps overboard, and is rescued by her husband. As Elsie is but a child, and her husband of mature age, Captain Barton places his young wife on the Continent to be educated, and leaves her for two years. Temptation comes in the way. Count Dorsey schemes to encompass her ruin. Elsie is close to falling into the snares of the serpent when her husband returns. By craft and trickery the Count makes the husband believe that the wife is false to him. He lays a trap for the husband, and having induced him to come to a rendezvous in a lonely house, the Count binds the Captain with cords, and placing a loaded gun with the muzzle pointed to the Captain's breast, so arranges it that when a candle burns down a slight thread will be consumed, and the weights which are attached to the trigger of the gun will be unloosed, and by their fall discharge the piece. Just in time, Elsie, the wife, having providentially gotten rid of her seducer, flies to her husband's rescue, and arrives only in time to release her husband. Just as he is dragged by Elsie from the place of danger the gun is discharged, but the Captain is unhurt. There is an amusing Dutehman, a funny Irish girl, and a Dundreary. Mr. S. W. Piercy, as Captain Barton, assumed a somewhat thankless character, and played the part with exceeding dignity and elegance. Miss De Forrest is an agreeable actress, who filled the character of Elsie with pleasing grace, and for a first performance the whole play was well and effectively carried out. The piece is exceedingly well mounted, the scenery being new and appropriate. "The Serpent and the Dove" is a good, honest piece, and there is no reason why it should not, for its intrinsic merits and the excellence of the performers, draw crowded houses to Niblo's for a long time to come.

Rational Pastimes.

HOW TO MAKE A CRICKET GROUNDS.—The following information, from James Lilly-white's *Cricketer's Manual*, is so practical and valuable, that we republish it for the benefit of those who may wish to prepare a field for athletic pastimes:

"Select a field or piece of ground as nearly level as possible, although where the situation is not dry, a slight fall from the centre will be useful; but this must not exceed one inch to the yard. As a rule it may be stated that a piece forty yards square will satisfy the requirements of any ordinary club. The object is to render this piece as much impervious to rain, or to enable the rain to percolate as quickly as possible; and here comes the most important question of all—the nature of the subsoil. As on this depends so much of the expense to be incurred, too much attention cannot be given to it. The chief point is whether the subsoil is dry; whether it is likely to hold the water in wet weather; whether it is clay, sand, gravel, or peat. A dry level is a natural aid that will tend to make the formation of a cricket ground a very economical proceeding, as the expense of drainage is necessarily avoided or much lessened. But there are few dry levels, and hence consideration must be given to the character of spongy substances. The first principle is to underdrain with three-inch tiles, the depth and distance apart of the tiles to be determined according to the light or heavy nature of the subsoil. If it be clay or peat—especially the latter—it may be found necessary to remove six or nine inches of it, and replace with good loaming mould. This mould should be well trodden down, and especial care should be given to levelling it, and to the removal of any stones before the turf is placed on it, as on this mainly depends the evenness of the work when finished. The drains must be near together, on account of the water-holding nature of the ground, and they must be deep enough to take away the water at a sufficient depth to prevent the earth from sucking it to the surface. Drains placed near the surface are of no real use; the tiles should be at a depth not less than three feet.

Great care should be taken, too, in laying the turf. Each soil should be about three feet long by one foot wide, and in thickness should not exceed 1½ inch, as from the cutting through the roots a new life and vigor are given; and it is even a benefit to old grounds merely to take off the turf, prick up the surface, level, and relay the same turf. The sods should be placed very tightly together, and made as level as possible as each is laid, as this saves much after trouble, and the ground is fit to play on at an early date. The best turf for cricket grounds is obtained from the large open downs, where it is well fed off by sheep; but this, too, will require to be well tended, to clear it from weeds, before it becomes thoroughly fit. Should your ground be finished in time, it should be given a top dressing. The best time of the year to commence making new grounds, or redress old, is about the middle of October; and when necessary to introduce seeds, it should have a good dressing of well-sifted loamy mould. Any species of sand should be avoided, as tending to make the surface gritty and loose.

The following hints for making a close, velvety turf are from the pen of M. H. Sutton: In the first place, careful preparation of the ground proposed to be laid down to turf is necessary. This should be commenced in the winter by draining, if found requisite, and digging to the depth of six to twelve inches, according to the nature of the soil. When this has been done, the land should be leveled and made firm with a spade, and subsequently raked, to remove stones, etc. Should the natural soil be too stony, it will be advisable to procure a supply of good mould, and spread this over the land to the depth of two or three inches. If the soil is poor, some well-rotted stable-dung will be very beneficial. Where this cannot be obtained, we would advise as the best dressing of artificial manure 2 cwt. of superphosphate of lime and 1 cwt. of Peruvian guano per acre. In March, after the ground has been made thoroughly fine and clean, a heavy iron roller should be used to make it perfectly level; and as the subsequent appearance of the ground depends, in a great measure, on this part of the preparation, we cannot too strongly urge the importance of its being well done. The ground should then be evenly raked, and the seed sown. April and September are the best months for sowing. As to the sorts of seed suitable for cricket grounds, etc., we can, after a long course of personal observation of the numerous kinds which have come under our notice, confidently recommend the following varieties as most certain to produce a close, velvety turf:

Cynosurus cristatus, Crested Dogstail; *Festuca ovina*, Sheep's Fescue; *Festuca tenuifolia*, Fine-leaved Fescue; *Lolium perenne* Sutton's, Sutton's Dwarf Perennial Rye Grass; *Poa pratensis*, Smooth-stalked Meadow Grass; *Poa sempervirens*, Evergreen ditto; *Poa nemoralis*, Woodside Meadow Grass; *Medicago lupulina*, Yellow Trefoil; *Lotus corniculatus*, Birdfoot Trefoil; *Trifolium repens perenne*, Perennial White Clover; *Trifolium minus*, Yellow Suckling.

These should be mixed in their proper proportions, and sown at the rate of three

bushels or sixty pounds per acre (English), or one gallon to six rods or perches.

After the sowing has been accomplished, the ground should be again rolled, and as soon as the young plants have attained the height of two or three inches, the whole plot should be carefully gone over with a sharp scythe. Frequent mowing and rolling are indispensable to maintain the turf in order. By adopting these means, a close green sward will be obtained in nearly as short time as a ground produced by turves, while it will be far more permanent, and at much less expense.

It will sometimes happen that annual weeds indigenous to the soil come up; these can be easily checked, if not destroyed, by mowing them off as soon as they make their appearance. Plantain, dandelions, and daisies, too, will often appear, and these must be cut up each one singly about an inch below the surface (not deeper), and about a teaspoonful of salt dropped over the cut part. Birds are very fond of grass seeds, and care should be taken to keep them off until the seeds are well up.

Moss is generally a sign of poorness in the soil, or a want of drainage; to effect its removal we advise, after raking off as much moss as possible, a top-dressing of quicklime mixed with rich compost, applied in the winter, and a sowing of more seed in the spring, or a top-dressing of soot will, by encouraging the growth of grass, destroy the moss.

This should be applied in the spring at the rate of about sixteen bushels per acre. It often happens that, owing to frequent playing, cricket grounds get bare and destitute of grass. To improve them there has been specially prepared a mixture of fine grasses and clovers, which will quickly form a thick, close turf. In such cases play should be discontinued on the bare places by the end of August, and immediately after a shower the ground should be lightly harrowed and seed sown thickly at the rate of fifteen to twenty pounds per acre. After sowing give a good rolling, and mow and roll as frequently as possible during the autumn and spring. A light dressing of well-rotted stable manure during the winter or early spring months will greatly encourage the growth of the grass, and help to produce a close-growing turf; or if this is not procurable, either 1½ cwt. of superphosphate or 1 cwt. of guano might be applied per acre."

THE AMATEUR ATHLETICS.—A convention of delegates of amateur athletic clubs was held at the Knickerbocker College, Sixth ave., last Wednesday. The following clubs were represented: American Athletic, Amateur Athletic, Fanwood Athletic, Friendship Boat Club, Greenpoint Athletic, Harlem Athletic, Englewood Athletic, Manhattan Athletic, Nantulus Boat Club, Orion Athletic, Plainfield Athletic, Scottish-American Athletic, Yonkers Athletic and Shortbills Athletic. The following definition of an amateur was adopted: "One who has never taken part in an open competition or for any stake, public money or entrance fee, or competed with or against a professional athlete for any prize; who has never taught, pursued, or assisted in the pursuit of athletic exercises as a means of pecuniary benefit." The meeting adjourned to meet again upon the following Wednesday.

HARVARD'S ATHLETICS.—The first meeting of the Harvard Athletic Association, for the present year, was held last Saturday in the college gymnasium. The sparring match between V. Stow and W. Seymour was decided in favor of the latter, and the silver cup of the association awarded to him. Vaulting with one hand was won by F. B. Keene, who cleared 5 feet 4½ inches. In light-weight wrestling, W. A. Gaston threw C. Stetson. The contest between the former and A. H. Rogers was declared a draw, and postponed to the 15th. Next came a broad-sword exercise match by A. Matthews and P. J. Barlow, the latter winning. The programme was to have closed with a middle-weight, but no one appeared against J. A. Wetherbee, and he was declared victor and presented with a silver cup. The sports will be continued on the 16th and 23d.

The *Crimson*, which has opened a sporting column, urges the Athletic Association to institute challenge cups for encouraging efforts in pedestrianism.

—The base ball season was opened at Prospect Park, Brooklyn, last Saturday, by a game in which members of Chicago, Columbus, Canada and other leading professional clubs took part. Bond, of the Bostonians, pitched on the side that scored 1, and Corcoran, of the Buffaloes, on the side that scored 8.

PEDESTRIANISM.—The task of walking 89 miles in 26 hours, with 10 minutes to spare, was accomplished by Miss Von Hellern, at Cincinnati, last Saturday. Physicians present condemned the performance as too severe and very injurious to the pedestrian's health.

THE LONDON SIX-DAYS' WALK.—This walk, at Agricultural Hall, London, beginning next Monday, will be contested by a number of noted pedestrians, among them Weston, O'Leary, Vaughan, who has a record of a greater number of miles in three days than either of the former, and Smyth, who has just walked 2,000 miles in 1,000 hours at Dublin.

Tiffany & Co., Silversmiths, Jewellers, and Importers, have always a large stock of silver articles for prizes for shooting, yachting, racing and other sports, and on request they prepare special designs for similar purposes. Their **TIMING WATCHES** are guaranteed for accuracy, and are now very generally used for sporting and scientific requirements. **TIFFANY & CO.** are also the agents in America for Messrs. **PATEK, PHILIPPE & CO.**, of Geneva, of whose celebrated watches they have a full line. Their stock of Diamonds and other Precious Stones, General Jewelry, Artistic Bronzes and Pottery, Electro-Plate and Sterling Silverware for Household use, fine Stationery and Bric-a-brac, is the largest in the world, and the public are invited to visit their establishment without feeling the slightest obligation to purchase.

BY CHARLES HALLOCK,

EDITOR OF "FOREST AND STREAM," AUTHOR OF THE
"FISHING TOURIST," "CAMP LIFE IN FLORIDA," ETC.

NEW YORK:

The book is a complete manual for sportsmen:
It gives every sportsmanlike method for capturing every known game animal, bird and fish in North America.

It designates the proper charges for guns for each kind of game, the various kinds of decoys and blinds, and baits and lures for the fish.

It gives over 4,000 localities where game and fish may be found, specifies the game found in each locality, the hotel accommodation, and the best route to get there. (The preparation of this Directory was in itself a work of great magnitude.)

It gives the acrid name and specific characteristics of each species it describes, with the habitat and breeding season of each—a most valuable contribution to science.

It describes 297 varieties of edible fish alone, that may be taken with the hook; 80 varieties of ducks; 50 varieties of snipe or waders, and the different methods of shooting each.

Its instructions for capturing large game are very minute, and the chapters on woodcraft, outditching and camping have been pronounced by "El Cazador," of Los Angeles, California, to be simply complete.

Every kind of dog used for sport is designated, and his points for bench judgment, breeding, rearing, breaking, care and diseases, comprise a seventh part of the volume. There are 71 prescriptions and recipes given under the revision of the best modern canine therapeutists.

It is in itself the most concise, accurate, instructive, sensible and comprehensive work ever written upon the dog and his diseases. Any physician can administer the prescriptions with perfect confidence to their safety and efficacy.

It contains very useful recipes and remedies for wounds, bites, poisons, illness, and emergencies of all kinds; for cleaning, repairing, and preserving every implement used for sport; for selection and use of every kind of boat employed by sportsmen; a reference list of several hundred books in request by sportsmen, and a directory where to buy outfitting goods.

It instructs in taxidermy, and tells how to preserve and mount specimens of animals, birds and fish.

Dog Paths to Success.

HIGHEST HONORS
AT THE
Centennial World's Fair, 1876!

THE
SHONINGER ORGAN

PRONOUNCED UNANIMOUSLY AS THE
Best Instruments.

Their comparative excellence is recognized by the
Judges in their Report, from which the following
is an extract:

"The B. SHONINGER ORGAN CO.'S exhibit
as the best instruments at a price rendering them
possible to a large class of purchasers, having a combination of Reeds and Bells, producing novel and pleasing effects, containing many desirable improvements, will stand longer in dry or damp climate, less liable to get out of order, all the boards being made three-ply, put together so it is impossible for them to either shrink, swell or split." THE ONLY
ORGANS AWARDED THIS RANK.

There are 50,000 of our instruments in this and the European countries in use, and they are so made that they will keep in tune, and stand any climate. They contain a magnificent Chime of Bells, tuned in perfect harmony with the Reeds, producing wonderful effects. The Music Rack, when moved forward, will make a splendid writing desk, with our Book Closets and Swinging Lamp or Flower Brackets, with a one-stool boxed free with each Organ, makes the SHONINGER ORGANS the most substantial, convenient and perfect Organ.

ESTABLISHED 1850.

We are prepared to appoint a few
new Agents.

A liberal discount to the Clergy, Sunday Schools,
Teachers, Churches and Lodges.
Illustrated Catalogues, with prices, sent by mail

Guns, Etc.

W. W. Greener's

CHOKE-BORE GUNS,

Tried on Game in America.

Supplied by H. C. Squires, American Agent,
1 CORTLANDT ST., NEW YORK.

The Gun of the Future.

Samples of the Hammerless Gun now on
exhibition, and orders taken by our agent.
Guns to be delivered June 1.

See the Following Testimonials:

Sir—It is a pleasure for me to inform you of my
high appreciation of the 10-lb. Greener breech-loader
purchased of you last winter. I consider choke-
boring, if skillfully done, as the greatest improve-
ment in fowling pieces since the introduction of the
percussion cap. It gives the maker complete con-
trol of the pattern, and greatly increases penetra-
tion. To prove this, I will give you the performance
of this gun. The 32-inch 10-gauge barrels, charged
with 4 1/2 drachms of powder and 1 1/2 ozs. No. 6 + ng-
lish chilled shot, give patterns ranging from 255 to
330 pellets in 30-inch circle at 40 yards. The same
charge of powder and 1 1/2 oz. No. 4 American shot
gives 160 to 175 pattern, with penetration which kills
ducks at 50 to 70 yards like a stroke of lightning. It
is a characteristic of the choke-bore to show its
greatest superiority in the large sized shot. What
I am about to say will perhaps surprise you as much
as the performance surprised me. On trial of the
12-gauge 28-inch modified choke-bore barrels, with
3 1/2 drachms of powder and 1 1/2 oz. of shot, I got
about the same pattern and spread of shot at 26
yards as with the full choke 10-gauge barrels at 40
yards, with tremendous penetration. This is just
the performance required of a gun for thick cover,
in which you generally find ruffed grouse, woodcock
and quail, these birds being killed, with few excep-
tions, at from 15 to 24 yards.

COL. JOHN BODINE.

SCHUETZENFEST

The FOREST AND STREAM AND ROD AND GUN having
given a gold medal for team shooting at the

SCHUETZENFEST

of the Sharpshooters' Union of the United States of
North America, the Executive Committee of this
Union takes pleasure in informing their American
friends that they will make all arrangements for
team shooting for this medal. The match will take
place at the Schuetzen Park, Union Hill, on

Monday, June 24, 1878,

at 11 A. M. Each team to consist of eight men. En-
trance fee, \$25 per team. The team making the
highest score to win the Forest and Stream and Rod
and Gun Medal. The entrance fee money, after de-
ducting cost of markers, will be divided among the
teams, pro rata. All the members of such teams
must be of the same society, and must have been
members of it for ninety days previous. The en-
trance fee is to be paid on or before June 19, 1878, to
Mr. F. HARENBERG, Treasurer of the Sharp-
shooters' Union, No. 100 Greenwich street, N. Y.
Any club or shooting society of the United
States will have the privilege of sending their teams
without being members of the Union. Any com-
munication directed to the secretary will be
promptly replied to. GEO. AERY, Pre-ident.

TATHAM'S

Improved Chilled Shot.

AMERICAN STANDARD DIAMETERS.

(RED LABELS.)

Gives greater penetration and better pattern than ordinary shot. Equally well adapted to choke-bore, modified chokes and cylinders.

Our chilled shot will be found free from shrinkage, more spherical, more uniform in size, heavier and of brighter and cleaner finish than any other. SEND FOR CIRCULAR.

TATHAM & BROS.,

52 BEEKMAN STREET, N. Y.

Also, manufacturers of Patent Finish, American Standard Drop Shot, and Compressed Buck Shot, more uniform than the ordinary moulded shot.

BEWARE OF IMITATIONS.

Gunpowder.

THE
HAZARD POWDER CO.,
MANUFACTURERS OF
GUNPOWDER.

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. only.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6 1/2 lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot-guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 6 (coarse). In 1 and 5 lb. canisters and 6 1/2 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest or water shooting, it ranks any other brand, and is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG. In kegs of 25, 12 1/2 and 6 1/2 lbs. and cans of 5 lbs. FFG is also packed in 1 and 1/2 lb. canisters. Burns strong and moist. The FFG and FG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard rifle powder of the country.

Superior Mining and Blasting Powder.

GOVERNMENT CANNON & MUSKET POWDER; ALSO, SPECIAL GRADES FOR EXPORT OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents in every prominent city, or wholesale at our office,

and Sportsmen's Association," for an unusu-
ally fine display of Duck, Moleskin and
Leather

HUNTING SUITS,

which attracted great attention and were
much admired by all Sportsmen.

THE BOSTON
SHOOTING SUIT.

Manufactured only by

G. W. SIMMONS & SON.

BOSTON, MASS.

NEW YORK AGENTS:

Fowler & Fulton,

300 BROADWAY,

The Best in Use.

ONLY ONE QUALITY MADE, AND THAT IS
THE VERY BEST.

Flexible Waterproof, Gun-Color Duck.

Each article—coat, trousers, vest and hat
cap—has the name and manufacturers' ad-
dress stamped upon it, and no suit is genuine
without it bears this imprint.

We make no discount except to the trade.
The price of the suit complete is \$13.

The material is of the best quality of duck,
waterproofed by a patent process. The color
is that known as "dead grass shade."

The seams and pocket corners are copper-
riveted, and nothing is neglected to make the
whole suit complete in every way.

This is what one of our best sportsmen says
of it, writing from camp: "Although I had
been nearly eight hours under incessant rain,
laboring and striving along under adverse
circumstances, yet I found myself compara-
tively dry, and my clothes without a tear. For
the benefit of our brother sportsmen, let me
advise one of Messrs. Simmons' (of Boston,
Mass.) Waterproof Suits. Oh! what a relief
it was to find one's tobacco was dry, and that
one could light a pipe; that you could laugh
at your miserable friend, who stood shivering
and shaking as if he had the palsy; and then,
next morning, oh! what fun it was to see him
mending his clothes, while I had not a tear to
complain of! Ventilation, that great harbinger
of waterproof suits, is legislated for in the
most ingenious manner. No sportsman should
fail to supply himself with a suit, which is at
once cheap, practical, and will last an almost
indefinite time."

Our Flexible Tan-Colored Water-Proof
Leather Coats, Breeches, Vests, Leg-
gings and Caps are considered the finest
things ever made.

SPLENDID FOR SHOOTING SMALL GAME and touching up
CATS OR DOGS.

Just the thing for Taxidermists to collect specimens. There is no report or dan-
ger attending its use, or any auxiliaries required to operate it. It can be loaded with
ease and rapidity. It is extremely simple, and has no delicate parts to get out of order or wear
out. For sale by the Trade generally. Sent upon receipt of price or C. O. D.

Hart's Sportsman's Favorite Metallic Shells.
FOR BREECH-LOADING SHOT GUNS.

These Shells are easily loaded, and the caps easily extracted from inside.
Head solid and much thicker than any Shell now made, giving a solid seat for cone or snail, which prevents
it from driving through or springing away, thereby causing miss-fires. The Cone is made of nickel, and fast-
ened solid in its place. Neither rust nor corrodes fast, like movable anvil made from steel. The Nickel
Cone also prevents miss-fire when a cap has been left on shell for a few days, which is liable to occur either
in steel or iron. These Shells are finely finished, and made any length ordered, from 2 1/2 to 3 1/2 inches.
Shells and Loaders and Descriptive Price-Lists can be obtained from all the leading Sportsmen's Houses
throughout the country.

FROM CAPTAIN BOGARDUS, CHAMPION WING-SHOT OF AMERICA.
MESSRS. GEORGE E. HART & CO.—Gentlemen: The fifty Shells I received from you to-day suit me better
than any I have ever used. They are stronger and better in every respect, and I shall use them in all my
shooting hereafter. Yours truly,
A. H. BOGARDUS.

W. W. Greener's Champion Treble Wedge Fast,
Breech-Loader.

THE WINNING GUN.

At the International pigeon shooting, Monaco, Feb.,
1878, the Grand Prix de Casino, an objet d'art valued at
£100, and a money prize of £105, was competed for by
sixty-six of the best shots of all nations, and won by
Mr. Chalmers, of France, with a full-choke bore
Wedge-Fast Gun by W. W. Greener, killing 11 birds
out of 12 at 28 yards and 1 for 1 and 20% yards. He
also won the second event, killing 8 birds in succession
at 33 yards, making a total of 19 birds out of 20. This
is acknowledged to be the best shooting on record.
The winning gun at the choke-bore match, 1877, beat-
ing 17 guns by the best London makers, and winning
the silver cup, valued at 50 guineas, presented by Mr.
J. Parker, the gunmaker.

The winning gun shot at Philadelphia, 1876, in the pigeon shooting match between Capt. Bogardus and
Mr. South for \$500 a side, South killing 56 birds out of 100, using one barrel only.
The winning gun also at the great London Gun Trial, 1876, beating 102 guns by all the best makers of
Great Britain and Ireland. THE PATENT TREBLE WEDGE FAST BREECH-LOADER is the strongest
and most durable ever invented, and the most successful gun of the period, patented in the United
States, Oct. 3, 1873; No. 168,328. BEWARE OF INFRINGEMENTS OR IMITATIONS.

W. W. GREENER, St. Mary's Works, Birmingham, England.

THE STANTON SIPHON
FOUNTAIN PEN-HOLDER.The Only Practical and Really Useful Fountain Pen-Holder
Ever Manufactured.

The only Fountain Pen-holder with a FLEXIBLE SIPHON, so that any size or make of Pen can be used.
The only Fountain Pen-holder in which the INK does not come in contact with oxidizable metal, and
therefore cannot decompose or coagulate. No spilling of ink can occur in filling, as the tube is filled by
suction from any vessel containing writing fluid.

No Inkstand or Special Ink Required.

ALWAYS READY FOR USE.

Is a very handsome and convenient pocket article; is made of strong metal, heavily nickel-plated and
polished. Contains sufficient ink to closely write twenty pages of foolscap; with feet in the point of the pen
until the last drop of ink is exhausted, and being air-tight the ink can neither evaporate nor mould. Is
easily replenished, always perfectly clean and any article of gold pen can be substituted for the handsome
Waterproof Indestructible Golden Pen furnished with each holder.

Sportsmen will find it a most Convenient Companion when
away from home.

Will carry sufficient ink for TEN DAYS' ordinary use. Especially adapted to the use of Doctors, Law-
yers, Commercial Travelers, Collectors, Government Officers, Railway Officials, Tourists, and all who
can appreciate the immense comfort in always having their own pen and ink with them.

Sent by mail on receipt of 25 cents, with full directions.

P A I N E ' S FEATHER-FILLED GLASS BALL.

PRAIRIE FIRES NEVER SPREAD FASTER

THAN THE SALE OF THIS BEAUTIFUL AND POPULAR BALL.

One Million and a Quarter

have been sold since August, and our moulds are now running night and day filling our constantly increasing orders.

Every Ball made to scale, and no imperfections. **\$1,000** Reward to any one who can find a single ball in ten thousand beyond the maximum weight (two ounces). No thick sides or bottoms. Its uniformity of thickness won it favor from the first, and out of the immenso number sold we have never had one complaint.

NO CLOSE DECISIONS.—A Feather-filled Ball once struck by shot, and the tale is told. *It satisfies every one on the instant, and saves all unpleasant work for Referees.*

NO SHORT COUNT.—Every barrel is warranted to contain enough over three hundred to allow for reasonable breakage. Will also contain copies of the Standard Rules for Glass Ball Shooting, for one, two, or three traps.

C A R D.

During Mr. Paine's absence in England his Patents were grossly infringed upon. Glass Balls and Traps of the most worthless description were sold in large numbers. Balls that could not be broken with a cannon were thrust upon the market by thousands. On his arrival home, seeing this state of affairs, he immediately, with his fruitful brain, invented the Paine Feather-filled Glass Ball. American sportsmen are the best judges of its magnificent success.

No Sportsman's Warehouse is Complete without Paine's Feather-filled Glass Balls. Men and Boys, from Maine to California, shoot at them! Old ladies darn socks on them! Children learn Geography on them! Babies cut their teeth on them! If you want a Ball for main strength and endurance try some other.

WARNING TO ALL.

The following will show how fully we are protected in the manufacture of the Paine Patent Feather-filled Glass Ball, and as the price is SO LOW there is little or no incentive beyond curiosity to infringe on the Patent:

UNITED STATES PATENT OFFICE.

IRA A. PAINE, OF NEW YORK, N. Y.

IMPROVEMENT IN CLASS-BALL TARGETS.

Specification forming part of Letters Patent No. 196,379, dated October 23, 1877; application filed September 22, 1877.

To all whom it may concern:

Be it known that I, IRA A. PAINE, of New York City, in the County and State of New York, have invented a new and useful Improvement in Balls for Trap Shooting, of which the following is a specification:

The figure is a side view of one of my improved balls, part being broken away to show the construction.

The object of this invention is to furnish balls for trap-shooting which shall be so constructed as to "make the feathers fly" when broken by the shot, producing the same effect as when birds are struck by the shot.

The invention consists in a hollow glass ball for trap-shooting, filled with feathers or other light material, as will be hereinafter fully described.

A represents the ball, which is made of glass, is smooth upon the outer side, and has a neck upon one side for placing it upon the trap.

For sale by all Dealers in Sporting Goods throughout the world.

The ball A is filled with feathers B or other light material, as shown in the figure, which, when the ball A is broken by the shot, will be scattered through the air, showing that the ball was broken by the shot, and producing an effect similar to that produced when a bird is struck by shot, and enabling the marksman to see the effect of his shot, the smoke having time to disappear before the feathers can possibly reach the ground.

Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is—

A hollow glass ball for trap-shooting, filled with feathers or other light material, substantially as herein shown and described.

Witnesses:

JAMES T. GRAHAM,
C. SEDGWICK.

Sold by principal New York dealers, and by Wm. Read & Sons, Boston, Mass.; B. Kirtledge & Co., Cincinnati, Ohio; E. B. Eaton, Chicago, Ill.; Brown & Hilder, St. Louis, Mo.

CANNOT BE SENT BY MAIL.

Bogardus' Patent Rough Glass Balls and Glass Ball Traps.

These Traps are the only ones that give satisfaction, as they are simple of construction, easily set, and not liable to get out of order, and they throw the ball in a manner that more closely resembles the flight of a bird than any other trap in the market. The Patent Rough Glass Balls are made of uniform weight and thickness, and have a corrugated surface that strengthens the ball for shipment to any part of the country, prevents the glancing of shot, and thereby insures the breaking of the ball when hit.

CAPTAIN BOGARDUS was the first to introduce the ROUGH BALL, and at a price far below the smooth ball at that time.

Balls and Trap can be ordered through all Gun Dealers. Liberal discount to the Trade.

MY IMPROVED TRAP (warranted), which will throw a ball in any direction from the shooter as the option of the puller, is now ready for the market. Price 88.

Parties buying glass balls will receive score book for glass ball shooting in each barrel.

HEADQUARTERS FOR BALLS, Haggerty Bros., 10 Platt Street.
FOR TRAPS, HART & SLOAN, Newark, N. J.

Second and enlarged edition of "Field, Cover and Trap Shooting," containing instructions for Glass Ball Shooting, now ready. Price \$2, by mail, postage paid. Address, Dec 6 17
Capt. A. H. BOGARDUS, International Hotel, N. Y.

THE UNITED STATES CARTRIDGE COMPANY, LOWELL, MASS.

Manufacturers of the

CENTRAL FIRE, SOLID HEAD,

BRASS SHELL, RE-LOADING CARTRIDGE,

Used by the Army and Navy of the United States and several Foreign Governments.
All kinds of RIM FIRE AMMUNITION.

Special attention paid to orders for TARGET PRACTICE CARTRIDGES.

Volume 10.—No. 7.
No. 111 Fulton St., N. Y.

For Forest and Stream and Rod and Gun. IN MEMORY OF A GOOD DOG.

MY poor old dog has had his day—
And happy days we've had together,
When woods with red and gold were gay,
In the glorious autumn weather.
When o'er the aftermath's dark green
We wove the gossamer's silver sheen,
And over all the bine sky bent;
But now the woods are bare and gray,
And all of autumn's glories spent,
And my poor dog has had his day.

My poor old dog has had his day—
No happy days have we together,
Since all the woods are bare and gray,
And gone the pleasant autumn weather.
His tuneful voice no echo wakes,
The fox no more his lair forsakes
In fear of him who lies below
The roar of Winter's wild affray—
In quiet sleep beneath the snow—
My poor old dog has had his day.

The Tent in the North Woods.

EDITED BY THE PROFESSOR AND LEATHER-STOCKING.

"And this our life, exempt from public haunt,
Finds birds in trees, trout in the running brooks,
Deer 'mong the stones—and game in everything."
As You Like It.—Cun Var.

THIS being our first station in the Wilderness is a proper *Punctum Saliens* (Latin is good to begin with) for this, as yet, unopened record.

We left Louisville, on the Black River Railroad, Aug. 28d, at 7 A. M. A light spring wagon carried our party of three, with two guides; the *impedimenta* (Latin again) being stowed in canvas bags at our feet. The road is twenty miles to Fenton's, where we dined. The first half is an open country—sandy, but good traveling; the rest a narrow path in the woods. From Fenton's the road is all in uncleared land, and is very rough for the horses. Ten miles, most of which we walked, brought us, at 6:30 P. M., to Wardwell's. This, the last outpost of civilization, is a small log tavern, in a little clearing, with the primitive forest all around. A small lake spreads a clear mirror for the distant landscape of forest-crowned hills. We were hungry and tired, and after a hearty venison supper, crept to our lodgings in the loft and slept soundly.

This morning we found two light boats awaiting us, in which we left at 9 A. M., making our adieu to civilization—such as it is—at this outpost and threshold of the great Northern Wilderness. This day's work has been navigating up Beaver River, toward Albany Lake, our first destination. The stream is about two rods wide and very winding; the water of a dark forest stain. The immediate shores are chiefly crowned with alder, illuminated here and there with patches of the burning lobelia cardinalis, whose reflections set the stream aglow. Tall pines and spruces look over the bushes along shore. There are no clearings and no signs of human life, but the occasional hunters' camps. Deer tracks are frequent on the shores, with slides of otter. After passing the South Branch Inlet, the stream becomes narrow and difficult with snags. At 5 P. M., landed and raised our tent near an old bark shanty, which seems to have been unused this year. We are fortunate to-day in the absence of the dreaded insect annoyances.

The situation of our camp is picturesque and really beautiful. The bank rises abruptly some ten feet from the stream to a level table, planted closely with spruce and balsam, almost as thick as they can stand, and to the exclusion of nearly every other tree. From the dense gloom below, these spiry-topped foresters have stretched upward with longing aspirations toward the light, emulating each other in the towering altitude to which they could attain. Dense undergrowth covers the mossy soil, except for an area of a rod or two, where it has been cleared by our predecessors, who erected their hunters' home.

This home, of the stereotype form, merits a brief description. *Ex uno disce omnes* (the Latin is irrepressible). A horizontal pole, about eight feet long, is supported by crooked uprights some six feet from the ground. Against this pole lean at an angle of about 45 degrees, with occasional cross-pieces; the cover is made of sheets of spruce bark, with the smooth side below. To obtain this bark the hunter selects full grown spruce in good condition, and cuts a circle close to

the roots, and another as high up as he can reach. A vertical cut then enables him to develop from the trunk a sheet of bark nearly six feet square, flat and water-tight; a few of these construct a roof perfect against the weather. The sides of the mansion are either of similar pieces or else of brush. The fire being built in front, the heat is reflected downward by the polished inner surface of the bark upon the sleepers below, who, on their beds of boughs, with their feet toward the glowing embers, take such rest as the punkies and other rightful owners of the soil allow. When the camp is an elaborate one, a dinner table is a necessary adjunct; this is composed of a single sheet of bark, supported on short poles and crooked sticks, with comfortable log seats, and moss cushions if you are luxurious.

We pitched our tent hard by the shanty, and the men in a few minutes cut us a large bundle of rank grass from the river's edge for a bed. Rubber sheets and blankets perfected the accommodations for the night's repose. Pillows are not on the hunter's list of necessities, but a taste for luxuries added some small empty bags to our kit. Filling these with moss and ferns they lay with a most inviting plumpness at the head of the tent. The success of the experiment was proved by the utterance of a thrice repeated "Bully!" as each tired head sank to its soft repose.

It is time to introduce into this faithful record the members composing the party. First in the order of seniority comes the Professor. The Professor, now in the middle of his fifth decade, is a hearty lover of nature, but, it must be confessed with sadness, can neither hunt nor fish, and has never been in the bush before. He takes everything as it comes with unruffled good nature, and is always ready to do more than his share of the work. A great traveler, a keen observer, an excellent authority on things scientific, he is a most valuable acquisition to the expedition, and is frequently called upon to pronounce on some form of animal or vegetable life. His common attire is a suit of blue flannel, with a slouched hat, and he goes armed with a pocket magnifying glass ready for instant use. He is a bachelor, and as shy of womankind as old Mr. Weller himself, and, like old Weller, attracts the fair sex *sex noliens volens*. The little divinity in petticoats, who presides over Wardwell's table, lost her heart to him, and gazed disconsolately down the river as the unconscious Professor was borne away on its swift flowing current, serenely munching a plum-cake made expressly for him by her own fair hands.

Leather-stocking stalks next into the picture, our special artist, and joker in ordinary to the expedition. His common attire is a pair of moccasins which he got among the Indians, a fez cap which he brought from Egypt, a pea-jacket which he wore in his voyage to Greenland, and leather breeches with scalp trimmings, which he traded for among the trappers of Oregon. A repeating rifle, a heavy army revolver, Arkansas tooth-pick, a pocket box of carpenter's tools and a trout rod complete his toilet, without which, in perfect order and polished to perfection, he never ventures abroad.

Venator, though last mentioned, begs not to be considered the least of his honorable company. Blessed with a fine physique, a quick eye and legs of cast-iron, he is devoted to the sports of field and flood. Many are the trout he brings to our table, and many are the pau-cakes he takes from it. Be-bold him attired in a suit of bramble-proof corduroy, and a pair of huge wading-boots, while a hole cut through his slouched hat for purposes of ventilation, allows a long lock of hair to wave defiantly in the breeze.

It remains to speak only of the guides, the brothers Sylvester and Orlin. Born in the depths of the forest pri-neval, they revel in the woods, and pine in the clearings; nothing in the circle of polished society has for them half the attractions that are furnished in their intimate association with black flies and mosquitoes. The song of the latter is music to their soul, and the smoke of a smudge is as the breath of Araby. Rowing, cooking, wading, shooting, long tramps with lodgings on the cold ground, all such employments are alike to them, provided there is hardship in them and the flavor of the wilderness. It is a happy faculty that can make a home of a desert, and find comfort and sweet companionship where wild beasts must congregate.

We remained at our camp on the following day, some of the party exploring up stream to the rapids, some four miles. Broke camp on the 26th. We left this picturesque little temporary residence with regret, for it had become quite homelike. The evenings around the fire were lovely. The heat of the day abated as twilight came on, changing to actual chilliness at a later hour, making the forest ingleside attractive. The firelight illuminating a little circle of the dense foliage, a young moon struggling through the tops of the trees, the spicy odor of the balsams and spruce, the absolute silence, broken only by the faint ripple of the stream, the occasional hoot of an owl and the distant howling of a wolf, united to form a scene not to be described and appreciable only by the enthusiastic lover of woodland life.

We found the stream snaggy and difficult. The guides were half the time in the water pulling the boats over some obstinate root or fallen tree. There is hereabouts no good "floating ground" for deer; the best we have seen is a long reach of still water below the South Branch, a few miles down from our camp. The signs of deer, however, are numerous; sometimes we come to one of their runways, and very frequently see their fresh tracks in the mud along shore, where they come down to drink or to feed upon the water plants. At the "Little Rapids" we made our first "carry." The

stream here has considerable descent over a thick bed of granite boulders, but with no rock *in situ*. Loaded boats are dragged down among the stones, but in going up stream everything must be carried over the path about a quarter of a mile. Our kit is packed in several large bags with shoulder straps. The boats themselves walk over the track inverted on the sturdy shoulders of the guides, who are armed with a wooden yoke shaped for the purpose. The whole transfer is rapidly effected.

We re-embarked, and after a couple of miles came to what they call a "draw." This is another rapid through boulders, which, however, admit the loaded boats to be hauled upward. The passengers walked around a path in the thick woods three quarters of a mile, in rubber coats, a rain having set in. Our lower extremities, of course, got well saturated from the reeking bushes, but the poor guides got a thorough soaking, having to wade the whole distance. The weather had now changed, and a fine drizzling rain pursued us for the rest of the day.

The stream now expanded with marshy shores. Some ducks were seen, but kept out of shot; even leather-stocking, with his double-patent duplex, back action—none genuine without signatures of patentee—arsenal of weapons, was unable to touch them with a ball. Venator was more lucky with his trout rod, and fished up a mess of speckled beauties from among the lily pads. The Professor smiled approvingly as he paddled at the stern.

The shores continued to recede on either hand, leaving a marshy lake, with narrow winding channels of open water between fields of reeds and lovely white water lilies. The Professor, ever ready with his learning, told us that these were called *Nymphaea odorata*, which we were very glad to know, as we would not have suspected it.

Albany Lake unfolds gradually from its marshy entrance. There are some distant views of ridges, clothed with evergreens, and granite ledges show in some places along shore. Woody points project on right and left, narrowing the lake to an eighth or a quarter of a mile, with intervening basins of nearly a mile in width. This wild sheet of water is very incorrectly laid down upon the maps (1871). It is very much larger than there represented. We shall become better acquainted with it by-and-by.

It was a good long pull up the lake against an easterly wind before we came to the camping place. A sand beach and a little notch in the line of forest directed us to the place. We found a large and well constructed shanty of spruce bark, opening inward, away from the lake winds. It has the unusual luxury of two apartments—one for the table and I cuisine, and one for sleeping—each, of course, has but three close sides, the other being open toward the fire. The bark roof was badly warped and split and very leaky, and the dining-room speedily proved uninhabitable in the heavy shower which came rattling down as soon as we landed. We managed to eat our supper on the ground, avoiding the wet spots, and then made our lodgings sufficiently dry by pitching the roof with bark, and tacking up an india-rubber sheet. The campground being on a slope, brought down the water in streams through the shanty, and we had to cut channels to save ourselves from a flooding. To add to the discomforts, the smoke filled the cabin, and nearly drove us out. We wept over our situation abundantly, but never would desert the shanty.

The men went out in the rain to float, or at least to explore for floating, but the wind caused a heavy sea and drove them home. By midnight we were all settled to the labor of sleeping on our anything but downy couches, soothed by the monotonous patter of the rain on the thin shields of bark that interposed between us and the storm. Suddenly the sleepers were aroused by a piercing cry: "Get up! the river is on us! It is pouring through the shanty two feet deep!" We started up in alarm; Leather-stocking was seen on his feet gesticulating wildly; he raved incoherently. A moment more revealed the fact that he was sound asleep. His frightful torrent was a vision of the night. Venator thought it was not wholly unconnected with pau-cakes.

The morning broke, but brought no relief to the well-soaked adventurers. A deep ditch of muddy water encircled the fire, and a mountain torrent rushed madly through the two sections of the shanty. After a hurried breakfast, we all took a hand in patching the roof of the camp. Small holes were plugged with sticks, larger ones were covered with bark, while sunken spots were propped up and bark gutters made for irremediably leaky apertures. The result was tolerably satisfactory. The space in front of the fire, where we had found a rough bench already constructed, but useless on account of the storm, was reclaimed for its proper purposes. The half of the shanty, where the table and cuisine were situated, was restored to its first uses, and we were at last able to sit or move around without plunging down into a puddle of water, or getting a stream in the eye on casually looking up.

When the situation cleared, Venator bethought himself of his boots, which, from being once high and mighty, were become, through exceeding dampness, lump and unsatisfactory. If he tried to get into them wet as they were, he was sure to stick half way; and he knew by past experience that, if he did succeed in entering their cavernous depths, and wished once more to bring his feet to the light of day, that the strength of all the men in camp could hardly draw him forth from their too friendly embraces. The Professor, on being consulted, suggested that large fires should be built at different points down the yawning abyss of the legs. Leather-

stocking darkly hinted that the sudden disappearance of his river last night could only be accounted for on the supposition that it had been completely engulfed in the vast emptiness of the hoots. The guides advised hanging them in the heated atmosphere of the roof, and this was finally done; and there they reposed the rest of the day, hasking in the warmth of the fire. On examining them at dusk, they were found completely dry, and as stiff and unyielding as a long exposure to tremendous heat could make them. And when Venator got them on, after much tribulations, his legs were as well protected from all possible dangers as though encased in Milan armor of proof.

Dinner brought consolation to the expedition. Beans were the order of the day. Venator, though he never eat the article, made a glowing speech in their favor; the Professor smiled benignantly, and muttered that in Latin they were *Materia ventosa*; while Leather-stocking said nothing, but combined them silently with the primary elements of his frame.

The rainy day drew its slow length along; everything was damp and dreary, and the "moist, unpleasant bodies" of the hunters were surrounded by a reeking mist. The skies cleared at sunset, however, and the placid surface of the lake tempted us forth for a short paddle. Beyond us a loon was floating, calling the echoes of the bills with his wild laugh. A bullet from the ready rifle of Leather-stocking cut short his amusement and dashed the spray from the spot where he had been sitting. With a quick eye to business, the loon dove simultaneously with the crack of the gun, and finally emerged with a scream of defiance far beyond and out of shot. A brave old veteran, he! The whistling lead and pinge of the bullet were as familiar to his ears as to those of any war-worn soldier. Not a hunter came near him but saluted him right royally with a broadside of all arms. But he lives and laughs! and well he may, for few and far between are they who bring down a loon with a rifle bullet, and he knows that his plumage is no small trophy. And now his mate joins him, and their chuckles are heard in the forest-tipped hills; the rosy gleam fades out against the forest-tipped hills; darkness covers everything, and we paddle quietly back to camp. The comforting flask is passed from hand to hand; then, the last pipe smoked, the last joke told, we wrap ourselves in our blankets and seek our rest. From the far distance comes the solemn hoot of an owl, then the splash of a trout in the lake. And now slumber claims us all, and the prolonged and sonorous snoring alone breaks the silence.

Bright sunshine greeted us in the morning, awakening in Leather-stocking, special artist to the expedition, a keen desire to photograph. The camp-ground was first fixed for posterity, and the party then set out in further search of the picturesque. A lovely spot revealed itself half a mile up the lake. A long rocky shore, of smooth granite, dipped down at an easy slope into deep water, overhung by evergreens. At the terminus of this solid beach a narrow cape of rock thrust itself out into the water, its surface rounded smooth by ancient glaciers. A cosy little harbor of deep water lies behind it. The view along the point, with its clumps of Christmas greens, the lake in the distance and on either hand reflecting like a polished mirror the blue outlines of the distant hills, was seized upon incontinently by the enthusiastic artist, who grouped the boats and assistants around in imposing attitudes before fastening their shadows forever. Posterity will know the most minute particulars concerning the state of our wardrobes. That nail in the seat of the boat has made its mark for all time.

At noon we packed up to embark in search of a more desirable situation. The traps were speedily gotten together, and we abandoned the old smoky shanty with no feelings of regret. A mile and a half westward, on the north shore, we found the place we sought. It was a projecting point, beautifully clothed with spruce forest.

There are divers considerations affecting the choice of a greenwood home. Among them is the risk of falling trees. It may be set down as an axiom, that at some period or other every individual tree in all the mighty forest is bound to come crashing down to earth. There are sundry unpleasant chances of your being just there when some one of them bows its ancient head. Look well, then, to the condition of your vegetable neighbors.

A thrifty grove covered our point; a fine view was commanded by it of the lower part of the lake. Smooth spots were found for tent and shanty, and a huge boulder with a vertical side rose over the prospective hearth-stone. The axes were quickly at work. The canvas walls were raised, and a shanty, of a little more permanent character than a single night's lodging requires, soon reared its rustic architecture among the boughs. We even constructed a table, of a sheet of bark, supported on poles and crotched sticks, with pine logs split for seats, and similarly supported on each side. We ate our slap-jacks that night with great satisfaction, and slept on a softer bed of boughs than bad wood our weary limbs since we had entered the tract of old John Brown.

(To be continued.)

For Forest and Stream and Rod and Gun. ON THE SUNFLOWER RIVER.

The following is the promised continuation by our correspondent, H. L. S., of St. Louis, of his adventures with the bears among the cane-brake of the Sunflower River, Miss. The first letter was given in our issue of Jan. 24, and it will be remembered that after capturing their bear the party were about to test the merits of the steak:

The residents of the Sunflower, and, in fact, those of Vicksburg, are extremely partial to bear meat, and I found our friend Value could hardly wait our tardy cook's preparation. I had a faint recollection of interviewing bear steak on a previous occasion with rather discouraging results, still I thought myself hungry enough to be able to dispose of my share. Ned, I knew, would eat his if it killed him, and straightforward Uncle Joe would eat bear if he liked it, if not he would let it alone. I furtively watched my companions as they proceeded to discuss its merits. Ned's first installment passed from view with apparent relish; his next—must I say it?—seemed to produce a slight pallor on his firm, well-knit features; the third I never saw raised to his lips. I would not dare say this if Ned were not at this writing at least a thousand miles away. Uncle Joe deliberately spat his first mouthful on the ground, and said "He would be shot if another piece of that blasted bear ever got into his mouth." I tasted bear also, and silently stole away to the rear of the tent out of observation. Suffice to say that we all, except Uncle Joe, learned to like bear meat before our hunt was over. It only required unlimited patience, combined with persistent practice.

We determined to spend the next few days still hunting for deer. In the meantime we sent a man across the country to invite Holt Collier, the great bear hunter of the Mississippi, to join us with his fine pack of bounds. As still-hunting is little resorted to South, our friend made sport of our intentions, but we had practiced this method too many years in the Lake Superior regions not to know our own capabilities. To the astonishment of our doubting comrades, we hardly missed a day without bringing down one or more deer, most of them, however, were ordinary animals of their kind, with one exception. One day I reached the banks of a little hayou (as all small streams are called here) some four miles from camp, and sat down on a log to rest and drink in the beauties of the surrounding landscape. As my eye was wandering up the bayou that wound so gracefully among the stately cypresses and giant oaks until lost in the distance, I suddenly saw emerging from a thicket, about 100 yards distant, a fine buck. My rifle was at my shoulder in an instant, and as I was about to fire I caught sight of another buck, the largest I had ever seen, issuing from the same thicket. For a moment the peculiar sickness, incident to such occasions, took possession of me, but it was momentary. Taking deliberate aim well forward, as he was walking, quartering toward me, I fired. I distinctly heard a heavy thud on the ground, then all was still. I was astonished at this, but, quickly reloading, awaited the result. The smaller buck had passed from view in the underbrush. Shortly I saw him reappear through an opening, feeding as if nothing had happened. I fired at him, wounding him slightly, when he concluded to take his departure. I then approached the fallen monarch cautiously, for I had some suspicion that he was playing possum, but found this was not the case. The bull had entered the shoulder, ranging upward and backward in such a manner as to shatter the spinal column almost its entire length. I afterward found it flattened and shapeless, lodged against the skin, being the only time that the body of a deer had ever succeeded in stopping one of my .46-cal. bullets. The animal was estimated to weigh from 250 to 300 pounds, and many of my St. Louis friends will testify to his excellent gastronomic qualities. There seems to be here two varieties of deer. Although the majority of those we killed appeared to be the genuine red or Virginia species, we frequently met those more compactly built, with shorter legs and necks, bearing a greater resemblance to the Rocky Mountain or black-tailed deer. This large buck was of this species.

The following noon Holt Collier arrived in camp, followed by seventeen dogs, which, added to our previous pack, made twenty-seven. All was now bustle and excitement, preparing for the next day's bear hunt. The "starters" were chained together in pairs to prevent them from doing any private hunting on their own account. A deer was cut up, boiled, and fed to the dogs. Ponies, saddles, etc., were properly looked after, and guns carefully inspected.

Early the next morning we were all in the saddle except Uncle Joe. It was a fine morning, the atmosphere being clear, cool and bracing, and as we galloped along the trail leading to Nelson Lake, where we expected to start a bear, we felt the keenest delight at the prospect before us. But a few minutes after the dogs were let loose a portion of them were in full pursuit of some animal. I asked Holt what he supposed it to be. "Nothing but a cat," was his laconic reply. Soon the dogs ceased their pursuit of the cat, for at a little distance they had heard the voice of one of the starters. "That's a bear!" cried Holt, as all the dogs joined in the pursuit. The woods rang with their music. "Come on," said Holt, "we must keep in hearing of the dogs." Up the banks of the lake, then down again we rode. Keeping as nearly abreast of the dogs as possible. Occasionally some one would attempt to cut off the bear by pressing into the cane, but without success. At last Bruin took a different direction, leaving the cane for the open woods, then a great tumult among the dogs—snapping, snarling and fighting—was heard. We pressed forward rapidly, and on coming up to the scene of conflict were just in season to find Uncle Joe pulling and tugging at the hind legs of a small bear, while the dogs were doing their best to keep the animal in their possession; but Uncle Joe, as usual, was victorious. "What have you got there, Uncle?" said Ned. "What is left of a bear," said that matter-of-fact individual. True enough, twenty-seven dogs were too much for one small bear, and they had not only killed him, but would have soon eaten him if it had not been for the timely interference of Uncle Joe. Soon we had the dogs on the trail of another black denizen of the cane-brake. "This time it is no baby," Holt said, "but a tough old fighter who does not propose to be eaten by the dogs." Now could be heard a sharp battle in progress, and some one or more of the dogs would retire howling and discomfited. Then the bear would push on, and we found it a difficult undertaking to keep up with him, for he led us through the thickest cane-brakes, and our party was scattered in its endeavor to follow. As for myself, I had deliberately made up my mind to keep in view of Holt as long as I could remain in my saddle. This I succeeded in doing for a few miles, then that man of iron began to surge ahead. Cane-brakes, interwoven with vines and briars, huge fallen trees and the various obstacles peculiar to southern forests, seemed little hindrance to his break-neck speed. In my frantic efforts to "hold my own," my hat had early passed from my possession, and had it not been for the close cut that my harber had recently given to my hair I should have soon found myself in the predicament of poor Absalom of old. My coat and pants were rapidly assuming the appearance of those belonging to the most abject street beggar, and I was obliged to realize the fact that slowly but surely I was falling behind. Humiliated and discouraged, I listened to the gradually receding voices of the bounds. To add to my discomfiture the day was rapidly drawing to a close, and the prospect of a night spent alone and supperless in the wilderness was presenting itself to my imagination. Nevertheless I pressed forward; frequently I would find myself almost hopelessly entangled in some thicket and be obliged to retrace my steps long distances or to make tiresome detours to avoid the ever recurring cane-brakes. Fainter and fainter grew the voices of the bounds, until the dim aisles of the forest ceased to convey them to my ears altogether. I stopped and dismounted, and proceeded to investigate the situation, while pondering on the mutability of all human expectations, and, hesitating what course to pursue, once more the faint echoes of the chase greeted my ears, nearer and nearer, louder and louder, until the woods rang again with the merry voices of our faithful animals. I remounted, and with fresh zeal pressed on. Presently the dogs seemed to have come to a halt in the centre of a large cane-brake. Pushing on as far as possible with my horse I then dismounted and made my way on foot, arriving at last, panting and perspiring, at the scene of the conflict. Perched on the huge limb of an oak lay the bear, looking angrily down at his foes. It took but a moment to bring my

rifle to bear, and with the report he fell to the ground pierced through the heart. He was instantly covered by the dogs, and in his death struggle mortally wounded one of them.

Holt soon came up, and the hunter's horn resounded through the forest. This was a signal to our companions that the hunt was over, as they made their appearance one by one, each heartily congratulating me upon my success. Wearing in body but light of heart we returned with our trophy to camp. H. L. S.

For Forest and Stream and Rod and Gun.

GAME OF THE SANDWICH ISLANDS.

AN article on the Sandwich Islands, which appeared in one of your late numbers, has awakened a good many memories of pleasant times sporting there under the care of the extremely hospitable white residents.

"What!" some one will ask. "Game on those little dots in mid-ocean? Did he hunt parrots or monkeys?"

Not at all. The islands are large, covering six thousand square miles, and all that are of any size have game of some kind. Deer on Molokai; wild cattle, which give fine and exciting sport, on Kani; wild turkeys on Oahu, and, perhaps, some of the other islands; besides duck and snipe in their season on most of the lowlands.

The deer were presented to King Kamehameha Fifth, and placed on the island to increase and multiply, which they do, as fast as the wild dogs, which range in packs, will allow, for no native is allowed to kill them.

The cattle are remnants of the stock originally given to the first king of the islands, Kamehameha First, by Vancouver, on his visit to the kingdom during the latter part of the last century. They were given with the agreement that not one of them was to be molested, and this agreement was kept; although, before the end of that time, the damage the fast-increasing herd did to the crops was very great.

The turkeys, as near as I could discover, "grewed." The real puzzle was the snipe, for in any but the right season they may be sought everywhere on the islands but will not be found. In other words, they migrate. This is the more curious when it is considered that the Hawaiian group is over two thousand miles from any mainland. Can snipe fly as far as that without rest? or do they go from island to island westward toward the Chinese coast, finding rest every two or three hundred miles?

The fishing about the kingdom is good most of the year. The ocean mullet is the favorite with the islanders. At one time almost all the lowlands near the ocean were laid out in fish ponds, where young mullet were imprisoned and fattened for eating; but, as the Kanakas have diminished the ponds, many of them have been allowed to go to ruin. All the walls of the ponds, by the way, were built of white reef coral. Of course, all the fish usually found in semi-tropical waters abound—the flying fish most abundant. The natives eat their fish, and even squid, or devil-fish, raw and alive, with their poi. One of the descendants of the kings, a dusky nymph of some 400 or 500 lbs. weight, hothers her dependants almost as much as the whale did the New York Aquarium keepers, to provide her with a sufficient supply of her favorite little fish, the ohua, which wriggling dainties she eats alive by the handful, with a variety of seaweed. At low tide, the reefs by which the islands are surrounded are many of them laid bare, and afford delight to the naturalist by the display of corals, algae and crustace which fringe their edges or fill the interior cells. I would like to go into particulars about the flora of the islands, both the indigenous, with its two hundred varieties of ferns and fern trees, which grow on every crag of the volcanic mountains, veiling their rugged, blackened faces, or which serve to render more enchanting the many charming valleys with their clear running streams and misty waterfalls. The forests of Ohia, with their dark green leaves, crimson flowers and fruits; the long, silvery-green lines on the mountain sides, made by valleys filled with the foliage of the Kukui or Candee nut tree; or of the numberless flowers and flowering trees brought to the islands from different parts of the tropics. The islanders are a flower-loving race. They never consider themselves dressed unless they are covered with wreaths of bright flowers or sweet-scented myrtle, and, indeed, until late years, this was their only dress.

But I began with the thought of telling you with what pleasant surroundings a huntsman can shoot turkeys under the care of the genial island ranchers, and of one hunt in particular, with Captain H., among the hills back of Kahuka Ranch, on the Island of Oahu. To do this you must have a little idea of the topography of that island. The island winds from northeast to southwest. It is divided by an almost impassable range of mountains, which slope gently down toward Honolulu on the southeast. This slope is divided at right angles to the range by a succession of deep fertile valleys. The northern side of the barrier is the grander; that half of the range has fallen away and disappeared in many places, leaving precipices often from 800 to 2,000 feet sheer, from whose base fertile plains stretch out toward the sea. There are broken by valleys which lead up, in many cases, to alps, where the cattle find pasture through the year. Only one good pass leads through the mountains from one half of the island to the other. Nuanu Valley, which rises gradually from Honolulu until at its highest point it breaks through to the northern side between two lofty peaks at an elevation of 800 feet above the ocean, which reaches away into the distance beyond the plains at the foot of the perpendicular descent.

Kahuka Ranch occupies over 20,000 acres of plain and mountain on the northern side. When the invitation came to visit the Captain and see how a large ranch was conducted, it was accepted with pleasure. Colonel J. offered me a mount and an invitation to stop at his rancho of Kualoo on the way. The Colonel has been trying a number of years to raise the grade of horses from the wiry little native pony to one more resembling an American horse, and has succeeded admirably, as the specimens brought round for us on that lovely morning proved; for a more delightful animal I never put leg over than that little brown horse with the long unremembrance native name, the tireless, easy gait and the sure foot for the mountain passes. Our way led from the city up the gentle slope of Nuanu Valley, first by the most beautiful gardens of the world, until clear of town, then through soft green meadows watered by clear running brooks, and bounded on both sides by high cliffs. No view yet in front of us as we ascend, except the rising valley with its rocky boundaries and overhanging peaks; but one of surpassing beauty behind,

We turn in our saddles and gaze long on the picture framed by the black walls of the valley and the dark blue sky above. The foreground meadows, bordered by waving bananas, with here and there the spike of a flowering century plant or plume of a palm. In the middle distance the town is only known among the dense tropical foliage of tree and vine, by the gleam of a white house or steeple and the masts rising from the inner harbor. Beyond the ocean long lines of white breakers marking the reef and separating the pale green of the shallower water from the deep blue expanse of the slime-bearing Pacific. Only one ship in sight; all her white sails spread to urge her onward away from a haven she seems loth to leave, as she rocks idly to and fro on the long swell. Near us the murmur of the little river tells where it winds through the valley. One does not need to eat "Lotus day by day" in this paradise to feel

"How sweet it were, hearing the downward stream,
With hilt shut eyes, ever to seem
Falling asleep in a half dream,
To dream and dream."

"To watch the crisping ripples on the beach,
And tender lines of creamy spray,
To lend our hearts and spirits wholly to the influence
Of ever offered charm to every sense."

For six miles of gentle but continuous ascent we followed the valley, which narrowed gradually, until just as the mountains seemed closing in upon us we came suddenly on to a precipice as steep and abrupt as an Alpine pass, and a view of the fertile northern plain, checkered with fields of rice and cane, bounded as every island view is by the blue of the ocean. Our way was down well cut zig zags, then ten miles across the level to Kualoa. The next morning after a hasty look around the beautiful place, at the stock and a fine lot of pea fowl, which the Colonel keeps to protect his fields from grasshoppers, I was away northward across the plain, a long ride to Kahuku. It must be said right here, and might be dwelt on, that no people have the art of hospitality more thoroughly learned than the Hawaiian, and my reception was genuinely cordial. The next morning after an early breakfast mine host said that he was not a mighty Nimrod, but having to ride some distance up the mountains to see how a certain herd was doing, he would show me a likely place for game on the way, appointing a rendezvous where we could dine in the open air on the mountain side. On the way, as he had promised, he pointed out a narrow valley thickly wooded, where, he said, a flock of turkeys had roosted the night before. With a "Good luck to you; bring us something to eat for dinner," he was off, and I turned toward the valley. My hunting has always been more for the delight of the sense than for the slaughter of game, more to see them in their haunts than to bring them out, though the latter must be generally the result, and particularly such a day as this to sustain a sportsmanlike reputation, if possible, though the temptation was to sit down in the shade on the hillside in this air, too balmy to be felt, and smoke the day away, watching the ocean as it slept in the morning light, the shadows of the mountains, or the boatswain birds wheeling slowly among them, rather than rouse myself to tramp, or rather creep after the gobblers, though experience told me that the excitement would soon bring the right tone of feeling, and the tramp make the after rest more delicious.

Leaving my horse with the boy I started up the valley alone with my rifle, watching and listening at every step. After a long careful hunt it seemed certain that they had left the place, when one of the flock in his chase after an unlucky "hopper" appeared in a clearing two or three hundred yards away. To hide and wait developments was my immediate move. They were feeding toward me leisurely, not as if hungry, but more for the pleasure of the stroll, with an occasional tidbit of ripe guava or other delicacy thrown in. In fact, I was hunting with a sure thing on a dinner, but enjoying the sport of finding extras under pleasant circumstances. They came on, until within perhaps fifty yards of me, when the crack of my rifle sealed the doom of a fine young cock. The ball had struck him fairly in the head. As soon as he was "conscious of his death," as the darkey said of the turtle, we sought the rendezvous where our jolly host was waiting. His cook had brought up all that was necessary for preparing the expected turkey, which, after being duly admired, was given to him. We whiled away the time before dinner, and then sat down with good appetites and a bill of fare fit for a king. First course: Mullet cooked in the coals, a la Hawaiiian; *piece de resistance*, the turkey, washed down by claret, cooled in the spring at our side; vegetables, bread fruit and dried bananas; desert, oranges, from the tree over our heads, of a delicious spicy flavor; guavas, from neighboring bushes, with cream and sugar; Obias, *au naturel*; a bunch of fine native bananas which grew handy; fine old kona coffee and a beverage, to which limes, that the natives brought, added just the right smack, closed the repast. Our pipes and quiet talk held us until the lengthening shadows warned us homeward, where we arrived satisfied with a day well spent. A day such as can be had by any one visiting the "Happy Isles."

NOTES FROM CALIFORNIA.

IN a recent issue of the FOREST AND STREAM, I noticed a statement or report to the effect that prairie chickens are working their way toward this coast. The report probably originated from information given by one of the California State Fish Commissioners, Hon. B. B. Redding, himself an ardent sportsman, to one of our local papers. Mr. Redding, who doubtless knows what prairie chickens are, spoke very confidently of their having migrated as far west as Battle Mountain, Nevada, on the line of the Central Pacific Railroad, a considerable number, and said that their advent in that quarter was a matter of surprise as well as joy to the inhabitants thereabouts. He thought, however, the hundred-mile (or more) Humboldt Desert, which lies to the west of Battle Mountain, would be an obstacle in the way of their direct migration toward the Pacific slope; but that the birds would probably work north and around the desert, and finally find their way down into our California valleys. A few weeks ago I was speaking of this matter to a well-known sportsman of this city; who, almost every season, spends some weeks in Eastern Nevada shooting sage-hens, etc., and he quite positively contradicted the statement relative to any recent immigration of prairie chickens from the far West to that section. He asserts that there have been some there for many years, and that the birds have been and are now found to the north of

Battle Mountain, up through Idaho, and in Oregon, and have been there as long as he has known the country. It seems to me, however, that—as one or the other must be mistaken—the latter is in some part in error. It is possible that there have been a few chickens that far West for some years, and also that they are to be found in Idaho and Oregon. But it does not follow that of late the immigration this way has not increased, and that Mr. Redding—who has abundant means of acquiring information on such subjects, and who is as much interested in our game as he is in the introduction and propagation of fish—is not really right after all. His connection with the Central Pacific (as Land Agent) takes him over the entire route several times a year, and he has opportunities to observe for himself and to acquire information on such matters that few others possess.

It is to be hoped that Redding is right in this matter, and that the prairie chickens are really coming this way, as they are a much needed addition to our stock of game birds. True, there are grouse in this country, but they inhabit the most inaccessible mountain tops in the Sierra Nevada and coast mountains, and are beyond the reach of sportsmen who go out from our cities and valley towns for hunting. Deer, hares, rabbits, squirrels, geese, ducks, quail and doves, we have plenty of, but those who used to hunt the prairie chickens out West think there can be no sport equal to that.

Speaking of our California quail, I see that a correspondent of yours in one of the southern counties, says that dogs are of no use there in hunting these birds. I don't know what kind of ground they have there, but I have never seen any part of this State where quail could be successfully hunted without a dog. They may not when first found lie very close, but after a shot or two they do, and I have frequently had to kick them out of the grass or underbrush before they would fly, and they are a hard bird to find if not killed outright, hence a good dog is indispensable. Their worst habit is lighting on trees. A large covey may take to a tree, and it will require a keen eye to discover one of them. And the most provoking part of the business is, they always go out on the wrong side of the tree when they once make up their minds that they want to go. Our mountain quail is a larger bird than the valley quail, and of quite different plumage, being about a third larger, and nearly twice the size of the Bob Whites of the Eastern States. They are a hardy bird, and frequent the snow belt of the Sierras, where they are plentiful. Their distinguishing feature is a long plume, which, beginning on the top of the head and falling gracefully backward, extends down almost to the middle of the back. They are a very game bird, but steady flyers and are not hard to shoot for good wing shots. I learned the other day that down on one of the islands near the mouth of the Sacramento River (Andrus Island, I think) somebody is raising a lot of the genuine "Bob Whites," brought out from the East. A gentleman told me he had seen the little fellows, and knew he was not mistaken. I had not before heard of their introduction. Our mountain quail would be just the thing for the Middle States, and our valley quail for the Southern States. I wonder that some of the sportsmen back there don't introduce them in considerable numbers. They can be had without difficulty, as a great many are trapped every year. They are so easily trapped, in fact, that in some places they use them in the place of pigeons for pigeon shooting, the latter being very expensive—twenty-five cents a piece, generally.

Some months ago our Fish Commissioners received from New Zealand four English pheasants (two cocks and two hens), in good condition. They got permission from the military commander of this department to turn them loose on Goat Island, in San Francisco harbor, where they have good cover and water. The island, also, has lots of quail. The Commander issued an order prohibiting shooting on the island until the birds might have time to multiply. Some weeks after they were put out the Commissioners went over to the island with a couple of cocker spaniels, and found the birds all near together, the dogs putting them up, and they taking wing as well as though "native to the manor born." It is hoped that they may live and increase, and it is thought they will, as our climate ought to be well adapted to them.

Ducks and geese are here without number this year, the farmers in some localities having to bait the ground with poisoned grain to get rid of them. In a few weeks the snipe will be in. They do not stop hereabouts in the fall, as there are few spots where they can bore until the winter rains have softened the ground and produced temporary marshes.

We have just had one of the worst storms that has visited us for years, and it is expected that—as in former cases—the wild pigeons will be compelled to leave their mountain haunts and come down into the oak grooves of the valleys to feed on acorns. There is a place a few miles from here where they came a few years ago by thousands, and afforded a month's sport of the best kind. If they come this year there will be grand fun, and I will detail some of it for your Eastern readers. There is one advantage we Californians have over our brethren of the North and East; that is, we can shoot throughout the whole season, from September 15 to March 13, and generally the latter part of the season is best. The weather is mild and pleasant (when not raining), and if a person isn't afraid of getting a wetting he can hunt every day through the winter.

Sacramento, Cal., Jan. 15.

AMIGO.

A MONTH IN THE ADIRONDACKS FOR \$30.

To those who have but a limited summer vacation, and who must return to their posts at a certain day and hour, the following statistical account of my experience in the North Woods may be of value:

"I left New York on the special express, 10:30 A. M., Hudson River and N. Y. C. RR.; reached Utica 6:55 P. M.; took the Black River and Utica RR. for Boonville, and reached Boonville, thirty-five miles from Utica, about 8 P. M. Remained over night at Geo. May's, Hubert House; \$2 a day; omnibus and porters in attendance to convey passengers and baggage to hotel free of charge. At 8 A. M. I started for the woods and Fulton chain of lakes, twenty-four miles distant, twelve miles over mountains and rolling country, a few miles through deep sandy cuts and over high sandy mountains, to Sand Hill. From this hill to Moose River, about six miles, road very good in ordinary dry weather—good wheeling and walking. Moose River is reached about noon, a very small town, with a hotel near the river. Bark peelers and tanners are the chief inhabitants. Moose River is crossed by an old, wide scow-boat that won first prize in the Harlem regatta—distance, one mile and return; time, seventeen hours fifty-five minutes and forty-five seconds. At any rate, the geeatle boy will ferry one across free of charge, unless one feels dush, and can contribute a dime. The sportsman then begins his travels in Brown's Tract. The pleasures of the woods begin here. Do not feel discouraged at the acres of mud and stagnant water encountered in the fourteen miles

to Comstock's. The "Forge House," and the fishing and hunting will amply repay you. The road from Moose River to the "Forge House," commencement of the Fulton Chain of Lakes, is the worst I ever saw, not excepting General Grant's campaign from Culpepper Court House, May 4, 1864, daylight, through Virginia, to the surrender, 2:30 P. M., April 9, 1865. The sublime still quiet of the woods is grand beyond description, and affords much pleasure to one coming from the large and noisy city of New York. Nothing is to be done for fourteen miles but to enjoy that supreme quiet which is only found in the woods and on the prairie. Hell Gate is a small body of water to the right of the road, seven or eight miles out, barely discernible through the woods, next the old Arnold clearing, where in years gone by stood a hotel. Thists two and a half miles from the "Forge House," over good roads. If one leaves Moose River at 12 M., the "Forge" can be reached in five or six hours, giving ample time in the woods. I have walked it in three hours and forty-five minutes, but I did it when the roads were good, and to satisfy myself that my powers of endurance were as good as when in the army. I presume an ordinarily good pedestrian can walk from Boonville to the "Forge House"—twenty-four miles—in nine hours. Parties going into the woods generally reach the hotel from 6:30 P. M. to 7, from Boonville; but pedestrians should start early, get into the woods before the heat of the day, bring the hotel into sight at four in the afternoon, take a bath in the lake and an hour's sleep before a good dinner at "Comstock's." This is, by all odds, the best kept house in the woods, if one will bear in mind that all supplies must be brought in on the snow. Parties here determine at which lake of the chain they will go into camp.

One can remain at the hotel for \$2 per day, 50 cents a day for boats, and \$3 per day for guides. Special arrangements can be made much cheaper, according to time or number. At Ed Arnold's, head of Now Lake, one can board in a log cabin at \$1 per day, and sometimes can arrange to have a boat at \$1 per week—bed and board first class. Nothing can be done without a boat; there are no roads, and, without a guide, one would soon get lost. After a night's rest and a good breakfast at the "Forge," we come to the fishing. There are always from one to six guides at the hotel, who may be engaged ahead by letter. They are all good, industrious, honest men, young and old, earn their three dollars per day with whomever they go, and have been in the business from one to forty years; know the woods, lakes and rivers, how the fish run and where they lie at different times of the year to a certainty. Three dollars per day is the price, board included; but after one has been out a few times they can soon learn to find the spring holes in which the speckled lie without the expense of a guide. One who wishes to travel cheaply can write to Ed Arnold, Boonville, and he can get accommodated for seven to eight dollars per week, boat included. Let him lit out with fly rod, four dozen good, assorted flies, a half dozen eleven foot leaders, good reel and oil line of about fifty to seventy-five feet, all costing from \$15 to \$25, as one feels he can afford; a pack basket and iron basket, which can be had for \$5 or \$3; a couple woolen shirts, blue in color, one to put on before leaving home, the other to be packed in basket; a change of underclothing, a common tin drinking cup, needles, thread, etc., and whatever other little articles one may think he needs to make good wear and tear. The whole outfit will weigh from twenty-five to thirty pounds, and should be carried on the back, with nothing swinging below the hips or on the side. Thousands go into the woods who carry a great number of articles they never find use for. A good woolen blanket strapped on top of a pack basket or knapsack will be found indispensable to those intending to camp out in a bark shanty, of which there are quite a number on the different lakes very handsomely situated, and all ready waiting for occupants. Whoever reaches them first is "owner of all the surveys, his right there is none to dispute." A gill of tar of oil, to be had in any drug store for twenty cents, kept well corked in a bottle, must not be forgotten, to keep away the punkies and mosquitoes. Tobacco smoke is also a good preventive. The flies last from warm spring until about the middle of August. Without oil or tar I always found it impossible to fish a spring hole. Ed Arnold's is found a very convenient and central place to stop, at the head of the Third Lake, overlooking a beautiful sheet of water, about a mile long and the same distance wide. From the top of the log house one can see the speckled and salmon trout jumping all over this mile square in the early morning, up to about noon every day from five to twenty at a time, in different directions. Arnold's is a couple of miles from Big Moose Carry and Fourth Lake, six to eight miles from Big Moose Lake, which is about five miles long by one wide, very deep in some places, picturesque, handsome and full of speckled and salmon trout, the salmon weighing from one to twenty-five pounds, very solid and cold when taken out of about forty feet of water on a hot day in July or August. Into Big Moose quite a deep, wild stream flows from the upper and Northern end, which is also full of large speckled trout. Big Moose Carry, by way of Fourth Lake, leaving Third Lake and Arnold's early after breakfast, is the route generally taken to the North Branch of Big Moose River for speckled trout. When in the spring holes go into camp in the vicinity of the Indian Hole first night out. Next morning, at the peep of day, fish the Indian Hole, then breakfast, make the carry around the rifts, and, if the day turns out cloudy, fish down the river and up the main branch to Comstock's. Then you are ready for a five-mile run through the First Second and Third lakes, back to camp. A small broiling iron, made of fine wire, will be found very convenient for cooking fish on such an expedition as this. From Camp Arnold a party can go to Little Moose Lake, about eight miles distant, making one carry and return the same day, but will find it much more pleasant to fish the spring holes late, go into camp for the night, and return to camp next day, fishing before sunrise. Fish in any of the other lakes can be taken the same way, returning same day or not as one feels disposed. I speak of this plan more particularly on account of invalids, who may not have the strength to endure the fatigue. Now, as to expenses: Fare from New York to Utica, \$5; Utica to Boonville, \$1.41; horse to carry baggage and fisherman from May's Hotel to Forge House, \$5; May's Hotel, supper, lodging and breakfast, \$1.50. I would recommend to those who can walk to do so by all means, as they will feel much fresher next day and more ambitious to take the trout on the fly than if they had come over the rough road horseback. Sixteen dollars will pay all expenses to and from Brown's tract; \$20, if one has a horse, both ways. Fifty dollars will give one three or four weeks in the woods, covering all expenses—even \$30, if parties travel in threes and six, as the boats cannot well carry more than three at one time. All this small sum of money your doctor and druggist will undoubtedly feel deprived of.

FLY ROD.

A VALUABLE RECIPE.—Cut this out and paste it in your hat. It may some day save the life of your mother-in-law:

"A man who had announced his first attack of rheumatism learned in one-half an hour that the following would cure it: Iodide of potassium, quinine, glander salts, onions, raw lemons, raw silk, oil silk, gin and tansey, rock candy and whiskey, Turkish baths, a potato carried in his pocket, a horse chestnut carried in his pocket, an eel skin around his leg, a suit of red flannel, chloroform liniment, hot lemonade, a trip South, a dry atmosphere, equable temperature, sulphur baths, mustard and hot water, camphor liniment, and electricity."

—A few gentlemen wishing to join a first-class shooting and fishing association can hear of a favorable opportunity by addressing OAMR, this office.—(Ad)

Fish Culture.

MIGRATION OF FISHES.—No. 2.

BY G. BROWN GOODE—READ BEFORE THE AMERICAN FISH CULTURAL ASSOCIATION.

MAXIMUM TEMPERATURE.

On the coast of eastern Maine we are told that the menhaden schools keep passing to the eastward until about the middle of July, when their impetus is apparently checked, and their movements for thirty or forty days seem to be local only. During this period the temperature at Portland varies from 60 deg. to 70 deg., this being the height of midsummer. The monthly means for July and August, 1876, were 66 deg. 7 min., and 63 deg. 9 min. The same months at New London are placed at 73 deg. and 73 deg. 3 min.; at Norfolk, 84 deg. 1 min.; June, July and August, at Jacksonville, average above 85 deg., and we have no satisfactory evidence that the menhaden are seen there in midsummer. At Key West the lowest monthly mean is December, at 66 deg. 4 min., in an unusually cold winter.

RANGE OF TEMPERATURE PREFERRED.

These facts seem to indicate that under ordinary circumstances the menhaden prefers a temperature of 60 deg. to 70 deg., Fahrenheit. When the rising temperature of spring has passed the limit of 50 deg. to 51 deg., the fish are certain to appear; and when the falling temperature of autumn reaches that point their departure is equally sure, though a few individuals may linger in water not congenial to them. The opposite limit seems to be marked by the line of 80 deg., or perhaps 75 deg.

An easterly or northerly wind, lowering temporarily the surface temperature, causes the school to sink below the surface. The chill of night also drives them down.

These conclusions are not regarded as final. The movements of the fish about Cape Hatteras are very puzzling, and need to be interpreted by a series of careful temperature observations.

THE RELATIONS OF THE TEMPERATURE OF THE WATER TO THE SEASONAL MOVEMENTS OF THE MENHADEN.

The relations of the temperature of the water to the movements of the menhaden schools having been studied, a new question is at once suggested. When the schools disappear from our coast, driven by falling temperatures, where do they go? The answer must be in the form of a theory, for no one has seen them during their winter absence; at least no one has been able to identify the New England and Middle States' fishes after their departure in the autumn. It is evident that there are but three courses open to our coast fishes when it becomes necessary for them to leave inshore:

1. They may swim out to sea until they find a stratum of water corresponding in temperature to that frequented by them during their summer sojourn on our coast.

2. They may swim southward until they find water of the required warmth.

3. They may descend into the abyssal depths of the ocean, there to remain for a season in partial or total torpidity.

The last of these theories is the least plausible, from the fact that it necessitates the greatest change in habits. The susceptibility of the menhaden to slight changes of temperature has been pointed out. Hybernation in the oceanic depths involves a change of ten to twenty-five degrees colder than that preferred by them in summer, as well as other important changes in respect to specific gravity and pressure.

The hybernation theory is a favorite one with the fishermen of the British provinces, and has recently received strong support from Professor Hind in his treatise on the "Fisheries of North America." His arguments refer to the mackerel, although the scup, tautog and herring are included by implication. He refers to the appearance of the mackerel "with scales on their eyes and blind," and suggests that the winter sleep of fishes is probably much more general than is usually supposed. He takes the position that there are only two alternatives possibly open to fishes which cannot live in cold water. They must migrate south or hybernate. His arguments naturally fall into two categories—those against migration and those in favor of hybernation. Those in favor of hybernation may be summed up as, first, the testimony of fishermen and travelers; second, the quoted opinions of theorists; third, peculiarities in early and late fish; and fourth, the alleged hybernation of other fishes.

TESTIMONY OF FISHERMEN IN FAVOR OF HYBERNATION CRITICISED.

1. The statements of one M. Pleville le Peley, "an eyewitness," are quoted both from Lacépède and H. de la Blanchère. M. le Peley gravely states that he had observed about the coasts of Hudson Bay "the mud at the bottom of the small, clear hollows, encrusted with ice around their coast, entirely bristled over by the tails of mackerel imbedded in it nearly three parts of their length" (Hind, op. cit. Part II., p. 10, note); and again "affirms having seen in the middle of winter, in deep, muddy bottoms, myriads of mackerel packed one against the other, with one-half the body plunged in the mud, where they remained during the winter. As soon as spring came they aroused themselves from their torpor and appeared always on the same day on the same coast at the surface of the sea, and repaired to favorable spots to spawn" (Part I., p. 78). The absurdity of these statements renders it unnecessary to criticise them. The other testimony is less definite. A Newfoundland fisherman remembers to have heard his father say that forty years before "he had often seen mackerel in White Bay come on shore like squid, with scales on their eyes and blind, about Christmas" (Part I., p. 78); and again a statement quoted from the Rev. John Ambrose that "mackerel have been brought up from the muddy bottoms of some of our outer coves by persons spearing for eels through the ice" (Observations on the Fishing Grounds of St. Margaret's Bay, N. S., by Rev. John Ambrose, and Proceedings and Transactions of the Nova Scotian Institute of Natural Sciences, 1866-7, quoted by Hind op. cit. Part I., p. 79), which statement is not supported by the personal evidence of Mr. Ambrose, being merely a hearsay story. And this is all. Prof. Hind, in Part II of the same work (p. 10) remarks confidently: "That the mackerel spends the winter months in a torpid condition near to the locality where the school first show themselves on the coast has already been adverted to;" and again refers to "the fact already noticed that it is taken in winter from muddy bottoms." I submit that no such fact has been established, and that Prof. Hind's generalizations are without foundation. There is much better evidence to prove that swallows hybernate in the mud of ponds, a theory

which has had numerous advocates since the time of Gilbert White, of Selborne.

THE CONCLUSIONS OF THEORIZERS IN FAVOR OF HYBERNATION, CONTINUED.

2. Prof. Hind first quotes from "La Pêche et Les Poissons" of M. de la Blanchère. The statement, printed as it is in a single paragraph instead of two, and not given in full, conveys the impression that M. de la Blanchère indorses the views of Pleville le Peley, already quoted. On the contrary, he states explicitly: "The question of the annual and regular appearance and disappearance of this fish is still unsolved." He then proceeds to contrast with M. le Peley's views of Duhamel de Mouceau, Anderson and others, who represented that the mackerel pass the winter in the Northern seas, and in spring, beginning their migrations, pass Southward, visiting first Iceland, then Jutland, then Scotland and Ireland and the coasts of Continental Europe, in autumn assembling together for a return to the polar regions. Then he quotes Pleville le Peley and remarks: "This theory associates the mackerel with many other sedentary fishes which pass the winter at the bottom of the sea, stupefied by the cold into a kind of lethargy, and would seem to explain why in October young mackerel of ten and fifteen millimetres are taken, why in winter others of larger size are taken, not with a line, but with nets which entangle those which have not already buried themselves in the mud or the sand." (Nouveau Dictionnaire General des Pêches, etc., Part I de la Blanchère; Paris, 1868, p. 183, article maquereau.) Another quotation is made (Hind, op. cit. Part II. p. 10) from Shaw's "General Zoology or Systematic Natural History," published 1803. Hind asserts "that the four disputed points in relation to the natural history of this fish are there asserted, namely, its local habits, its torpidity during hybernation, the film over the eye, and the fact of its being partly embedded in the soft mud or sand during its winter sleep."

I admit that Shaw asserts the presence of a film over the eye. He does not, however, even give the theory of hybernation his personal indorsement, but, remarking that the long migration of the mackerel and herring seems at present to be called in question, continues: "It is thought more probable that the schools which appear in such abundance round the more temperate European coasts in reality reside during the winter at no very great distance, immersing themselves in the soft bottom, and remaining in a state of torpidity from which they are awakened by the warmth of the returning spring and gradually recover their former activity." Even if Shaw could fairly be quoted as a supporter of this theory, his opinion is of little value. He was not a naturalist, but a book maker, and his compilations are acknowledged to be inaccurate. (See a criticism on Shaw's General Zoology in Gills Arrangement of the Families of Fishes, etc., 1872, pp. 40 and 41.)

The opinions of Dr. Bernard Gilpin and the late Rev. John Ambrose, two excellent Nova Scotian observers, are quoted, (part I., p. 79) though with no apparent reason, for the latter remarks only that "it is the opinion of some" that the third run of mackerel, which takes place at St. Margaret's Bay about the first of August, are not returning from the Gulf of St. Lawrence, but from sea, and "it may be that a portion of the immense school, passing eastwardly in the spring, strikes off to some favorite bank outside to deposit the spawn. Or there may be a sort that never go as far east or west as the others, but winter along our shores, etc., etc." while Dr. Gilpin expressly remarks that though the asserted torpidity and blindness favor the idea of hybernation, he does not think that we have yet sufficient proof to assert them as facts.

The authorities, support of the hybernation theory do not, in fact, support it, and the testimony cited by Prof. Hind is merely tradition and popular opinion, some obtained directly, the remainder at second hand.

ARGUMENTS FROM THE ALLEGED HYBERNATION OF OTHER FISHES, CONTINUED.

Still another set of arguments is based upon the supposed hybernating habits of other species of fishes. Prof. Hind remarks: "In seas which are not ice-incumbered the winter torpidity of the mackerel may be of very short duration; in ice-incumbered seas it may extend over several months. In this particular this mackerel resembles the sturgeon of the Caspian Sea, whose torpidity during the winter is well known, and this winter sleep is not confined to these fish, but is probably much more general than is usually supposed." (Part II., p. 11). Here we have a definite statement. The mackerel hybernates, and the winter sleep is not confined to the mackerel.

The only hybernation which is definitely known to occur among fishes takes place in the fresh water lakes and streams of cold regions. The fish are driven by cold into the deeper waters, and there remain in a state of torpor proportionate in degree to the amount of cold which they experience. They may even be frozen up in the midst of a mass of ice and recover their vitality when the ice is melted. Mr. Milner had a mud-minnow (*Melanura limi*) which was frozen in solid ice in the middle of an aquarium globe three or four times, and each time recovered its vitality upon thawing out. Marine fishes in the extreme north doubtless undergo similar experiences, though I am not aware that any record of such a phenomenon has ever been published.

In warm regions an analogous phenomenon takes place, which has been called aestivation. When the lakes and streams are dried up by the heat the fish seek refuge in the deepest pools, and, when these too are dried, they bury themselves in the mud at the bottom and remain torpid until the rainy season refills the reservoirs and revives them. Hybernation and aestivation do not appear in any case voluntary acts. The fish do not become torpid of their own volition. They avoid it as long as they can, and only succumb when they are deprived of means of escape. They never become torpid when there are greater depths to which they can retreat.

(To be continued.)

Abstract of the Twelfth Annual Report of the Fish Commission of Connecticut for the Year 1877.

THE limited appropriation of the last General Assembly has restricted the operations of the Commission. The distribution of land-locked salmon fry was as follows to the ponds and lakes where in 1876 100,000 of the same species were planted:

"5,000, Waramung Lake, New Preston; 5,000, Bantam Lake, Litchfield; 5,000, Hog Lake, Lyme; 5,000, Gardiner's Lake, Salem; 5,000, Twin Lakes, Salisbury; 5,000, Wauouscoponus Lake, Lakeville; 5,000, Spectacle Ponds, Kent; 5,000, Square Pond, New Fairfield; 5,000, Snipsic Lake, Rockville; 5,000, Hampton Pond, Easthampton; 5,000, Long Lake, Winsted; 5,000, Wangamabourg Pond, South Coven-

try; 5,000, Balahack Brook, South Windham; 1,000, Salton, still Lake, East Haven; 1,000, Rogers' Pond, Branford; 500 Valley Pond, Woodbridge."

With the exception of the 5,000 destined for New Fairfield, arrived in good condition at their various destinations; and of the total number 9,989 died before hatchling, and 4,262 before reaching the proper age to be transferred to the waters of the State. There is every reason for great encouragement in the work of introducing black bass. The fish of this variety originally planted some years ago have increased at a wonderful rate, and the Commissioners have during the past year been in receipt of numerous reports of the success of their efforts in this direction. Many bass weighing four and five pounds have been captured from waters which once contained only inferior and insignificant fish. In connection with this topic it may be noted that the opinion expressed in the FOREST AND STREAM of May 17, 1877, that the introduction of bass into the Connecticut was deleterious to the shad fishery, has been amply sustained by subsequent facts, the return for the shad seines in 1877 being fifty per cent. greater than that of 1876.

The principal object for which the Fish Commission was established was the attempt to restore to the rivers of the State the salmon formerly so abundant, and to increase the supply of shad. The results with the latter fish were so successful that Congress was led to the provision of a Government Commission, which has been instrumental in placing shad in the waters of nearly every State in the Union. After much perseverance the Connecticut Commissioners succeeded in obtaining a limited number of salmon eggs, until, in 1874, more than 1,100,000 were placed in the Connecticut. These are to return in 1878 or 1879. Of the appearance of salmon in the river or in the ponds west of its mouth there were several reports during the past season. Much encouragement is to be taken from the success of Massachusetts in the Merrimack River salmon stocking, a report of which from Com. Brackett is embodied in the present report. Much complaint is justly made of the futility of the efforts on the part of the Commissioners, so long as the present abuses by fishermen with gill-nets are not corrected. This is a matter demanding new legislation, and as to the proper regulations to be enforced the Commissioners suggest:

"1st. The time of fishing for shad should be so changed that none could be taken except between March 15th and June 15th of each year.

"2d. No salmon should be taken in any of the waters of this State previous to July 1, 1880. If statutes should be enacted as suggested, even then the work would not be complete.

"Experience has shown that they must be enforced, and this can only be done by employing honest and fearless men who will devote their whole time to it during the fishing season, and of course a sufficient amount of money must be appropriated to pay them for their services. The simple question is, whether the money which has been devoted to this work by the State during ten years shall be sacrificed to the rapacity of a few fishermen, or whether Connecticut shall have an equal chance with her sister States to test the success of the labors of her Fish Commissioners."

THE BLACK BASS OF CAPE COD, MASS.—WHEN AND BY WHOM THEY WERE INTRODUCED.—Mr. Editor: The first talk of the introduction of the black bass in Southeastern Massachusetts, was at the summer mansion of the late Samuel T. Tisdale, at Agawam, East Wareham, on or about the first day of August, 1849. Prominent among the guests was the late Mr. Preston H. Hodges, then the landlord of the Clinton Hotel, located on the east side of the City Hall Park, New York. After the feasibility of moving live bass from some Western lake to Wareham was duly considered, Mr. Tisdale made the following proposition to Mr. Hodges: "In the proper season next year, 1850, if you will procure the fish (bass) at some convenient point and convey them to Wareham, I will pay 'em bills, except your time, which you must take from the fund of amusement consequent in the capture of that historie game fish, which, to me, is a stranger." Mr. Hodges accepted the proposition, and on the 15th of the following June he put out for Saratoga Lake, with necessary tackle and tanks, and commenced operations, and readily captured twenty black bass, and started by rail for Wareham. On his arrival at Springfield, Mass., the vitiated water was drawn from the tanks and fresh ice water introduced in its stead, and, strange to relate, in a few moments every fish turned up dead. Of course this was a sad disappointment, but Mr. Hodges took the first train west for Saratoga, and again was successful, as he captured twenty more bass in a reasonable time, and again shaped his course for Wareham, via rail to Albany, from thence by boat to New York, where he changed the water; and taking a stock of cochinat, embarked on a Fall River steamer to Fall River, from thence by rail to Agawam, East Wareham, where he arrived with his nineteen bass (one having died on the trip.) These fish were placed in the Flax Pond, a small sheet of water near Mr. Tisdale's residence, at 10:45 o'clock A. M., on the 4th day of July, 1850.

The next year, 1851, about the same number of bass were introduced in other waters in this locality by the same individual. The increase of black bass is truly wonderful; it is probably due to the great amount of food our waters contribute to their voracious appetite, and by their hardy habit. To-day, more than one hundred lakes, ponds and rivers in Eastern Massachusetts are populated from this early private enterprise.

Rhode Island and Connecticut are also reaping a harvest of fish, due to the enterprise of two men, whose names should be enrolled in the history of fish culture. It would be useless to write at length concerning this truly game fish, as he is too well known to the readers of the FOREST AND STREAM AND ROD AND GUN for me to relate anything new in his nature and habit.

I have never taken a bass here over four and one-quarter pounds, yet, it is not uncommon to see larger ones, and there are reliable reports that several were taken last season weighing from six to seven and a half pounds.

Of course, in my life I have angled with a great variety of rods, say beginning with an alder stick, white cedar, hemlock, birch, and so down with the pace of time, of numerous artificial joint rods of domestic and foreign make, but I am frank to confess that I never have handled but one rod in my life.

On one of the last days in September I went with a friend for black bass, when he proposed to change rods. I at first declined, as I feared I would injure his rod, but as he insisted, by complimenting me on my experience, I accepted the proffered exchange. The rod was a Leonard make, of eight ounces, split bamboo. I made a few casts when something lively struck my bait, and when satisfied I had the lad hooked I allowed him a short play. On account of snags, and being assured I had a lively customer to contend with, and what to me seemed a frail rod, with all his stubbornness I raked him to my feet, netted and landed him in what I thought was good style, and he proved to be a black bass of three and a quarter pounds weight. This, to me, seemed a thing of life, in comparison with anything I had ever used.

I never take a black bass from the water void of a reverential thought of Mr. Samuel T. Tisdale, really the prime mover and benefactor to the sporting circle of this community, by the introduction of that fish, a patrimony for all time, without money or price. I hope no man—in fact, no true sportsman—will take black bass or any other game fish during the close season; but, perchance, there be such in our community, they are unworthy the name of man, and much less the honored name of a sportsman, and they should be infamously branded by the true sporting circle as frauds.

Wareham, Mass., March 6.

CYRUS LISCOM.

CARRYING COAL TO NEWCASTLE.—That is what it seems at first thought. Mr. E. S. Marks, one of Seth Green's efficient helpers, has visited the State hatchery at Caledonia for the purpose of taking back to the Felton chain of lakes about 200,000 brook and salmon trout, 100,000 of each. In the hatching-house near the Old Forge House 200,000 frost fish are to be batched and placed in the waters. The advantages of this location for hatching purposes are now so apparent that it is considered certain that the State will establish a permanent State Hatchery there, to supply all the northern quarter of the public domain with fry.

—The number of whitefish spawned at the Wisconsin State Hatchery this season will approach seven millions.

—Esopus Creek, Kingston, N. Y., has been stocked with black bass and yellow perch.

MINNESOTA.—Wm. Golcher, one of the State Fish Commissioners of Minnesota, has resigned his office and gone to California to reside. The vacancy is to be filled by the Governor. Dr. Robt. O. Sweeny is the present sole incumbent in the Commission.

—The French Society of Acclimatization, of Paris, has just acknowledged the receipt of a shipment of brook-trout eggs from Seth Green. They were first packed in the usual manner and then placed in a refrigerating box, and that arrived in excellent condition.

Natural History.

HABITS OF THE RUFFED GROUSE.

EDITOR FOREST AND STREAM: MONTREAL, Feb. 8, 1878.

The days of my boyhood were spent near Sheldon, Vermont, and in my youthful rambles, gun in hand, through the forests that surrounded my native home, I learned that I was an inveterate young pot-hunter, for it was my favorite sport to stalk and shoot the cock grouse on their drumming logs—a feat that requires no small amount of patience and stealthy creeping. I remember one day, when I was following through the underbrush and trying to get a shot at a drummer that had run off from his log, before I could draw a bead on him he ran toward another drumming log that was also occupied by a male grouse. As the first one approached I saw the possessor of this log set his leathers up on end and draw in his head, spread his tail out like a fan over his back, and with wings also spread and hanging down by his side, he slowly strutted along the log in a style that would have caused any beholding Thomas Gallopavo to have died with envy. At his appearance, the bird that I was following made himself as small as possible, and darted rapidly away through the brush. The occupant of the log, after turning several times slowly around, lowered his crest and started in pursuit of the intruder.

Some years after this occurrence I was tracking on the snow a covey of grouse. When I came in sight of them they ran into a spruce thicket, and as I approached this thicket one of the birds came out and slowly approached me with feathers up on end, and with wings and tail spread, looking like an animated ball of feathers. I watched his actions for a few moments as he strutted toward me, turning slowly from side to side, then I knocked him over with a charge of No. 6 shot. He was an unusually large old cock-grouse, evidently the patriarch of the flock. Three years ago last November, while shooting grouse in the woods that border the Black River, at the rear of this island, I passed over Mt. Creek into a narrow strip of bush that covers the point of land between the creek and river, where my spaniel flushed a grouse, which, with feathers up and head drawn in close, fluttered slowly toward me in a wavering, hesitating manner, as if he had a half mind to stop and give battle to his disturber. After he had passed me I covered him and pulled the trigger. Snap! a miss-fire, and the bird dropped into a thicket of sage-brush and wild grass. I replaced the defective cartridge with a fresh one, and sent my dog to put the bird up again, but though he coursed that patch of brush through and through he failed to find his game again. The following autumn I had a similar occurrence happen me. When shooting grouse on the burnt tangle that lies north of the river St. Maurice, a few miles above Three Rivers, my dog flushed there, out of the ferns, a grouse similar in appearance to the last one mentioned. I took a double shot at him at a long range, and saw him slowly settle into the ferns, not over fifty yards from where I stood. I instantly approached the spot and remained in its vicinity for nearly half an hour, while my dog worked over every yard of the ground around me, but failed to find any trace of the bird. Both of the above cases puzzled me not a little, as my dog had a fine nose and was well-trained to work on grouse. Their unusual appearance I could readily understand, for it was the same antagonistic spirit that caused them to set their leathers up that makes a "Tom Turkey" spread himself and a cat to get her back up when angered, to make themselves look as formidable to their foes as possible; but the failure of my dog to find those birds the second time was a mystery to me, and probably would have remained so until now had I not seen it clearly proved through the columns of your valuable journal that quail are gifted with the power of withholding their scent, and there is no reason to doubt but that other species of gallinaceous birds are also endowed with the same power.

STANBRAD.

ST. PAUL, Minn., Feb. 11, 1878.

EDITOR FOREST AND STREAM:

As I have noticed various discussions in the FOREST AND STREAM about the drumming of the ruffed grouse, and have found none to correspond with my experience, I will herewith give you my observations regarding the above. Upon carefully approaching the birds, I have found them sitting longwise on a log, and when in the act of drumming they would lie down close on to the log, with their head and neck stretched out, flapping or striking their wings against the sides of the log, which, it seemed to me, caused the drumming, and I think my theory is correct, as I have seen them plainly in the act.

Truly, yours,

J. P.

Our correspondent, Mr. Joseph Scott, writes us as follows: Your correspondent, "R. T. M.," in your issue of January 24, calls the attention of correspondents to the fact that the ruffed grouse in the western part of New York will almost always alight on a tree at the end of its flight, while in Connecticut it very seldom does so.

As to the above, I know nothing of the habits of the ruffed grouse in the places mentioned, but I do a little in Muskoka, where it will invariably alight in the trees in the month of September, when the birds are young. Later on, say November, when the young ones are strong on the wing and wild, they will often alight on the ground. I have often flushed them as many as three times before they would alight on the trees.

I noticed last fall that they refused more than I ever saw them before to alight on the trees. What the reason was I don't know, unless it was because the ground was more free from snow than any previous year to my knowledge.

Our Hartford correspondent, "T. S. S.," gives his experience of king partridges in the following words:

I notice recently several references to "king" partridges. A year ago, a friend of mine came home with a small bag of game, and accounted for the fact by saying that he had spent the afternoon chasing a "turkey." Upon being called upon to explain, he said he had seen a partridge as large as a turkey, but could not secure it. The following day I went with him after the phenomenon, and sure enough we found her. She finished wild, but I marked her course, and on following, Bob pointed her near a fence corner. She gave me a fair shot, and I bagged her. We had no means of weighing her, but I should think she would weigh 2½ lbs. Was it a "king partridge?"

KING PARTRIDGES.—Mr. Editor: Much has already been written on the ruffed grouse question, but "the pen is mightier than the gun," and I think the birds can stand it if you can. I am another of these favored mortals who have seen the "king" partridge, and as I find there are people who give the theory credence, I will tell you what I know about kings. On one of the islands of Lake Winnepesaukee, in a warm day in March, I passed through a belt of timber, and, coming into the open on the sunny hillside, saw, about 100 yards from me, what had all the appearance in size and style of a cock turkey strutting in the fullness of his pride. Ah! thought I, some lover of solitude has chosen this island on which to enjoy his political views and eat his roast turkey undisputed. While looking about me to discover other signs of civilization, I was soon discovered, and a whizzing of well-known wings announced the sudden disappearance of my supposed gobbler; but as he flew away in a very unkinglike manner, accompanied by his mate, he appeared no larger than the average bird. This was in days before the era of the F. & S., so I did not then know there was a race of kings in the family of *Bonasa umbellus*, although I had heard stories of the mother of invention and the father of all rabbits, etc. Several interesting items in F. AND S., in relation to shooting the ruffed grouse with the rifle, call to mind an incident which happened in the Maine woods where the birds were tame. I was shooting at their heads strictly. One old fellow sat on a limb about forty feet from the ground. My first shot missed, but the bird ducked his head and looked inquiringly over and about him, wondering what was in the air. In the meantime I had ready another cartridge and put on him again. This time he dropped on to the ground. On picking him up, imagine my surprise at being unable to find blood on him or a feather disturbed; but a slight bruise on the side of the head showed where the bullet grazed as it passed, causing instant death. My experience has been that, where the birds were wild, if flushed late in the fall they generally fly a longer distance and alight on tree-tops; and O, shades of departed kings, how many times I have put on them with an ounce and a quarter as they whirled through the foliage; expressed the usual lament that so many wounded birds hide away and die, while they probably were looking around for their supper!

Bromfield House, Boston, March 12.

SQUIRRELS AND EMASCULATION.

ROOM OF THE DIRECTOR OF THE MUSEUM, Buffalo, Feb. 23, 1878.

EDITOR FOREST AND STREAM:

I have read the letters in your very valuable paper with regard to the emasculation of the squirrel, noticed by hunters. It seems to me clear that the greater number of reported cases of emasculation are founded on specimens in which the testes are actually present but temporarily concealed in the body. Where the testes have really been destroyed, I suggested to Prof. Linden that it might be the work of *Callosia emasculator*, or an allied species of bot-fly. The natural history of these parasites is not well known. As to how many species we have in America, we shall know more when Baron Osten Sacken's Catalogue is published, of which the manuscript is nearly finished, as the author informs me in a recent letter from Heidelberg. But that a fly really emasculates the striped squirrel (*Tamias striatus*) seems certain from Dr. Fitch's observations. The doctor reared the fly from grubs found in the testes, which were completely eaten out. Dr. Fitch suggests that the squirrels endeavor to kill the grubs in the testes of infected individuals, and this action has been mistaken for an unfriendly act of castration. The suggestion that the grubs could not penetrate the outer envelope of the testes seems to me disproved by Dr. Fitch's experiments; besides, insects are well known to penetrate more dense and tougher substances. I think we must wait for more facts in the matter. First, we must have truly emasculated red and gray squirrels; secondly, we must find out if this condition is caused by a bot-fly; thirdly, we must find out if this fly is the same as the one found by Dr. Fitch destroying the testes of the striped squirrel. Dr. Fitch seems to have adopted the belief that all the stories of emasculated squirrels were true. We may find, however, that the cases of emasculation are comparatively rare. In the meantime it is evident that FOREST AND STREAM has added to the numerous obligations which naturalists already owe it, by clearing up many misunderstandings in the present matter.

Very respectfully,

A. R. GROTE

BUFFALO, N. Y., Feb. 25, 1878.

EDITOR FOREST AND STREAM:

This controversy has at least exposed the fallacy of the popular, but

utterly unsupported, belief that the castration is performed by the attack of the pugnacious red squirrel on the other animals of the same species. Emasculation, however, means destruction, not periodical dislocation, by passage of the testes through the inguinal canal, which normally and abnormally may happen in other mammals, man included. Later evidence adduced by examination of duly emasculated squirrels will prove the correctness of Mr. Fitch's observation, based upon the facts before him in the form of the grub of the *Callosia*, and the appearance from it of the perfectly developed insect. In conclusion, I cannot help but think lightly of the feeble objection offered to the progress of the boring larvae by the protective envelope, *tunica vaginalis*, when thinking of the powers exerted by many boring grubs, to which not even several inches of solid intervening wood offers any impediment whatever, as illustrated by the ravages upon timber through the agency of many species of beetles, such as *Curculio* and *Boristichus*.

Yours most truly,

CHARLES LINDEN.

BALTIMORE, February 23, 1878.

EDITOR FOREST AND STREAM AND ROD AND GUN:

I have been much interested in your articles regarding the so-called emasculation of squirrels. During the past two years I resided in a neighborhood where squirrels were numerous enough to be a pest to the farmers, and a merciless warfare was there waged against them the year round. I am of the opinion with you that the testicles are not wanting, but only not discernible at certain seasons. At all seasons of the year I found the greater number of squirrels shot—both fox and gray—to be males; and in spring—say from April 1—nearly every one of the full grown males appeared devoid of testes, and the young, until about half grown, entirely so. In the fall I don't remember seeing a single full grown male on which the organs were not fully developed. I have frequently seen a number of gray squirrels on one tree, some seemingly engaged in combat, the objective point of attack appearing to be the testicles, but have never observed any wound. Once, last fall, shooting two squirrels engaged in this manner, I found them to be a male and female. This is the only instance I remember of shooting both animals whilst so engaged, as I ordinarily hunted them with a rifle. But may it not be that these apparent combats are a part of the amours of squirrels? Respectfully,

FREDERICK.

EAST DAY, Mich., Feb. 4, 1878.

EDITOR FOREST AND STREAM:

My first experience on this subject was in the year 1840, in the spring, when young squirrels were making their appearance, I was out hunting, and had sat down to rest and take my lunch. While doing so, seven young gray and black squirrels made their appearance near me on an elm tree, and I commenced eating buds. Before I finished my lunch, an old gray squirrel went up the same tree and commenced chasing the young ones, and caught several of them in a very short time, which brought to my mind what I had often heard said, that the red or pine squirrels destroyed the testicle in the black and gray. I killed the entire lot, eight in all, but was careful to take the old one first. The old one I found to be a male, and three of the young ones were males, and had been castrated, the blood still running from the wound. The other four were females. I have seen the same thing take place several times since, but never by a red, and it was always done by old ones upon the young; but I have good reason to, and do believe that the red do the same thing, from reliable persons of my acquaintance that have seen them do it. I noticed in an article signed "Chill," a question asked, "Why is it the black is the only victim if it is an insect?" I agree with "Chill" in reference to the red, but have seen as many of the gray as the black affected in that way.

I must confess that I am not much of a believer in the insect, as I have never found it in that part of a squirrel. Where I was raised we called it a warble, which I suppose is the same thing, and I never found any such a thing on a young squirrel in the spring, but always on the old or full grown in the fall.

W. H. C. MITCHELL.

NEWARK, N. J., March 5, 1878.

EDITOR FOREST AND STREAM:

I have taken young squirrels of different families from the nest up to the time of weaning, and never yet found them injured. I think that the idea that the old ones perform any operation on them is absurd. After the young ones leave their parents, however, all family ties and affection cease, and the son is as apt to be mutilated by the father as by any other squirrel.

From observation of the fights of grays, I am convinced that they emascinate each other. A friend of mine, a thorough naturalist, raised a family of three squirrels by means of a nursing-bottle. One, a hawk, at one and a half years of age had testes fully developed and apparent. A family of grays lived unmolested in a tree almost overhanging the naturalist's house, and one day the young buck escaped from the house and ran up the tree. In less than twenty minutes our young specimen returned a mutilated squirrel. Rods are more agile and muscular than the grays, can dodge better, and give a heavy blow or thrust edgewise, and in a short time they drive from a grove almost all grays, and emascinate the unfortunate remainder. My friend, also, had a pair of grays, which reared a family in captivity. I state this, because many deny that squirrels breed in captivity.

I believe there is great diversity in the time or age of maturity in squirrels. I have shot two males of the same family exhibiting the greatest difference, and I think there is no uniform rule. A few years ago I took from the nest three grays not a day old. A cat with kittens received one of them, contrary to all rules, and reared it along with three of her own tribe. The kittens had the greatest affection for their foster brother, except at dinner time, when a fierce battle for an available seat invariably took place. However, this young *Romulus* grew and prospered, and it was not until when he was eighteen months old that I could pronounce him a hawk. Others I have seen fully developed when about a year old. I do not think the *Callosia emasculator* has any more to do with mutilating squirrels than the numerous deas which inhabit their downy coach. In some parts of America I have found this grub on almost every squirrel, especially reds, in others not at all, yet the number of those emasculated was about the same. In conclusion, I would say that I have seen so many exceptions to Owen and Huxley's rule that I think there is no fixed rule at all. I have had dozens of red in captivity during the breeding season, and dozens during other times; have shot many of these captured ones, and on dissection found as various results as could be imagined. Two male reds, known to be of the same litter, were dissected, and the testes of one was found securely hid under the skin, while those of the other was apparent without dissection. There is, therefore, no general rule, but I am inclined to think that congenital malformations are more numerous in squirrels than any other animals.

C. H. CROW.

[We are glad to be able to publish the above communication from Prof. Grote, and we recommend his suggestions to our correspondents. Opinions are all very well, but they are in no sense evidence. What we want in this matter is facts; and not only facts, but facts established by close and accurate observation, not by a hasty jumping at conclusions. Until we can obtain something more definite than mere expressions of opinion, then we shall consider the discussion closed, to be reopened only for the admission of absolute evidence.—ED.]

BIRDS' NESTS IN UNUSUAL PLACES.—*Ames, Iowa, Feb. 11.*—In your issue of Jan. 31 I notice an account of a nest of the common robin built upon the ground. I can add another instance of the kind which came under my observation in the State of Massachusetts some twenty years ago. In this case the nest was placed at the foot of an apple tree, between the swell of two roots, upon the down-hill side of the tree, which stood upon a steep hillside. I discovered the nest when in the process of building, and watched it closely till the young flew away. F. E. L. BEAL.

—We have received from our frequent correspondent, Mr. G. H. Ragsdale, of Gainesville, Cook County, Texas, samples of his bird skins, Painted Bunting (*Pictrophanes pictus*), and Leconte's Sparrow (*Coturniculus lecontei*). The skins are well made, and the prices at which they are sold are reasonable, being for *C. lecontei*, \$1 25, and for *P. pictus*, 40 cts. Ornithologists desiring bird skins from Texas will do well to communicate with Mr. Ragsdale.

DEATH OF THE HIPPOPOTAMUS.—It is with regret that we announce that "Baby," who was born in 1876, on the Nile shuffed off his mortal pachyderm on Tuesday, at the Aquarium. His graceful waddle, his open countenance will be seen no more. Dr. Kohn, his mentor, is disconsolate; so is the milkman who supplied the baby hippopotamus with the lacteal fluid by the can.

THE NAUTILUS IN FLORIDA.—It has been doubted by some naturalists whether the Argonaut, or paper Nautilus, occurs on the Florida coast. Two paper shells have been found here this winter, and last winter one was found with the animal entire, besides another empty shell. Its habitat is probably in tropic seas, but it is sometimes brought to these shores by storms. In the Indian Ocean I have seen it in calm weather sailing on the surface, as described by old writers, but discredited by closet naturalists of these days. S. C. C. Halifax Inlet, Fla., Feb. 17, 1878.

THE MILD WEATHER.—*Boston, Feb. 15.*—Editor Forest and Stream: On Wednesday last, Feb. 13, I saw two American goldfinches flying about my garden. I recognized them first from their song, and on investigating saw them on a clothes-line. Their predominant color was clear yellow with black on the wings, and on taking flight they had their usual manner of first falling and then rising, uttering their usual song while flying. I have been much interested in ornithology and oology for some years back, but I never knew this bird, which is always very late, to arrive in the spring, rarely coming before June, and I have found their nests with eggs as late as the 10th of September. The day was pleasant; thermometer about 30 deg. Is not this something rather unusual? H. D.

We think not. This species habitually winters as far north as Connecticut, and in mild seasons, like the one just passed, might well be seen occasionally in Mass. Another correspondent, Mr. Chas. J. Henri, writing from Cincinnati, says:

Robins (*Turdus migratorius*, Linn.) made their appearance in Avondale, a suburb of this city, on Thursday, Feb. 7. This is some days sooner than usual.

CAZENOVIA, N. Y.—Please record for March 7th to 9th of this remarkable spring as accompaniments of warm sunny days, butterflies, honey bees, grasshoppers, all the early birds, a tadpole and pussy-willows, in silken fur, and crocuses in bloom. It may be that fickle Spring may ring on changes of far less pleasant character, but her favors need not be forgotten. The duration of ice in the lake has been shorter by ten weeks than in seven winters. L. W. L.

Woodland, Farm and Garden.

HIS DEPARTMENT IS EDITED BY W. J. DAVIDSON, SEC. N. Y. HORTICULTURAL SOCIETY.

SPRING FLOWERS.

SPRING flowers will soon paint our fields and woods, enliven our garden, gladden the hearts of children and cheer the paths of older people. Their freshness, brightness and modest beauty rivet greater appreciation than the more gaudy summer belles, and surely they are by far the most accommodating. Many of them come into blossom and are past before arboreal vegetation is clothed in leaves; hence, though they may occupy the shadiest positions in summer they may have sunlight sufficient in spring. They require little or no nursing in the way of cultivating, staking or watering; merely plant them once, keep rank vegetation in check so that it may not choke them, and let them alone; they will take care of themselves and annually become stronger and more beautiful. In fact, in many gardens there are places so densely shaded with trees as to be unfit for summer flowers. Well, spring beauties are glad of such a home. High, dry, gravelly soils are averse to their tastes; they love to revel in good, free soil, enriched by vegetable mould or decayed leaves, but they are in no wise particular.

Conspicuous among the earliest bloomers are Snowdrops and Crocuses, whose proper places are studded about on the lawns, under trees, near the roots of bushes, and maybe here and there a clump in the garden border. Daffodils and Jonquils soon follow, and may be naturalized in half wild places, or together with Grape Hyacinths, Siberian Blue Squill, Crown Imperial, Guinea-ben Flower and Solomon's Seal, planted in clumps in front of shrubbery or in the borders. Hyacinths and Tulips are mostly used to fill up the flower beds prior to the advent of Pelargoniums, Colonses and other greenhouse panspermalia; and about the end of May they are re-

moved to some out-of-the-way place till next October or November, when they are again transposed to the front. This double shifting enervates the bulbs; better plant them in permanent clumps in the mixed border. Some growers advocate planting "Dutch" bulbs so deeply that they will be beyond ordinary digging depth, and thus they may remain unmoved without interfering with the summer inmates. But I do not practice this method myself nor recommend it to others.

Spring Beauty is too tiny and pretty to scatter about. Keep it—also the Violet Oxalis—in little masses in choice shady places, and with a stout peg mark their whereabouts for the summer, otherwise, after they lose their leaves, they may be inadvertently disturbed or lost. European and American Dog-tooth Violets only require a moist, shady nook and good ground, where they can run wild, to exert themselves to rank luxuriance. With them the Ten-o'clock and Spring Snowflake may also associate and be happy. Lily of the Valley likewise loves a somewhat similar place, and to be left undisturbed; it will take care of itself and increase mightily as well. It will also thrive rankly and flower more profusely when grown in sunny spots.

The May Flower, or Creeping Arbutus, I love to see in the woods, and I leave it there, as it refuses to be comforted in our garden. Twin-leaf, Mandrake and Birthroots enjoy shady locations and good soil, as among bushes where there is an annual accumulation of decaying leaves, or they can be grown to advantage in garden borders or half wild places. Bloodroot—a beautiful white flower—relishes somewhat similar conditions, and likes particularly to ramble in the shady portions of an old rockery or rootery. The creeping Forget-me-not, so productive of pretty white-eyed blue blossoms, prefers to be naturalized along the garden fences, at the foot of old walls, among the hushes, or to share the room with Bluets on a moist bank. It is also an excellent subject in rockeries, rooteries or borders. Hepaticas, both single and double, are perfect gems, hardy as dandelions, and they bear their exquisite blue, red or white flowers in great profusion. Christmas Roses are not so intrinsically beautiful as they are desirable on account of their earliness to blossom, the white flowers often expanding as soon as thaw unlocks the surface of the earth. If the plants be protected with a mulching they often flower and are past before the covering is removed—say in March. The purple-flowered kind is not so pretty as the white, neither does it open quite so early.

Moss Pinks will grow anywhere not in a bog, and though desirable for a place in the garden I never saw them look sweeter or more appropriate than in interlacement with Bluets, Violets, Canada Lilies and other wild flowers on a grassy sward in a New England old country graveyard. For snowy patches few plants can excel the White Arabis or Rock Cress—a free growing but dwarf habited plant equally at home in the border or rockery. After the same fashion is the yellow Rock Alyssum, and the blue or violet Aubrietias, but the latter particularly prefer the rockery and a slight winter covering. The Spring Adonis has pretty yellow blossoms and feathery leaves, as has also the Winter Aconite, likewise a yellow flower and the earlier of the two. European and Asiatic Globe flowers, the one with orange and the other with yellow blossoms, may also associate with them, and they are all desirable garden plants for the border, rockery or shrubbery bed. The single and double flowering Marsh Marigolds (erroneously called Cowslips) are worthy the damp est corner. The Golden Corydalis and better still the hind called *O. nobilis* are almost indispensable; they have fern like leaves and yellow flowers that are freely borne from spring all through the summer. In this course they have good company in their relative Dicentra eximia, with pink-purple flowers, but otherwise of somewhat equal size and habit. Next of kin to the last named is the Bleeding Heart, a native of Northern China, and one of the loveliest and most graceful of hardy herbaceous perennials. Stellaria Holostea, a species of Starwort Chickweed is a complete sheet of white in May, and it grows quite freely; it likes a moderately moist soil and just a little shade. The Smooth Lungwort, with its profusion of raceme-like clusters of light blue flowers, is one of our handsomest spring plants, and if grown in the border it should have its place marked as it soon dies down after blossoming. Wood Anemones are modest little beauties, but there is a double-flowering variety which is showier and more suitable as a garden plant. They grow well under ordinary conditions, providing they be not in too sunny places. The shrubby or evergreen Candytufts bloom very profusely and should find room in every garden. They are Europeans, but are among the finest of hardy perennials.

Our Stemless Lady's Slipper, so abundant in moist and sandy woods, are very fine garden plants, and may be successfully transplanted even when in flower-bud. Grown in pots or pans in cool greenhouses they do splendidly. False Solomon's Seal, notwithstanding its commonness, repays a position in a rootery or rockery, or in some natural-like place; its white flowers are so neat and plentiful in spring, and its red berries in the fall. Euphrasia bloom freely in spring and feel equally at home in sunny or shady places, in the border or rockery. Two years ago I found a patch of Sedum ternatum in a half-wild place here. It was bursting into flower, but I lifted it and replanted it as a border to a walk underneath the shade of some trees, and more vivid belts of white we could hardly expect to see. Of Columbines we have an immense variety of species and varieties, beginning with the Canada red and ending with the Rocky Mountain Yellow. They grow readily from seeds or division, bloom quite gayly, and are worthy a place in the choicest garden. Tree

Paeonias and single and double-flowering Common Paeonias are gorgeous garden plants, and no less conspicuous is the brilliant Oriental Poppy. We do not find the mossy Saxifrage do very satisfactorily, but the large-leaved sorts, as *S. crassifolia*, *cordata*, etc., grow and flower splendidly. The Californian Umbrella-leaved Saxifrage bears two-foot-high stems of pretty blossoms, but they are rather transient, scarcely lasting a week. After the flowers, arise the noble leaves which comprise the chief attraction of the plant. It likes moisture, and luxuriates by banks of streams. Stone-crops make a dense carpet of gold, and require a sunny place. The Periwinkle or Myrtle as it is wrongly called, blooms freely and makes perhaps the best living edging for very shady places, and its neat habit and fresh evergreen leaves render it a favorite subject for cemetery planting. Of Native Violets we have a number of species and varieties presenting different shades of blue, yellow and white blossoms, and which make desirable garden plants providing they get a moist, shady nook. The Sweet Violets are barely hardy, but the slightest cold frame protection in the winter time amply rewards us in spring. Pansies are best treated as frame plants, but they also do well in north-facing borders, where they are benefited by a light protection in the way of evergreen branches or some sedge-grass. English Cowslips and Primroses amply repay similar care. In frame quarters I do not know of any plant that proves more satisfactory than the Polyanthus; and who could deny that sweet old favorite, the Wallflower, an equal chance?

The European Heather, *Erica carnea*, as clumps or belts in shrubbery borders has few equals; it sets its blossom-buds in fall and opens its myriads of purple bells in early spring. In exposed places it likes the protection of a few evergreen branches in winter. *Daphne Mazereum* is a little shrub not much bigger than a common herbaceous plant, but in earliest spring its branches become clothed with purple, rose-colored flowers, which are soon succeeded by brilliant red berries. It will grow anywhere almost. Another species, *D. Cneorum*, is a low spreading evergreen that is covered with terminal clusters of handsome rose-pink blossoms in early spring, and they bloom again in the fall. As clumps in the front of shrubbery borders or edgings to Rhododendron beds they are very appropriate. If the young branches be layered every year they will become greatly invigorated, and if need be yield great increase.

WILD RICE.—Applications for wild rice, and inquiries as to the best method of cultivating it, come thick and fast. We will therefore here say to all, that we do not think that a particle of wild rice can now be had. The little wild rice that is harvested is gathered by the Indians in the fall, on special order, and Mr. Thomas Cantwell, of Brainerd, Minnesota, who was kind enough to secure a small lot last year, was early obliged to announce that he could fill no more orders, the crop being almost a total failure. If there is a good crop next fall, he promises to secure a large quantity.

The fall is the natural season for planting the seed, as wild rice sows itself; but the spring is equally favorable. We have repeatedly, within the past four years, printed instructions for the culture of wild rice; but so long as we can aid the cause of game production, we will continue to repeat them at intervals, in indulgence of the forgetful, and to benefit those who may never have seen them.

For planting, rice should be gathered when "in the milk," or, more properly speaking, before it gets too ripe to shell. It should be stripped off the stalk, and not pounded off; and planted anywhere where there is mud and water. As soon after it is picked as possible, if dry enough to sink, it will take root, increase and multiply, like Canada thistles. Where it is desirable to sow rice on ground not muddy, a strip three or four feet wide can be chopped around the margin of the pond with a hoe. The first rise of water will soak the seed and cause it to sprout and take root.

Mr. Cantwell has described in a contemporary the Indian method of gathering rice. He says:

"Wild rice, so called, is, in the opinion of several observing friends, a member of the oat family, and grows in vast quantities in nearly all the lakes and ponds in the northwestern part of this State. It ripens generally about the first of September, and the annual rice harvest is a sort of jubilee time with the Indians. They make arrangements some time ahead, get their outfit, kettles, pots, pans, squaws, papposes, guns, dogs, etc., and start in their canoes for some rice lake—the nearer the better, for the 'noble red' abhors work. On arrival at the lake, the squaws and youngsters put up the 'tepees,' or conical shaped pole shelters, covered with anything that is handy, or that they may have with them, while the lordly bucks bask in the sun, and find fault with everything in general.

"Ducks are always plenty about a rice lake, and the head of the family, when he gets hungry, pot-hunts mud-hens along shore.

"When the 'tepees' are finished, the squaws, generally two in each canoe, start out into the rice, and as they move along they grasp handfuls of stalks, which grow high above the water, and deftly bind them together with strips of bass-wood bark. This causes the grain to ripen quicker; and every bunch tied up belongs to the squaw who tied it up. In a few days, when fully ripe and dry enough to shell out, they move out among the bunches, with a blanket stretched along the bottom of the canoe, bend the bunches over the side of the boat, and pound the rice out with a stout club. When sufficient for the day is gathered, they go ashore, and partially roast the rice, which causes the husk to open, so the rice will drop out. They then winnow it, and the rice is ready to eat."

We wish we could give our readers as satisfactory an answer with regard to the culture of wild celery, which is inquired for.

TEA CULTURE.—The cultivation of tea is still an experiment in the United States. Possibly we may yet succeed in producing tea leaves of a flavor superior to the best of that imported from the Flowery Kingdom. Does not the same sun shine for all? During the past year the Washington Department of Agriculture, at Washington, distributed over 20,000 plants, grown in the greenhouses of the Department. Three hundred pounds of seed have been lately sown, with a view of extensive distribution in the Southern States.

FARMING IN MINNESOTA.

E. F. WARNER, Esq., Supt. of the Am. Express Co, at St. Paul, has purchased several thousand acres of fertile prairie in Minnesota, and will at once enter, in conjunction with other gentlemen, upon one of the most stupendous farming enterprises in the West. What the chances of success are in this pursuit may be gathered from the following very carefully prepared table, which has been most considerably furnished us upon application by a gentleman who has been in Minnesota for twenty-one years, and has not only planted grain over vast areas of prairie, but also numerous colonies of Swedish immigrants who are now well-to-do and prosperous. We may say, literally, that the statement has been obtained by us in response to a query from a subscriber relative to the subject. We shall be most happy to bring any of our readers into personal communication with the gentleman referred to, who has the best facilities in the State for putting them on the road to agricultural success. He remarks respecting the figures given below:

"In making up my estimates of disbursements and returns on improving the land, I have been guided not only by my own experience of fourteen years as a farmer, but by that of some of the most reliable agriculturists in the State, to whom I have submitted my figures. The calculated expenditure is very liberal, and will in all probability fall much below the estimate. On the other hand the presumed yield of 18 bushels per acre is very low on land which in favorable seasons will doubtless produce 25 to 30 bushels per acre, and 85 cents per bushel is a very moderate price at the elevators. In the matter of income no mention is made of stock raising, but several hundred head of horned cattle may be supported on the place without any cost excepting the trifling expenditure of making hay, which can be done at less than \$1 per ton."

As Minnesota is a broad country, so also is its farming done on a large scale. Much capital is required to establish a first-class farm, but the reward is more certain than savings-bank investments. Grasshoppers seem to be the only plague to which the country is subject, and their visits are only periodical. We can give information of value to any capitalist who wishes to confer with us on the subject in hand.

DISBURSEMENTS AND RETURNS IN OPENING A FARM.

Ten thousand acres, of which six thousand were gradually brought under cultivation. Price of land, at \$2.50 per acre, \$25,000, payable in ten equal early installments, with seven per cent. interest per annum:

FIRST YEAR.	
Expenditures:	
Breaking by hired teams of 1,100 acres at \$2.50..	\$ 2,750
Incidental expenses, haymaking, etc.....	500—\$3,250
SECOND YEAR.	
Expenditures:	
Buildings.....	6,000
Live stock and implements—	
24 Horses or mules at \$150.....	\$3,600
7 Sulky plows at \$70.....	490
7 Seeders at \$70.....	490
7 Harrows (17 ft) at \$25.....	175
7 Rollers at \$15.....	105
7 Self-binding harvesters at \$275.....	1,925
1 Mower.....	100
1 Separator with 10 horse-power engine.....	1,500
24 Single harnesses at \$18.....	432
6 Wagons (with runners) at \$100.....	600
Blacksmith tools, iron, steel.....	300
Sundry other tools.....	100
Furniture, bedding, stoves, etc.....	300
Labor (wages and board)—	
1 Foreman and wife, by the year.....	1,000
1 Hostler, by the year.....	420
6 Men, 8 months, at \$30 per month.....	1,440
1 Blacksmith, 3 months, at \$45 per m.....	135
7 Men for 12 days in the spring at \$1.50 per day.....	120
14 Men for 12 days in the harvest at \$2.50 per day.....	420
21 Men for 24 days for threshing at \$1.50 per day.....	750
Sundries—	
1,500 Bushels seed-wheat at \$1 per bush.....	1,500
360 Bushels seed-oats at 40 cts per bush.....	120
Wire for binding 1,100 acres grain at 50 cts. per acre.....	550
640 Acres new land broken, per contract \$2.50.....	1,600
Feed for live stock.....	1,000
10 Per cent. of principal for land.....	2,500
1 Year's interest on same at 7 per cent.....	1,750
1 Year's int. on last year's outlay, \$3,250.....	325
Incidental expenses.....	500
Total amt't expenditures 1st and 2d yr.....	\$33,289
This amount of expenditure, \$33,289, bearing 10 per cent. yearly interest, remains as a charge against the farm until paid. Crop during the year 1,000 acres in wheat, supposing to yield 18 bushels per acre, of which 16½ for sale and 1½ for seed the following year. Estimated price of wheat, 85 cents bushel; proceeds of sale accounted for in next year's estimate and used as working capital on the farm. 100 acres of oats for feed of live stock; 1,100 acres of new land broken, of which 560 acres with own and 540 with hired teams.	
Assets at end of second year:	
7,800 acres wild land at \$2.50.....	\$19,500 00
2,200 acres cultivated land at \$5.....	11,000 00
Buildings.....	6,000 00
Live stock and implements, less 10 per cent. for wear and tear.....	9,105 00
18,000 bush. wheat at 85 cents.....	15,300 00
	\$60,905 00
Liabilities at end second year:	
On land.....	\$23,500 00
On 1st & 2d year's expenses.....	33,289 00
Assets above liabilities.....	5,116 00

Total amt't expenditures 1st and 2d yr.....\$33,289
This amount of expenditure, \$33,289, bearing 10 per cent. yearly interest, remains as a charge against the farm until paid. Crop during the year 1,000 acres in wheat, supposing to yield 18 bushels per acre, of which 16½ for sale and 1½ for seed the following year. Estimated price of wheat, 85 cents bushel; proceeds of sale accounted for in next year's estimate and used as working capital on the farm. 100 acres of oats for feed of live stock; 1,100 acres of new land broken, of which 560 acres with own and 540 with hired teams.

THIRD YEAR.	
(2,000 acres in wheat; 200 in oats for live stock; 1,100 acres new land broken with own teams.)	
Expenditures:	
Live stock and implements.....	\$10,117 00
Labor.....	7,461 00
Wire for binding grain.....	1,100 00
Incidental expen's.....	2,000 00
10 per cent. on principal for land.....	2,500 00
1 year's int. on same at 7 per cent.....	1,575 00
1 year's int. on 1st and 2d year's ex.....	3,328 90
Cash on hand at end of year.....	13,990 10
	\$42,075 00
Assets at end of third year:	
6,750 acres wild land at \$2.50.....	\$16,750 00
3,300 acres cultivated land at \$5.....	16,500 00
Buildings.....	6,000 00
Live stock and implements, 10 per cent. off.....	17,299 50
Cash on hand from last year.....	13,990 10
	\$70,539 60
Liabilities at end of third year:	
On land.....	\$20,000 00
On 1st and 2d year's expenses.....	33,289 00
Assets above liabilities.....	17,250 60

FOURTH YEAR.	
(3,000 acres in wheat; 300 acres in oats; 1,700 acres new land broken by own teams.)	
Expenditures:	
Live stock and implements.....	\$10,117 00
Labor.....	10,966 00
Wire.....	1,050 00
Incidental expen's.....	2,000 00

Cash on hand at end of year.....	23,604 40
	\$69,774 30
Assets at end of sixth year:	
0,000 cult., 4,000 wild land.....	\$40,000 00
Buildings.....	\$18,000 00
Live stock and im.....	50,041 53
Cash on hand.....	22,604 40
Value of assets at end of sixth year.....	\$112,645 93
Liabilities none.	

MATING CANARIES.—The following directions are contributed to the New York Times:

"In the first place canaries should never be allowed to mate oftener than twice in any one year. Some canaries will raise as many as four litters if not prevented; but a third mating is always injurious, and often brings on a disease which ruins the cock bird as a singer. The canaries while mating should be fed on hard-boiled egg and common oyster crackers well soaked in boiled milk, but, of course, made cool before being fed to the birds. Hemp seed should not be used, as it fattens the birds. A raw piece of beef highly seasoned with Cayenne (red) pepper should be fed them as often as once in each week. The cage should not be moved about if it can be avoided, and should hang in a darkened room. All canaries while mating like privacy. When the eggs are hatched feed the young birds only on the yellow of hard-boiled eggs for two weeks; after that, mix hard, dry crackers with egg and feed. Sometimes the hen canary begins to make her nest before the young birds are able to leave it. At such times put a new nest in the cage, and leave plenty of food for the newcomers, as the mother often leaves them unneared for. Bits of tissue paper, cut into fine pieces, should be thrown around the new nest in order to prevent the hen from pulling the old one in pieces. Cotton should not be used, as it is highly injurious to the feet of canaries; they often get caught in it, and are quite frequently made cripples for life.

J. P.—The following are a few of the best climbing plants, hardy and sure to give satisfaction. Plant them where they can ramble at their own free will, and allow them all the light and freedom possible:

Akebia quinata—Japanese Akebia; *Celastrus scandens*—Bitter sweet; *Menispermum canadense*—Moonseed; *Wistaria sinensis*—Chinese wist; *Wistaria sinensis alba*—Chinese west white; *Tecoma radicans*, and the large variety *Grandiflora*—Trumpet flowers; *Oenothera lamarckiana*—Sweet-scented Virginia Bower; and any of the newer varieties of the large flowered sorts; they are all perfectly hardy and desirable; any or all of the *Lonicera*s, or honeysuckles; and you can fill up with any of the annual varieties.

Sea and River Fishing.

FISH IN SEASON IN MARCH.

SOUTHERN WATERS.

Pompano, *Trachinotus carolinus*, Grouper, *Epinephelus nigritus*, Drum (two species), Family *Scia*—Trout (black bass), *Centropomus niger*, Kingfish, *Menticirrhus nebulosus*, Striped bass, or Rockfish, *Morone chrysops*, Sea bass, *Scorpaenopsis ocellatus*, *Lucania*, Sheepshead, *Archosargus probatocephalus*, Tailorfish, *Pomatomus saltatrix*, Snapper, *Lutjanus caesus*, *M. nigricans*.

The trout season on Long Island, which opened last year, and previously on the 15th of March, does not open this year until the 1st of April. The law is now uniform throughout the State.

Trout fishing is now open to all persons who are willing to pay \$5 for each trout caught. On April 1 it will be different.

FISH IN MARKET—RETAIL PRICES.—Striped bass, 20 cents; large do., 18; smelts, 18; Long Island green do., 20; frozen salmon, 35; green do., \$1.25; California 45; mackerel, 15; Southern shad, 35 to 85; native, \$2; white perch, 15; Spanish mackerel, 35; green turtle, 15; frost fish, 6; halibut, 12½; haddock, 6; codfish, heads off, 8; do., heads on, 6; black-fish, 15; Newfoundland herring, 6; flounders, 8; do., small, 4; sea bass, 15; eels, 18; lobsters, live, 8; do., boiled, 10; sheepsheads, 25; turbot, 25; scallops, \$1.50 per gallon; whitefish, 15; salmon trout, 12; hard crabs, \$3.50 per 100.

MOVEMENTS OF THE FISHING FLEET.—The number of fishing arrivals reported at this port the past week has been forty-one. The number of Bank arrivals numbered twelve, bringing about 500,000 pounds of halibut. The number of George's arrivals for the week has been 25, bringing 875,000 pounds round codfish.—*Cape Ann Advertiser*, March 15.

CONNECTICUT—Essex, March 10.—The first lot of striped bass caught in the Connecticut this season were taken here last week, and weighed about 500 pounds.

NEW YORK—Kingston, March 13.—Large quantities of suckers and chubs are being taken out of the Esopus at this place every day. OUR HARRY.

Eldred, Sullivan Co., March 11.—Trout fishing here already begun in the Beaver Brook. They are fine fish, and give promise of a good season, so soon as the lawful time for taking them arrives.

VIRGINIA—Warrenton, March 15.—Jack and carp fishing, the only angling we have here, has begun. For trout we go to the mountain brooks of the Blue Ridge. I shall soon go to the trout streams in company with "Nicholas Spicer," of the old *Porter's Spirit*, whose real name is D. A. S. Payne.

EARLY COMERS AT WASHINGTON.—We are having a very early spring; mossbunkers came March 6, a month earlier than usual. Alewives and matowocas are abundant in the market, and shad have been taken five or six a night for a week or two past. G. B. G.

TENNESSEE—Nashville, March.—Fishing season now fairly opened and streams generally in good condition for sport. The reports from Hurricane Creek, in Humphreys county, from Turnbull in Clatham, Buffalo in Dixon, and Harpeth in Williamson, are very favorable for anglers. Many fine trout (bass) and perch have been taken within the last week. A party of gentlemen had some good sport in Mill Creek, a small stream near this city, the other afternoon, taking a number of trout (bass) averaging about three-quarters of a pound each. In Harpeth and the Cumberland rivers suckers to large quantities are caught, there is no sport in taking them, but they are considered good food.

FLORIDA—Halifax Inlet.—In the seven winters spent on this coast, I have never seen so much cold and stormy weather as this month has given us. We have had fourteen

clear days and fourteen that were either rainy or cloudy, which is a very large proportion of bad weather for the State. The average temperature at noon has been 60 degs., which is about four degrees lower than usual. I have killed less than half the weight of fish that I did in February, 1877, and the only species that seems as abundant as usual is the sheepshead, and they run small this year. Feb. 18—Wind, west; thermometer at 8 A. M. 60 degs; got thirty-six sheepshead. Feb. 20—Wind southeast; thermometer at 8 A. M. 60 degs.; forty sheepshead. Average of these two days about two pounds only. S. C. C.

INDIANA PICKEREL.—A correspondent at Lima, Lagrange county, Indiana, who signs himself "Backwoods Hoosier," sends us a small Limerick hook with which he caught an eleven pound pickerel through the ice lately, which measured three feet in length. His usual catch per diem varies from five to ten fish ranging from five to ten pounds in weight. He ought to be content with his success.

H. L. LEONARD'S OFFER.—We have made a careful examination of the angler's outfit advertised in our columns this week, and feel justified in saying that any purchaser of either the \$5 or \$10 list will obtain the full value of his money, besides having the goods selected for him by one experienced in the business. We consider the offer a liberal one, and one which we should advise amateur anglers to avail themselves of.

BAMBOO RODS.—Messrs. Abbey & Imbrie, the pioneers of section bamboos, have offered one of their "best round joint, six-section, salmon" rods as a prize for the best salmon-fly casting at the next annual meeting of the New York State Association. Both of the firm are well-known and expert salmon fishermen, and are recognized authority even up in this the highest grade of fishing. We understand that their idea in offering this magnificent prize is to incite our best fly-casters to aspire beyond the beaten paths of trout fishing. Trout have many admirers, and none more ardent than our friends of 48 Maiden Lane; but we are sure that all sportsmen will appreciate the desire to extend the scope and enhance the pleasure of anglers. To those of our readers who are not posted, we ought to say that the section bamboos marked "Abbey & Imbrie's Best" are a superlatively beautiful implement. This grade of salmon rods costs from \$75 to \$100, according to size and mountings. We have been the fortunate possessor of one of them for six or seven years.

SOLVER'S TABLE.

The subjoined table contains the solutions received from competing solvers to March 7, 1878, inclusive.

G. R., Phila., Penn.; 8; Waldmann, Rocky Hill, N. J.; 7; E. H. W., New Haven, Ct.; 8; Rev. L. W. Mudge, Princeton, N. J.; 7; W. B., Waterbury, Ct.; 8; Wm. Mylchreist, Middletown, Ct.; 4; R. H. Seymour, Holyoke, Mass.; 7; Prof. D. S. Jordan, Irvington, Ind.; 4; Prof. C. Jacobine, Savannah, Tenn.; 3; Rook, New York City; 4; Franklin Benner, Astoria, L. I.; 4; W. A. Briggs, Montpelier, Vt.; 6; Wm. Parker, New Britain, Ct.; 6; Rich. Fairley, Chatham, N. B.; 2; Geo. Noble, Fisherville, Canada; 1; Chas. C. Hebbard, Cambridge, Mass.; 5; G. K. Andrews, Mahonington, Penn.; 5; Geo. A. Lee, 1; E. S. Bradford, Webster, Mass.; 3; Harry M. Wheelock, Red Wing, Minn.; 3; Status, Boston, Mass.; 7; Bishop, New York City; 4; Incog., Boston, Mass.; 6; A. Taylor, Phila., Penn.; 1; F. A. N., New Orleans, La.; 7; A. M. J., Galveston Texas; 6; L. A. Gowdy, Bristol, Conn.; 6; E. D. Hurlbut, 6; X. Hawkins, Ky.; 6; John C. Burritt, New Britain, Conn.; 6; F. W. Merittdale, Peterboro, Ky.; 6; F. Williams, M. D., Hartford, Conn.; 6; P. K. Jones, Meriden, Conn.; 6; Jnno, Springfield, Mass.; 6.

The subjoined games are further variations of the Vienna Opening taken from the Handbuch:

Game No. 27.—VIENNA OPENING.

- | | | | |
|-------------|------------|------------|--------------------------|
| White. | Black. | White. | Black. |
| 1—P-K4 | 1—P-K4 | 10—Q-Q2 | 10—Q-K5 ch |
| 2—K1-Q B3 | 2—B-Q B4 | 11—P-K K13 | 11—Q-K6 |
| 3—B-Q B4 | 3—K-K B3 | 12—P-Q4 | 12—B-R B6 |
| 4—P-Q3 | 4—P-Q B3 | 13—K-K B3 | 13—B-K5 Kt |
| 5—P-K B4 | 5—P-Q3? | 14—Kt-K B | 14—B-K7 |
| 6—P-K5 Q P | 6—P-K5 Q P | 15—Kt-K B | 15—Q-K4 |
| 7—B-Q K5 ch | 7—Kt-Q B3 | 16—B-K3 | 16—P-K K13 |
| 8—P-K K13 | 8—B-K K5 | 17—Kt-K B3 | 17—P-K K13 (a) |
| 9—Kt-K2 | 9—Kt-K H4 | | White has the best game. |

NOTES.

(a) A continuation of this variation occurs in a game between Zukertort and Anderssen, *Schach Zeitung*, 1869, p. 265.

Game No. 28.—VIENNA OPENING.

The first four moves are the same as in the preceding game:

- | | | | |
|------------|------------|--------------|---------------------------|
| White. | Black. | White. | Black. |
| 5—P-K B4 | 5—P-Q3 | 12—P tks P | 12—P tks P |
| 6—Kt-K B3 | 6—P-Q K14 | 13—Kt-K B1 | 13—Q-Q2 |
| 7—B-Q K13 | 7—P-Q R4 | 14—Kt-K B | 14—Q-K K |
| 8—P-Q R4 | 8—P-Q K15 | 15—Kt-K15 | 15—P-K R3 |
| 9—Kt-K1 | 9—Q-Kt Q2 | 16—Kt-R3 | 16—K-R2 (a) |
| 10—K-K K13 | 10—Castles | 17—Bt-B3 (b) | |
| 11—Q-K2 | 11—B-Q R3 | | White has a winning game. |

NOTES.

(a) If 16—Kt tks P (16—K-R; 17—Kt tks R P, 17—P tks K1; 18—B tks P), then 17—Q tks Kt, 17—Kt-K B3; 18—Kt tks R P, etc.

(b) In a game between Zukertort and Anderssen, the game is continued as follows: 17—Kt tks K P; 18—Q tks Kt, 18—Kt-K B3; 19—Q-R4, 19—P-K5; 20—Kt-K15 ch, with the advantage. While might also have played 20—R-K E13, 20—P tks ch; 21—K-Q. The *Nene Berliner Schach Zeitung*, 1871, p. 114, further notes if Black plays 17—Kt-K R4, then 18—Kt-K15 ch, 18—Kt-Kt (18—K-E13; 19—Kt-R4, and mates); 19—R-R13, 19—Kt-K B5; 20—B tks Kt, 20—P tks B; 21—Q-R5, 21—Q-K4 (21—Kt-K B3; 22—Kt-R P ch); 22—Kt tks K B P.

Game No. 29.—VIENNA OPENING.

The first two moves are the same as in Game No. 28:

- | | | | |
|-----------------|-------------|------------|--------------------------|
| White. | Black. | White. | Black. |
| 3—P-K B4 | 3—P-Q3 (a) | 11—Q-Kt-Q | 11—P-Q R5 |
| 4—Kt-K B3 | 4—Kt-K B3 | 12—B-Q R3 | 12—Castles |
| 5—B-Q B4 | 5—P-Q B3 | 13—Kt-K3 | 13—B-Q R3 |
| 6—B-P tks P (b) | 6—P tks K P | 14—Kt-K B5 | 14—P-Q K15 |
| 7—Q-K2 | 7—Q-Kt Q2 | 15—P tks P | 15—Q tks P ch |
| 8—P-Q3 | 8—P-Q K14 | 16—P-Q B3 | 16—Q-Q K13 |
| 9—B-Q K13 | 9—P-Q R4 | | Black has the best game. |
| 10—P-Q R3 | 10—Q-Q K13 | | |

NOTES.

(a) In "Book of Paris Congress," 1867, 6—B tks K1 is considered preferable. The position can be resolved into a King's Gambit.

(b) The succeeding moves until the fifteenth are the same as in a game between Steinitz and Anderssen, *Schach Zeitung*, 1870, p. 137. In another game, where 6—P-Q3, 6—Q-K2 is played, the *Nene Berliner Schach Zeitung*, 1871, p. 117, remarks: "Anderssen sees the advisability that, in this opening, Black should give Castling Q R the preference, otherwise White's attack on the K R side would be irresistible."

Game No. 30.—DEBUT DE FANTAISIE.

The following curious and short game, which was played at the *Cercle de Echecs* of St. Petersburg, we transfer from the *La Strategie*, 72 and 74 Rue Saint Sauveur, Paris, France. Remove White's Q Kt:

- | | | | |
|---------------|-----------|-----------------|------------|
| White. | Black. | White. | Black. |
| Mr. Schiffer. | Amateur. | Mr. Schiffer. | Amateur. |
| 1—P-K4 | 1—P-K R3 | 5—Kt-K5 ch | 5—K-K3 |
| 2—Kt-K B3 | 2—P-Q H3 | 6—Q-K E1 ch | 6—K tks Kt |
| 3—B-Q B4 | 3—P-Q K4 | 7—Q-K t5 ch | 7—K-Q3 |
| 4—B tks P ch | 4—K tks B | 8—Q-Q5 ch mates | |

Game No. 31.—CENTRE GAMBIT.

In the following game Mr. Thorold gives Miss Rudge, the English lady player, the odds of a Kt. The match now stands eight games won by each, the winner of eleven games being the victor. Remove White's Q Et:

- | | | | |
|--------------|-------------|-----------------|--------------|
| White. | Black. | White. | Black. |
| Mr. Thorold. | Miss Rudge. | Mr. Thorold. | Miss Rudge. |
| 1—P-K4 | 1—P-K4 | 8—Castles Q R | 8—P tks P ch |
| 2—P-Q4 | 2—P tks P | 9—K tks P | 9—Kt-Q B3 |
| 3—Kt-K B3 | 3—B-Q B4 | 10—P-K6 | 10—B-K3 |
| 4—B-Q B4 | 4—P-Q3 | 11—P tks P | 11—B tks B? |
| 5—P-H3 | 5—P tks P | 12—Q tks K Kt P | 12—R-K1 |
| 6—Q-K13 | 6—Q-B3 | | White wins. |
| 7—B-K K15 | 7—Q-K13 | | |

CURSORY JOTTINGS.

—Capt. T. P. Bull, Chess Editor of the *Detroit Free Press*, expresses his views regarding duals: "If duals can be avoided, and they often can by a skillful manipulator, well and good; but we would never recommend the addition of pieces to obviate unimportant duals. The greatest economy of force should always be kept in view, and no man be employed whose bearing on the problem proper is not clear and well defined."

—The Canadian Chess Association has instituted a correspondence tourney under the direction of Mr. J. Shaw, of Montreal, Canada. Twenty-one players will enter the list at an entrance fee of \$5 each. Prizes: 1, silver cup, \$50; 2, chess men and board, \$20; 3, do., \$15; 4, chess table, \$10; 5, works on chess, \$5. Each player to play one game with every other player, and to conduct four games simultaneously.

—Capt. MacKenzie has opened a chess room at No. 101 East 14th st., corner of Union Square. Make him a call.

—We are fully aware that America ranks high in problematical matters, and that our problemists are able to hold their own against the world. However, we are not willing to concede that all problemistic genius and skill is centered in this Republic, although chess editors and problemists apparently strongly incline to that opinion. Come, gentlemen, less fanfare, and print an occasional recognition of the skill of other problemists.

—The journey of the St. Louis Chess Club has finally come to an end. In the first class, Messrs. C. W. G. Watts and J. E. Nelson tie for the challenge cup. In the second class, Messrs. Robt. Giegge and Robt. W. Goode tie for the first prize, and Dr. C. N. D. Campbell receives the third. The winner of the challenge cup must hold it two years in order to obtain complete possession.

—The St. Louis *Globe-Democrat* says: "If any composer wants his problem solved or hurst, let him contribute to our column, for we boast of having the best solvers in the land." It is true that these solvers are first-class, yet we are not disposed to concede this honor. We remind Bro. Foster that our solvers are equally good—for instance G. R., Rev. L. W. M., etc., etc.

Rational Pastimes.

NEW YORK ATHLETIC CLUB.—At the annual meeting held last week, over sixty members present, the Board of Management in their review of the work of the past year reported a season of progress and development in every department of the club. It was recommended that the present track-master, Jack Goulding, be retained another year; that handicap games be given the coming season as in the past, and that the club establish a series of swimming contests during the summer at hand. The Board holds that the success of the winter games were "conclusive proof that the oldest athletic club in the country had not been idle during the nine years of its

existence." During the season members of the club, in open competitions, had won the following prizes: Athletic—First prizes, 28; second prizes, 17; third prizes, 6; boating—first prizes, 4; second prizes, 2. The success of the handicap games of last year will probably lead to making the majority of the spring games of the same character. The project of inviting a team of the London Athletic Club to visit New York the coming season for the purpose of competing with American athletes in a series of games was referred to Messrs. D. H. Knowlton, William B. Curtis and F. J. Hyues as a committee to confer with the Westchester Polo Club. The following officers were elected for the current year: Pres., Fitz J. Hyues; Vice-Pres., Charles H. Pierce; Treas., W. E. Cox; Sec., W. R. Whittemore; Capt., William B. Curtis; First Lieut., Edward Merritt; Second Lieut., Waldo Sprague; Trustees, H. E. Bucmeyer, Alfred H. Curtis and R. W. Rathborne.

THE ENGLISH SIX DAYS' WALK.—The contestants who started last Monday in the walking match at Agricultural Hall, Islington, England, were: Bailey, Brown, Corkey, Grover, Hazall, Ide, George Johnson, S. Johnson, Lewis, Martyn, McCarty, McLeary, O'Leary, J. Smith, W. Smith, Smythe and Vangban. This match is for a purse of £750 offered by Sir John Astley, £500 to the man covering the greatest distance in six days. The chief interest in the match would naturally have centered in the match between O'Leary and Weston, but the latter was declared sick at the time for starting. O'Leary walks in a separate track. The man who covers the most ground wins. No restrictions are made as to gait.

LACROSSE.—The Lacrosse Tournament at Gilmore's Garden last week was participated in by the following clubs: Ravenswood Club—P. Colder (captain), G. Cluff, A. D. Ritchey, W. P. Ritchey, G. D. Wheeler, R. J. S. Graham, R. W. Hopkins, J. Gullerson, J. Smith and J. D. Wilson. New York University—J. A. Atwood (captain), H. R. Baremore, J. E. Capwell, R. B. Dunning, S. A. Eddy, W. K. Gillett, R. H. T. Marrener, E. L. Swaine, C. T. Webster and C. B. Zabriskie. Tuesday the Ravenswoods scored first goal in 12m. 38s. The University club scored a goal in 11m. 42s. The Ravenswoods then scored the third goal and thus won the game. Wednesday evening the Ravenswoods won two more goals and took the prize cup. We had the pleasure of a visit from Mr. W. G. Winsans, President of the Ravenswood Lacrosse club.

NEW YORK BAY REGATTA.—At the meeting of the New York Bay Regatta Committee on Wednesday night, it was decided that the measurement of the competing yachts be on the water-line with the allowance of one-half of the overhang aft for counter stern boats. It was stated that the owners of thirteen yachts had already been heard from. Entries will be received by John W. Sawyer, 85 South street; W. Bishop, 210 South street; Joseph Nobles, 734 Greenwich street; A. L. Kreymeyer, Jersey City; J. D. Brassington, 256 West street, and J. H. Robinson, at the Hoffman House. It has been decided to hold the regatta on Thursday, June 27, and until then the committee resolved to meet weekly to perfect their arrangements.

EASTERN ROWING ASSOCIATION.—The initial regatta of the season will be held at Silver Lake, Plympton, Mass., May 30. The four races will include an amateur single-scutt race, open to all oarsmen who come within the meaning of "amateur," as defined by the National Association of Amateur Oarsmen; a pair-oared professional race; a professional scullers' race, and a four-oared working boat race. The prize for the amateur scullers' race will be an elegant silver cup. For the pair-oared race, first prize, \$100; second, \$50; third, \$25; payable in gold. For professional scullers the first prize, \$150; second, \$100; third, \$50; payable in gold. For the four-oared working boats the first prize will be \$150; second, \$100; third, \$50; payable in gold. The second regatta, at the same place, will consist of a professional scullers' race, a contest open to New England scullers, and probably a four-oared shell race. Prizes will be the same as those of the first regatta. A new boat house is to be erected at the lake, similar in design to those on the Harlem River, New York. Entries can be made to Captain J. J. Flynn, No. 38 Essex street, Boston, and will close for amateurs ten days before each race, and for professionals three days previous to each race. Invitations are to be sent to all the prominent oarsmen. The distances are to be three miles, with a turn, in all the races, except the amateur single scull race, which is to be two miles, with a turn.

SHAWMUT BOAT CLUB.—This club is making preparations for the coming season's work. The club is to purchase a steam yacht. Four and six-oared crews will represent the club at the Eastern Rowing Association.

ANALOSTAN BOAT CLUB.—This popular rowing association of Washington has elected the following officers for the ensuing year: L. H. Stevens, President; Colonel S. N. Benjamin, Vice-President; H. S. Nyman, Treasurer; J. H. Goodrich, Corresponding and Financial Secretary; E. S. Maunders, Captain; W. A. McKenney, First Lieutenant; C. L. Burdott, Second Lieutenant.

No Notice Taken of Anonymous Communications.

would do for hunting, fishing and pleasure boating? One made in sections that you can take apart and pack? Who are the best makers of boats? Of what material are they made and how heavy? What are the prices? Ask Theo. E. Bond, Cleveland, Ohio; price \$10 to \$100.

well. 7. Do not think it would be better than cardboard. 3. An-

INQUIRIES, Huntingdon, Tenn.—1. Does a heavy gun, with same charge of powder and shot, give better penetration than a light gun? 2. Will a choke-bore breech-loader give better penetration than a muzzle-loader? 3. In shooting choke-bore breech-loader if the shot chamber in shell will they not be forced into irregular shape by the expansion from the muzzle, and thus interfere with accuracy of direction? 4. It is not certain that it does. Experimentally have varied a great deal. Theoretically, greater rigidity of the arm, it is urged, gives better penetration. 5. A choke-bore does give greater penetration. 6. Using buckshot, chamber the shot at muzzle always, otherwise the conical form of the projectile would be changed.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INDOOR AND OUT-DOOR RECREATION OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

No. 111 (old No. 103) FULTON STREET, NEW YORK.

(Post Office Box 2332.)

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Twenty-five per cent. off for Clubs of Three or more.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns, 50 cents per line.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

*Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, MARCH 21, 1878.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to the FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. No anonymous contributions will be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of the mail service if money remitted to us is lost. No person whatever is authorized to collect money for us unless he can show authentic credentials from one of the undersigned. We have no Philadelphia agent.

Trade supplied by American News Company.

CHARLES HALLOCK, Editor.

THE CATLIN COLLECTION.—The Smithsonian Institution is about to receive a valuable accession in the famous collection of paintings and Indian implements, weapons and curiosities made by George Catlin in his eight years' study of Indian life and character. The paintings consist of 310 portraits in oil and 200 paintings descriptive of all the phases of Indian life. The collection was exhibited twice in Europe. Upon the second tour while in Brussels the artist became embarrassed financially, and the collection was about to be seized, when Joseph Harrison, of Philadelphia, the engineer and locomotive builder, who developed the first railways in Russia, and who was then stopping in Brussels, bought the interesting collection to prevent its disruption. It has since been in the late Mr. Harrison's galleries at Philadelphia. Catlin died broken-hearted at Jersey City in 1872. His name is indissolubly connected with the most complete existing memorial of a people soon to take their place among the races which have vanished from the face of the earth.

THE QUINTUPLE HERALD.—The last and the previous Sunday editions of the New York Herald contained twenty pages of close type, which is equal to two hundred and forty pages of the average monthly magazine size. Of the one hundred and twenty columns, sixty-five are devoted to the advertisements, which are three thousand one hundred and thirty in number. We may here mention that the narrative of "Still Hunting," in the Herald of March 3d, was from the pen of the editor of this journal, and contained the long promised account of his trip with the Mounted Revenue Police through the mountains of Virginia and North Carolina, in quest of "Moonlighters" and contraband whisky.

FOREST AND STREAM will be sent for fractions of a year as follows: Six months, \$2; three months, \$1. To clubs of two or more, \$3 per annum.

FIELD TRIALS IN THE EAST.

We call particular attention to a communication from Captain John M. Taylor, of Nottoway County, Virginia. Captain Taylor proposes that field trials be held this year, and that the ground selected shall be either in Delaware, Maryland, or Virginia. In choosing any section of country for such trials, Captain Taylor plainly shows that two things are vital to their success. First, there must be an abundance of birds; and, second, in order that the sportsmen of the Atlantic seaboard may participate in the trials, the expense of travel and transportation of dogs must not be excessive. It is very inconvenient for owners of dogs in Boston, New York, Philadelphia or Baltimore to send their dogs to the West, as was done when the trials were held in Tennessee. Captain Taylor, from a perfect acquaintance with the best grounds for game in Delaware, Maryland and Virginia, is of the opinion that a wide tract of country could be found in one of these States admirably adapted for the purposes of field trials. As Baltimore may be considered the base of operations, perhaps the Baltimore Kennel Club would take the initiative in an undertaking of this character. As far as the FOREST AND STREAM AND ROD AND GUN is concerned, we would give such field trials, if held in the East, our entire support, and would be glad to present a handsome prize; declining, however, having anything to do directly with either the management of the trials, or the judging of the dogs.

We refer our readers to Captain Taylor's letter, which gives, in his usual pleasing style, the leading points in regard to the plan of field trials. There is something quite happy in the idea of a numerous party of sportsmen, with their dogs, floating along a canal in their barges, camping where they pleased, and presenting "fields and pastures new" to their view every day. We suppose that in no country in the world, save in the United States, could such a thing be feasible.

We believe, then, that sportsmen will readily understand the advantages to be derived from having field trials in the East, and we are quite sanguine that Captain Taylor's ideas can be successfully carried out.

WHO SHALL SELECT THE NEXT TEAM?

THE recent action of the late American team, if seriously intended as a preliminary step toward taking into their own hands the selection of the team which is to represent America in the next match for the Centennial trophy, evinces, to say the least, a lack of discretion. It is to be hoped that no such purpose is entertained. If the members of the late team propose simply to imitate the example of the Massachusetts Rifle Association, and submit to the N. R. A. their views in regard to the best method of selecting a national team, their action is proper and commendable. But they have no right to go further. They were selected to shoot a single match. Having won, this gave them the right to hold the trophy for a year, and to name the time for the next competition. Having done this they ceased to exist as a team.

The new team will be chosen by the N. R. A., as they themselves were chosen to succeed the team of 1876. With the manner in which this selection is to be made, they, as a team, have nothing to do, except by offering such advice as their experience may suggest, which advice will undoubtedly have great weight.

Nothing would be more indecorous than for active riflemen, the majority of whom would probably themselves be competitors for places upon the new team, to undertake the management of the competitions in which it is to be selected, even if they were otherwise competent to do so, and the riflemen of America would not submit to it. Besides, they are in no way competent to undertake such an important task. With the exception of the well-merited renown they have gained as riflemen, they are comparatively unknown. They are few in numbers, and without organization, cohesion, responsibility or experience. The idea is so absurd that it is to be hoped that no member of the team will call down upon his head the ridicule which would follow any attempt to carry it out.

The ground upon which it is asserted that this power is claimed is equally ridiculous. If the N. R. A. are a "local institution," pray what are the team who they created? Capt. Jackson, the only member not a resident of New York or Brooklyn, has expressed himself emphatically that all international matches should be conducted at Creedmoor, and by the N. R. A., and he speaks the general sentiment of the public, which the team would do well to heed before taking any further steps in such a delicate matter as this.

—Franklin W. Fish, Esq., popularly known during the past twenty-five years as a writer of humorous and sentimental prose and poetry, will deliver a poem at Everett Hall, 398 Fulton street, Brooklyn, this Thursday evening at 8 o'clock; subject, "The Age of Steel."

—The "Pacific Life," a live sporting paper published at San Francisco, has recently changed hands, and came out about the first of March, much improved in all respects. There is ample field for such a journal on the Pacific Slope, and we heartily wish it success.

Mr. Wright Hawkes, L. L. D., will deliver a lecture this Thursday evening at Chickering Hall before the American Geographical Society upon "The So-called Celtic Monuments

of Brittany in France," illustrated with twenty stereopticon views.

GAME PROTECTION.

MEETINGS OF STATE ASSOCIATIONS FOR 1878.

New Hampshire State Sportsmen's League, Manchester, April
New York State Association for the Protection of Fish and Game, Buffalo, May—; Sect'y., John B. Sage, Buffalo.
Connecticut State Sportsmen's Association, Hartford, May 15.
Iowa State Sportsmen's Association, Des Moines, May 28.
Nebraska State Sportsmen's Association, Fremont, May —.
National Sportsmen's Association, Wilkesbarre, Pa., June 11
Illinois State Sportsmen's Association, Quincy, June 11.
The Pennsylvania State Association for the Protection of Game and Fish, Wilkesbarre, June 11; Sect'y., Benj. F. Dowance.
Ohio State Sportsmen's Association, Cincinnati, June 15; Sect'y., Willbank, Toledo.
Tennessee State Sportsmen's Association, Nashville, Dec. 2; Sect'y., Clark Pritchett, Nashville, Tenn.
Wisconsin State Sportsmen's Association.
Massachusetts State Sportsmen's Association, at call of President.
Missouri State Sportsmen's Association.

AMENDED GAME LAW IN MINNESOTA.—The Legislature of Minnesota adjourned a week ago, having passed two amendments to the Game Law; one limiting the season for killing deer to six weeks, which is a good point, and the other, not so popular among the sporting fraternity, imposing a fine of \$10 for entering a man's fenced field in pursuit of game without a permit from the owner. We will say freely that we indorse this last measure heartily as applied to the prairie States.

STATEN ISLAND FISH TROUBLES.—The action of the Richmond County Board for the Preservation of Fish seems likely to breed trouble between the fishermen and the members of the New York Excelsior Fishing Club. Fykes with meshes must be 4 1/2 inches, and must be set 110 feet from low-water mark. The fishermen declare that they can catch no fish now. Members of the club are prepared to arrest any persons violating the law, and in return the fishermen declare that they will bring suit against any of the club catching fish on a Sunday.

The Rifle.

THE FOREST AND STREAM AND ROD AND GUN TOURNAMENT

For the Short-Range Championship.

Conditions.—Teams—Each team shall consist of ten men. The teams participating must be composed of members of the various clubs which they represent. Rifles—Limited to ten pounds in weight; minimum pull of trigger, three pounds; 22-100 cal. Teams can furnish their own rifles and ammunition, or use those at the gallery, as they may desire. Number of Shots—Ten by each competitor. Sighting Shots—Two shots will be allowed each competitor. Position—Off-hand. Targets—200-yards targets, according to the regulations of the N. R. A. reduced in proportion to the range at the gallery. Practice—No practice allowed on the day of the match. The match to be governed by the rules of the N. R. A. relating to teams. The referees shall elect an umpire, whose decision in all cases shall be final.

The following teams entered for the match. The shooting commenced on March 18: N. Y. Rifle Club, Centennial Rifle Club, Scotch-American Club, Seppenfelt Team, Zettler Rifle Club, Hellwig Rifle Club, Newark Rifle Club, Yorkville Rifle Club, Irish-American Rifle Club.

Judges, Col. Gildersleeve and Major Fulton. Referee, T. C. Banks.

Order of shooting: Zettler, Yorkville, on Monday, March 18th; Seppenfelt, Newark, Tuesday, 19th; Hellwig, Centennial, Wednesday, 20th; Scotch-American, Thursday, 21st; New York and Irish-American, Friday, 22d.

Nine teams, of ten each, have entered for the prizes, and among the number of the respective teams are to be found nearly all the champion off-hand shots in New York, and in the cities within a circle of twenty miles of the metropolis. All the men on the teams have been selected with great care, and some very extraordinary shooting may be expected. The contest commenced on Monday night, the 18th, at Conlin's Gallery, 1,222 Broadway. The Yorkville team led off, and were followed by the celebrated Zettler team, which has in its ranks some of the crack shots from the Bowery galleries. Among the distinguished riflemen present were Col. Gildersleeve, Major Fulton, Col. Sanford, the champion Blydenburgh, the champion Bruce, of 219 fame, the pistol champion Lord, Mr. Duckworth, Mr. O'Donnell, and many others.

The contest will prove one of the most important and interesting short-range matches ever shot in this city, and we are glad to record the fact that off-hand rifle shooting is gaining increased favor among all classes.

To our old friend, Mr. Conlin, belongs the credit of having interested such a large number of first class riflemen in gallery shooting, and for the thorough manner in which all the preparations and details of this match were carried out.

We think it better for the present not to give the scores. Our reasons are that the targets must be inspected by the judges before the official score can be published. In our next issue we shall certainly give our readers the absolute scores.

THE SHARPSHOOTERS' UNION.

The third biennial Association match of the Sharpshooters' Union of the United States and National Association promises to be the grandest sort of gathering for off-hand shooters. It is to be held at Union Hill, N. J., and will remain in session from the 16th to the 24th of June, inclusive. Mr. George Aery, the President, is making every effort to have this the most popular of any of the meetings thus far held, and in these

endeavors he is ably seconded by the other officers of the Union. The first gathering in Baltimore in 1874 showed that such meetings could become very important agencies in unifying the riflemen of the whole country. The meeting of 1876 was held in connection with the Centennial, at Philadelphia, and with the beautiful surroundings of the Park at Union Hill; and, favored by the prestige which that range already enjoys for first-class work, it is confidently expected that the meeting in June next will exhibit something extra fine in its record of scores made and riflemen engaged.

The shooting programme already offered is a liberal one, though at this early date it is impossible for the committee to positively announce many of the honorary gifts, but report and rumor make the prize list in this respect very bounteous, and the fulfillment is not likely to fall short of the promise.

There are on the Union Hill shooting lawn thirty-four targets, at 200 yards each. These have been divided into two classes: Association Targets, of which there will be four, and the General Prize Targets comprising the remainder. In the first-class are the Targets of Honor and the Stieh Targets, two of each, open only to members of the United Sharpshooters' Association, and those presenting proper certificates of membership in either the German or Swiss Sharpshooters' Unions. In addition, the President of the United States, the Governors of the State of New York and New Jersey, and the Mayor of the City of New York may shoot on these targets as honorary guests.

The tickets for the honor and stieh targets must be taken together at \$10. The honor target is divided into twenty-five rings, three-quarters of an inch apart. The outer rings, one to seventeen, counting inward, are upon a white field, while the inner rings, eighteen to twenty-five, are upon a black surface, making a black centre of twelve inches in diameter. Each shooter fires three shots, and but three. The greatest number of rings in the three shots takes the first prize, the next the second prize, and so on. In case of ties, the manner of distribution will be left to the decision of the shooters interested. The targets have been given the fanciful designation of "Columbia" and "Germania," and upon them will be assigned for distribution all honorary gifts not specially donated to other particular targets, and all contributions of the united rifle clubs will be given to this and the stieh targets, the latter getting \$1,000 cash. Capt. Aery has succeeded in getting from the intricacies of the Custom-house the valuable set of silver sent by the German Sharpshooters' Union last year, and the New York Schutzen Corps has given a prize of \$500 in gold.

The stieh targets—"New York" and "San Francisco," respectively by name—are black fields, twelve inches in diameter, upon which will be placed a black bull's-eye, or carton, six inches in diameter, bull's-eye alone counting. The best bull's-eye shot of each competitor is measured from the centre of bull's-eye to centre of shot. The best shot takes the first prize, and so on down the list. In case of ties, the second nearest bull's-eye of each shooter will be taken, and in case of further tie by drawing lots. Each competitor will be entitled to three shots, and the prize purse of \$1,000 will be distributed in seventy-five prizes, as follows:

One of \$75, one of \$63, one of \$50, one of \$40, one of \$30, two of \$22, two of \$20, five of \$18, seven of \$14, seven of \$13, seven of \$12, five of \$10, seven of \$9, seven of \$8, seven of \$7, seven of \$6, seven of \$5.

The general prize targets are open to all comers, but marksmen not members of any of the Union will be required to purchase a festival ticket. The list of general prize targets includes two man targets, two Creedmoor targets, two goblet targets, two public prize targets, and twenty-one bull's-eye targets.

The man target represents the upper portion of a man's body, twenty inches wide. The whole figure is black, and upon it are perpendicular lines half an inch apart, the middle line counting twenty, and the outer lines one. Each shooter may fire two strings of five rounds each, on an entrance ticket, costing \$5. The better series is taken except in case of ties, when the score of the whole ticket is considered, and if still a tie, by drawing lots. The targets are designated as "Union Hill" and "Hohoken." The purse will be \$1,200, divided into eighty prizes, as follows: \$100, \$90, \$80, \$70, \$60, \$50, \$40, \$30, \$25, \$20, \$18, two of \$16 two of \$15, two of \$14, three of \$13, eight of \$11, eight of \$10, ten of \$9, ten of \$8, ten of \$7, fourteen of \$5.

The Creedmoor targets, styled "Creedmoor" and "Wimbledon" are of the regular third-class type, as per rules of the National Rifle Association of America. Bull's-eye eight inches, counting five; centre, of twenty-six inches diameter, counting four; inner, of forty-six inches diameter, counting three, and the outer, over the remainder of the six by four feet slab, counting two. The rules of the National Rifle Association will be enforced at this target in regard to the rifle, loading, manner of shooting, etc., and the prizes will be awarded according to the regular rules. Each competitor may make one entry, at a fee of \$2, and the prize list of \$300 will be distributed as follows: \$40, \$30, \$20, \$15, two of \$10, three of \$8, \$7, two of \$6, three of \$5, three of \$4, \$3, \$2.

The Creedmoor targets will be kept open as bull's-eye targets, ten tickets to be sold at \$1, and daily distributions of a liberal percentage to take place among those making bull's-eye hits.

The goblet targets are named the "Hudson," "Ohio," and "Mississippi." They are a black oval, with a vertical diameter of seventeen inches, and a cross diameter of eleven inches. In the centre of this figure is placed an inner oval, nine by three inches. With shooting tickets, at ten shots for \$1, the inner field counts two, and the outer field one. With tickets at five shots for \$1 the value of the shots are doubled, i. e., inner field four, and outer field two. The premium for the first twenty points, made by one shooter, one trade dollar; the next twenty points, another trade dollar; for next forty points, two trade dollars; and for one hundred and twenty points, one silver goblet. A goblet of double value will be given to the first marksman making one hundred and twenty points.

The public prize targets are marked like the target of honor, into twenty-five three-quarter inch rings. Each shooter may obtain one entry ticket at \$5, and on it fire three strings of three shots each, the best string only to count except in case of ties, when the whole ticket will be measured, and if still a tie, by drawing lots. Upon these tickets, "Wilhelm Tell" and "Herrmann," will be distributed \$1,000, in eighty prizes, as follows: \$80, \$70, \$60, \$50, \$40, \$35, \$30, \$25, \$20, two of \$18, two of \$15, four of \$14, three of \$12, eight of \$10, eight of \$9, ten of \$8, ten of \$7, ten of \$6, and fourteen of \$5.

The twenty-one bull's-eye targets may be fired at by all comers as above specified at twenty shots per dollar, without

limit to entries. The target is a circular black field, twelve inches in diameter. In the centre of this is a black bull's-eye, 2 1/2 inches diameter, counting three points; a middle disk, 7 1/2 inches, counting two points, and a shot other ways in the 12-inch disk counts one. The bull's-eye disk is removable, and when hit will be taken off and reserved for measurement for one of the seventy-five prizes of the \$1,000 offered on this series of targets as follows: \$75, \$63, \$50, \$40, \$30, two of \$22, two of \$20, five of \$18, seven of \$14, seven of \$13, seven of \$12, five of \$10, seven of \$9, seven of \$8, seven of \$7, seven of \$6, seven of \$5.

Each day a series of bull's-eye premiums will be distributed as follows: For the first and last bull's-eye, each forenoon and afternoon, one trade dollar; for the most bull's-eyes per day, \$6; second most, \$5; third most, \$5; fourth most, \$4; fifth most, \$4; sixth and seventh most, \$3 each; eighth and ninth most, \$2, and for tenth most, \$1. For the first and last bull's-eye made at the meeting, \$5 gold.
